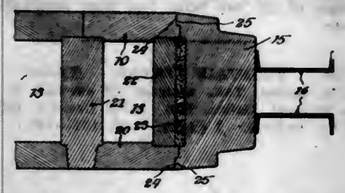
1. A storage battery comprising a plurality of plates, each of said plates formed of a plurality of sections, by having longitudinal slots therein, and means for spacing the outer ends of said sections, and intermediate spacing means received in said slots.

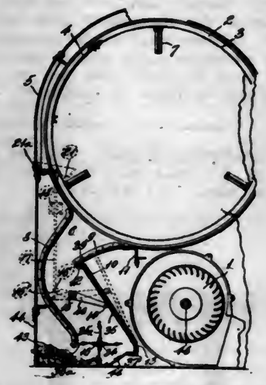
1,486,399. CELLULAR DIRIGIBLE AIRSHIP. SIMEON V. TRENT, Salt Lake City, Utah. Filed Mar. 31, 1921. Serial No. 457,227. 17 Claims. (Cl. 244—3.)

1. In an airship, a skeleton framework comprising a pair of trusses connected throughout their lengths to form a box girder, semi-circular ribs rigidly connected at both ends to the sides of said box girder, and the spaces between the trusses of the box girder and between said trusses and said ribs being divided into pockets that are adapted to receive collapsible containers for gas and air.



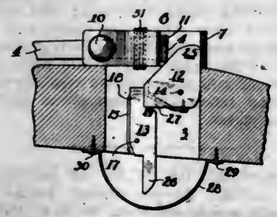
1,486,400. TRIANGLE-CALCULATING INSTRUMENT. OSCAR R. TURNER, Salt Lake City, Utah. Filed Apr. 18, 1922. Serial No. 554,502. 5 Claims. (Cl. 33—98.)

1. A triangle calculating device comprising a series of guide arms relatively pivoted and adjustable to reproduce a given triangle, means for indicating the angles to which the arms are adjusted, a two-part measuring slide geared to each arm for longitudinal adjustment thereon, and an adjusting screw connecting the parts of each slide for increasing or decreasing the space between them within predetermined limits corresponding to the pitch of the screw used, the said guide arms having graduations representing a predetermined number of threads of the said screw.



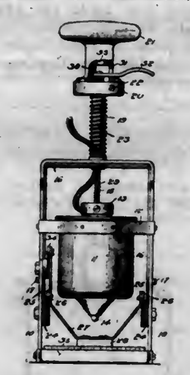
1,486,401. COKE-OVEN WALL STRUCTURE. JOSEPH VAN ACKEREN, Pittsburgh, Pa., assignor to The Koppers Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Oct. 25, 1919, Serial No. 333,358. Renewed July 24, 1923. 14 Claims. (Cl. 202—9.)

1. In a coke oven structure, in combination: a heating wall comprising spaced silica liner-brick sections connected together at intervals by silica tie-brick sections to form flame flues within said heating wall, the ends of said liner-brick sections being formed with jogged edges; a clay jamb-brick section positioned at the end of the heating wall and provided with companion jogged edges for engagement with the aforesaid jogged edges of the liner-brick sections; and a substantially co-extending vertical joint interposed between said jamb-brick section and the adjacent tie-brick section of the heating wall, said joint



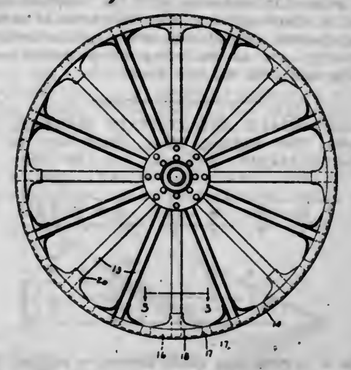
composed of silica sand, to accommodate heterogeneous expansion or contraction of the jamb-brick section and the heating wall; substantially as specified.

1,486,402. DELINTING DRYING TUMBLER. CHARLES E. WARREAM, Cincinnati, Ohio, assignor to The American Laundry Machinery Company, Norwood, Ohio, a Corporation of Ohio. Filed Apr. 23, 1920. Serial No. 376,086. 29 Claims. (Cl. 34—5.)



13. In a drying chamber, the combination of an air chamber, a heating chamber, a drying chamber, means for causing flow of air through said several chambers, a lint collecting member, a curved plate member having its concave face toward said lint collecting member, and arranged to deflect the air to said lint collecting member after its passage through the said drying chamber, means for operating said collecting member to discharge the lint therefrom, a lint conveyor arranged to receive the lint upon its discharge from said collecting member, and means for operating said lint conveyor.

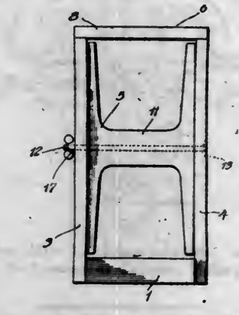
1,486,403. SLING GUN. WILBUR J. WATKINS, South Pasadena, Calif. Filed May 7, 1923. Serial No. 637,258. 23 Claims. (Cl. 124—14.)



1. In a sling gun, a lock consisting of two pivoted elements adapted releasably to engage one another and secured to one another by an elastic band contacting only with said elements and tending to pull them toward one another.

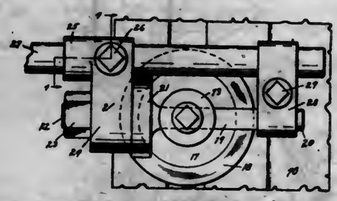
1,486,404. ELECTRIC WAX SEALER. SAMUEL M. WEISBERGER, Scranton, Pa. Filed Aug. 19, 1922. Serial No. 582,929. 8 Claims. (Cl. 120—116.)

1. In a device of the character described, the combination of a supporting frame, a wax container supported in the frame and having an outlet therein, means for opening and closing said outlet, an operating handle, gear wheels mounted on said frame, a die normally positioned to one side of the frame and wax container, connections between said die and gears and connections between said gears and handle for rotating the gears and shifting the die to a position beneath the outlet opening of the wax container.



1,486,405. TRACTOR-WHEEL CONSTRUCTION. PAUL H. WHITE, Indianapolis, Ind., assignor to Indiana Silo and Tractor Co., Anderson, Ind., a Corporation. Filed Oct. 24, 1921. Serial No. 509,989. 4 Claims. (Cl. 301—66.)

4. In a wheel construction, the combination with a hub, and a channel-shaped rim, of a channel-shaped spoke secured to the hub and terminating within the rim channel, and a spoke securing gusset plate comprising a base portion adapted to be secured to the rim channel side, a complementary channel-shaped spoke embracing portion adapted to be secured to the spoke, and an intermediate channel-shaped portion between said base portion and said spoke portion.



1,486,406. YARN HOLDER. WALTER WILSON, Jersey City, N. J. Filed Nov. 25, 1921. Serial No. 517,754. 4 Claims. (Cl. 242—141.)

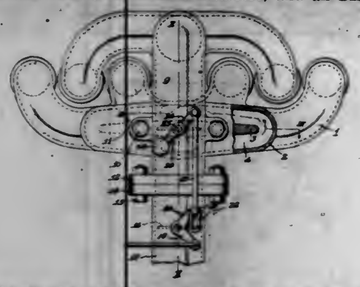
3. A holder for yarn and the like comprising a relatively heavy base, uprights secured at their lower portions along opposite edges of the base, a cross-piece connected to the upper edge portions of the uprights, a reel fitting between said uprights, a non-rotatable shaft extending freely and removably through the reel and having means to readily engage with one of the uprights

and adapted to project through the other upright, and means on the projecting end of the shaft for drawing the two uprights frictionally against the side portions of the reel.

1,486,407. BORING-BAR HOLDER. DAVID S. ANTHONY, San Antonio, Tex. Filed July 18, 1922. Serial No. 575,901. 3 Claims. (Cl. 29—96.)

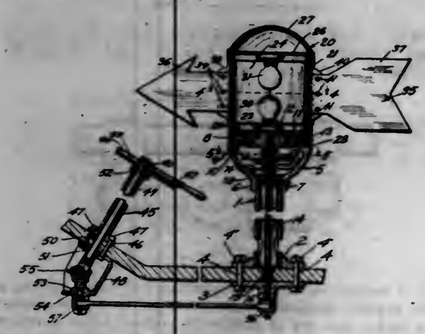
1. A boring bar holder comprising a bracket having a body portion designed to be mounted in a tool holder of a lathe, one end of said body portion being provided with a cylindrical support, the opposite end being provided with a transversely arranged head, said head being provided with a pivot pin, a swinging arm pivotally mounted on said pin, a clamp device pivotally mounted on said cylindrical member, means for detachably securing the boring bar in the free ends of said swinging arm, and said clamp device, and means for locking said swinging arm and said clamp member in any of their positions of swinging movement.

1,486,408. BORING BAR. DAVID S. ANTHONY, San Antonio, Tex. Filed July 18, 1922. Serial No. 575,902. 2 Claims. (Cl. 29—96.)



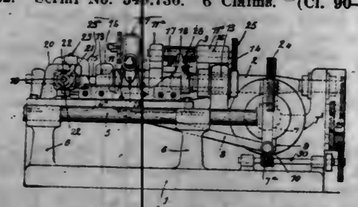
1. A boring bar comprising a shaft tapered at one end, the said tapered end being provided with a longitudinal opening, a tool slidably mounted within said opening, and a wedge designed to move longitudinally within the opening to secure the tool therein.

1,486,409. MANIFOLD. FRED E. ASELTINE, Dayton, Ohio. Filed May 6, 1922. Serial No. 558,848. 5 Claims. (Cl. 123—122.)



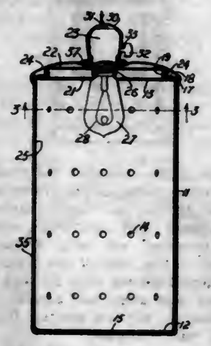
1. The combination of an intake manifold, an exhaust manifold, a casing carried by the outer side wall of said exhaust manifold and having its center portion communicating with said intake manifold so as to re-

ceive fuel therefrom to be heated in said casing by conduction from said exhaust manifold, and an auxiliary



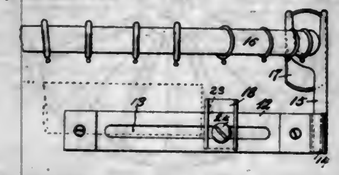
throttle at the central portion of said casing and in said intake manifold adapted to cause fuel to pass into said casing.

1,486,410. DIRECTION INDICATOR FOR MOTOR-DRIVEN VEHICLES. GUY P. BAGNALL, Los Angeles, Calif. Filed Feb. 5, 1920. Serial No. 356,435. 1 Claim. (Cl. 177—327.)



The combination with an automobile having a floor and a seat, of a tubular standard secured upright to said floor near said seat and surmounted by a bowl carrying bearings, a shaft rotatable within said tubular standard, signaling means secured to said shaft and comprising a lantern provided with a plurality of electric lights and mounted upon said bearings, there being an indicating means mounted upon said lantern, manually operable means within reach from said seat, means connecting said manually operable means and said shaft to rotate the latter and the indicating means therewith, and means whereby the operation of said manually operable means may cause current to flow alternately through one or another of said lights.

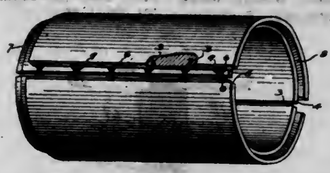
1,486,411. MACHINE FOR THE MANUFACTURE OF MILLING CUTTERS WITH CONSTANT PROFILE. HENRI LÉON BERTIN, Paris, France. Filed Mar. 25, 1922. Serial No. 545,736. 6 Claims. (Cl. 90—132.)



1. A machine for cutting and relieving milling cutters comprising a work carrying shaft adapted to support the milling cutter to be acted upon, means for rotating said work carrying shaft, a cutting tool, a rotary cam for actuating said tool, means for rotating said cam, a template, means actuated by said template for displacing the cutting tool along the axis of the work, means actuated also by said template for displacing the cutting tool in a plane at right angles to the axis of the work and means for imparting to said template a reciprocating movement.

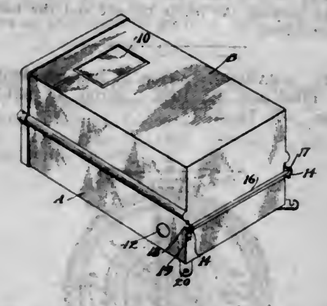
1,486,412. ELECTRIC BED WARMER. ROY W. BIDDLECOM, Glendale, Calif., assignor to Biddlecom Mfg. Co., Glendale, Calif., a Partnership composed of Roy W. Biddlecom and George H. Schnell. Filed Jan. 29, 1923. Serial No. 615,706. 3 Claims. (Cl. 219—45.)

1. In an electrical warming device of the class described, the combination of: a cylindrical shell having an opening in one end thereof through which a lamp of limited size may pass, and ventilating openings for circulation of air through said shell; a cap screwed upon said shell in a position to cover said opening; a lamp socket secured in said cover with the receptacle opening thereof in communication with the inside of said cap; an incandescent globe in said socket and extending into said casing; and an insulating air permeable covering enclosing said shell and said socket.



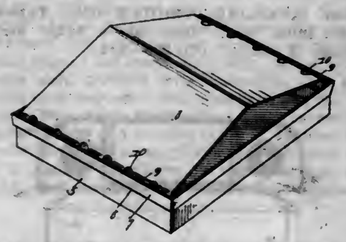
1,486,413. SHADE AND CURTAIN FIXTURE. MARY BORGES, New Bedford, Mass. Filed Nov. 10, 1921. Serial No. 514,219. 3 Claims. (Cl. 156—24.)

3. In a curtain and shade fixture, a support for attachment to a window frame, a curtain pole carrier maintained by the support the same having at its upper portion tines to provide a crotch for the reception of a curtain pole, the stem of said carrier being bent transversely to cause in use the crotch portion of the carrier to be pressed toward the window frame, for use with a curtain pole having ends provided with a flange or plate against which the tines of the carrier will abut to maintain the pole in a horizontal position.



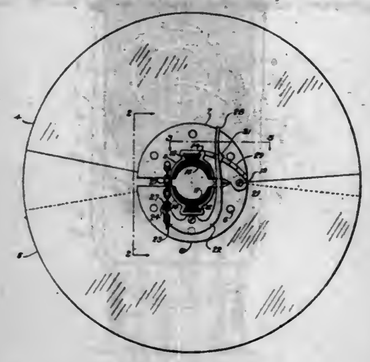
1,486,414. CONCRETE CASING FOR PILES. WILLIAM W. BRIER, Los Angeles, Calif. Filed Jan. 31, 1922. Serial No. 532,984. 3 Claims. (Cl. 20—100.)

1. An article of the character described comprising a casing of cementitious material longitudinally divided to form two parts, a circumferentially extending reinforcement of flexible material uniting said parts at one division so as to form a hinge joint and divided at



the other division to split the casing, and means to secure the ends of said reinforcement at said second division.

1,486,415. METER BOX. ALBERT CASPER, Vallejo, Calif. Filed Apr. 27, 1921. Serial No. 465,063. 5 Claims. (Cl. 220—41.)



1. A meter box of the character described comprising a rectangular-shaped box vertically divided into two separable sections, a sliding connection formed between the two sections at the sides thereof, a fixed top extending between and projecting beyond the sliding connection, means for rendering the sliding connection at the adjoining upper and lower ends of the respective sections weather-proof, and means for supporting one section with relation to the other and for locking the same against separation.

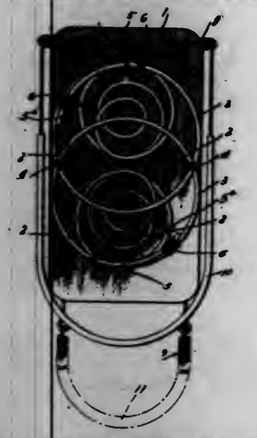
1,486,416. COMBINATION SANITARY DISPLAY AND STORAGE TRAY. CLARENCE G. CATHER, Selma, Calif. Filed Sept. 12, 1921. Serial No. 500,036. 1 Claim. (Cl. 211—28.)

In a meat display rack and drain, a tray having sides provided with shoulders terminating in upwardly extending flanges, a meat supporting plate having angularly disposed portions, the end edges of the said angularly disposed portions resting on the said shoulders and at least one of said angularly disposed portions being inclined and terminating in a downwardly curved edge provided with apertures, the said edge of the plate having its curved portion free of the side of the tray above the shoulder on which it is supported.

1,486,417. RAT GUARD FOR SHIP CABLES. SAMUEL CHEELY, Lodi, Calif. Filed May 13, 1922. Serial No. 560,706. 2 Claims. (Cl. 114—221.)

1. A rat guard for ship cables or the like, comprising a pair of disc segments pivoted together at one end, flanges extending axially from said segments, a lever fulcrumed on one of said segments, a swinging member secured to the other of said segments and adapted to be adjustably and removably attached to the end of said lever whereby upon the oscillation of said lever the pairs of segments with their associated flanges and liners will be drawn together on said cable, and means for clamping the segments in said latter position.

1,486,418. HAIR-TRIMMING DEVICE. GEORGE D. CLARDY, Passaic, N. J., assignor to Gillette Safety Razor Company, Boston, Mass., a Corporation of Delaware. Filed Sept. 19, 1919. Serial No. 324,979. 12 Claims. (Cl. 30—12.)

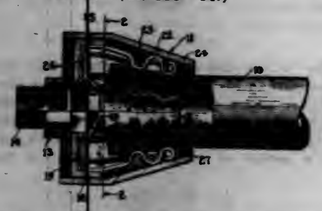


1. The combination with a safety razor including a blade support, a blade, means for clamping the blade on the support and a guard projecting beyond the edge of the blade, of a removable plate held by the blade-clamping means between the latter and the blade support and having a series of comb teeth projecting beyond the guard.

1,486,419. ANTIBUTTING ATTACHMENT FOR ANIMALS. VINYARD O. CRAWFORD, Heavener, Okla. Filed May 15, 1923. Serial No. 639,179. 1 Claim. (Cl. 119—142.)

In an anti-butting device for stock, a plate for application to the face of an animal, a plurality of prongs extending rearwardly from the rear face of said plate, a plurality of spiral springs secured to the rear face of said plate in lapping relation, and connected with each other, the springs being longer than the prongs when in normal position to hold the prongs out of engagement with the

face of the animal, attaching elements in the form of coiled springs connected at their ends with the corners of said plate to form means for securing the device to

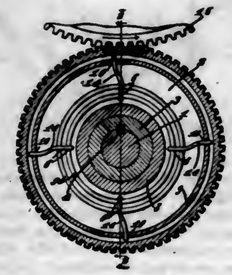


the head of the animal, a throat encircling member connected with one of said springs, the other spring forming a chin engaging member.

1,486,420. PACKING RUBBER. ERD V. CROWELL, Tulsa, Okla. Original application filed Aug. 13, 1921, Serial No. 492,054. Divided and this application filed Oct. 13, 1921. Serial No. 507,437. 2 Claims. (Cl. 288—3.)

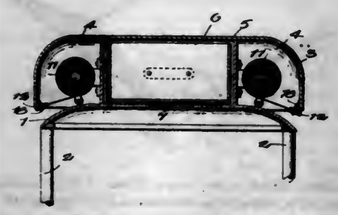
2. In a device of the character described, a rubber member including sections and comprising an outer ring portion and an inner flexing portion tapered from the ring portion toward the inner periphery of the member and symmetrically formed with respect to the plane of the ring portion, said inner ring portion having a packing surface which constitutes the inner peripheral surface of the member.

1,486,421. HOSE COUPLING. GEORGE H. DYER, San Francisco, Calif. Filed Mar. 29, 1920. Serial No. 369,578. 5 Claims. (Cl. 285—86.)



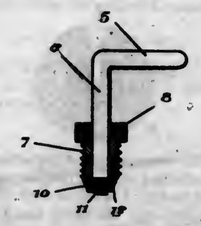
2. A hose coupling comprising a central tubular member adapted to be inserted in the end of a hose, said member having a plurality of circumferentially extending recesses formed in the outer surface thereof, a contractible clamping member adapted to embrace the end of the hose, said clamping member being circumferentially corrugated, the internal corrugations on said clamping member being disposed in radial alignment with said circumferential recesses in the tubular member when the device is assembled, and means for contracting said clamping member.

1,486,422. PRINTER'S QUOIN. OLOF A. ENSTROM and ADOLF E. DAHLIN, Lynn, Mass., assignors to Maxwell Edelman, Boston, Mass. Filed Dec. 14, 1922. Serial No. 606,949. 5 Claims. (Cl. 254—40.)



5. A quoin, the body of which is formed in two parts, one of which has a flange provided with an inclined portion, positioned in a groove in the other part, which part is provided with adjustable means coacting with the inclined portion of said flange for separating the parts; two headed studs secured to one part with the heads in depressions in the other part; and springs surrounding said pins between the heads thereof and the bottoms of said depressions.

1,486,423. GEARING. ANTON F. ERICSON, Philipsburg, Pa. Filed Apr. 12, 1923. Serial No. 631,704. 2 Claims. (Cl. 74—28.)



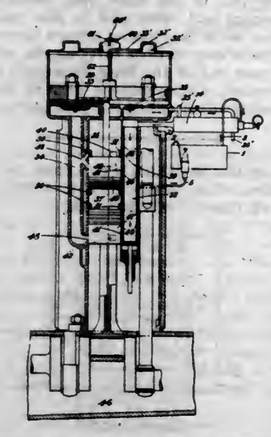
2. In a device of the class described, a pair of pinions located side by side and having a common axis, one pinion being rotatable with respect to the other pinion, for adjustment, the pinions being provided with oppositely projecting annular ribs, and a spring engaged with the ribs of the pinions.

1,486,424. AUXILIARY VEHICLE TOP. THEODORE G. FERNO, Dines, Wyo. Filed June 6, 1922. Serial No. 566,323. 2 Claims. (Cl. 296—143.)

1. In combination, a vehicle top including a main top and an auxiliary top mounted thereon and spaced thereabove, partitions supporting the auxiliary top above the main top for forming compartments, vehicle side curtains, and rollers in said compartments and mounted on said partitions for supporting said side compartments.

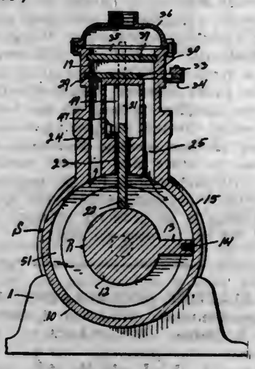
1,486,425. CYLINDER-HEAD LIFTER. VERNON LEE GIBSON, Sholes, Nebr. Filed Oct. 13, 1921. Serial No. 507,505. 2 Claims. (Cl. 16—125.)

1. A cylinder head lifter comprising a handle having downwardly extending terminal portions, screw plugs rotatable and slidable on said terminal portions to be individually engaged in and disengaged from the spark plug or similar holes in a cylinder head, and retaining members on said terminal portions under said plugs.



1,486,426. SCRIP-CUTTING MEANS. ALFRED R. GILLHAM, Cincinnati, Ohio, assignor to The A. H. Pugh Printing Company, Cincinnati, Ohio, a Corporation of Ohio. Filed June 12, 1922. Serial No. 567,874. 9 Claims. (Cl. 33—83.)

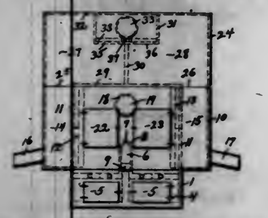
1. A scrip-cutter of the character described, comprising a pair of severing strips, one of said severing strips being wider than the other and having a severing edge at one longitudinal edge thereof and another severing edge at one end thereof, the other of said severing strips having a severing edge at one longitudinal edge thereof, said wider severing strip provided with cross-slits, said narrower severing strip located in said cross-slits, and the walls of said cross-slits acting frictionally on said narrower severing strip to hold said severing strips in adjusted relation, and constructed and arranged whereby said wider severing strip is movable lengthwise on said narrower severing strip to adjust the severing relation of said severing edges.



1,486,427. INTERNAL-COMBUSTION ENGINE. LEWIS THOMAS GODFREY-EVANS, West Norwood, London, England. Filed Feb. 9, 1921. Serial No. 443,644. 1 Claim. (Cl. 123—51.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

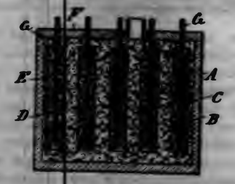
An internal combustion engine comprising a plurality of cylinders, upper and lower oppositely moving pistons in each cylinder explosion chambers between each pair of upper and lower pistons and above the upper pistons, a crank shaft, an air pump mounted above the cylinders, a pump cylinder, a perforated piston operating in said pump cylinder and connected to the upper pistons and to the crank shaft, a movable perforated disc mounted below said piston a perforated cover to said pump cylinder, a perforated disc rotatably mounted above said cover means for opening and closing the perforations in said cover by rotation of said last mentioned disc means connecting said

lower pistons to the said crank shaft, a carbureter, means whereby air is forced by said pump to said carbureter and into said explosion chambers, tubular timing valve operatively connected to the crank shaft a series of fuel inlet ports in the walls of said cylinders a series of ports in said tubular timing valve coacting with said fuel inlet ports and a series of exhaust ports in said cylinder walls.



1,486,428. ROTARY ENGINE. EARL C. GROVES, Hobson, Mont., assignor of one-half to Waite Land & Livestock Company, Utica, Mont., a Corporation of Montana. Filed Mar. 22, 1920. Serial No. 367,912. 4 Claims. (Cl. 121—76.)

2. A rotary engine including a cylinder having open ends, a cylindrical rotor axially arranged within the cylinder and having a rigid radial vane or piston engaging the inner surface of the cylinder, said rotor being of lesser diameter than the diameter of the openings in the ends of the cylinder and being shorter than the cylinder, circular heads fixed rigidly to the ends of the rotor and rotatably fitting in the ends of the cylinder for supporting the rotor in its operative position and closing the ends of the cylinder, said cylinder having inlet and exhaust ports, a spring opened valve for controlling the inlet port, means embodying a cam on the outer surface of one of said heads for intermittently closing said valve, a sliding radial abutment arranged between said ports normally having its



inner end engaging the periphery of the rotor and having its outer end projecting through the cylinder, a lever pivoted between its ends on the cylinder and having its inner end flexibly connected to the abutment, a vertically slidable member resting on the outer end of said lever and having a depending part provided with a roller, and a cam on the outer face of the other head arranged to intermittently engage said roller and to pass the roller outwardly of the latter for causing inward movement of the roller and the sliding member carrying the same so as to swing the inner end of the lever outwardly and cause a similar movement of the abutment whereby said abutment is intermittently lifted out of the path of the piston.

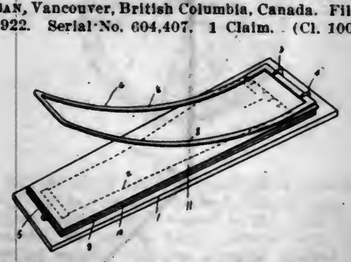
1,486,429. HOT-AIR FURNACE. JOHN A. HAGSTROM, Youngstown, Ohio. Filed Aug. 9, 1923. Serial No. 656,472. 1 Claim. (Cl. 126—99.)

In a device of the class described the bottom section of a furnace carrying two sets of grates, an ash pit formed underneath said grates, a preheated hot air manifold positioned between said grates, a fresh air inlet leading into one end of said preheated hot air manifold, a ridge portion formed on the upper portion of said preheated hot air manifold, a plurality of openings distributed in the above mentioned ridge, a second section positioned above said grates and connecting parts, an interior circular member within said second section, curved gratings secured to the sides of said interior circular section, a chamber communicating with said gratings, fresh air inlets leading into said chambers, a secondary outlet leading from the interior circular member, a damper functioning in said secondary outlet, a top section positioned above said second section, a circular cap member fitting securely over said interior circular member, two chambers formed in a top section, a vertical partition separating said chambers, a rectangular outlet chamber formed directly above said partition, two openings formed in the bottom of said rectangular outlet circular, one opening on one side of said partition and another opening diagonally disposed and positioned on the other side of said partition, a slide functioning with said opening for the purpose of regulating the direction of non-combustible gases, etc., escaping to an outlet leading to an ordinary chimney, substantially as described for the purpose set forth.

1,486,430. ELECTRIC ACCUMULATOR. KAJ HANSEN, Copenhagen, Denmark. Filed Nov. 5, 1921. Serial No. 513,047. 5 Claims. (Cl. 204—29.)

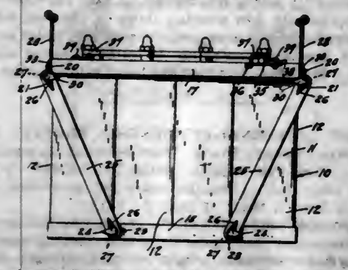
1. An electric accumulator comprising electrodes formed of granulated lead particles, and having glass-wool under pressure filling the spaces between the electrodes and absorbing the electrolyte, whereby the granules of the electrodes are subjected to a high mechanical pressure.

1,486,431. DEVICE FOR THE PLANTING AND TRANSPLANTING OF SEEDLINGS. JOHN NOEL HARVEY, Evesham, England. Filed Aug. 22, 1921. Serial No. 494,184. 1 Claim. (Cl. 47—37.)



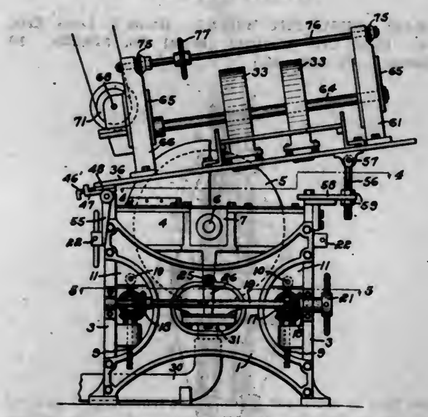
An article of the class described including an outer shell of fibrous material and a core of potting mold nested within said shell and having a seed or bulb receiving slot extending laterally through the same and also through the outer shell.

1,486,432. SUPPORT FOR FILAMENTS IN THERMIONIC VALVES AND OTHER TUBES. BENJAMIN HODGSON, Portsmouth, and STANLEY ROBERT MULLARD, Southfields, London, England. Filed Aug. 22, 1921. Serial No. 494,275. 3 Claims. (Cl. 250—27.)



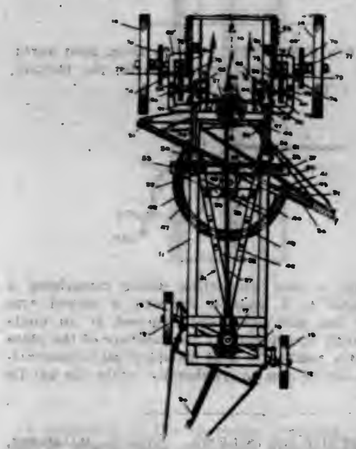
1. In combination, a vacuum tube envelope, a filament, a spring fastened to said filament, and means extending from said envelope whereby said spring maintains a uniform tension on said filament during abnormal heating of said envelope.

1,486,433. TROUSERS-PRESSING DEVICE. FRED HOGAN, Vancouver, British Columbia, Canada. Filed Dec. 1, 1922. Serial No. 604,407. 1 Claim. (Cl. 100—57.)



A trousers pressing device comprising, a flat base, a bowed spring open frame, hooks secured into the base adjacent one end under which one end of the said frame may be inserted, and a turnable hook secured into the base adjacent the opposite end capable of manipulation to hold down the opposite end of the frame when straightened.

1,486,434. STORAGE BATTERY. RICHARD J. HOLDEN, Fort Morgan, Colo. Filed Apr. 1, 1922. Serial No. 548,677. 11 Claims. (Cl. 204—38.)



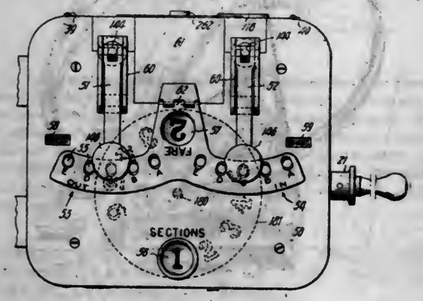
3. A storage battery comprising a cell container, a cell disposed within the container, a removable member abutting the upper ends of the container and cell, means for connecting the member and container for forcing the member into engagement with the upper ends of the container and cell, including pivoted links, cam plates pivoted to the links and engaging said member, and means for securing said cam plates in adjusted position.

1,486,435. ROD-GRINDING MACHINE. JONATHAN A. HUNT, Salem, Mass. Filed Aug. 17, 1920. Serial No. 404,110. 31 Claims. (Cl. 51—79.)

1. In combination, a work member, a housing substantially enclosing said work member, bearings in said housing within which said work-member is journaled to rotate, and means to raise and lower said housing together with said work member.

1,486,436. GRADING MACHINE. CHARLES H. JONES, Galva, Ill. Filed Feb. 5, 1923. Serial No. 617,093. 10 Claims. (Cl. 37—156.)

1. A grading machine comprising a main frame, a floating frame connected thereto, means on the main frame for raising and lowering the floating frame, a carrier pivotally connected with the floating frame for turning movement about a substantially vertical axis, and a scraper blade carried by said carrier and slidable longitudinally of itself with respect to the carrier.

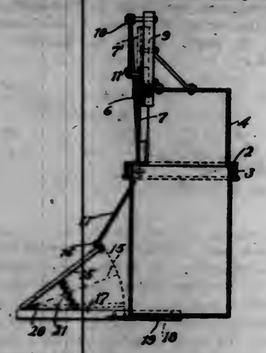


1,486,437. METAL SHANK FOR SHOES. HELMER G. JOSEPHSON, East Lynn, Mass., assignor, by direct and mesne assignments, to John L. Shevenell, Haverhill, Mass., and Helmer G. Josephson, Lynn, Mass., trustees. Filed Mar. 16, 1922. Serial No. 544,153. 5 Claims. (Cl. 36—76.)

1. A metal shank support adapted to be positioned between the insole and outsole of a shoe and having vertical side walls shaped to fit between the downwardly extending rib of the insole and provided with inturned flanges adapted to rest upon the under face of said insole.

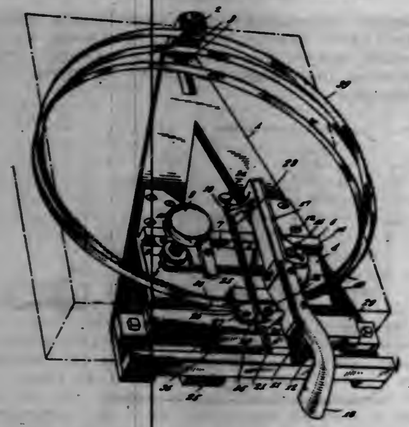
5. A curved metal shank support adapted to be positioned between the insole and outsole of a shoe having a wide forward portion and a relatively narrow rear portion and provided with upwardly extending vertical sides extending from end to end and of equal depth throughout, said walls being shaped to fit between the downwardly extending rib of the insole and having inwardly extending flanges extending from end to end and forming flat bearing faces adapted to rest upon the under face of the insole.

1,486,438. VARIABLE-VALUE FARE-CHECK PRINTING AND COMPUTING MACHINE. GEORGE ALFRED JULIUS, Sydney, New South Wales, Australia. Filed Sept. 12, 1922. Serial No. 587,779. 23 Claims. (Cl. 235—31.)



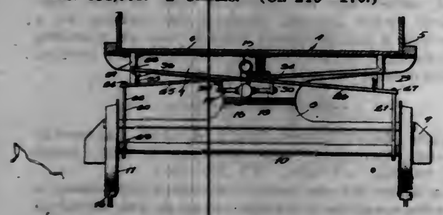
1. In a fare check printing machine, the combination of mechanism for printing of checks for particular sections only of a journey, manually controlled means for setting said mechanism, actuating means operatively dependent on and interlocked with said setting means, visible indicators for showing the journey sections for which the printing elements are set and for showing the fare charge relating thereto, counters intergeared with said indicators for registering the aggregate number of checks printed and the aggregate value thereof, typographical barrel printing elements for marking on a paper strip a list of journey sections and for cancelling the unrequired sections thereon, and means for severing the prints from the paper strip.

1,486,439. DUST COVER FOR ASH CANS. ALBERT D. KLAGES, Springfield, Mass. Filed Dec. 8, 1922. Serial No. 605,594. 5 Claims. (Cl. 220—36.)



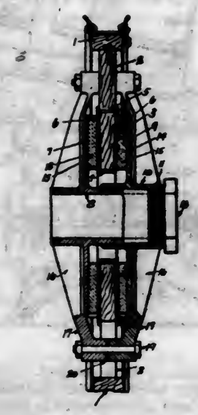
1. A device for the purpose described, comprising, a removable cover for a suitable receptacle and having an upwardly extending part, said cover having an opening in said part for gaining access to the receiving receptacle, a slidable closure for the opening, means for operating

the closure including a pedal device, connecting means between the pedal and the closure, the pedal device be-



ing provided with means for automatically returning it to its normal position after operating the door to open the same.

1,486,440. SAW SHARPENER. WILLIAM H. KRAMER, Edinburg, Ind.; Emma Kramer administratrix of said William H. Kramer, deceased. Filed June 3, 1922. Serial No. 565,512. 15 Claims. (Cl. 76—33.)



1. In a saw sharpener, the combination with means for holding at one point a plurality of sections of an endless band saw, one behind the other, with the teeth of said sections in alignment, of a cutting tool arranged to engage and sharpen said aligned teeth.

1,486,441. AUTOMATIC TRAIN BRAKE. JOSEPH J. LEVESQUE, Lewiston, Me. Filed July 26, 1923. Serial No. 654,003. 2 Claims. (Cl. 246—170.)

1. In an automatic train brake, the combination with a railroad train including a car body, a car truck including an axle and car wheels, and an air train pipe extending longitudinally of the car having a depending air bleeding valve connected therewith including an operating handle, of a brake applying device comprising depending arms receiving the axle, crossed connecting rods extending transversely across the entire width of the body pivotally secured at one of their ends to the car body and connected at their opposite ends to the axle engaging arms and means connecting the connecting rods with the handle of the valve.

1,486,442. RESILIENT WHEEL. HUGH C. LORD, Erie, Pa. Filed Oct. 8, 1919. Serial No. 329,239. 10 Claims. (Cl. 152—43.)

1. In a wheel, the combination of a hub member; a rim member, said members comprising parts overlapping radially; a resilient member comprising an axially extending resilient span rigidly secured to and forming a span between overlapping parts of the rim and hub members; and means acting on the members locking the ends of the span against axial movement toward each other.

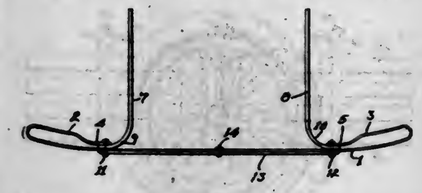
1,486,443. BROOM HOLDER. PHILIP LUTZ, East Northport, N. Y. Filed Apr. 7, 1923. Serial No. 630,542. 2 Claims. (Cl. 24—254.)

1. A handle or tool supporting device comprising a plate attachable to a wall or support, a curved arm formed with the said plate and disposed at an angle thereto, inwardly struck ears at the juncture of the plate and arm, and a resiliently held clamping plate cooperating with the curved arm to frictionally retain the handle or tool.

1,486,444. STRUT OR COLUMN. NELS L. MALMGREN, Chicago, Ill. Filed Jan. 12, 1923. Serial No. 612,301. 3 Claims. (Cl. 248—2.)

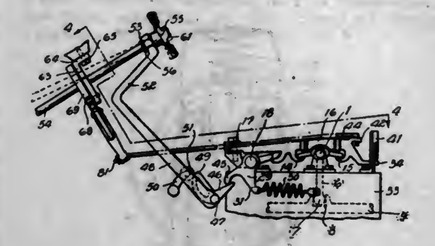
1. A strut or column comprising a sleeve member consisting of flanged longitudinal members, transverse members which rigidly connect said longitudinal members together in spaced relation forming openings in the sides of said sleeve member across which said transverse members extend, a post member adapted to telescope within said

sleeve member, and a stop plate adapted to be inserted into said sleeve member with parts thereof projecting



through longitudinal openings in the sides of said sleeve member so as to interchangeably interlock with transverse members of said sleeve, substantially as described.

1,486,445. CONFECTION CONTAINER. FRANK E. MAYOL, Salt Lake City, Utah. Filed June 28, 1922. Serial No. 571,333. 1 Claim. (Cl. 206—46.)



A container of the character described comprising a pair of semi-circular side walls having inturned flanges at the lower ends thereof, means for retaining said walls in a closed position to provide a closed space adapted to receive a confection, a bottom disposed within said container and normally resting on said inturned flanges, and means connected with the bottom whereby the same may be progressively raised to eject the confection through an opening in the upper end of the container.

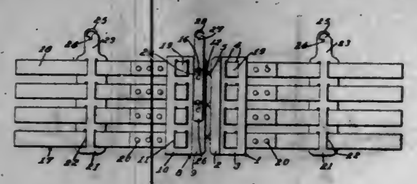
1,486,446. SPRING BUMPER FOR AUTOMOBILES. DAVID M. MORGAN, San Francisco, Calif. Filed Nov. 29, 1922. Serial No. 603,961. 1 Claim. (Cl. 293—55.)

A vehicle bumper, comprising a pair of supporting brackets, a transverse bumper member having its ends doubled back thereon, and a bolt passing through the bumper member twice and through each supporting bracket.

1,486,447. AUTOMOBILE GEAR SHIFT. BERNARD HY. MOSSINGHOFF, Chicago, Ill. Filed Feb. 25, 1922. Serial No. 539,086. 23 Claims. (Cl. 74—58.)

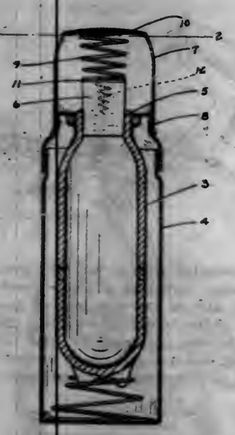
1. In combination with a variable speed gear, a speed selecting device, including a pedal member, universally rockable into any of the positions of gear selection, independently of the actual gear-shifting movement; speed selector mechanism, actuated by said pedal member to determine the selected gear speed according to the position of said rockable pedal member; and means to shift said gears.

1,486,448. LOCK HOUSING. OLOF A. NORLUND, Williamsport, Pa. Filed Oct. 14, 1922. Serial No. 594,569. 10 Claims. (Cl. 85—32.)



1. In a lock housing for the heads or nuts of screws and bolts, the combination with a swiveled housing or sleeve surrounding the nut or head and extending beyond the latter, and a revoluble guard ring also surrounding the nut or head and arranged within the housing or sleeve, said guard ring having engaging elements thereon.

1,486,449. BELT. ANDREW P. PANOS, Shreveport, La. Filed Nov. 22, 1921. Serial No. 517,061. 1 Claim. (Cl. 241—8.)

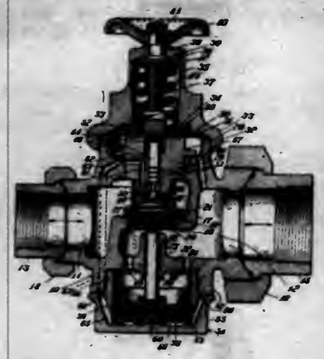


A belt comprising end members and means for connecting the end members releasably, main supports shiftable longitudinally of the belt, and extended above the

belt, an auxiliary support overlapped on one end member and extended thereabove, all of the supports being pro-

vided at their upper ends with button-holding elements, and means for connecting the auxiliary support releasably with said end member.

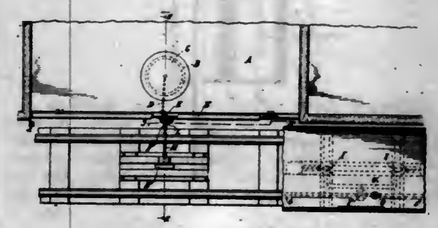
1,486,450. THERMOS-BOTTLE CLOSURE. JOHN W. PETERMAN, Cincinnati, Ohio. Filed Nov. 29, 1922. Serial No. 603,896. 1 Claims. (Cl. 215—13.)



1. The combination with a closure such as a cork, of a spring, discs carried by the spring at its opposite ends, and a cork screw carried by one of the discs and extending into the closure whereby to positively fix the closure and the spring upon one another.

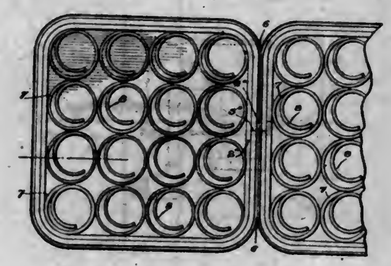
1,486,451. BUTTON. JAMES E. POTTER, Providence, R. I. Filed June 15, 1923. Serial No. 645,601. 4 Claims. (Cl. 24—101.)

1. A button formed of sheet stock folded to provide base and shank portions of double thickness, the free ends of the shank portions being enlarged to provide a hollow head, and a longitudinally-disposed stiffening rib in each of the shank portions abutting said base portion to assist in rigidly supporting the shank and base portion in substantially perpendicular relation.



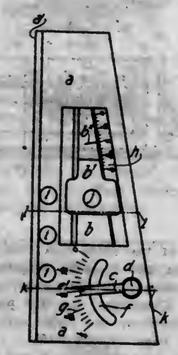
1,486,452. PRESSURE-REDUCING VALVE. EDWARD C. POST, Chicago, Ill., assignor to Vapor Car Heating Company, Inc., Chicago, Ill., a Corporation of New York. Filed Sept. 14, 1920. Serial No. 410,170. 6 Claims. (Cl. 50—11.)

1. In a pressure reducing valve, the combination with a valve casing having inlet and outlet openings, a main valve between said openings, a cylinder detachably secured to said casing the outer or head end only of which is in communication with the inlet side of the valve casing and a free piston in said cylinder adapted by a stroke in one direction to open said valve.



3. In a pressure reducing device, the combination with a main valve, a valve casing formed with a port controlled by the main valve and a duct leading from the high pressure side of the device, an auxiliary valve to close said duct and a pressure sensitive element subject to fluid pressure on the low pressure side of the device for operating the auxiliary valve; of a piston for operating said main valve and a cylinder removably attached to said casing in which the piston operates and provided with a duct leading to the face of the piston remote from the valve which duct communicates with the aforesaid duct in the casing and provides therewith the only opening as between the cylinder and the high pressure side of the device.

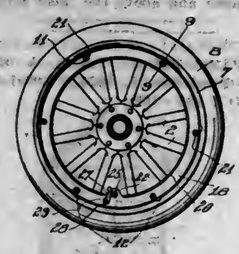
1,486,453. SAFETY DEVICE FOR PLATFORMS. JESSE RABB, Jr., Youngstown, Ohio. Filed Mar. 1, 1923. Serial No. 622,110. 7 Claims. (Cl. 104—30.)



3. A safety apparatus for railroad platforms comprising a vertically movable safety guard located in proximity to the platform, said platform having a well therein, a weight adapted to travel in said well, said weight being connected with said guard to normally maintain the same in its operative upright position, and instrumentalities connected with an approaching vehicle adapted to automatically lower the guard when the vehicle is adjacent the platform.

1,486,454. EGG CARRIER. JOHN D. RIPSON, Rochester, N. Y., assignor of one-half to Alvah C. Remington, Rochester, N. Y. Filed Aug. 14, 1922. Serial No. 581,556. 5 Claims. (Cl. 217—35.)

1. An egg carrier comprising a compartment, and cylindrical cells having resilient walls fitted in said compartment in abutting relation, each cell having a relatively movable and resilient volute egg holding member connected at one end with the cell and extending in spaced relation to the inner face of the wall of the cell.

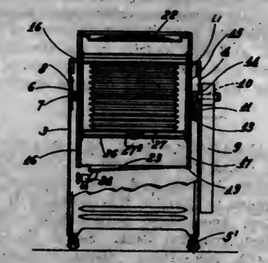


1,486,455. PARALLEL AND SECTIONAL RULER. ROCHFORT WYBRANTS ROBINSON, Marlow, England. Filed Jan. 11, 1922. Serial No. 528,486. 3 Claims. (Cl. 33—110.)

1. A ruler including a frame provided with a ruling edge and having an opening one side of which provides a gauge edge disposed at an angle with reference to the ruling edge, a scale on the said gauge edge, a shiftable gauge member carrying a marker adapted to be read in conjunction with said scale and said gauge member adapted to be shifted along the gauge edge to thereby be moved to a new position where it may be held while the frame is being adjusted to the new set position of the gauge member.

1,486,456. VEHICLE WHEEL. BROCK R. ROBLIN, Holley, N. Y., assignor to Lightning Change Auto Wheel Corporation, Rochester, N. Y., a Corporation of New York. Filed Mar. 25, 1921. Serial No. 455,383. 10 Claims. (Cl. 301—26.)

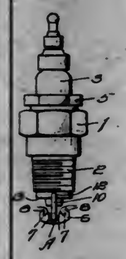
6. In combination with a wheel having a fixed rim and a demountable rim, bolts extending through the wheel, locking devices mounted to turn on said bolts, two rings supported on said bolts on opposite sides of the locking devices, an operating ring arranged between the first two named rings, and cooperating with the locking devices to effect the movement of the latter, a gear supported by



the first two named rings and cooperating with said operating ring to effect the movement of said operating ring, and means for locking said gear against turning.

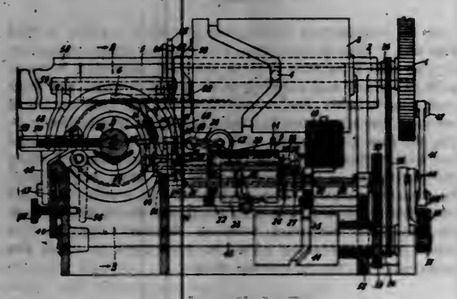
1,486,457. VEHICLE WHEEL. BROCK R. ROBLIN, Rochester, N. Y., assignor to Lightning Change Auto Wheel Corporation, Rochester, N. Y., a Corporation of New York. Filed May 29, 1922. Serial No. 564,286. 7 Claims. (Cl. 301—29.)

6. In combination with a vehicle wheel having a fixed rim and a demountable rim, two ring members supported by the wheel, locking devices pivotally mounted between said two rings and adapted to be moved toward and from positions between the rings, an operating ring arranged between the rings and having notches in which the locking devices are adapted to be received, the walls of said notches cooperating with said locking devices effecting the movement of the latter toward and from locking position, said operating ring also having a notch, one wall of which is formed with gear teeth and an operating gear for the ring supported between the two rings in the notch and cooperating with the gear teeth to effect the movement of the operating ring.



1,486,458. WASHING MACHINE. WILLIAM L. RODGERS, Pittsburgh, Pa. Filed Oct. 3, 1922. Serial No. 592,109. 4 Claims. (Cl. 68—21.)

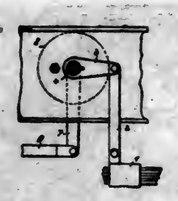
1. A tub for an oscillating washing machine comprising a main body and end walls, a perforated corrugated false bottom spaced from the bottom portion of the main



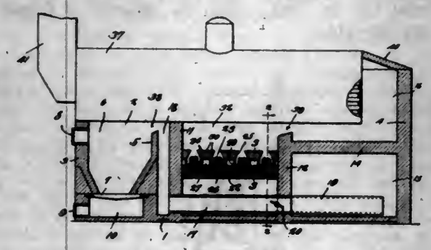
body and attached to said body and walls throughout substantially its entire perimeter, the main body being also corrugated throughout an appreciable extent immediately adjacent and above the false bottom.

1,486,459. SPARK PLUG. FLAVEL A. RUDOLPH, St. Louis, Mo. Filed Feb. 7, 1921. Serial No. 442,995. 6 Claims. (Cl. 123—169.)

1. In a spark plug, the combination of a conducting shell, an insulating core, a center electrode and a ground electrode depending from the lower end of the conducting shell pivotally connected thereto to freely swing in an arcuate path below the lower end of the center electrode, and a plurality of spaced tooth like members formed in the upper surface of the ground electrode.



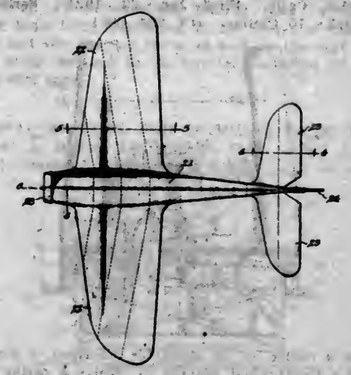
1,486,460. MACHINE FOR BINDING SAUSAGES. EDMUND SCHELLING, Dietikon, Switzerland. Filed Feb. 26, 1923. Serial No. 621,370. 2 Claims. (Cl. 17—1.)



1. A machine for automatically binding sausages comprising a rotary sleeve, means to feed the stuffed skin through said sleeve, a ring-shaped shuttle rotatably mounted in said sleeve, a radial slot in said shuttle means to catch and hold the cord, means to rotate said rotary sleeve, and said shuttle in the sleeve, and means for feeding the cord, means to form two slings, and means for tightening the knot for the purpose specified.

1,486,461. APPARATUS FOR AUTOMATIC REGULATION OF BRAKING POWER ON VEHICLES. ALFRED SCHEUER, Vienna, and HUGO SCHEUER, Retz, Austria, assignors to Handel Maatschappij H. Albert De Bary & Coy, Amsterdam, Netherlands, a Dutch Company. Filed Aug. 24, 1921. Serial No. 494,838. 6 Claims. (Cl. 188—195.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

5. In a brake-device, the combination of a brake-element to be actuated, a vehicle-spring, a coiled spring actuated by said vehicle-spring, and operative connections between said coiled spring and said brake-element responsive to load changes in the vehicle equipped with said brake-device, said connections including a shaft encircled by said coiled spring, and an annular body carried by said shaft and co-operating with said coiled spring for preventing transmission to said brake-element of jars incident to travel of the vehicle.



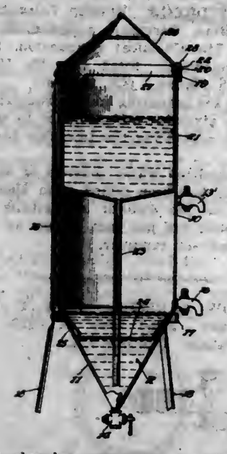
1,486,462. FURNACE. LINCOLN SHACKELFORD, Bonaparte, Iowa. Filed Oct. 17, 1921. Serial No. 508,211. 4 Claims. (Cl. 110—73.)

1. In a device of the class described, a boiler setting comprising a front and a baffle forming part of a fire pot; a forward cross wall disposed to the rear of the baffle and spaced therefrom, the fire pot communicating with the space between the baffle and the cross wall, across the upper edge of the baffle; a rear cross wall spaced from the forward cross wall and defining an intermediate chamber therewith; a back, spaced from the rear cross wall; a platform extended between the rear cross wall and the back and forming upper and lower chambers, the intermediate chamber communicating with the upper chamber across the upper edge of the rear cross wall; a flue extended through the intermediate chamber and establishing communication between the space at the rear of the baffle and the lower chamber; means for conducting the products of combustion from the lower chamber into the intermediate chamber; burners in the intermediate chamber, above the flue; and a boiler supported on the front and on the forward cross wall and extended into the upper chamber, the burners being disposed beneath the boiler.

1,486,463. TOY AEROPLANE. FRANK SHORT, Penn Yan, N. Y. Filed Mar. 13, 1923. Serial No. 624,744. 9 Claims. (Cl. 244—12.)

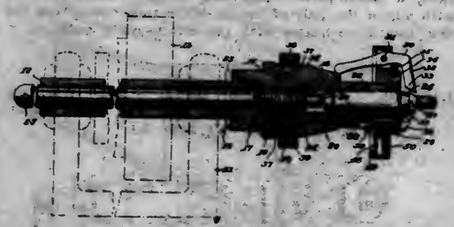
8. As a new article of manufacture, a toy aeroplane having a tapered U-shaped fuselage and integral wings pressed to form from a flat sheet of laminated material, said sheet being graduated in thickness by the use of superposed laminæ of graduated widths to cause said wings to taper from the front edge to the rear, said fuselage and wings, and the junctions of the wings with the fuselage, all being warped surfaces.

1,486,464. BURNER CLEANER. FRANK SMELIK, Nokomis, Ill. Filed Apr. 19, 1923. Serial No. 633,164. 5 Claims. (Cl. 158—220.)



1. The combination with the burner of a miner's gas lamp, of a support movably carried by the burner and movable into positions depending from and in horizontal alinement with the burner, means on the support for movement toward and away from the burner and rotary cleaning movement within the opening of the burner, and reciprocable means in the first means for movement through the opening of the burner.

1,486,465. CONNECTING-ROD BEARING. RONALD ALYMER SMITH, Mount Pleasant, Pa. Filed June 4, 1923. Serial No. 643,377. 1 Claim. (Cl. 64—65.)



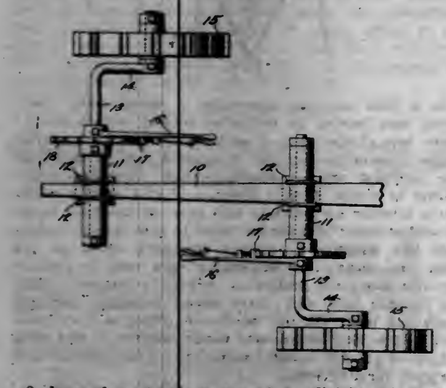
A connecting rod bearing having a fixed bearing block, a cap secured thereto, a movable bearing block arranged within the cap and having its underface inclined, a wedge fitted in between the inclined under face of the bearing block and the adjacent portion of the cap, a bowed spring having its ends engaging the wedge, and an abutment for the intermediate portion of said spring carried by said cap.

1,486,466. APPARATUS FOR CLEANING GASOLINE. JONAS A. SPARKS, Elk City, Kans. Filed Sept. 22, 1922. Serial No. 589,851. 1 Claim. (Cl. 210—47.)

In a fluid cleaning apparatus, a substantially cylindrical tank having an elongated conical bottom wall, a drain cock at the apex of said bottom wall, a container fitting telescopically in the cylindrical part of said tank and provided with a discharge pipe extending downwardly to within a short distance of said apex, a percolating strainer surrounding said pipe, an upturned flange on said strainer of different taper to said conical bottom wall and adapted to contact therewith along its top edge, and means for suspending said tank a suitable distance above the ground to permit its complete draining through said cock; said means including uprights, upper and lower annular bands connecting said uprights, said tank having an annular flange adapted to rest upon the upper of said annular bands, the lower ends of said uprights forming legs.

1,486,467. WORKHOLDER FOR SCREW-THREADING MACHINES. LOUIS SPITSFADEN, Elizabeth, N. J., assignor to Chrome Steel Works, Chrome, N. J., a Corporation of New Jersey. Filed May 28, 1921. Serial No. 473,510. 1 Claim. (Cl. 279—108.)

In a chuck of the class described, a chuck body having an axial opening extending therethrough, an abutment freely slidable in said body and projecting from the front end thereof, a bar threaded into and projecting from the rear of said chuck and forming a stop for the inner end of the abutment, jaws pivoted to the chuck body and having gripping ends arranged to move inwardly and toward the front end of said abutment, whereby to grasp an object and force it against the abut-



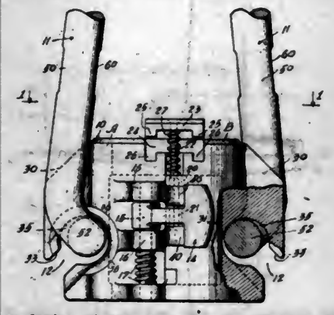
ment means to hold said abutment to rotate with the body, while permitting slidable movement therein, a projection on the end of the abutment arranged to co-operate with a recess in the article to be chucked and hold the same to rotate with the abutment, and means to operate said jaws.

1,486,468. PROCESS FOR RENDERING DURABLE EXTRACTS OF DRUGS. RUDOLF TAMBACH, Ludwigshafen-on-the-Rhine, Germany, assignor, by mesne assignments, to The Chemical Foundation, Inc., a Corporation of Delaware. Filed Jan. 25, 1917. Serial No. 144,516. 8 Claims. (Cl. 167—4.)

2. The process for preparing stable drug extracts which comprises adding glycerine and camphor to such extract, heating and then separating the insoluble from the soluble portions.

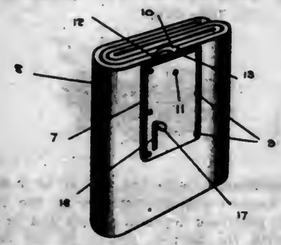
7. A new composition which consists of an extract of digitalis to which has been added from about 35 to 40 per cent—based on the amount of digitalis extract—of glycerine and about one per cent—based on the amount of glycerine added—of camphor.

1,486,469. PLOW CARRIER. ELVY T. UNDERWOOD, Field Creek, Tex. Filed June 29, 1923. Serial No. 648,599. 2 Claims. (Cl. 97—127.)



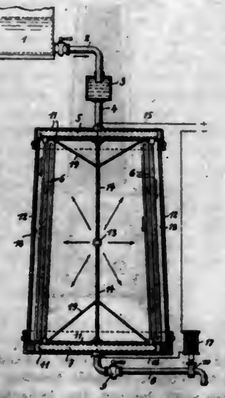
2. In a plow structure, spaced parallel beam carriers, an axle supported by each carrier, a wheel journalled on one end of each axle, a pair of spaced parallel beams independently supported by one of said carriers, an intermediate beam including a beam extension, said beam and its extension being supported by both of said carriers, a cross piece connecting the intermediate beam with one of the pair of beams, brace rods connecting the first mentioned beams with the intermediate beam.

1,486,470. FISHERMAN'S BELT. ROY WINSLOW WELCH, Kelso, Wash. Filed Apr. 18, 1922. Serial No. 554,578. 4 Claims. (Cl. 224—5.)



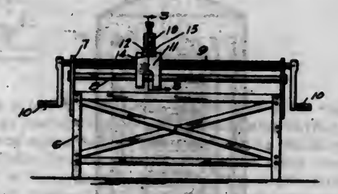
1. A fisherman's belt comprising a strip of flexible material, said strip being folded intermediately downwardly and then upwardly at each side to form a double intermediate portion, means at the ends thereof for adjustably connecting the same around the waist of the wearer, said belt having a series of pockets at the outside and a protector strip at the inside.

1,486,471. WELL-PIPE ELEVATOR. CHARLES E. WILCOX, Anaheim, Calif., assignor to E. C. Wilson, Los Angeles, Calif. Filed Jan. 29, 1921. Serial No. 440,933. 10 Claims. (Cl. 294—90.)



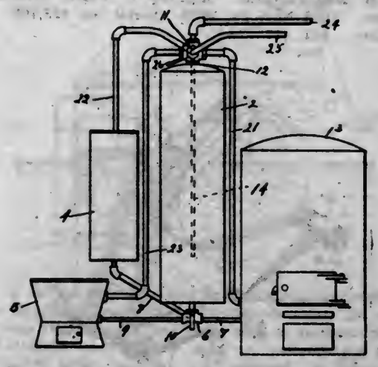
1. In a device of the character described, a structure having a longitudinal opening to receive a casing and a notch extending upwardly and inwardly in its side to the opening, and a supporting link carried in the inner part of the notch.

1,486,472. LOSS-PREVENTING DEVICE. MARTIN WINDECKER, Ponchatoula, La. Filed Aug. 5, 1922. Serial No. 579,837. 2 Claims. (Cl. 150—47.)



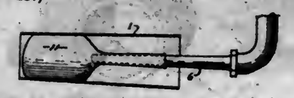
1. A loss preventing device comprising a case having an open end and a slot in one side, a claw pivoted in the case to be projected from said open end, a stud working in said slot and a link connecting said stud and claw.

1,486,473. APPARATUS TO STERILIZE LIQUIDS BY MEANS OF ULTRA-VIOLET RAYS. FABIEN AILHAUD, Beauvais, France. Filed Apr. 23, 1923. Serial No. 633,949. 2 Claims. (Cl. 99—15.)



1. An apparatus to sterilize liquids, characterized by the arrangement of two circular tubes intercommunicating through a plurality of fine tubes made of cast quartz, bent several times, and fed by a main tank of liquid and an intermediate feeding tank; a mercury vapour lamp being positioned in the center of the apparatus, and the circular tubes as well as the cast quartz tubes being encased in an envelope adapted to retain ultra-violet rays.

1,486,474. MACHINE FOR TRIMMING SOLID TIRES. HARRY L. BAKER, Los Angeles, Calif. Filed Apr. 23, 1921. Serial No. 464,060. 4 Claims. (Cl. 82—4.)

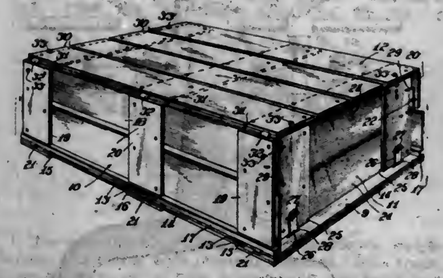


1. A machine for trimming solid tires comprising a frame, bearing plates secured to the ends of the frame, a plurality of rods rigidly connecting the bearing plates, a carriage slidable on the rods, a screw threaded shaft journaled in the bearing plates and threadedly engaging the carriage, cranks on the ends of the shaft, a tool holder having a tongue-and-groove connection with the carriage for sliding movement thereon, a screw threaded rod engaging the tool holder, a bearing plate secured to the carriage and rotatably supporting the rod, an operating crank fixed to one end of the rod, an extension formed on the tool holder having a tool receiving recess formed therein, and means for locking the tool within the recess.

1,486,475. HOUSEHOLD-BOILER CONNECTION. GEORGE C. BIENEY, Chester, Pa. Filed Dec. 11, 1922. Serial No. 606,101. 2 Claims. (Cl. 126—362.)

1. The combination with a hot water boiler and a plurality of heating devices of means for connecting a lead-in pipe with each of the heating devices, a boiler connection secured to the top of the boiler one stem of said connection opening into the boiler, a distributing pipe of smaller diameter than the interior of the stem connected with the boiler passing through said stem and connected with a stem directly opposite the first named stem, said pipe leading to a point adjacent the bottom of the boiler, a supply pipe connected to the same stem as the distributing pipe, a return pipe leading from each of the heating devices and each connected with a separate stem on the boiler connection, and a discharge pipe connected to another stem of the boiler connection.

1,486,476. PROCESS FOR UTILIZING HOG BLADDERS AS CASINGS FOR CHOPPED OR GROUND MEATS. ERNEST F. BLOSS, Wichita, Kans., assignor of one-half to Frederick W. Dold, Wichita, Kans. Filed Sept. 29, 1923. Serial No. 665,728. 1 Claim. (Cl. 17—45.)

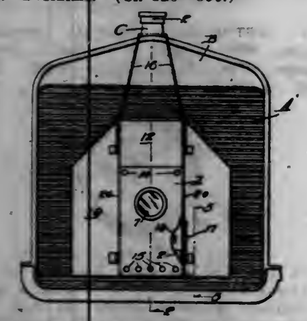


The process of producing a filled sausage, consisting in introducing a hog bladder in a hollow mold or form, having a substantially uninterrupted inner surface, filling the same while in said form, then applying heat to said mold and contained substances to cause said bladder to permanently conform itself to the shape of the mold and to adhere to the substance of the filling, and then removing said sausage longitudinally from said mold.

1,486,477. AUTOMOBILE SIGNAL. HERMAN BOCK, Milwaukee, Wis., assignor of one-half to John Sander, Milwaukee, Wis. Filed Feb. 4, 1922. Serial No. 534,120. 3 Claims. (Cl. 116—43.)

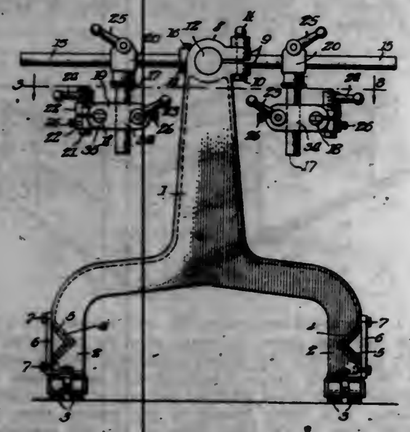
1. In a device of the class described, a cylindrical opaque casing having a window therein, a transparent casing rotatably mounted within the first mentioned casing and coaxial therewith, a spring normally holding the transparent casing in a predetermined position, signalling indicia on said transparent casing on each side of the window and normally concealed by the outer casing, means for oscillating the transparent casing in either direction to bring the indicia into view, and a lamp supported by one end of the outer casing and projecting within the transparent casing, said last named casing being provided with an arcuate slot through which the lamp projects and the ends of which limit the oscillation of the casing.

1,486,478. KNOCKDOWN CRATE. EDGAR T. BOND, Chicago, Ill. Filed Jan. 31, 1921. Serial No. 441,331. 7 Claims. (Cl. 217—47.)



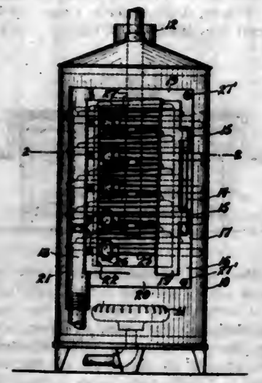
1. In a knock-down crate, the combination with a bottom and end pieces, of means pivotally connecting the end pieces with the bottom comprising staples secured to the bottom, straps looped through said staples and secured to the lower marginal portions of the end pieces, folding side pieces hinged to the bottom piece, and guide wires at the inner faces of the end portions of said side pieces, said end pieces having loops which embrace said guide wires.

1,486,479. METHOD FOR THE MANUFACTURING OF RADIATOR NIPPLES. WILHELM BÖTTGER, Biebesheim, Germany. Filed May 5, 1923. Serial No. 636,909. 2 Claims. (Cl. 29—156.)



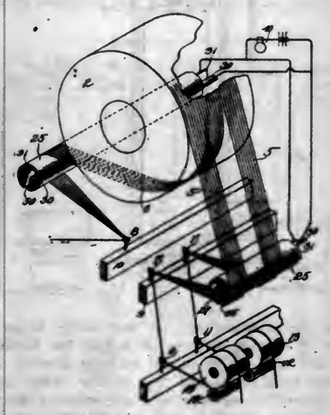
1. A method for the manufacturing of radiator nipples consisting in pressing into a piece of band iron two ribs designed to serve as abutments for the wrench, in rolling said piece of band iron to form a cylindrical body and in cutting threads into the outer surface of said cylindrical body.

1,486,480. AUTOMOBILE RADIATOR HEATER. SAM BREST, Chicago, Ill. Filed Jan. 6, 1922. Serial No. 527,396. 2 Claims. (Cl. 126—350.)



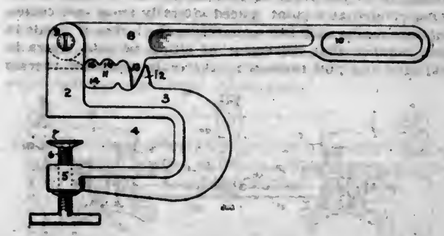
1. A heater for an automobile radiator comprising a housing open at one side and adapted to be mounted with said open side adjacent a vertical surface of the radiator, together with a heating device in the housing, and laterally extending wings hinged to the housing for extension in the plane of its open side for shielding the adjacent radiator surface from the wind.

1,486,481. MOTOR STAND. FRANK LEROY COLE, Chicago Heights, Ill., assignor to Canedy-Otto Mfg. Co., Chicago Heights, Ill., a Corporation of Illinois. Filed Nov. 10, 1921. Serial No. 514,182. 7 Claims. (Cl. 29—89.)



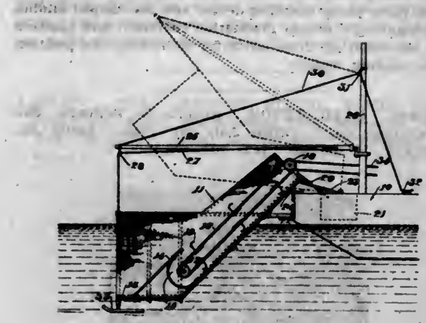
1. In a motor stand, the combination of a frame having a pair of spaced side rails independently pivoted thereon on aligning axes perpendicular to said rails, and means on said rails adjustable circularly thereabout and to and from the pivotal axes of said rails and adapted to be connected with a motor.

1,486,482. HOT-WATER HEATER. GEORGE COWLES, Sacramento, Calif. Filed Aug. 2, 1921. Serial No. 489,163. 4 Claims. (Cl. 122—250.)



1. A hot water heater comprising an outer casing having a door opening formed therein, a plurality of circulating coils in the casing, and accessible through said openings, a one piece door frame secured around the marginal edge of said opening, a door hinged to the frame to close the opening, and a water distributing manifold formed as a part of said door frame and separably connected to each of said circulating coils.

1,486,483. AUTOMATIC THREAD-DETECTING AND STOP MECHANISM. MILLARD F. FIELD, Winthrop, Mass. Filed Nov. 12, 1920. Serial No. 423,703. 16 Claims. (Cl. 117—28.)



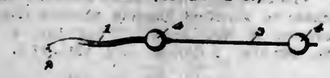
1. A machine of the kind described, comprising means from which a plurality of threads are unwound, a plurality of winding devices on which cords comprising a group of said threads are twisted and wound, and thread detector mechanism interposed between the unwinding means and the winding means operable on the breaking of a thread, in combination with a member enclosing said detector mechanism.

1,486,484. CHAIN-REPAIR TOOL. VICTOR A. FISCHER, New York, N. Y. Filed Jan. 25, 1922. Serial No. 531,582. 3 Claims. (Cl. 81—15.)

1. In a tool for repairing chains, two parts hinged together at one of their respective ends and having all the remaining operative portions extending in the same direction wholly to one side of the hinge, said two parts shaped to form clamping jaws in direct alinement, said jaws each provided with a prong respectively arranged at different distances from the hinge and overlapping, the total combined width across the two prongs being least when the ends of the prongs are in close relation and greatest when the prongs are in maximum overlapping relation, and wherein further, the two jaw parts of the tool intermediate of the prongs and hinge are respectively provided with opposing clamping portions and in which at least one of said portions is provided with two transverse grooves, said opposing portions and the prongs being all in the same plane.

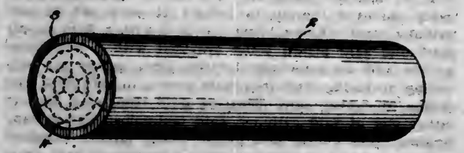
1,486,485. SHRIMP-CATCHING DEVICE. JOHN H. FRISSELL, Oakland, Calif. Filed Jan. 19, 1921. Serial No. 438,368. 3 Claims. (Cl. 43—4.)

1. A device of the character described, comprising a cage member formed of reticulated material, the front and rear ends of said cage being open, a semi-cylindrical trap member formed in the cage, an inclined trap board associated with the trap and adapted to direct the shrimps within the trap, and a conveyor having one end positioned within and concentric with the trap and to elevate the shrimps from the trap through the rear end of the cage.



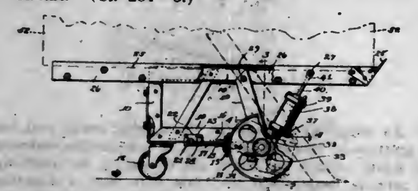
1,486,486. VIBRATOR. PHILETUS W. GATES, Chicago, Ill., assignor to Mumford Molding Machine Company, a Corporation of New Jersey. Filed Jan. 4, 1919. Serial No. 269,582. 2 Claims. (Cl. 121—17.)

1. A vibrator comprising a cylinder closed at the ends, a piston reciprocably mounted therein to impact at the ends of said cylinder, said piston being provided with an interiorly located duct, said cylinder being provided with a fluid supply inlet, means to maintain constant communication between said inlet and said duct, and ducts



leading from said first-named duct to the respective ends of said cylinder, one of said second-named ducts being relatively larger than the other.

1,486,487. METHOD OF FORMING THREAD TIPS. CHARLES B. GUDEBROD, St. Davids, Pa., assignor to Gudebrod Bros. Silk Co., Inc., New York, N. Y., a Corporation of New York. Filed June 23, 1923. Serial No. 647,343. 2 Claims. (Cl. 24—143.)

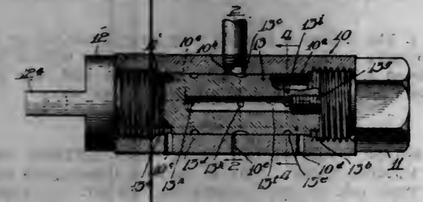


1. The method of forming a tip on a thread for use in stringing beads, consisting of immersing the ends of the thread in hot bone glue, after which the said ends are again immersed in a light solution of bees' wax.

1,486,488. ARTIFICIAL FUEL AND METHOD OF MAKING SAME. JOHN R. HINMAN, Indianapolis, Ind. Filed Dec. 3, 1923. Serial No. 678,187. 5 Claims. (Cl. 44—24.)

1. A combustible fuel comprising a compacted body portion of finely divided waste, oil, and clay; and a substantially hermetically sealed jacket surrounding said body portion.

1,486,489. TRUCK FOR HANDLING ROLLS OF PAPER. THOMAS JOHANSEN and EDWARD KEHOE, Baltimore, Md. Filed Dec. 27, 1922. Serial No. 609,278. 5 Claims. (Cl. 254—3.)



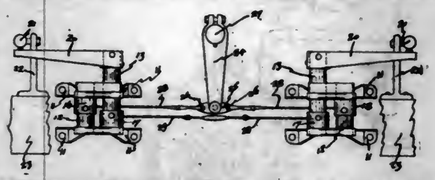
1. The combination with a truck-frame having wheels thereon, of a tilting table pivotally attached to the truck-frame so as to swing from a horizontal to an inclined position, a cylinder to contain a fluid and having a piston therein said cylinder and piston being interposed between the truck-frame and the tilting table and movable together with the table while the latter makes a preliminary movement and upon a further movement of the table the piston and cylinder being relatively moved to displace the fluid in the cylinder to check the movement of the table.

1,486,490. BAG FRAME. JOSEPH F. KITCHELL, Newark, N. J., assignor to The R. Neumann Hardware Co., a Corporation of New Jersey. Filed Oct. 21, 1920. Serial No. 418,436. 4 Claims. (Cl. 190—49.)

1. A bag-frame comprising an outer frame-section and an inner frame-section, and an auxiliary re-enforcing strip secured to the outer face-portion of said inner frame-section, said strip being formed with a marginal re-enforcing element in the form of a bead-like edge.

1,486,491. VIBRATOR. WILLIAM P. KRAUSE, Chicago, Ill., assignor to Mumford Molding Machine Company, a Corporation of New Jersey. Filed Jan. 4, 1919. Serial No. 269,579. 2 Claims. (Cl. 121—17.)

1. A vibrator comprising a cylinder, a piston reciprocably mounted therein to impact at each end of said cylinder, said cylinder being provided with a fluid supply inlet and said piston being provided with a peripheral groove and an interiorly located duct, means for conveying operating fluid from said groove to said duct, and means to convey said operating fluid from said duct to either end of said cylinder, said last-named means comprising cross ducts, said piston being further provided with peripheral grooves at the emergence of said cross ducts.

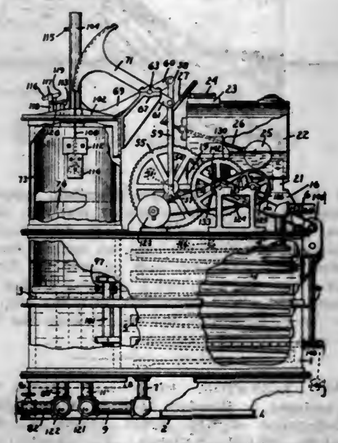


1,486,492. METHOD FOR THE IGNITION OF BLASTING CARTRIDGES. ADOLF MESSER, Frankfort-on-the-Main, Germany. Filed Aug. 29, 1921. Serial No. 469,768. 2 Claims. (Cl. 102—6.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. An improved method for the making ready and for the ignition of blasting cartridges of combustible material and liquid oxygen or liquid air consisting in inserting the priming device into the blast hole with a separate support which is not impregnated instead of dipping the same into the liquid together with the carbon cartridge in order to prevent premature ignition or misfiring.

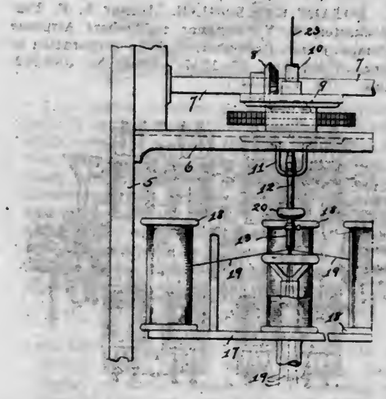
1,486,493. CONTROL. LESSITER C. MILBURN, East Cleveland, Ohio, assignor to The Glenn L. Martin Company, Cleveland, Ohio, a Corporation of Ohio. Filed Aug. 4, 1923. Serial No. 655,740. 15 Claims. (Cl. 244—29.)

1. In combination, a pair of cables extending in propinquity to each other, a first pair of levers, a second pair of levers spaced longitudinally of said cables from said first pair of levers, one lever of each pair being connected to one of said cables and the other lever of each pair being connected to the other of said cables, each of said levers being pivoted at a point spaced laterally from said cables, separate means each interconnecting the levers of a pair in such manner that movement of either of said levers in response to a pull thereon by the cable connected thereto



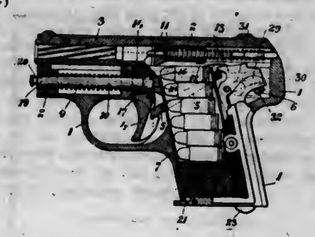
results in a pull by the other lever of that pair upon the cable connected thereto, a control stick acting upon one of said cables at an intermediate point thereof, an aileron pivoted adjacent each of said pairs of levers, and means connecting each aileron with the adjacent pair of levers in such manner that movement of said pairs of levers in one direction effects one movement of said ailerons and movement of said pairs of levers in the reverse direction effects reverse movement of said ailerons.

1,486,494. SLIDING-WEIGHT SCALE. GEORG OLLERT, Berlin-Neukolln, Germany. Filed May 31, 1921. Serial No. 473,981. 4 Claims. (Cl. 265—49.)



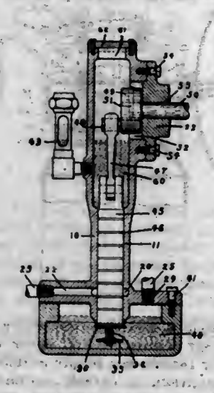
1. An improved sliding weight for scales comprising in combination with the scale beam, a guiding device on the weight beam, a rod-shaped sliding weight movably mounted in said guide, so that it can be shifted to either side, one of these parts (guiding device and rod-shaped sliding weight having a double graduation thereon), and markers upon the other of these parts for indicating the position of the sliding weight.

1,486,495. CARBURETOR. ALFRED E. ROBERTS, San Francisco, Calif. Filed July 28, 1919. Serial No. 313,810. 3 Claims. (Cl. 261—26.)



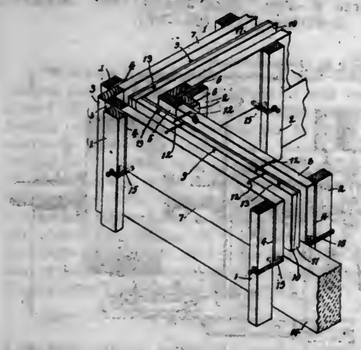
2. A carbureting machine, comprising a mixing chamber having an air inlet and a carbureted-air discharge outlet, means for introducing determinate quantities of gasolene into said chamber, a pair of vertically movable carbureted air induction and holding bells, water-sealed at their lower ends, the outlet from said chamber communicating through valved conduits with the interiors of said bells, elevating mechanism for lifting said bells alternately and holding each bell in elevated position to permit the vacuum created therein to be filled by carbureted air induced through said carbureter, and controlling means for causing said mechanism to release the elevated bell when the other bell has discharged its contents.

1,486,496. ATTACHMENT FOR THREAD-TWISTING MACHINES. FRANK M. ROGERS, Baltimore, Md. Filed Aug. 15, 1923. Serial No. 657,494. 4 Claims. (Cl. 117—21.)



1. In a thread twisting machine the combination with a tubular guide, of means for delivering a series of thread strands to the guide, means for twisting the strands together and a basin closely fitting the exterior of the tubular guide above the entrance of the thread strands.

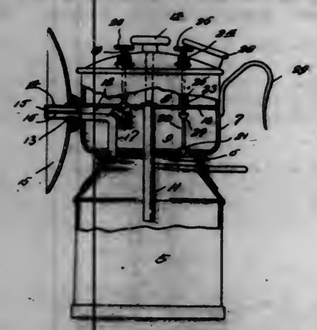
1,486,497. SELF-LOADING PISTOL WITH FIXED BARREL. HANS SCHMEISSER, Suhl, Germany. Filed Aug. 26, 1921. Serial No. 495,802. 2 Claims. (Cl. 42—3.)



1. In an automatic pistol with barrel removably fixed in the handle, means for preventing the removal or insertion of the magazine unless a safety device has been brought by hand into the position for locking the sear said means comprising in combination with a cartridge magazine removably mounted in the pistol, a pivotable holder for locking said magazine in its position, a sear locking shaft having a shallow groove which determines the unlocked position and a deep groove which determines the locked position, a safety lever accessible from the outside designed to operate said locking shaft, a spring-controlled piston situated between said holder and said locking shaft, said piston having a groove in its outer face, an extension at the upper end of said piston designed to engage with one or the other groove of said locking shaft, a nose at the lower end of said pivotable holder designed to lock the magazine in its position, and a nose at the upper end of said pivotable holder designed to engage with said groove of the piston so that it holds the piston in the locking position until the lower nose of the holder has gripped behind the inserted magazine said holder being then pivoted by the action of its spring so that said nose disengages from the groove and releases said piston.

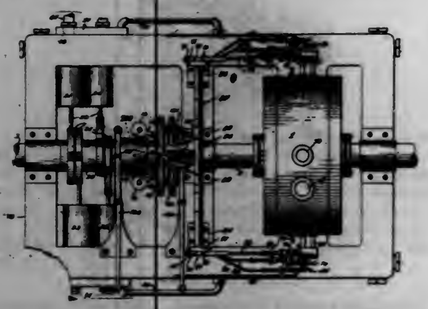
1,486,498. PUMP. HARRY F. SMITH, Dayton, Ohio, assignor, by mesne assignments, to The Gas Research Company, Dayton, Ohio, a Corporation of Ohio. Filed Jan. 10, 1921. Serial No. 436,236. 3 Claims. (Cl. 230—6.)

1. A pump of the character described comprising in combination, a vertical cylinder barrel, having a piston receiving bore therein; an enlargement at the upper end of said cylinder barrel, a chamber in said enlargement forming a continuation of the cylinder bore, a sealing liquid within said chamber; a piston in said cylinder bore, and spaced grooves around said piston, one end of the piston extending into said chamber, there being no packing glands surrounding said piston, the chamber in said enlargement being constructed to contain a sealing liquid which at all times covers the end of the piston within said chamber.



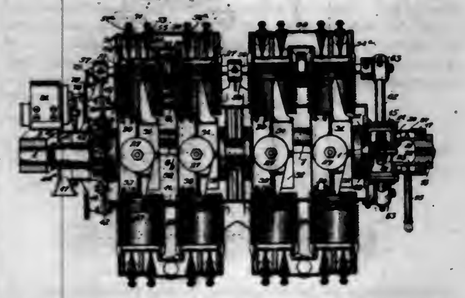
1,486,499. MOLD FOR CONSTRUCTING CONCRETE BUILDING WALLS. JOHN TAYLOR, Forest Grove, Oreg. Filed May 12, 1922. Serial No. 560,494. 2 Claims. (Cl. 25—131.)

2. In a mold of the character described, an outside series of flat rectilinear mold plates adapted to extend around a building on a horizontal plane, an inside series of similar mold plates, and an intermediate series of mold plates comprising, respectively, a pair of wedge-sections, and



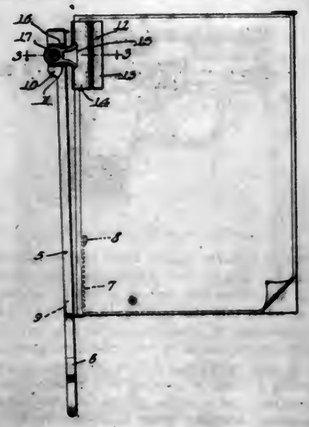
yokes for laterally spacing all of said plates and maintaining them in spaced relation, and ties for supporting the intermediate mold plates, and an upright framework, and clamps for removably supporting the inside and outside mold plates on said frame-wark, and spacing plates supported on said clamps and adapted for holding said plates in properly spaced relation.

1,486,500. ACETYLENE LAMP. SAMUEL G. THOMASSON, Jasonville, Ind. Filed Sept. 4, 1923. Serial No. 660,791. 2 Claims. (Cl. 48—4.)



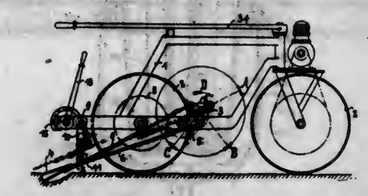
1. In an acetylene lamp of the character described, an upper container divided into an upper water compartment and a lower reserve gas supply chamber by means of a horizontal partition, a carbide container detachably joined to the lower end of said first named container, means for manually controlling the supply of water to the carbide container from said water chamber, a two passage burner tip supported by the first named container, means for establishing communication between one passage of the burner and the carbide container when said containers are joined, means for permitting the flow of gas from the carbide chamber or container to the reserve gas supply chamber at will, and manually operable means for controlling the supply of gas to the other passage of the burner from said reserve gas supply chamber.

1,486,501. ROTARY INTERNAL-COMBUSTION ENGINE. GROSCE W. TICE, Flint, Mich., assignor to Tice and Company, Indianapolis, Ind., a Copartnership composed of Irma A. Schroeder, Wilna L. Doepker, Angie F. Tice, and George W. Tice. Filed Jan. 9, 1920. Serial No. 350,307. 3 Claims. (Cl. 123—15.)



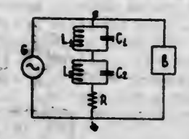
1. In an internal combustion engine, a stator and a rotor, the rotor having a series of pockets formed in the face thereof open to the inner face of the stator, a series of valve plates equal in number to the number of pockets and being pivotally supported on the stator, said stator having a recess for each valve plate, a fuel intake line and an air line for each valve recess opening directly therein behind the valve plate, a plurality of exhaust ports equal in number to the number of rotor pockets to which the said pockets open subsequent to ignition of the fuel charge, a valve for the fuel intake and a valve for the air supply line of each group, an operating mechanism therefor comprising a cam member rotatable in fixed relation with the rotor, a member riding on said cam, a rock lever actuatable by movement of the said cam riding member, the air supply valve being connected at one end of the rock lever, and the fuel control valve being connected with the other end of the rock member.

1,486,502. ROTARY GAS ENGINE. HENRY L. F. TREBERT, Rochester, N. Y., assignor to Trebert Airplane Motor Company Inc., Rochester, N. Y., a Corporation of New York. Filed Aug. 27, 1917. Serial No. 188,342. 12 Claims. (Cl. 123—44.)



1. In a rotary engine the combination with a fixed crank shaft of a set of cylinders comprising two opposed pairs, a rigid connection between the pistons of a pair providing for operative connection thereof with the crank shaft, comprising a plane web and a reinforcing rib on one side thereof; the webs of the pairs lying substantially in contact.

1,486,503. BOOK OR MAGAZINE HOLDER. ALONZO F. TRIMBLE, Hoganasville, Ga. Filed July 9, 1923. Serial No. 650,498. 2 Claims. (Cl. 129—1.)



1. A book or magazine holding device comprising a holding member provided with a hand gripping part, a holding element secured to the holding member and extending longitudinally thereof toward the forward end of the member and adapted to be passed into the book or magazine, between the leaves thereof, and a spring clamp attached to the forward end of the holding member and having jaws extending toward the side of the holding member upon which said holding element is located.

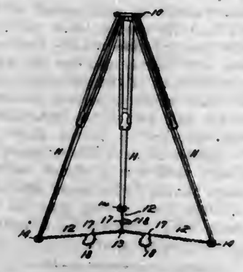
1,486,504. HOEING MACHINE. ROBERT WADENBACH, Magdeburg, Germany. Filed May 6, 1922. Serial No. 559,098. 3 Claims. (Cl. 97—36.)

1. A hoeing machine in which a reciprocating movement is communicated to the hoeing knives from a crank shaft, eccentric shaft or the like, comprising in combination with the crank shaft, means for driving said crank shaft from the running wheels of the machine, hoeing tools, connecting rods one for each tool connecting said tool with the crank shaft, a shaft mounted in the machine frame, articulations composed of two or more articulated members for suspending the ends of the connecting rods to said shaft, and means for preventing the lateral displacement of said articulations.

1,486,505. STABILIZING OSCILLATION GENERATORS. KARL WILLY WAGNER, Berlin, Germany, assignor to Radio Corporation of America, a Corporation of Delaware. Filed June 28, 1923. Serial No. 648,310. 4 Claims. (Cl. 250—36.)

3. An arrangement for the stabilization of oscillation generators comprising in combination an oscillation generator, a primary load adapted to operate within a certain working frequency range and a supplemental stabilizing load connected to said generator external to the tuned load, said supplemental load comprising a plurality of oscillatory circuits tuned to exclude different frequencies within the limits of the working range whereby each of said tuned circuits is adapted to substantially exclude a portion of the frequencies within the working range and said combined circuits are adapted to impose an increased supplemental load on the generator outside the limits of the working frequency range.

1,486,506. STABILIZING OSCILLATION GENERATORS. KARL WILLY WAGNER, Berlin, Germany, assignor to Radio Corporation of America, a Corporation of Delaware. Filed June 28, 1923. Serial No. 648,311. 2 Claims. (Cl. 250—36.)

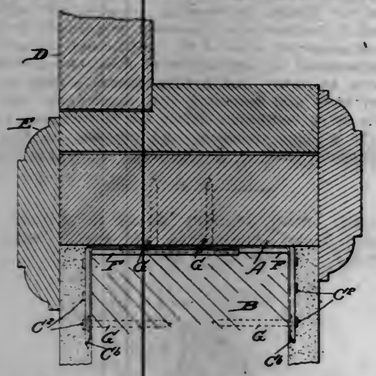


1. An arrangement for stabilization of oscillation generators comprising in combination an oscillation generator adapted to operate within a particular working frequency range, a primary load connected thereto which is substantially independent of said working frequency; a filter connected, between said load and said oscillation generator for passing the working frequency and excluding secondary harmonic or undesired frequencies produced by said generator whereby the load imposed on said generator assumes the characteristics of a load tuned to the working frequency, and a supplemental stabilizing load connected to said generator, said supplemental load consisting of an oscillation circuit for substantially excluding the working frequency and imposing an increased supplemental load on the generator at nearby frequencies.

1,486,507. ROPE CLAMP. FRANK E. WALKER, Elmhurst, N. Y. Filed June 15, 1922. Serial No. 568,471. 2 Claims. (Cl. 24—134.)

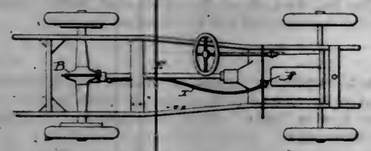
1. A rope clamping device of the class described comprising a block having a central partition extending from the top to the bottom thereof, said block being open on each side of the partition forming two compartments to permit of the passage of a flexible member therethrough and eccentrically pivoted means within each compartment and at the bottom thereof for cooperating with the partition so as to clamp said flexible member all in the manner and for the purpose specified.

1,486,508. TRIPOD. FRANK A. WEEKS, Plainfield, N. J., assignor to Laurence V. Coleman, Washington, D. C. Filed Apr. 6, 1921. Serial No. 459,074. 4 Claims. (Cl. 248—48.)



1. A triped having foldable legs, and means for positioning and controlling the spread of said legs and to be placed on the floor under the tripod, comprising three flexible chains connected together at their inner ends centrally below the tripod and thence extending outwardly to the lower ends of said legs, and means of ring character on the outer ends of said chains to receive and restrain the lower ends of said legs, said positioning and controlling means being a unitary structure separate from the tripod and resting on the floor and at the ends of the chains freely and detachably receiving and confining the extreme lower ends of the tripod legs and having no permanent connection therewith.

1,486,509. BUCK ANCHOR. JOHN A. WHITTAKER, Detroit, Mich. Filed Mar. 16, 1923. Serial No. 625,455. 9 Claims. (Cl. 72—98.)

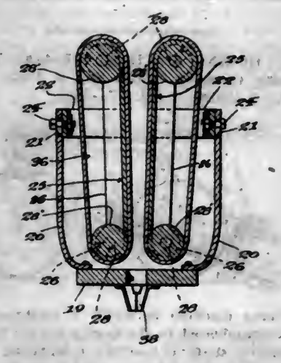


1. In a device of the character described, the combination of a pair of co-acting plates, each plate being bent at right-angles to its body portion, whereby when adjust-

ed in relation to each other they may be adapted to receive and overlap the sides and edge of walls of various

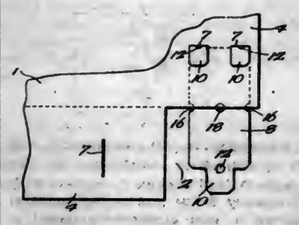
widths; and means for securing the plates to the buck of a door at any point along the buck or window casing, and at any point along the abutting edge of the wall.

1,486,510. INSTRUMENT DRIVE FOR MOTOR VEHICLES. FREDERIK G. WHITTINGTON, Evanston, Ill., assignor to Stewart-Warner Speedometer Corporation, Chicago, Ill., a Corporation of Virginia. Filed Mar. 17, 1922. Serial No. 544,649. 2 Claims. (Cl. 74—7.)



1. In a motor vehicle in combination with a differential mechanism and its casing, said casing having an aperture in the forward side of the bell which encompasses the main gear wheel, and the driving pinion carried by the intruded end of the propeller shaft, meshing with said main gear wheel; a second pinion on the propeller shaft within said bell of the differential casing; a closure for said aperture; a driven shaft journaled in said closure; a pinion on said driven shaft at the inner side meshing with said second pinion on the propeller shaft; the closure having at its outer side a terminal for connecting a flexible shaft casing, and the outer end of said driven shaft being adapted for coupling the rotating element on the flexible shaft.

1,486,511. DIVIDED LAST. GEORGE E. BELCHER, Orleans, Mass. Filed July 27, 1922. Serial No. 577,914. 2 Claims. (Cl. 12—136.)

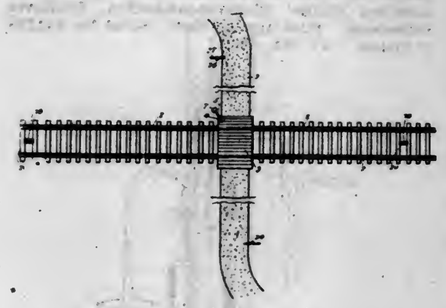


1. A divided last comprising a fore part and a heel part, said parts having curved contacting joint surfaces therebetween, a link pivotally connecting said parts, a spring pressed locking plunger having a rounded head and mounted in one of said last parts, the other last part having a locking bore rabbeted with said head and adapted to receive the same when the last is extended, said bore and locking plunger being disposed within the surfaces of continuous contact in all positions of the last parts and being offset laterally relative to said link.

1,486,512. PLANT-SETTING MACHINE. BUD W. BOON, Dardanelle, Ark. Filed Dec. 15, 1921. Serial No. 522,563. 2 Claims. (Cl. 111—3.)

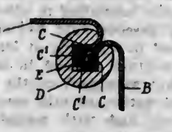
1. In a plant setting machine, a frame, a horizontal yoke suspended below the frame, furrow opening means on the yoke, vertical spring arms mounted on the arms of the yoke, horizontally disposed yokes mounted on the upper ends of the spring arms, upwardly directed members disposed between and carried by the horizontal yokes and diverging upwardly with respect to each other, rollers supported by the upper and lower ends of the diverging members, and endless belts engaged around said rollers.

1,486,513. BOX CORNER. PETER D. CRAIG, Chicago, Ill. Filed Mar. 3, 1923. Serial No. 622,477. 3 Claims. (Cl. 229—49.)



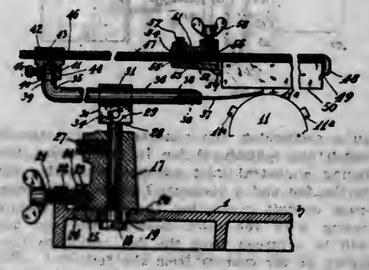
1. A box construction in which the box walls are of fibrous material and have slots formed in them near the corners, and a metallic corner plate adapted to pass around the corner of the box and having tongues at the ends adapted to penetrate the slots in the box walls for holding them in position, the metal being partially cut away between the ends of the plate and at the base of the tongues for thus defining the lines of bend and causing the plate to be self adjusting in the sense of bringing the tongues into register with the slots when the parts are assembled.

1,486,514. AUTOMATIC SIGNAL FOR RAILROAD CROSSINGS. BOYD B. CUNNINGHAM, Atchison, Kans. Filed Feb. 20, 1923. Serial No. 620,256. 4 Claims. (Cl. 246—125.)



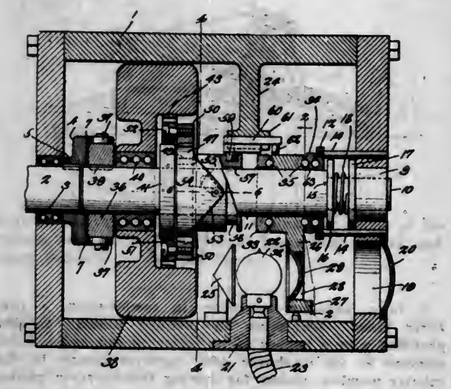
2. An automatic signal of the class described including a casing, spaced guide members in the top of said casing, trip members hingedly connected at their inner ends and movable between the said guide members, a reciprocating member connected to said trip members at the hinged connection therebetween, guides in the said casing for the said reciprocating member, a transverse shaft in the said casing, a rotatable member keyed

to said shaft and actuated by the said reciprocating member, a switch operated by said rotatable member,



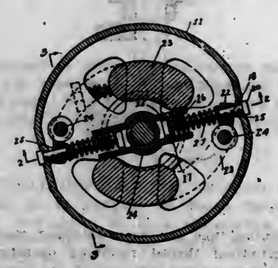
a visual signal operated by said switch, and a coil spring associated with the reciprocating member for returning the same to an operative position.

1,486,515. PIT TUB. ROBERT WILLIAM CUTHBERTSON, Chequerbent, near Bolton, England. Filed Aug. 22, 1921. Serial No. 494,445. 1 Claim. (Cl. 296—29.)



A corner joint for use in assembling plates to form a pit tub, comprising rounded inturned edges to said plates, an extension of each said inturned edges parallel to said plate, an integral lip offset from said extension, said extension and lip forming a V-shaped trough which with assembled plates produces a bead of square section, a clip around said bead and a filling within the bead tending to press the V-shaped portions outward against the clip.

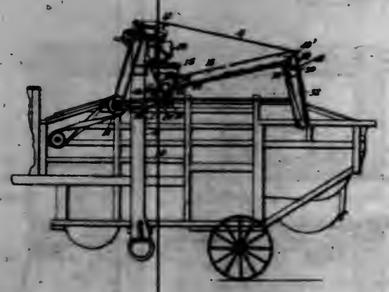
1,486,516. SHARPENING MACHINE FOR REAMERS AND THE LIKE. THOMAS C. DONAHUE, Pittsburgh, Pa., assignor of one-half to Walter L. Johnson, McKeesport, Pa. Filed Mar. 1, 1923. Serial No. 622,058. 3 Claims. (Cl. 51—69.)



1. In a sharpening machine of the character described, the combination of axially aligned center supports for supporting the tool to be sharpened; manually operated reciprocating sharpening means; a guide rod therefor; adjustable means for securing said sharpening means to said guide-rod; a rest-bar disposed rectangularly to the axis of said center supports having a horizontal and a vertical portion; a horizontally rotatable guide for said guide-rod mounted upon the vertical portion of said rest-bar; a vertically adjustable rest for said rest-bar; a flexible push-blade secured and positioned at the end of the horizontal portion of said rest-bar and means for moving said rest-bar at right angles to the axis of said center supports for imparting to the tool to be sharpened a fractional part of a revolution required for producing the desired relief on the cutting edge of said tool.

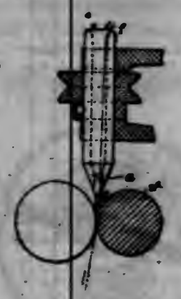
1,486,517. TRAFFIC SIGNAL FOR AUTOMOBILES. FREDERICK M. GRIETEN, Baltimore, Md., assignor of one-fourth to Charles T. Anderson, Baltimore, Md. Filed Dec. 14, 1922. Serial No. 606,849. 3 Claims. (Cl. 776—38.)

1. In a device of the class described, a shaft supported for rotation and for longitudinal movement; means for rotating the shaft and for imparting longitudinal movement thereto; a signal mounted for swinging movement; means for coupling the signal to the shaft frictionally, when longitudinal movement is imparted to the shaft; a movable detent coacting with the signal to hold the signal in adjusted positions; a fly wheel journaled on the shaft; a member rotatable on the shaft; means for connecting said member operatively with the detent; and mechanism for connecting the fly wheel to the shaft and to the rotatable member, said mechanism being automatically releasable from the shaft and the fly wheel when the speed of rotation of the fly wheel exceeds that of the shaft.



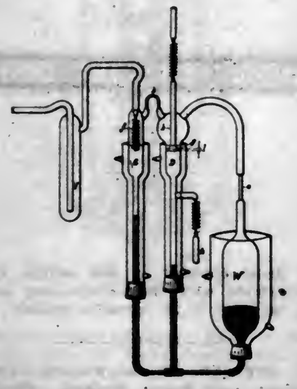
1,486,518. GOVERNOR. ARTHUR J. HARTLEY, Peoria, Ill., assignor to Hart Grain Weigher Co., Peoria, Ill., a Corporation of Illinois. Filed Apr. 7, 1921. Serial No. 459,417. 2 Claims. (Cl. 192—105.)

1. In a device of the class described, a driving shaft, a casing positively connected thereto, weight members pivoted within the casing, rod members slidably related to the inner ends of the weight members and engaging



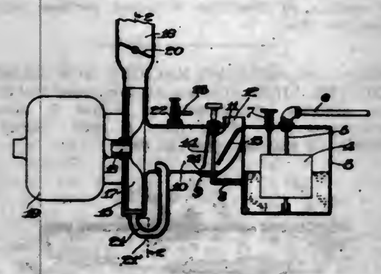
the casing, coil springs surrounding said rods and resisting outward movement of the weights, a driven member loosely mounted on the driving shaft and having a friction hub in connection therewith, a friction band surrounding said hub, and means for relating one of the weights with the friction band whereby movement of the weight will produce a tightening or releasing action of the friction band.

1,486,519. SWINGING CONVEYER. ARTHUR J. HARTLEY, Peoria, Ill., assignor to Hart Grain Weigher Co., Peoria, Ill., a Corporation of Illinois. Filed Feb. 3, 1919. Serial No. 274,762. 6 Claims. (Cl. 198—100.)



1. In a swinging conveyer, in combination, a conveyer reach, comprising an inclined tubular member provided with a hopper at its receiving end and a head-member at its discharge end, conveyer means in the tubular member, means for driving the conveyer means, means for supporting the tubular member at its receiving end in a pivotal manner means for supporting the outer end of the tubular member including a rod, its outer end connected with the tubular member and its rear end suitably supported and pivotally centered in line with and above the pivot member for the receiving end of the tubular member, a chute swivelly connected to the head-member of the tubular member, and a spout pivotally connected to the chute member.

1,486,520. SPINNING DEVICE. WALTER HENTSCHEL, Chemnitz, Germany, assignor to Sächsische Maschinenfabrik vorm. Rich. Hartmann, Aktiengesellschaft, Chemnitz, Germany. Filed Dec. 9, 1920. Serial No. 429,578. 2 Claims. (Cl. 19—154.)



1. A spinning tube for yarn spinning machines having a longitudinal thread receiving opening and provided with means at one terminal of the opening responsive to rotation of the tube to produce an air current directed from the entering point toward the exit point of the thread whereby to automatically draw the thread through the tube.

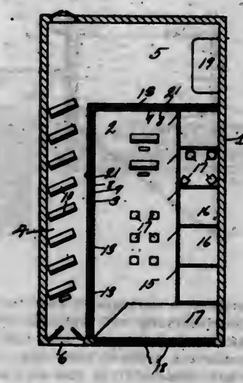
1,486,521. METHOD OF SEPARATING GASES FROM A MIXTURE THEREOF. GUSTAV LUDWIG HERTZ, Eindhoven, Netherlands, assignor to Naamlooze Vennootschap Philips' Gloeilampenfabrieken, Eindhoven, Netherlands. Filed Apr. 17, 1923. Serial No. 632,798. 10 Claims. (Cl. 183—115.)

1. A method of separating the components of a gas-mixture by diffusion consisting in allowing a gas-mixture to diffuse into a gaseous fluid flowing with a predetermined velocity and in removing at least one of the components of the mixture diffused in said streaming gaseous fluid together with part of the latter from places where the concentration of said components to be collected is relatively high with regard to the concentration of the other components.

1,486,522. CARBURETOR. WALTER A. INMAN, Waukegan, Ill. Filed Aug. 26, 1920. Serial No. 406,175. 3 Claims. (Cl. 265—79.)

2. In a carburetor, the combination of a fan casing, a power-driven centrifugal fan in said casing, the casing having a central inlet passage conducting air and fuel to the fan and a tangential discharge passage, and a by-pass conduit connecting the outer portion of the fan casing with the inlet passage, whereby unmixed fuel will be returned from the fan casing to the inlet passage by an air current from the fan.

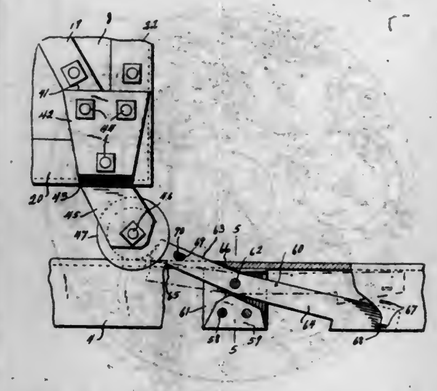
1,486,523. OIL-WELL APPARATUS. FRANCIS B. JACKSON, Tulsa, Okla. Filed June 30, 1922. Serial No. 571,856. 4 Claims. (Cl. 103—10.)



1. A device of the kind described, comprising a casing section adapted for closely fitting within a well, tubing extending through said section and having a gas tight

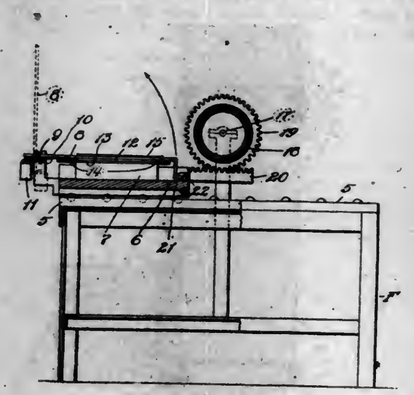
connection with said section, said tubing including a portion constituting a pump barrel and having a valve seat

immediately below the pump barrel section and having lateral perforations and a standing valve adapted to seat in said valve casing and close said openings.



1,486,524. STORE ARRANGEMENT. BENJAMIN HIRAM JEFFERSON, Niles, Mich. Filed July 16, 1923. Serial No. 651,743. 5 Claims. (Cl. 20—1.)

1. The combination with a store, the interior of which is normally one room, of means whereby said store may be converted into a main display portion with a passage leading from the front of the store to a room at the rear of the store.

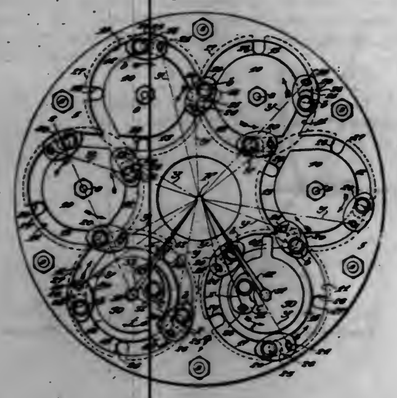


1,486,525. CAR-DOOR HANGER AND DOOR. MERRELL E. JONES, Prescott, Ariz., assignor of one-half to William P. Hassett, Ashfork, Ariz. Filed Feb. 2, 1922. Serial No. 533,613. 4 Claims. (Cl. 16—87.)

1. In combination with a car door mounting including tracks located above and below a door opening and further including a door carrying rollers traveling along the tracks, latching means comprising an elongated latch bar pivoted intermediate its ends within the lower track and having one end projectable through an elongated slot in the track, the other end being weighted whereby the latch bar will normally gravitate into operative position

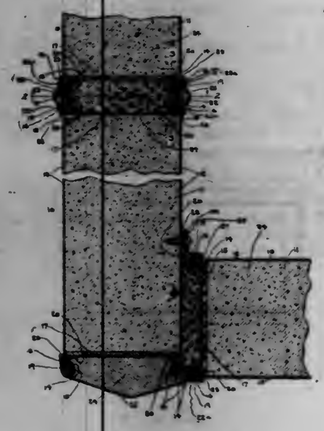
with its active end extending in the path of travel of the rollers, said latch bar extending longitudinally of and being enclosed within the track.

1,486,526. METHOD OF AND APPARATUS FOR PRODUCING TAX RECORDS AND TAX BILLS. JOHN J. LANE, St. Louis, Mo. Filed Mar. 28, 1923. Serial No. 628,337. 4 Claims. (Cl. 101—281.)



1. The method of producing tax-records and tax-bills comprising the assembling to type arranged to imprint a tax-record page; then printing a tax-record page therefrom; then printing individual tax-bills from portions of said type.

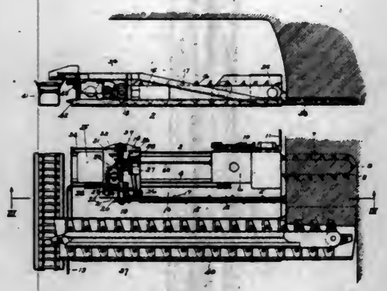
1,486,527. BRAIDING MACHINE. MICHAEL J. LARKIN, Pawtucket, R. I., assignor to Rhode Island Textile Company, Pawtucket, R. I., a Corporation of Rhode Island. Filed Aug. 21, 1922. Serial No. 583,107. 10 Claims. (Cl. 96—8.)



1. In a braiding machine, the combination with a plurality of bobbins, of means to move the bobbins in opposite directions in sinuous courses to cause them to intermesh the strands delivering therefrom, a supplemental bobbin mounted to revolve about an axis located between

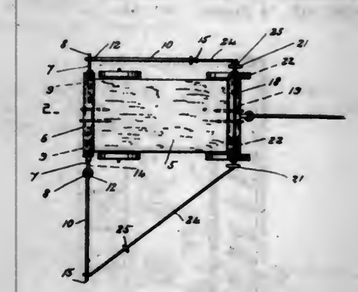
the opposite courses of movement of the main bobbins, and means to revolve said supplemental-bobbin about said

axis during the passage of a main bobbin whereby to intermesh the extra strand therefrom with the other strands of the fabric.



1,486,528. OVEN. GEORGE R. LAWRENCE, Chicago, Ill. Filed Feb. 3, 1922. Serial No. 533,860. 15 Claims. (Cl. 72—16.)

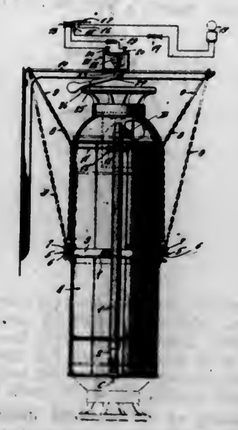
1. A section or unit for a wall of an oven comprising a casing, non-heat-conducting material between the sides of the casing and perforated tie plates transversely uniting said sides at edges thereof.



1,486,529. MECHANISM FOR MINING COAL. NILS D. LEVIN, Columbus, Ohio, assignor to The Jeffery Manufacturing Company, Columbus, Ohio, a Corporation of Ohio. Filed Mar. 31, 1921, Serial No. 457,363. Renewed Aug. 6, 1923. 7 Claims. (Cl. 262—9.)

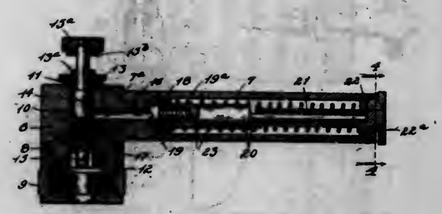
1. In a mechanism for breaking coal out of the solid, the combination with a main frame adapted to horizontal movement along the face of the vein, cutting mechanism attached to said main frame and adapted to form a horizontal kerf at the base of the vein, means to bodily move said main frame to cause said cutting mechanism to engage the coal to cut it, cutting mechanism mounted upon said main frame and movable relative thereto, means to

move said movable cutting mechanism relative to the main frame to form a vertical kerf in the coal above said horizontal kerf, and means carried by said movable cutting mechanism into said vertical kerf to exert pressure transversely thereof to dislodge the coal adjacent thereto.



1,486,530. LAND MARKER. THOMAS PATRICK LONG, Harmon, Ill. Filed Aug. 7, 1922. Serial No. 580,164. 1 Claim. (Cl. 97—230.)

In a land marker, a carriage, a rear tube secured to the carriage, longitudinally and circumferentially adjustable stub shafts mounted in the rear tube and having downwardly projecting arms at their ends, marker arms pivoted to the said arms, a front tube also secured to the carriage, a rod circumferentially adjustable in the front tube and provided with upwardly projecting arms at its ends having guide eyes at their ends, and a flexible connection slidable in the said guide eyes and having its ends secured to the marker arms.

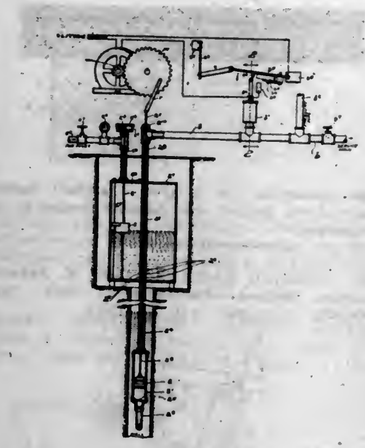


1,486,531. FIRE EXTINGUISHER. GEORGE P. MCDONNELL, St. Louis, Mo. Filed Oct. 1, 1919. Serial No. 327,647. 2 Claims. (Cl. 169—27.)

1. An automatic fire extinguisher comprising a chemical-mixing receptacle, a plurality of flexible suspension means secured to said receptacle whereby said receptacle is tiltably supported, a fusible means encircling said flexible suspension means above the center of gravity of said receptacle and retaining portions of said flexible means against the body of said receptacle, said flexible suspension means diverging upwardly from said receptacle above the encircling fusible means, and a support to which the divergent flexible means is secured, whereby

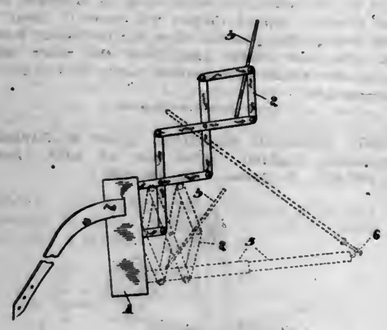
said receptacle is permitted to drop relatively to said support and be inverted when said fusible means is broken.

1,486,532. PNEUMATIC-TIRE PRESSURE GAUGE. MICHAEL J. MCANENY, Denver, Colo. Filed Oct. 18, 1922. Serial No. 595,335. 4 Claims. (Cl. 73—111.)



1. A device for ascertaining the amount of air-pressure in a pneumatic tire, comprising a hollow cylinder having a nozzle on its forward end and a closure on its rear end, there being a passage extending through the nozzle, a plunger in said passage provided with means for sealing the outer end of the passage by depressing the plunger, there being an air-passage connecting said plunger-containing passage with the cylinder and an air-passage in the nozzle connecting with each other said two first-named passages, a piston having a stem in said cylinder and spring-pressed to normally seat the piston against the adjacent end of the air-passage thereto, and a scale-bar in the cylinder, operatively engaged by said stem to move said bar to expose to view the pressure-indication thereon by air-pressure against the spring-resisted piston.

1,486,533. WATER-SUPPLY SYSTEM. GLENN MUFFLY, Cleveland Heights, Ohio. Filed June 22, 1922. Serial No. 570,069. 3 Claims. (Cl. 103—25.)



1. A water supply system comprising in combination an air-tight storage tank, a pump cylinder, a piston within said cylinder, pump valves for said cylinder and

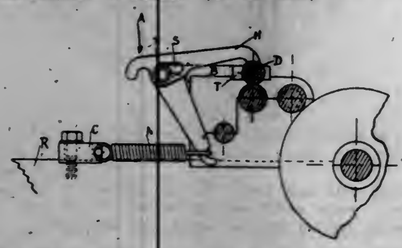
piston respectively, a pipe connecting said pump cylinder with said tank, a rod passing through said pipe and con-

necting with said piston for the purpose of actuating same, a water outlet near the bottom of said tank, and a water delivery pipe connected with said outlet.

1,486,534. CARRIER FOR MIRRORS AND THE LIKE. NEIL D. MUNN, Dresden, Ontario, Canada. Filed Dec. 16, 1922. Serial No. 607,432. 6 Claims. (Cl. 45—97.)

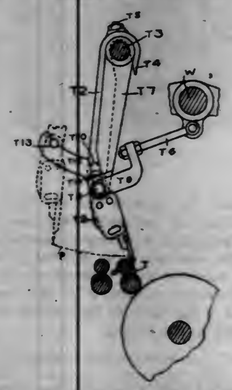
1. In a support for mirrors and the like, the combination of a casing; an extensible member connected at one end to said casing; a mirror supported adjacent the other end of the member, said member, when retracted, adapted to be received with said mirror in the casing; and a post detachably supported on said base, said post being formed of a plurality of detachable sections adapted to be received in the casing.

1,486,535. HEAT-INSULATING PLASTER BOARD. TREADWAY B. MUNROE, Forest Glen, Md. Filed Apr. 21, 1923. Serial No. 633,764. 6 Claims. (Cl. 72—124.)



1. A heat insulating wall board composed of a heat insulating fibrous bagasse supporting member adapted to

bond with asphalt and pitch like materials, but not adapted to satisfactorily bond with cement and con-

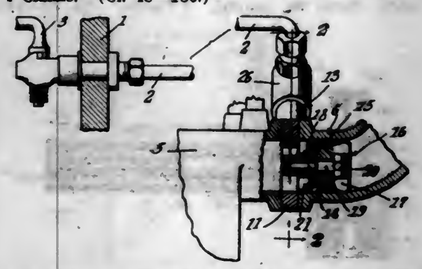


crete like substances, and a layer of asphalt material mixed with finely divided rock material bonded to said bagasse member.

1,486,536. COMBING MACHINE. JOHN W. NASMITH, Manchester, England. Filed Mar. 21, 1923. Serial No. 626,659. 2 Claims. (Cl. 19—120.)

1. Apparatus for applying pressure to the top rollers of textile machines, said apparatus comprising a lever operating in a fulcrum pin on the machine framing and bodily movable in relation to said fulcrum pin, and tensioning means applied to one extremity of the lever to apply pressure at the other extremity thereof around the fulcrum to the roller, the lever being so arranged that manual pressure applied thereto will move it about its fulcrum and in that position allow the tensioning means to pull the lever bodily away from the roller being weighted, the whole lever moving bodily in relation to its fulcrum pin.

1,486,537. COMBING MACHINE. JOHN W. NASMITH, Manchester, England. Filed Mar. 21, 1923. Serial No. 626,661. 5 Claims. (Cl. 19—120.)



2. In a combing machine, a top comb resting on an independent centre, means for rocking the said comb, means for lifting and drawing the comb forward clear of the detaching rollers, and a support on which the comb may rest when so drawn forward.

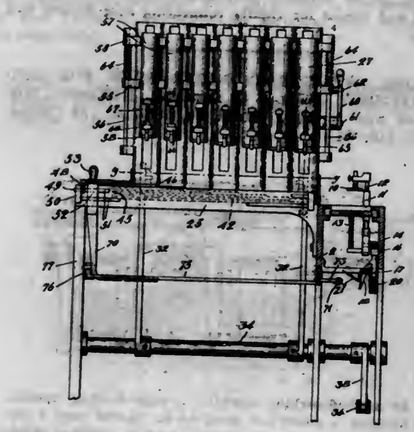
1,486,538. PRUNING IMPLEMENT. BENJAMIN F. NIGHTLINGER, Washington, D. C. Filed Mar. 2, 1922. Serial No. 540,593. 5 Claims. (Cl. 30—11.)

4. In a device of the character described, a cutter member having a flat side or face, a blade movable over and upon the flat side or face of the cutting member, said blade having a convex cutting edge, and an extension at the outer end of said blade having an edge adapted to be disposed at an acute angle with respect to the associated cutting edge of the blade.

1,486,539. MIXING DEVICE. JAMES K. NORVELL, Wartrace, Tenn. Filed Aug. 24, 1923. Serial No. 659,137. 4 Claims. (Cl. 48—180.)

1. A device of the class described comprising a mixer for insertion between the carbureter and intake manifold of an internal combustion engine, said mixer having grooves and orifices arranged to intersect each other one to supply fuel and the other air and spiral blades on said mixer to impart a whirling motion to the mixture delivered by the mixer.

1,486,540. AUTO SAFETY DEVICE. SADAMA ORIOKA, Honolulu, Territory of Hawaii. Filed Oct. 5, 1923. Serial No. 666,782. 2 Claims. (Cl. 293—26.)



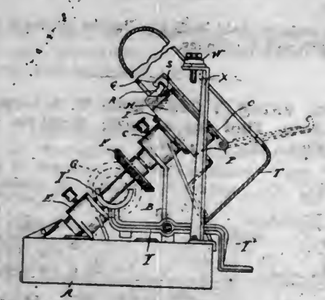
1. The combination with an automobile including a chassis having longitudinally extending side beams provided with guide ways, of a safety appliance therefor including a frame slidably and resiliently mounted in said guide ways, a fender pivotally secured to the forward end of the slideable and resiliently mounted frame, and a hand lever for raising and lowering the fender.

1,486,541. SECTIONAL WALL. HANS OTTOSSON-ELIOT, Stockholm, and MANNE JÖNSSON, Islinge, Lidingo, Sweden, assignors to Aktiebolaget Industribostader, Stockholm, Sweden, a Corporation. Filed Aug. 6, 1921. Serial No. 490,422. 4 Claims. (Cl. 20—4.)

1. A wall section for house building comprising a frame coated with boards, the edges of the frame extending entirely around and beyond the coating, thus providing marginal spacings and fillets adapted to be applied in the spacings when the wall sections are assembled the surface of said fillets being substantially flush with the coating substantially as set forth.

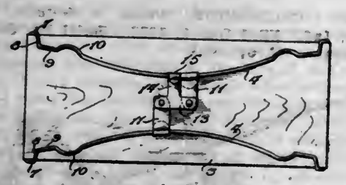
1,486,542. HEEL-LIFT CEMENTING AND ASSEMBLING MACHINE. ERVIN L. PAGE, Georgetown, Mass., assignor to Page Machine Co., Inc., Haverhill, Mass., a Corporation of Massachusetts. Filed Dec. 7, 1914, Serial No. 875,844. Renewed July 20, 1923. 58 Claims. (Cl. 12—50.)

1. In a heel-making machine, a series of superimposed lift-assembling plates, each plate having a lift-receiving recess in its front end, and a lift supporting face in the rear thereof, so arranged that a lift supported on the face of one plate will be held in the recess of the next above it, and said plates being forwardly movable to bring the recesses of the different plates into approximate register.



1,486,543. SULKY-PLOW ATTACHMENT. BENJIMAN PORATH and JAMES W. MCMILLAN, Buffalo, Wyo. Filed Jan. 30, 1923. Serial No. 615,895. 2 Claims. (Cl. 97—82.)

1. An attachment for converting a sulky plow into a gang plow, comprising a beam carrying a share at its rear end, a bracket beam connected to the forward end of said beam and attached to the corresponding end of the sulky plow beam, a bracket connected to the rear end

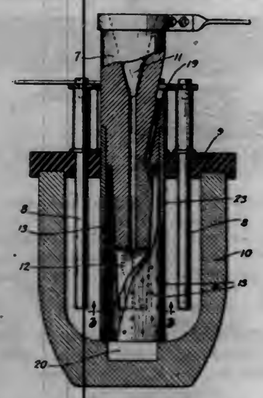


of the sulky plow beam and having a laterally offset rearward extension, and means for attaching the first-mentioned beam intermediate its ends to said extension.

1,486,544. CENTRIFUGAL CASTING APPARATUS. JOHN A. RATHBONE, Detroit, Mich. Filed Feb. 27, 1922. Serial No. 539,415. 12 Claims. (Cl. 22—65.)

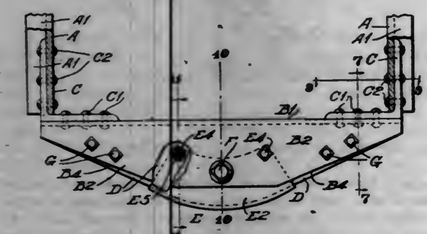
1. An apparatus for centrifugally forming castings, comprising a revoluble annular mold having hollow walls, a hollow shaft on which said mold is mounted, and means for introducing a cooling fluid into said hollow mold through said hollow shaft and for forcing the heated fluid and vapor axially outward through said shaft by centrifugal action.

1,486,545. LID FASTENER. WILLIAM E. REEDER, Hot Springs, S. Dak. Filed Feb. 21, 1923. Serial No. 620,405. 4 Claims. (Cl. 217—56.)



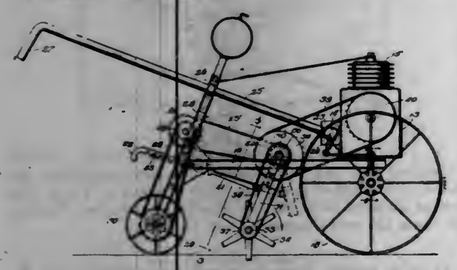
1. A lid fastener for boxes comprising arms adapted to extend over the lid, bridging members connecting the arms, and adapted to engage fixed portions of a box, and means disposed between and connecting the arms whereby to draw the same together over the lid.

1,486,546. ELECTROLYTIC SEPARATION. BRODDE E. F. RHODIN, Atlantic City, N. J. Filed May 26, 1922. Serial No. 563,763. 11 Claims. (Cl. 204—19.)



1. In electrolytic separation, an electrolytic cell having electrodes of different polarity separated by a parti-

tion of insulating material constructed with electrolytic passages therethrough, each inclined upwardly at its

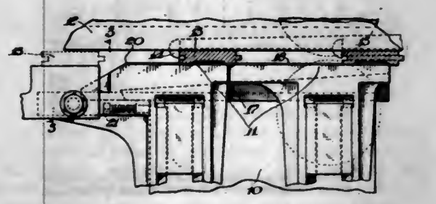


opposite ends to hold back the lighter products released at the different electrodes.

1,486,547. RAILWAY CAR. HUGH W. SANFORD, Knoxville, Tenn. Filed Aug. 31, 1923. Serial No. 660,416. 35 Claims. (Cl. 105—364.)

3. A composite end sill for railway-cars, said sill comprising a plate metal channel member formed to present an upright back face and to present upper and lower horizontal flanges directed away from the car frame, and a filling member located between and reaching outward beyond said flanges, substantially as described.

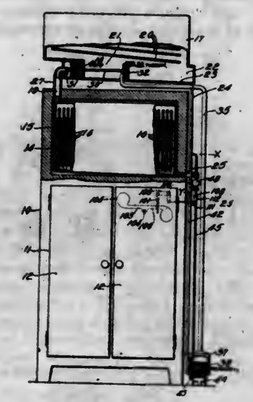
1,486,548. CULTIVATOR. PETER N. SCHRUM, Hammond, Ind. Filed Dec. 8, 1922. Serial No. 605,605. 8 Claims. (Cl. 97—40.)



1. A cultivator, including a main frame, supporting wheels carried by the main frame, a motor mounted on the main frame, a counter-shaft mounted on the main frame, a depending tool frame rotatably mounted on the counter-shaft, a shaft rotatably mounted in the depending tool frame, cultivator tools mounted on said last-mentioned shaft, and means for driving said shaft from said motor.

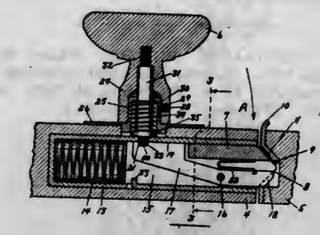
1,486,549. PIPE JOINT. JOHANN SCHUETTE, Zeesen-Konigs Wusterhausen, near Berlin, Germany, assignor, by mesne assignments, to American Investigation Corporation, New York, N. Y., a Corporation of Maryland. Filed Feb. 20, 1922. Serial No. 537,667. 15 Claims. (Cl. 287—129.)

5. A pipe joint comprising divided or segmental sleeves each secured to the adjacent ends of the sections of a pipe, flanges projecting from each of said segmental sleeves, plates between said flanges and spacing them apart and means for rigidly connecting said flanges and plates.



1,486,550. STATIONARY KNIFE EDGE FOR END MATCHERS. WILLIS S. SHERMAN, Milwaukee, Wis. Filed Apr. 1, 1919. Serial No. 286,715. 14 Claims. (Cl. 144—91.)

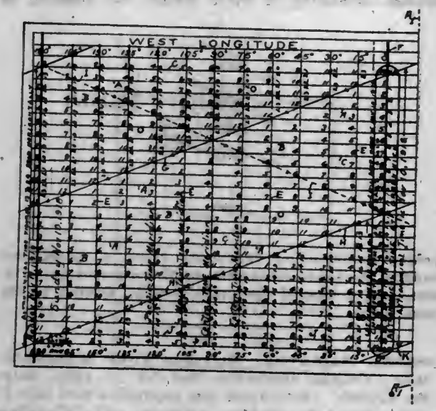
1. In a woodworking machine, a work-feeding passageway forming a guide for work as it travels past a cutting tool, comprising a fixed guide surface, yielding means pressing the work against the fixed guide surface, and an opposing stationary scoring guide spaced from the guide surface a distance less than the thickness of the work to score the work.



1,486,551. REFRIGERATING APPARATUS. CHARLES G. SMITH, Cambridge, Mass., assignor, by mesne assignments, of one-half to Laurence K. Marshall, Somerville, Mass. Filed Jan. 8, 1918. Serial No. 210,841. 9 Claims. (Cl. 62—4.)

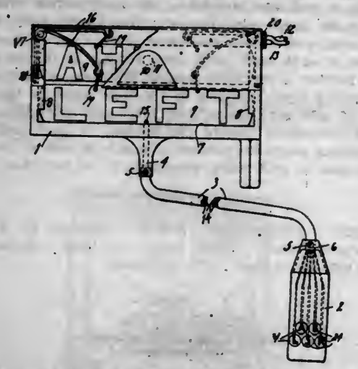
9. Refrigerating apparatus including an evaporator for a cooling liquid of given density, a boiler for a liquid of greater density than said cooling liquid, means for supplying heat to said boiler, a condenser, means whereby vapor from the denser liquid propels the vapor of the cooling liquid into said condenser, said last means discharging the vapor of the denser liquid into said condenser, a discharge conduit from said condenser to said boiler, said conduit having an upright portion in which the denser liquid collects at the bottom with the cooling liquid thereabove, an outlet for the cooling liquid above the level of the denser liquid, said conduit including a reservoir in series between the condenser and boiler,

a pair of elastic coils in said conduit connected respectively to the upper and lower portions of said reservoir for supporting said reservoir in vertically movable relation to said boiler, and means responsive to variations in the level of said reservoir with variations in the pressure of said boiler to automatically vary the heat supplied to said boiler.



1,486,552. LATCH. FRANK M. SWANSON, Minneapolis, Minn. Filed Nov. 25, 1922. Serial No. 603,180. 6 Claims. (Cl. 292—150.)

4. In a device of the character described, a cylinder, a bolt slidably mounted therein, a bolt releasing member mounted in the bolt, a hand engaging member mounted near the cylinder and adapted to move toward and away from the same, said member having means normally engaging said bolt releasing member when in proximity to said cylinder.



1,486,553. SIMPLIFIED TIME CHART. CHARLES MITCHELL THOMAS, Wytheville, Va. Filed Feb. 28, 1922. Serial No. 539,850. 1 Claim. (Cl. 283—1.)

A simplified time chart, of horizontal lines forming spaces representing the twenty-four hours of a day, a vertical sero dividing line separating chronometer and astronomical time and having meridional lines increasing to the right and left therefrom, diagonal lines intersecting said horizontal and vertical lines consisting of a middle midnight line and two noon path lines on each side thereof, of noon lines horizontally disposed at the top and

bottom of the chart, and designating numbers readable vertically and horizontally at the intersection of the said vertical and horizontal lines.

1,486,554. AUTOMOBILE SIGNAL. FRED WARREN WELLS, Jr., Springfield, Mass., assignor of one-half to William F. Sorenson, Springfield, Mass. Filed Oct. 5, 1922. Serial No. 592,480. 2 Claims. (Cl. 116—44.)

1. The combination, in an automobile signal, with a perforated casing having approximately vertical passages in the ends thereof, a plate arranged to slide up and down in said casing, transverse pins at the ends of said casing adjacent to said passages, and springs coiled around said pins and extending therefrom in one direction into said passages and in the other direction inwardly, said plates being supported from the inner terminals of said springs, and normally retained thereby out of registry with the perforation in said casing, of means to actuate said plate, against the resiliency of said springs, into registry with said perforation.

1,486,555. AIR-SUPPLY DEVICE FOR USE WITH CARBURETORS. ADOLPH WIKFELD, North Bergen, N. J. Filed June 28, 1923. Serial No. 648,352. 1 Claim. (Cl. 48—180.)

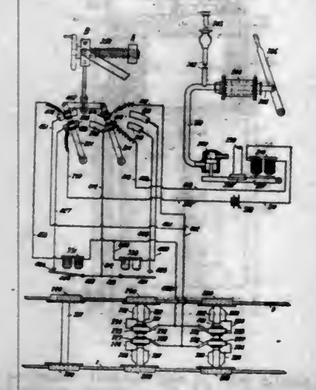
A device for use in connection with a carburetor, comprising a housing having a bore, and a surrounding groove formed upon its inner portion and in communication with the atmosphere and constituting an air supply chamber,

a sleeve valve slidable within the bore of the housing and serving to cover and uncover the air supply chamber, said sleeve valve being provided upon its rear end with tapered openings decreasing in width toward the direction of

opening movement of the sleeve valve, a spring surrounding the sleeve valve and opposing its opening movement, and a tapered apertured element secured to the sleeve valve.

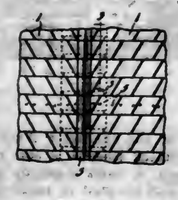
1,486,556. RADIATOR. MEINHARD WITTE, Minneapolis, Minn. Original application filed Oct. 11, 1920, Serial No. 416,083. Divided and this application filed May 8, 1922. Serial No. 559,354. 2 Claims. (Cl. 257—125.)

1. In a radiator structure, the combination with an upper tank and a plurality of tubes having their upper ends terminated approximately at the bottom of the front portion of said tank, said tank having at its back and lower portion a centrally located inlet, and a circulation distributing plate attached at its upper edge to the back plate of said tank above said inlet and extending from thence downward toward the bottom of said tank and terminating above the bottom of said tank and at the rear of the ends of said tubes, substantially as described.



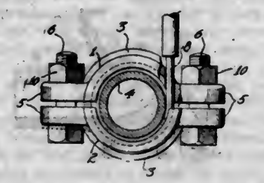
1,486,557. TIRE-CHAIN HOOK. JOSEPH D. YOUNG, Newport, Wash. Filed Sept. 11, 1923. Serial No. 662,127. 3 Claims. (Cl. 24—68.)

1. The combination with the end links of a chain, of a one piece connecting member between said links attached at one end to one of said links for swinging movement and having intermediate its ends an inwardly directed notch extending obliquely to the longitudinal axis of the member in which the other link is adapted to detachably seat, the member also having a notch formed therein for receiving the opposite end of the link from which is seated in said obliquely extending notch.



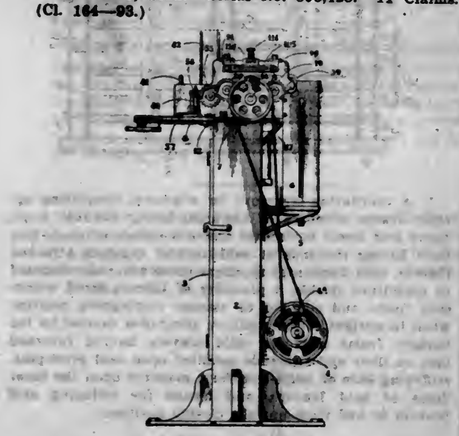
1,486,558. CONTROL OF RAILWAY TRAINS. ARTHUR REGINALD ANGUS, London, England. Original application filed Sept. 5, 1918, Serial No. 252,779. Divided and this application filed Mar. 25, 1922. Serial No. 546,795. 9 Claims. (Cl. 246—4.)

1. Train-controlling apparatus comprising on the track switching means adapted to be given different positions according to the directions in which a train is to be allowed to run, means adapted to cause the passage, from running rails on one side of the track to running rails on the opposite side through opposite train wheels and their conductively connecting axles, of electricity of two different frequencies in correspondence with said different positions of said switching means respectively, and on a train an electro-responsive device whose movable portion is adapted to occupy a line-clear or a danger position according to the condition as to energization of said electro-responsive device, a direction-corresponding part adapted to occupy different positions in accordance with opposite directions of running of said train, a receiving portion adapted to have produced in it by the passage of electricity as afore-



said through said axles variations of electric potential corresponding to the frequencies of the electricity so passing, and co-operating means adapted to co-operate with said direction-corresponding part to enable the occurrence of said variations of potential in said receiving portion to cause a condition as to energization of said electro-responsive means corresponding to the line-clear position of said movable portion but only in the case of correspondence between the frequency of the variations of potential in said receiving portion and the position of said direction-corresponding part.

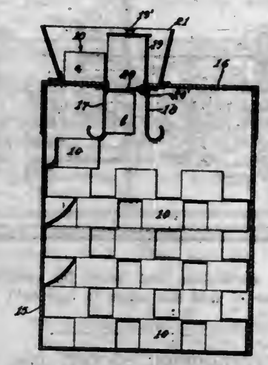
1,486,559. ROOF-VALLEY SHINGLE. FRANK BASEL, Minneapolis, Minn., assignor of one-half to Patrick Halloran, Minneapolis, Minn. Filed June 14, 1922. Serial No. 568,167. 2 Claims. (Cl. 108—24.)



1. The combination with a roof valley structure comprising a gutter of sheet metal extending longitudinally of said valley, a series of overlapped shingles extending along each side of said gutter and superposed thereon, of a series of overlapped members bent along a longitudinal center line and having diverging top edges, which members are inserted under and in contact with the edge portions of the shingles adjacent each side of said gutter and are superposed in overlapping relation on said gutter whereby a renewed gutter is formed by said overlapping members without removing the shingles or the first mentioned gutter.

1,486,560. GROUNDING CLAMP FOR ELECTRIC WIRES. ROBERT A. BECKER, Poughkeepsie, N. Y. Filed June 22, 1921. Serial No. 479,612. 2 Claims. (Cl. 173—273.)

2. A grounding clamp including coacting members each comprising a body-portion; extensions disposed on each body-portion for the reception of securing means; and securing means including a clamping instrumentality operably associable with the extensions and adapted to draw the members together into engagement with the object to which they are to be secured; each of the co-acting members being provided with an inturned flange arranged at opposite sides thereof to constitute, with its coacting member, a housing for a portion of a grounding wire, said flanges also constituting a stop to limit outward movement of a portion of a grounding wire when said wire is coiled around an object between the coacting members, one of said members being provided with an opening for the insertion of the grounding wire.

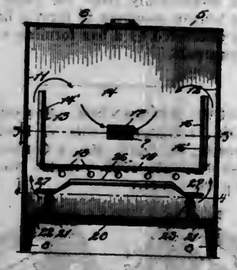


1,486,561. SELF-FEEDING GANG PUNCHING MACHINE. FERNAND BÉLISLE, Ottawa, Ontario, Canada. Filed Oct. 9, 1922. Serial No. 593,428. 11 Claims. (Cl. 164—93.)

1. In a perforating machine of the class described, a card holder, means for feeding the cards forward one by one in position to be perforated, a perforator comprising a die-plate, a plurality of punches mounted to move vertically in a punch holding plate positioned over said die-plate, means over said punch plate to arrest the vertical movement of the punches selected to perforate the card, means to arrest the travel of the card while being perforated and means to lead the card to a stacking receptacle.

1,486,562. DISPENSING APPARATUS FOR CONFECTIONS. CHARLES B. BEMIS, Athol, Mass. Filed Apr. 19, 1922. Serial No. 555,590. 6 Claims. (Cl. 221—8.)

2. In combination, a chain of pockets adapted to receive ice cream bars, a container for receiving said chain of pockets, a seat through which the pockets may be passed to the outside of the container, said seat comprising a wall depending into the container, a compartment slidable

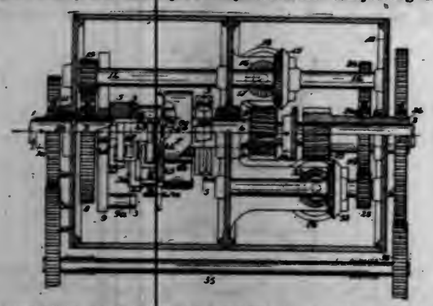


along said wall, and an upwardly swinging trap door in the bottom of said compartment, said door adapted to support one of said pockets.

1,486,563. COMPOSITION OF MATTER FOR USE AS A LUBRICANT FOR VEHICLE SPRINGS. PETER H. BERGEN, Goessel, Kans. Filed Dec. 27, 1920. Serial No. 433,400. 1 Claim. (Cl. 87—9.)

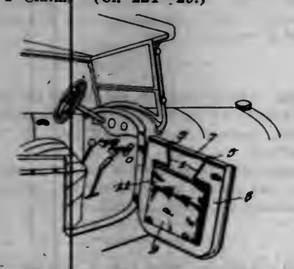
A composition of matter for use on vehicle springs and the like, including heavy mineral cup grease, two parts, whiting one part and a perfume.

1,486,564. RANGE. WILLIAM A. BUSIEK, Belleville, Ill. Filed Oct. 16, 1922. Serial No. 594,770. 3 Claims. (Cl. 126—39.)



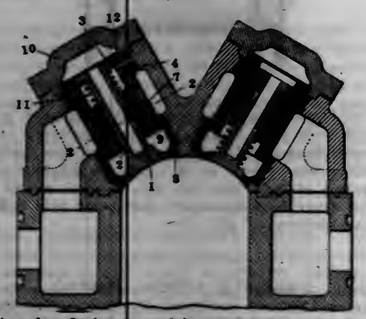
1. In a range, an oven, said oven positioned in said range so as to form flues in said range, a source of heat positioned beneath said oven, baffle extensions positioned on said source of heat so as to deflect heated air from the source of heat into the flues formed by the oven and the range, and separately underneath said baffle extensions underneath said oven.

1,486,565. VARIABLE-SPEED GEARING. WILLIAM THOMAS CARLING, Guildford, England. Filed Mar. 9, 1923. Serial No. 623,928. 10 Claims. (Cl. 74—34.)



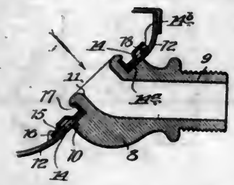
1. A variable speed gearing, comprising driving and driven shafts, alternative means for transmitting power between said driving and driven shafts, an epicyclic gear mechanism forming part of one of said alternative transmitting means, said epicyclic gear mechanism including

two co-axial sun gears and planetary members connecting said sun gears, said planetary members comprising an



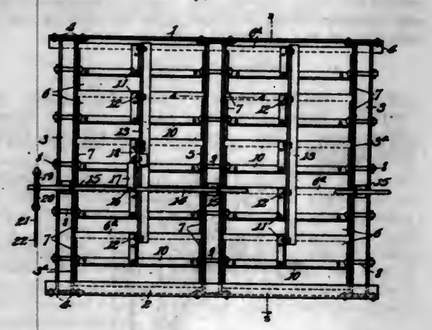
irreversible mechanism, and means for applying driving power to one of said sun gears to lock said irreversible mechanism.

1,486,566. AUTOMOBILE POCKET. CARL F. CRECELIUS, Falmouth, Ky. Filed Feb. 21, 1923. Serial No. 620,545. 1 Claim. (Cl. 224—29.)



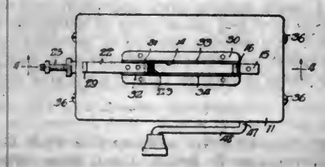
A bag supporting member comprising a horizontal bar having its ends bent inwardly and extending upwardly from the inner ends of the bent-in members and bent outwardly and downwardly from the plane of the horizontal bar and bent-in members to form a hook, the hook members being connected by a bar forming a continuation of the hook terminals.

1,486,567. VALVE MECHANISM. EDWARD F. DEACON, St. Louis, Mo., assignor to Gus V. Brecht Butchers' Supply Company, St. Louis, Mo., a Corporation of Missouri. Filed July 25, 1922. Serial No. 577,438. 3 Claims. (Cl. 251—144.)



1. A valve device comprising a valve having its stem provided with an integral abutment, a one piece valve cage, a multipart sleeve therein forming a bearing for the valve stem, and a pin passing through the cage wall and through recesses in the sleeve parts to hold said parts in position.

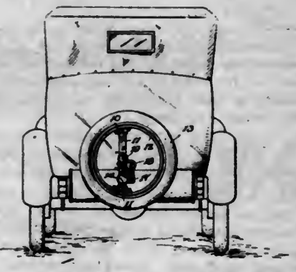
1,486,568. ELECTRIC-LAMP SUPPORT. LOUIS H. DEBS, Chicago, Ill., assignor of one-half to Albert Cohn, Chicago, Ill. Filed May 3, 1922. Serial No. 558,191. 5 Claims. (Cl. 240—78.)



1. An electric-lamp fixture comprising, in combination, a vertical standard, a cup-shaped member carried by said standard and having an angular wall, an incandescent electric-lamp carrying nipple, and means for connecting said nipple to the wall of said cup-shaped member in simultaneous rotary and vertically adjustable relation thereto.

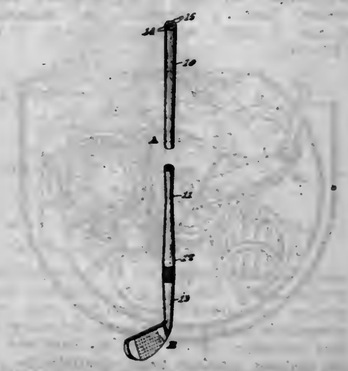
1,486,569. METALLIC VENTILATING SHUTTER FOR WINDOWS. GEORGE DINIACO, Steubenville, Ohio. Filed Apr. 3, 1922. Serial No. 549,016. 4 Claims. (Cl. 189—62.)

1. A ventilating structure for windows, comprising upright frame members of inwardly-facing channel form, upper and lower horizontal frame members of angle-iron form having the ends of said upright members attached thereto, said horizontal members being reversely disposed to constitute shields, a plurality of louvers fitted within said frame and adapted to assume overlapping relation when in upright closed position, pivot-pins carried by the upright frame members, said louvers having inturned lugs on their opposite ends mounted upon said pivot-pins, stiffening bars of angle-iron form mounted upon the inner faces of said louvers, and means for swinging said louvers to and from upright closing position.



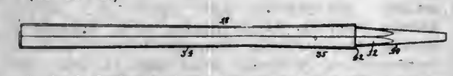
1,486,570. SHARPENING DEVICE. BENJAMIN FINE and DANIEL FINE, Chicago, Ill. Filed Dec. 18, 1922. Serial No. 607,505. 4 Claims. (Cl. 120—94.)

4. In a sharpening machine of the class described, the combination of a housing having a longitudinal slot in its top for the insertion of chalk to be sharpened, guide rods extending longitudinally in said housing, a carriage



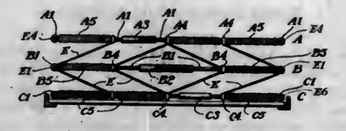
on said guide rods, crank mechanism for reciprocating said carriage on said rods below said slot, knife structures on said carriage having vertical blades extending towards each other with opposed edges cut on the bias in conformity with the shape of the chalk to be sharpened, springs behind one of said frames for forcing it towards the other frame whereby the inserted chalk will be clamped and sharpened during reciprocation of the carriage, a stationary abutment for said chalk extending through one end of the slot, a movable abutment at the other end of said slot extending downwardly therethrough and a spring behind said movable abutment tending to force it towards the stationary abutment whereby the chalk will be held against longitudinal displacement, said blades being sharpened to shave the chalk when the carriage is moving towards the stationary abutment.

1,486,571. TRAFFIC SIGNAL FOR MOTOR VEHICLES. HOWARD J. FISHER, Crestline, Ohio. Filed Apr. 13, 1923. Serial No. 631,876. 3 Claims. (Cl. 116—45.)



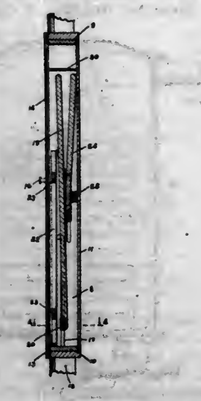
1. In a traffic signal, the combination of a circular tire carrier, clamps secured upon the inner circumference of the tire carrier, a bar extending between said clamps and having longitudinal slots at its ends, securing bolts inserted through said slots and the clamps, a swingingly mounted semaphore blade carried by the bar, and means for swinging said blade.

1,486,572. GOLF-CLUB SHAFT. WILLIAM R. FORSYTH, Swampscott, Mass., assignor to Cross Rod and Tackle Company, Lynn, Mass., a Corporation of Massachusetts. Filed Mar. 21, 1921. Serial No. 454,034. 15 Claims. (Cl. 46—4.)



1. A golf club shaft having a plurality of longitudinally extended sections or members of bamboo cane firmly secured together and arranged with the hard layer of the cane forming the exterior surface of the shaft.

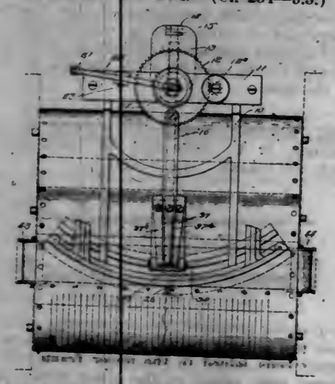
1,486,573. SHAFT FOR GOLF CLUBS AND METHOD OF MAKING THE SAME. WILLIAM R. FORSYTH, Swampscott, Mass., assignor to Cross Rod and Tackle Company, Lynn, Mass., a Corporation of Massachusetts. Filed June 8, 1923. Serial No. 644,154. 9 Claims. (Cl. 46—4.)



1. A shaft for golf clubs having a plurality of members of bamboo or like cane firmly secured together and each comprising an outer strip of cane of substantially uniform thickness throughout its length and an inner strip of cane having its pith layer reduced in thickness between its ends.

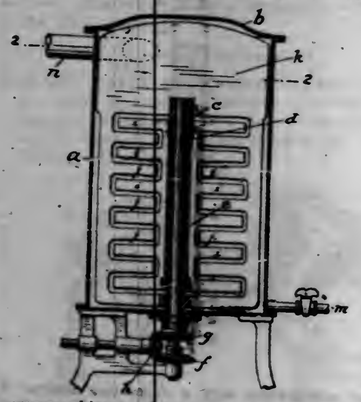
1,486,574. SPRING STRUCTURE. ORRIN G. FRANKS, Chautauqua, N. Y. Filed Mar. 30, 1923. Serial No. 628,902. 20 Claims. (Cl. 5—247.)

1. In a spring structure, the combination with an upper frame and a lower frame, of upright springs having their upper ends joined to the upper frame and having their lower ends joined to the lower frame and said springs being formed to cause sidewise movement between their ends during compression, the springs at each side of the upright primary plane of the structure being set to cause the said sidewise movement to be away from said plane, and means located between the upper and lower frames at each side of said plane and joined to the springs, whereby the springs at each side of said plane are held for movement in unison, substantially as described.



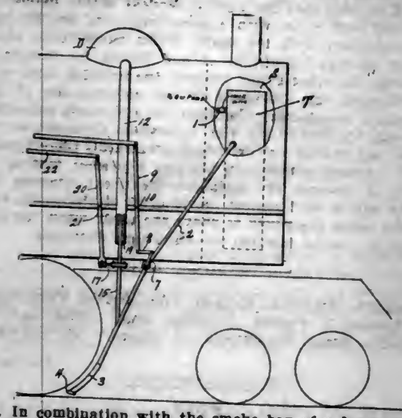
1,486,575. SUPPORTING MEANS FOR IRONING BOARDS. FREDERICK GRAF, Milwaukee, Wis. Filed Sept. 6, 1921. Serial No. 498,840. 2 Claims. (Cl. 68—10.)

1. In combination with a supporting member having opposite side members provided with vertically extending guide grooves terminating at their upper ends with rounded laterally offset and downwardly extending portions to form locking parts, an ironing board having inner end opposite trunnions which extend into said guide grooves, said trunnions automatically entering the locking portions of the grooves when the board is moved endwise in one direction and automatically disengaging said locking portions of the grooves when the board is



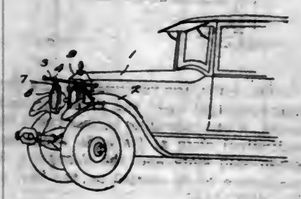
moved in the other direction, a leg member hinged at its lower end to the lower portion of the supporting member and having its upper end hinged to the outer end portion of the ironing board, and an auxiliary means for locking the board in operative position.

1,486,576. RECORDING AND SIGNALING MECHANISM. GUY M. HAFER, Detroit, Mich., assignor to Hoskins Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed Sept. 14, 1921. Serial No. 500,715. 4 Claims. (Cl. 234—5.5.)



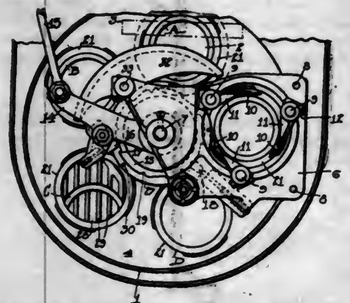
1. In apparatus of the character set forth, an instrument having an oscillating needle and a scale over which said needle swings, a pin carried by said needle, a ledge over which said pin oscillates, a member having a plurality of plungers slidably mounted therein, said plungers overlying the path of said pin, means for periodically depressing said member to cause said pin to actuate one of said plungers, and an electric circuit having a switch, which will be closed by said plunger as it is actuated.

1,486,577. PROCESS AND MACHINE FOR WHIPPING CREAM. CYRUS HOWARD HAPGOOD, Nutley, N. J., assignor to The De Laval Separator Company, New York, N. Y., a Corporation of New Jersey. Filed June 6, 1923. Serial No. 643,623. 6 Claims. (Cl. 259—6.)



1. A cream whipper adapted to operate upon a continuously flowing stream of cream, comprising a container having an inlet for cream in its lower part and an outlet for whipped cream in its upper part, a whipping contrivance of substantially less height than the container and whose upper end is below said outlet, and a member in the upper part of the container above the whipping zone adapted to facilitate the discharge of whipped cream through said outlet.

1,486,578. LOCOMOTIVE. JOSEPH P. HARNEY, Altoona, Pa. Filed Mar. 8, 1922. Serial No. 542,094. 4 Claims. (Cl. 291—1.)

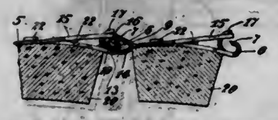


1. In combination with the smoke box of a locomotive and a supporting wheel for the locomotive, means within the smoke box for heating air under pressure, and means for discharging said heated air upon the surface over which the wheel traverses.

1,486,579. SAFETY ROD. THOMAS F. HARROLD, Indianapolis, Ind. Filed Apr. 24, 1923. Serial No. 634,359. 2 Claims. (Cl. 293—55.)

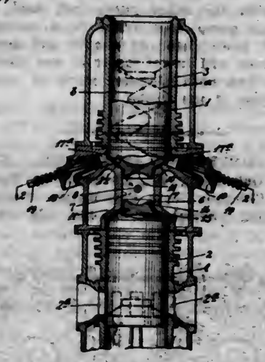
1. In combination, an automobile including a pair of fenders at its forward end, a rod, and means for mounting the rod on the fenders forwardly of the radiator and above the headlights of the automobile.

1,486,580. FEED MECHANISM FOR AUTOMATIC GRINDING MACHINES. JAMES N. HEALD, Worcester, Mass., assignor to The Heald Machine Company, Worcester, Mass., a Corporation of Massachusetts. Filed Apr. 7, 1922. Serial No. 550,420. 9 Claims. (Cl. 51—215.)



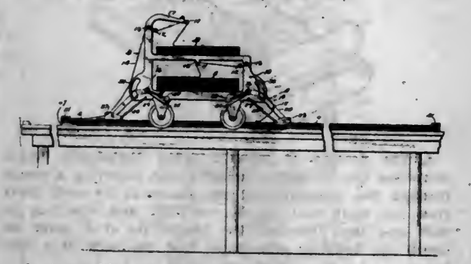
1. In a work feeding mechanism for automatic grinding machines, a magazine comprising a circular series of rigid supports, and an elongated stack confining member adjustably carried by each support for tangential contact with the work.

1,486,581. FISHING FLY. EDWARD R. HEWITT, Midvale, N. J. Filed Jan. 28, 1922. Serial No. 532,511. 4 Claims. (Cl. 43—48.)



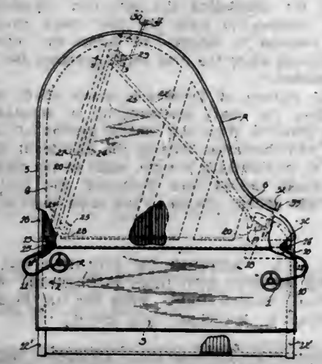
4. A feather wing for a fly having applied thereto a metallic coating of aluminum foil and a waterproof adhesive varnish applied to the feather and interposed between it and the foil.

1,486,582. LINK BELTING. HENRY A. HOUSE, Bridgeport, Conn. Filed Oct. 17, 1922. Serial No. 595,036. 11 Claims. (Cl. 74—64.)



4. A belt connector comprising two rigid sheet metal plates having complementary interlocking means at one of their ends, the coacting interlocked portions of the plates constructed to permit of a relative lateral rocking movement of said plates, releasable means carried by one of said plates, for preventing accidental disconnection of their interlocked ends while permitting of such relative lateral rocking movement, stop lugs projected from one of said plates and opposed to the interlocked end of the other plate to prevent relative longitudinal shifting movement of said plates, and means for securing each of said plates to the body portion of a driving belt.

1,486,583. INTERNAL-COMBUSTION ENGINE. WILLIAM M. HUSKISSON, New Rochelle, N. Y. Filed Jan. 26, 1923. Serial No. 614,957. 3 Claims. (Cl. 123—51.)



1. The combination, in an internal combustion engine having opposed cylinders; of a separate breech element fitted between said cylinders and having an opening therethrough cylindrical at each end and of a diameter substantially the same as that of the cylinders, said opening being of relatively small diameter towards the center with reference to the ends and having the central portion connected to said ends by frusto-conical portions, said breech being provided with tangentially disposed inlet ports at the junction of one of the frusto-conical portions of the opening in the breech and the adjacent larger cylindrical portion, and pistons moving in said cylinders and shaped to conform to the end portions of the breech whereby to cover said ports when the pistons are in their proximal positions.

1,486,584. CLOTH-LAYING-UP MACHINE. MOSES ISAACS, New York, N. Y. Filed Nov. 20, 1920. Serial No. 425,323. 6 Claims. (Cl. 270—31.)

1. A machine as characterized comprising a portable frame; a plurality of supports for separate supplies of cloth mounted on said frame; a plurality of guide frames for delivering cloth from said supplies to opposite ends of said frame; a plurality of holding members for retaining said cloth at the free end of each layer thereof; and means carried by said machine for alternately removing and temporarily transporting said holding members from the opposite ends of said cloth to return the same to holding position for the ply thereof next to be laid.

1,486,585. MUSICAL INSTRUMENT AND LIGHTING SYSTEM THEREFOR. BENJAMIN H. JEFFERSON and ROBERT H. WAUD, Chicago, Ill., assignors, by mesne assignments, to Lyon & Healy, Inc., Chicago, Ill., a Corporation of Illinois. Refiled for application Serial No. 266,858, filed Dec. 16, 1918. This application filed Mar. 23, 1921. Serial No. 454,748. 2 Claims. (Cl. 240—4.)

1. The combination with a musical instrument comprising a sound box mounted on suitable supports, and having a cover provided with a front hinged section, a sliding shelf under said hinged section, said section and the top portions of the side walls being spaced to provide openings, of a main feed circuit having two branches terminating adjacent the inner forward ends of said side walls, separable connectors forming the terminals of said branches, and mounted on the inner faces of said side walls, lighting devices on said hinged front section and flexible conductors passing through said openings to connect said lighting devices and separable flexible connectors when the section is closed, said conductors being of sufficient length to permit removal of the lighting devices from the instrument without disconnection to permit said section to be raised.

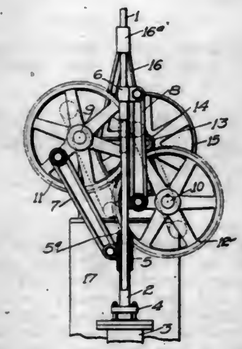
1,486,586. ART OF MAKING CONTAINERS. HARRY W. JONES, Bedford, Va., assignor to The American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Mar. 15, 1919, Serial No. 282,849. Renewed Dec. 9, 1922. 6 Claims. (Cl. 93—36.)

1. The process of manufacturing containers, which comprises first providing a body, then inserting a staple through the body, spacing the staple at its ends away from the main body of the container and clinching its ends and then inserting the hinged lip of a cover between the body of said staple and the body of a container.

1,486,587. MEANS FOR AND METHOD OF DROP-FORGING CRANK SHAFTS. HARRY H. KEEPORTS, Detroit, Mich. Filed May 17, 1919. Serial No. 297,848. 8 Claims. (Cl. 29—6.)

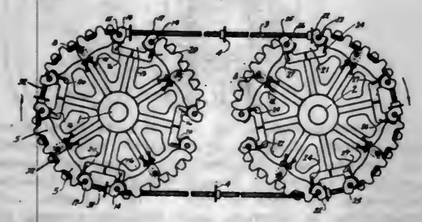
1. In a means for forming crank shafts, the combination of a die with impressions comprising recesses in which are projections for forming preliminary vertical bends to form intermediate crank throws, the end projections of which are inclined and disposed at an angle to the axial line thereof to give the initial lateral impulse to the corresponding crank throw, a second impression for completing the operation containing deep vertical recesses to form the end crank throws, and lateral recesses to receive and deflect the intermediate crank throws after the first bend, coacting for the purpose specified.

4. The method of forming a crank shaft consisting in bending the shaft preliminarily in substantially a vertical plane to form the central portion of the crank throws, and thereafter bending the additional end crank throws at substantially a right angle to the plane of the first formed throws and deflecting the first formed throws into oblique planes in the same operation.



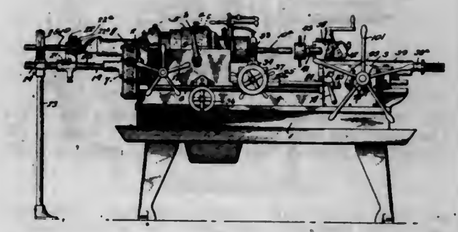
1,486,588. METHOD OF FORGING SIX-THROW CRANK SHAFTS AND DIES THEREFOR. HARRY H. KEEPORTS, Canton, Ohio. Filed Oct. 13, 1922. Serial No. 594,278. 3 Claims. (Cl. 29—6.)

1. The process of forming a six throw crank shaft consisting in, first, deflecting to one side the central portion for the central pair of crank pins and arms, second, forming the first and second and the fifth and sixth crank pins and arms at each end at right angles thereto, with a connecting crank between the first and second and the fifth and sixth pins, and third, subjecting the same to a forging action in which the central crank pins are roughly completed and the end two crank pins and arms are deflected from the right angle plane to an angle of 120 degrees and completely rough formed, as specified.



3. A series of dies for forming a crank shaft, one of which is formed with a central depression to deflect the central crank throws, another of which is conformed to produce crank throws at the ends of the shaft at right angles to the first deflected portion, and a final forming die with a vertical central portion to conform the central crank throw and deflected lateral portions to form the end crank throws, as specified.

1,486,589. DOUBLE-ACTING-PUMP POWER HEAD. CHARLES L. KESSLER, San Diego, Calif. Filed Oct. 13, 1919. Serial No. 330,181. 4 Claims. (Cl. 103—200.)

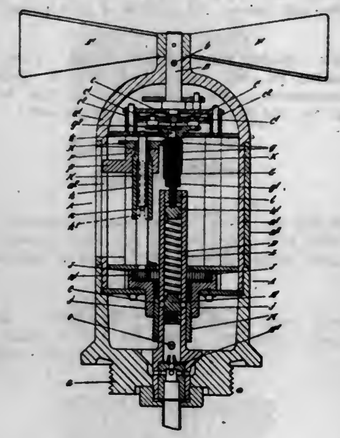


1. A power head for double acting pumps, including a supporting frame work, a pair of pump rods, a pair of intermeshing gears revolubly mounted one above the other on said supporting framework, an equal distance on opposite sides of one of the pump plunger rods, a connecting rod connected with the lower gear and extending upwardly and its upper end engaging one of the pump rods and a connecting rod connecting with the upper gear extending downwardly and its lower end connecting with the other pump rod, said connecting rods and said pump rods lying in a common plane, whereby said power head is simple and compact and the plunger rods will travel faster in one direction than in the other and both plungers move in one direction during a portion of one stroke.

1,486,590. CONVEYING APPARATUS. EUGENE E. LANDAHL, Oak Park, Ill., assignor to Webster Mfg. Company, Chicago, Ill., a Corporation of Ohio. Filed Feb. 23, 1922. Serial No. 538,469. 26 Claims. (Cl. 74—61.)

1. The combination of an endless belt, a wheel on which the belt is supported and devices on said wheel to in effect increase the circumference thereof, by forming successive straight stretches in the belt as it travels around the wheel, said devices being operative to force the straight stretches outward away from the axis of the wheel, without disturbing intermediate successive portions of the belt, thereby to take up slack and tighten the belt thereon.

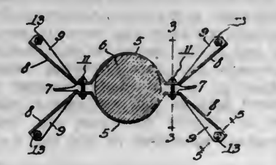
1,486,591. STAY-BOLT TURNING AND THREADING MACHINE. COLUMBUS K. LASSITER, New York, N. Y.; Annie Frances Lassiter, administratrix of said Columbus K. Lassiter, deceased, assignor to Dale Machinery Company, Inc., New York, N. Y., a Corporation of New York. Filed Jan. 31, 1921, Serial No. 441,276. Renewed Jan. 11, 1924. 26 Claims. (Cl. 10—87.)



1. In a machine for turning and threading stay bolts, the combination of means for intermittently feeding up a continuous stock rod, successive portions of which are to be turned, threaded and severed from the remainder of the stock to form the bolts, means for rotating the stock rod while holding it from endwise movement during successive turning, threading and severing actions, a carriage having a working travel in one direction along the stock rod while said rod is being rotated and held from longitudinal movement, turning and threading devices mounted on the carriage and adapted to be employed on successive working travels of said carriage for intermediately turning and terminally threading a portion of the stock rod presented for treatment by a working movement of said devices lengthwise of said stock, power means for applying a positive working travel to said carriage, and means for cutting off the formed bolt from the body of the stock.

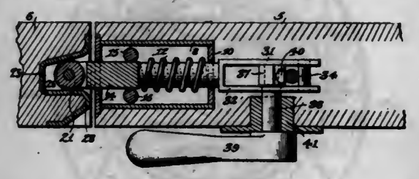
1,486,592. METHOD FOR PRODUCING HYDROCYANIC ACID. OTTO LIEBKNECHT, Frankfort-on-the-Main, Germany, assignor to The Roessler & Hasslacher Chemical Company, New York, N. Y., a Corporation of New York. Filed Nov. 24, 1922. Serial No. 603,122. 7 Claims. (Cl. 23—1.)

1. The process of making hydrocyanic acid, which comprises treating an alkali metal cyanide and metal salts whose bases form unstable cyanides, with water, such quantities of metallic salts being treated that substantially all the water remaining when the reaction is over exists as water of crystallization.



1,486,593. TIME FUSE. OWEN DAVID LUCAS, Bayswater, London, England, assignor to Vickers Limited, Westminster, England, a British Company. Filed Jan. 16, 1923. Serial No. 612,934. 11 Claims. (Cl. 102—36.)

8. In a mechanically operated long time fuse, a firing spring, initial fuse operating mechanism, a spring release device, a toothed change speed gear between the initial operating mechanism and the spring release device, which change speed gear comprises a rotatable spindle, a series of toothed rings on the said spindle, the number of teeth on any one of the second and succeeding rings being twice the number on the preceding rings, and a sliding



pinion adapted to be slid into gear with any desired ring, and means driven through the said change speed gear whereby the release device is operated.

1,486,594. SUPPORTING DEVICE. ADOLPHUS WILLIAM MALONE, Springdale, Pa., assignor of one-half to Albert H. Vestal, Anderson, Ind. Filed Dec. 14, 1923. Serial No. 680,705. 7 Claims. (Cl. 189—28.)

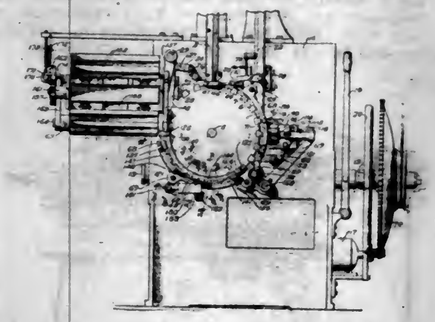
1. A support consisting of two elements joined together at points intermediate their ends and having an opening therethrough for the reception of the article to be supported, each of said elements being provided with diverging wings and each of said wings having laterally extending bearing portions thereon.

1,486,595. DOOR FASTENER. CLAUD A. MARCUM, Joplin, Mo. Filed Sept. 28, 1921. Serial No. 503,752. 2 Claims. (Cl. 292—169.)

1. In a door lock, a housing, a sliding bolt carried by the housing including a cylindrical body portion, an enlarged extension at one end having plain side faces and a slotted extension at its opposite end, a spring coiled about said cylindrical portion engaging the enlarged portion and one end of the housing for normally urging the bolt outward of the housing, guide rollers carried by the

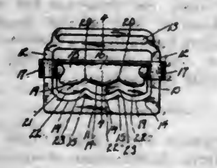
housing engaging the plain side faces of the enlargement, a rotatable spindle extended through the slotted portion of the bolt, and means carried by the spindle for actuating the bolt against the tension of said spring means.

1,486,596. HANDING-IN MECHANISM. FRED MAUB, Shamokin, Pa., assignor to J. H. & C. K. Eagle, Inc., a Corporation of Pennsylvania. Filed Feb. 10, 1923. Serial No. 618,366. 7 Claims. (Cl. 28—43.)



1. Handing-in mechanism for warp threads, comprising a substantially vertical support, a shaft mounted upon the support to move longitudinally thereof, a pedal arranged near the lower end of the support and having an operative connection with the shaft to effect its longitudinal movement, a casing mounted upon the upper end of the support, reciprocating elements mounted within the casing and having means for engaging with bunches of warp threads, rack bars extending longitudinally of the reciprocating elements and connected therewith, a gear arranged between the rack bars to simultaneously shift them in opposite directions, and means whereby the longitudinal movement of the rod serves to turn said gear.

1,486,597. CONVERTER ATTACHMENT FOR DRIVE WHEELS OF AUTOMOTIVE VEHICLES. ROYAL R. MILLER, Chicago, Ill., assignor, by mesne assignments, to Miller Traction Tread Company, Chicago, Ill., a Corporation of Delaware. Filed Dec. 18, 1920. Serial No. 431,741. 7 Claims. (Cl. 301—39.)

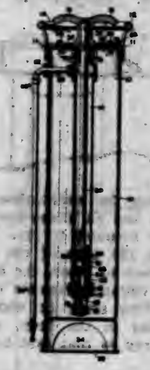


4. In a drive wheel converter, the combination with a flanged plate having driving gear teeth thereon, of brackets resting on the flange and extending beyond the gear teeth, and means rotatably mounted in the brackets and engaged between and over the gear teeth to removably secure said brackets thereto.

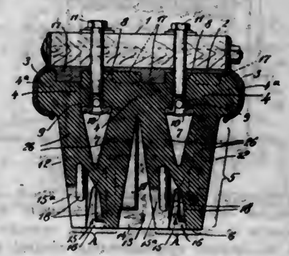
1,486,598. CARTONING MACHINE. MICHAEL J. MILMOE, Chicago, Ill. Filed Sept. 20, 1920. Serial No. 411,503. 95 Claims. (Cl. 93—6.)

1. In a cartoning machine, a magazine for containing collapsed cartons, a circular carrier having teeth thereon forming peripheral pockets, means for continuously rotating said carrier to cause the teeth thereon to extract cartons, one at a time, from said magazine and deposit said cartons in said pockets, and means cooperating with said teeth for opening and seating said cartons in said pockets.

1,486,599. SLIDE BUCKLE. ROSWELL A. MOORE, Waterbury, Conn., assignor to Waterbury Buckle Co., Waterbury, Conn., a Corporation. Filed Nov. 5, 1923. Serial No. 672,734. 1 Claim. (Cl. 24—194.)



As a new article of manufacture, a slide-buckle having a substantially rectangular, flat, sheet-metal buckle-frame formed with a webbing-opening, with side-bars and with a lower bar, the upper edge of which is formed with a plurality of scallops and points, and a slide formed at its ends with mounting-fingers loosely embracing the side-bars of the frame, and forwardly struck up to form a longitudinal rib, the lower edge of which is embossed to conform to the scallops of the lower bar of the frame, and also formed with a depending skirt scalloped to conform to the scalloping of the said bar, and also to the scalloping of the lower edge of the struck-up rib of the slide.



1,486,600. PUMP FIRE EXTINGUISHER. CHARLES NUHRING, Cincinnati, Ohio. Filed Oct. 18, 1921. Serial No. 508,498. 11 Claims. (Cl. 299—97.)

1. In a fire-extinguisher of the class described, the combination with a tank, of a cap therefor provided with a plurality of vent openings leading into the top of the tank, a pumping attachment associated with said cap and

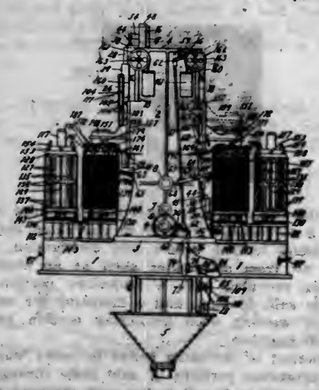
arranged within said tank, means associated with said pumping attachment for closing said vent openings, locking means cooperating with said closing means to hold the latter in closed relation to said vent openings, and a discharge pipe connected to said pumping attachment.

1,486,601. CUSHION TIRE. MAX CYRUS OVERMAN, New York, N. Y. Filed Nov. 20, 1918, Serial No. 263,368. Renewed Mar. 7, 1922. Serial No. 541,868. 20 Claims. (Cl. 152—1.)

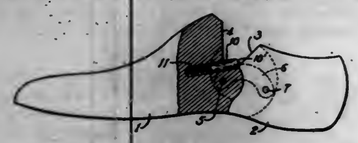
1. A cushion tire whose cross section, with the tread downwards, comprises a wheel-engaging upper portion and a lower portion integral with said upper portion composed of a plurality of integral lateral parts whose bottoms constitute the road-engaging tread of the tire, said lateral parts being severally longitudinally hollow, the hollows being contained between substantially straight side walls converging toward the tread of the tire, said lateral parts being separated laterally from each other by a circumferentially extending cleft which reaches upwardly from the tread to the upper part of the aforesaid hollows, each of said lateral parts alone being too unstable to serve as a tire, and cross webs extending at circumferential intervals across the cleft and uniting said lateral parts.

1,486,602. CUSHION TIRE. MAX CYRUS OVERMAN, New York, N. Y. Filed Mar. 11, 1919. Serial No. 282,027. 13 Claims. (Cl. 152—1.)

1. A cushion tire whose cross-section with the tread downwards comprises a wheel-engaging upper portion; and a lower portion whose bottom is the road-engaging tread of the tire,—said tire being hollow by means of a plurality of spaced apart longitudinally extending hollows which are severally substantially V-shaped in cross-section with the top of the V's at said upper portion of the tire and with the bottoms of the V's in said lower portion of the tire directed towards the tread, said lower portion of the tire being divided into lateral parts by a cleft extending up through it from the tread between said V-shaped hollows, said tire, due to said cleft and hollows, having pairs of side-walls, each pair thereof converging steeply towards the tread with one of the hollows contained between them, the outer walls of said pairs being more inclined to the vertical than the inner walls.

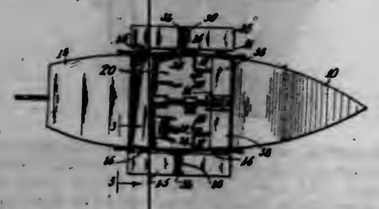


1,486,603. CUSHION TIRE. MAX CYRUS OVERMAN, New York, N. Y. Filed Jan. 18, 1921. Serial No. 438,119. 16 Claims. (Cl. 152—1.)



9. A cushion tire comprising a wheel-engaging base portion and a flange-free lower portion formed integrally therewith, said lower portion comprising inner and outer substantially straight space-separated force-resisting and transmitting members united by a tread portion, all of said members converging towards one another in the direction of said tread portion which has a wide ground contact to deliver the thrusts from the tread well under all of said inner and outer members, all of which thicken laterally under load and expand into said spaces without bending collapse.

1,486,604. BROACHING MACHINE. JULIAN L. PERKINS, West Springfield, and JOHN OAKLEY, ROBERT A. WILSON, and HIRAM D. CROFT, Springfield, Mass., assignors to Perkins Appliance Company, Springfield, Mass., a Corporation of Massachusetts. Filed Feb. 13, 1922. Serial No. 536,160. 121 Claims. (Cl. 90—8.)



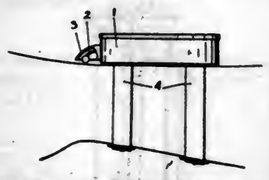
1. In a broaching machine, independent broach elements, means to reciprocate the same, and means to move them alternately into the work plane.

1,486,605. DIVIDED LAST. OTTO A. PETERSON, Stoughton, Mass. Filed July 27, 1922. Serial No. 577,915. 2 Claims. (Cl. 12—136.)

1. In a divided last, a fore part and a heel part having a central knuckle joint comprising a convex member on one part and a concave member on the other part, a spring pressed follower having a rounded head disposed in a longitudinal bore in the convex part adjacent its intersection with the secant face and adapted to project against the opposite secant face of the cut of the other part when the last is in extended position and engageable with the concave of the other part of the knuckle when the last is in collapsed position.

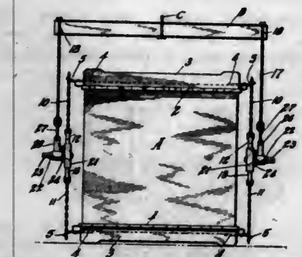
1,486,606. SAFETY PORTABLE BOAT. MARIANO PIMPINELLA, Ambler, Pa. Filed May 21, 1923. Serial No. 640,292. 3 Claims. (Cl. 14—123.)

1. In a boat, a float hinged to the side thereof, means normally holding said float above the water level and means for swinging said float downward to engage the water, said last means comprising a longitudinally expansible thrust bar, consisting of a number of telescopic tubular sections, and means for supplying compressed air to the interior of said thrust bar.



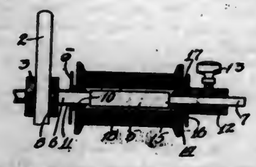
1,486,607. TANK AND METHOD OF MAKING. RUDOLF R. REISSIG, Roosevelt, N. Y., assignor, by mesne assignments, to Curtiss Aeroplane and Motor Company, Inc., Garden City, Long Island, N. Y., a Corporation of New York. Filed Mar. 7, 1923. Serial No. 623,563. 7 Claims. (Cl. 29—148.)

1. A tank comprising an outer shell provided with an opening, a corrugation formed in the outer shell, said opening being formed within said corrugation, a part extended off from said outer shell at an angle, said part being provided with a projecting portion which engages in said opening, and a fastening for said part formed by welding such projecting portion and said outer shell together.



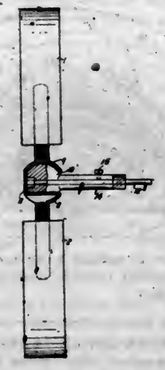
4. A method of fastening baffles in tanks which consists in extending portions of said baffle through openings in the tank wall and fusing such extended portions until a welded joint between the baffle and the tank and closures for said openings are provided.

1,486,608. ALARM DEVICE. LULU S. SCHROEDER, Lansing, Mich. Filed Apr. 29, 1922. Serial No. 557,476. 1 Claim. (Cl. 58—67.)



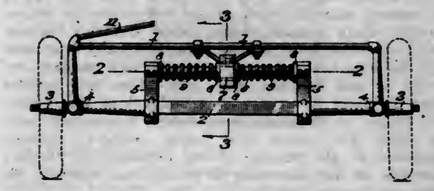
In an alarm device, the combination of a time piece comprising a casing and an alarm mechanism including a vibrating member actuated by the alarm mechanism and projecting from the edge of the casing to engage the body of the person to whom the device is attached, a housing for said vibrating member open on its under side, and an attaching strap on which the casing is mounted for securing to the body, said casing being mounted on said strap so that said housing lies at one edge of the strap.

1,486,609. TURNOVER MECHANISM. LOUIS J. SCHWAB, Peoria, Ill. Filed Dec. 29, 1922. Serial No. 609,716. 9 Claims. (Cl. 214—130.)



1. In a turn-over mechanism for a stack of sheets, the combination with base-boards between which the stack of sheets is compressed, of an operating means adapted to be located approximately central of a line passing axially through the stack and arranged for pivotal attachment to a supporting means to be supported thereby and the stack of sheets turned thereon, and means to connect the boards and operating means, being adapted to be moved by said operating means to compress and hold the stack of sheets between said base-boards.

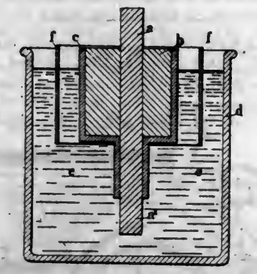
1,486,610. SEWING-MACHINE THREAD CONTROLLER. EDWARD N. SIMMONS, Chicago, Ill. Filed May 5, 1923. Serial No. 636,833. 9 Claims. (Cl. 242—134.)



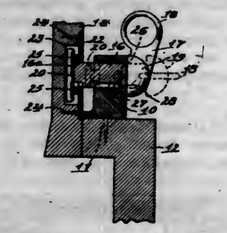
1. A sewing machine thread controller comprising a sleeve, a set screw for holding the same in position on a sewing machine spool spindle, a shaft secured to said sleeve, a bearing member rotatable and slidable on said shaft, a spring on said shaft governing said bearing member, a collar adjustable on said shaft, a set screw for holding said collar in a set position, and a second bearing member rotatably engaged on said collar and adjustable therewith.

1,486,611. BRAKE FOR ROAD VEHICLES. JOHN WALKER STEWART, Crawford, Scotland. Filed Feb. 20, 1923. Serial No. 620,198. 5 Claims. (Cl. 188—78.)

1. In a brake, the combination with a pair of shoes of two screws threaded into ends of the shoes, each screw presenting a cup-shaped head formed as a toothed crown, a ball joint accommodated in the cup-shaped heads, an adjusting rod passing through the ball joint, and a bevel gear on the adjusting rod engageable with each toothed crown.



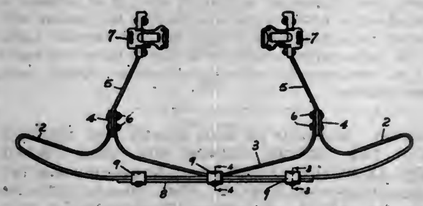
1,486,612. STEERING CONTROLLER AND SHOCK ABSORBER FOR VEHICLES. PERCY STOKES, Philadelphia, Pa. Filed Nov. 19, 1917. Serial No. 202,686. 3 Claims. (Cl. 280—94.)



1. In a steering device and shock absorber for a vehicle having a tie rod and axle bar, the combination therewith of an auxiliary bar and stop member and arms carrying said auxiliary bar, said auxiliary bar carrying a resilient member adapted to engage a traveller connectible with said tie-rod, said stop member being adapted to prevent the action of said resilient member against said traveller in more than one direction at a time, said auxiliary bar being formed of separate sections spaced apart and secured together, said stop member and arms being between said sections and connected therewith.

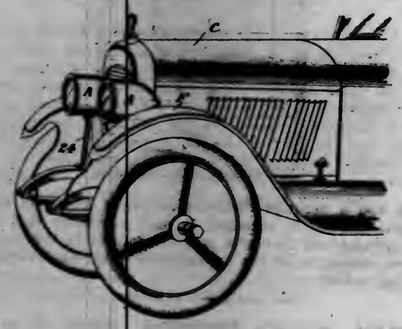
1,486,613. ELECTRIC BATTERY. ERNEST AUGUSTE GEORGE STREET, Levallois-Perret, France, assignor to Société Anonyme le Carbone, Levallois-Perret, France. Filed June 30, 1922. Serial No. 571,940½. 5 Claims. (Cl. 204—38.)

1. An electric battery capable of localizing and concentrating the precipitates or insoluble products formed in the course of its operation and also capable of regenerating its electrolyte comprising a vessel containing an electrolyte, a positive electrode including a conducting porous body, a central conducting carbon stick extending through the porous body and having one of its ends exposed to the atmosphere and its other end located in close proximity to the bottom of said vessel, said porous body having its lower portion extending into said electrolyte, a coating of colloidal material covering the surface of the portion of the porous body immersed in the electrolyte and also covering the portion of the carbon stick extending below the porous body, on a portion of the height of said stick, the lower end of said stick being uncoated and being in electric contact with the electrolyte, and a negative electrode extending into said electrolyte, the whole combined in such a manner that the precipitates and insoluble products formed in the course of the operation of the battery collect on the lower end of the carbon stick.



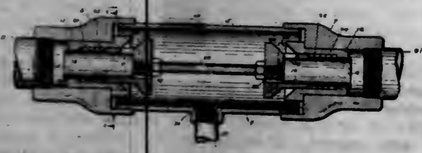
1,486,614. WINDOW FASTENER. HAROLD H. SULLWOLD, St. Paul, Minn. Filed Nov. 26, 1921. Serial No. 517,884. 2 Claims. (Cl. 292—57.)

1. In a window fastener a support adapted to be secured to one sash of a window adjacent to a vertical member of the other sash, said member having a plurality of recesses therein, a bolt slidable and revoluble in said support and having grooves therein, a handle mounted on one end of said bolt, a cross bar arranged on the other end of said bolt to be selectively inserted into said recesses, a plurality of abutment plates mounted over said recesses, each of said plates being formed with a horizontal slot, cam surfaces formed on the longitudinal edges of said slots to be engaged by said cross bar, and a stop extending into the grooves in said bolt whereby turning and sliding movement of said bolt is limited.



1,486,615. BUMPER. LEO H. TAFFEE, Hastings, Mich., assignor to Hastings Manufacturing Co., Hastings, Mich. Filed June 7, 1923. Serial No. 643,990. 2 Claims. (Cl. 293—55.)

2. A bumper comprising a horizontally disposed main bumper bar, a reinforcing bar superimposed upon said main bumper bar to project substantial distances at

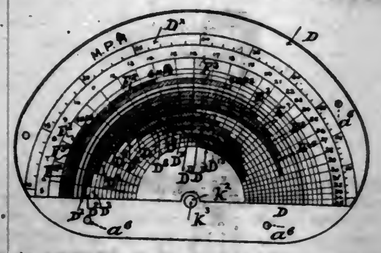


each side of the center thereof, a plurality of upright bumper members, and clips for securing said upright bumper members embracing said main and reinforcing bars, whereby the said upright bumper members are secured in position and said bars connected.

1,486,616. HEADLIGHT. THURMON H. TALLEY, Plainview, Tex. Filed Dec. 26, 1922. Serial No. 609,107. 6 Claims. (Cl. 240—41.)

1. A headlight, comprising a casing, a reflector pivotally supported within a rear end of said casing, a lamp supported within said reflector, a ring carried by the forward end of said reflector, said ring carrying a transparent lens, a plurality of integral fingers extending forwardly from the ring, and a plurality of horizontally disposed reflector plates supported by said fingers.

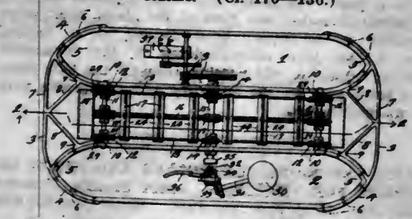
1,486,617. AUTOMATIC AIR VALVE. ROBERT M. TEEGARDIN, Seattle, Wash. Filed Oct. 5, 1920. Serial No. 414,888. 6 Claims. (Cl. 303—84.)



1. An automatic air valve embodying a valve casing, a valve chamber having a port in each end thereof, said ports being disposed to function either as an inlet or outlet port as circumstances may require, a double valve member slidably disposed in said chamber, and means to maintain normally said valve in open position.

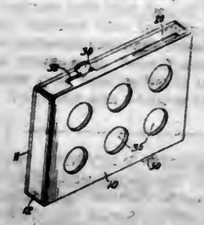
1,486,618. MANUFACTURE OF CALCIUM-CARBIDE CAKES. HERMANN THEM, Dinglingen, Baden, Germany, assignor to Carbic Limited, London, England, a British Company. Filed May 8, 1923. Serial No. 637,593. 11 Claims. (Cl. 23—11.)

1. A process for the formation of calcium carbide blocks from granulated carbide by the aid of sulphur in a fused state, which consists in treating the carbide with a small percentage of a soluble metallic chloride stable at the temperature employed in the sulphur treatment and in subsequently coating the treated carbide with fused sulphur.



1,486,619. METHOD OF AND MEANS FOR INDICATING THE PROPER PERIOD FOR GEAR CHANGING IN MOTOR VEHICLES. CHARLES GUTHRIE TOLSON, Manchester, England. Filed June 5, 1923. Serial No. 643,558. 6 Claims. (Cl. 235—103.5.)

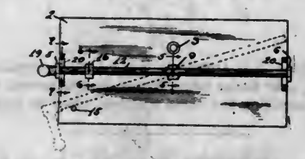
1. The method of indicating the proper period for gear changing up or down in motor vehicles according to which revolution counters or speed indicators are used combined within or with an instrument and arranged to work two pointers or fingers moving over a dial which is graduated and marked by segments or arcs of different



colour in manner to permit a change at sight when the pointers are in proper relative positions on and indicated at sight on the dial.

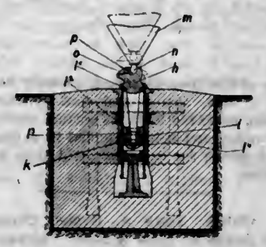
1,486,620. DIVIDED-HULL VESSEL. CHARLES D. ADAMS, St. Augustine, Fla. Filed Feb. 1, 1922. Serial No. 533,161. 3 Claims. (Cl. 170—136.)

1. The combination with an endless propelling means for vessels, said propelling means comprising an endless sprocket chain extending over spaced sprockets, endless cables extending over flanged pulleys in axial alignment with the sprockets, of transversely disposed paddles connected to said sprocket chain and cables, said paddles being T-shaped in cross section and having their opposite flanges in the same plane and in engagement with the chain and cables, said cables extending through apertures in the flanges of the paddles and through apertures in the main body of the paddles adjacent the inner sides of the flanges.



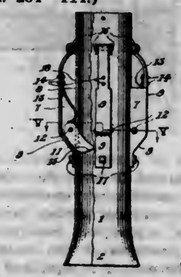
1,486,621. COIN RECEPTACLE. MILTON D. ADLER, New York, N. Y. Filed Apr. 17, 1922. Serial No. 553,890. 3 Claims. (Cl. 133—6.)

1. A coin receptacle comprising side walls and a central partition spaced from said side walls by laterally projecting flanges at its edges extending therefrom in opposite directions at the ends and along a portion of each side, said side walls being provided with complementary flanges extending along a portion of each side and forming, with said partition flanges, slots for the insertion and removal of coins and recesses in which spring pressed stop members are positioned, and spring pressed stop members positioned and enclosed in said recesses and slidable longitudinally therein, said stop members normally projecting at one end partially into



said slots and being provided with means for operating the same from the exterior of the receptacle to selectively slide the projecting end of either of said stop members out of said slot to permit a coin to be inserted or withdrawn from either side of said central partition.

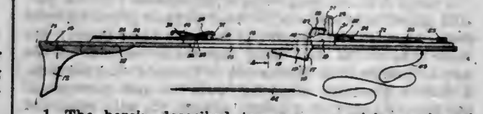
1,486,622. CLAMP FOR LEAD MOLDS. CHESTER M. ANGELL, Chicago, Ill., assignor to Vesta Battery Corporation, a Corporation of Illinois. Filed Nov. 25, 1921. Serial No. 517,447. 3 Claims. (Cl. 22—156.)



1. A mold, a casting swiveled upon said mold, a bar rotatably mounted in said casting, and stops for limiting the motion of the bar about said swivel and for limiting the motion of the bar about its axis.

1,486,623. ANCHORING MEANS FOR AIRSHIPS. KARL ARNSTEIN, Friedrichshafen-on-the-Bodensee, Germany, assignor to the Firm: Luftschiffbau Zeppelin, Gesellschaft mit beschränkter Haftung, Friedrichshafen-on-the-Bodensee, Germany. Filed Aug. 1, 1922. Serial No. 578,953. 5 Claims. (Cl. 244—2.)

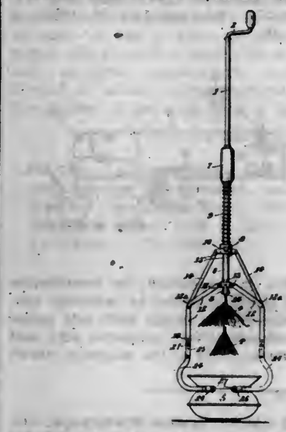
3. Anchoring means for air ships and the like, comprising an air ship, a disembarking door on said air ship substantially adjacent one of its ends, transporting truck means secured to the ship in the vertical plane of said door and supporting said air ship, means rigidly secured to said transporting truck means for pivoting them to the ground, a circular track upon the ground surrounding said pivoting means as a center, and means to support the air ship on said track.



1,486,624. OIL-WELL GRAPPLE. JOHN BAJUS, Canaanville, Ohio. Filed Dec. 28, 1922. Serial No. 609,489. 1 Claim. (Cl. 254—114.)

In an oil well grapple, a tubular casing having an outwardly flaring lower end, suspending means for the casing, said casing having a series of circumferentially arranged longitudinally extending equi-distantly spaced

openings formed therein, a housing member pivotally secured to the outer wall of the casing in proximity to the upper end of each opening adapted to cover the same, said members each having a downwardly inclined lower end wall, a gripping arm pivotally mounted in each member adjacent its lower end adapted to normally rest upon said lower inclined wall, a spring element engaging each gripping arm forcing downwardly thereon, and means for securing the lower ends of the housing members to the casing wall so that said gripping arms will normally extend downwardly into said casing through said openings with their outer ends positioned in proximity to each other.



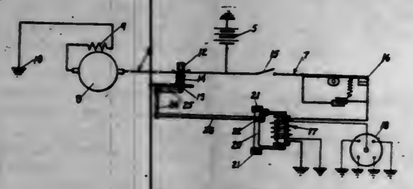
1,486,625. TOY GUN. JOHN BELLOCCHIO, New York, N. Y. Filed May 24, 1923. Serial No. 641,062. 2 Claims. (Cl. 124—14.)

1. The herein described toy gun comprising a barrel portion having a guide way, a follower movable along said guide way, resilient means for urging the follower forward forcibly, the follower including a notched member having a resilient keeper spaced thereover, a fulcrum member having a notch at its forward end, and a trigger means including a member pivoted between its ends upon said fulcrum member, one end of the trigger co-operating with the first mentioned notched member and held in engagement by said keeper, while the rear end of the trigger member is manually operatable for releasing the follower, the notched end of the follower extending into the fulcrum member notch, substantially as set forth.

2. The herein described toy gun including a slotted rib member, a follower movable along said slot, elastic means conected with the follower for driving it forward forcibly when released, said follower including a hammer having a notch in one end and an upwardly projecting guard toward its other end, said guard having a peep hole formed therethrough, and an anvil co-operating with the hammer in front of said guard.

1,486,626. SPITTOON CLEANER. STANISLAW J. BETLEY, Philadelphia, Pa. Filed Oct. 19, 1922. Serial No. 595,575. 4 Claims. (Cl. 15—73.)

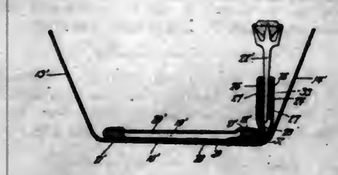
1. In a spittoon cleaner, a handle rod, a brush head carried by the inner end thereof, a tubular casing through which the handle rod is slidable and rotatable, sliding and fixed collars mounted on the tubular casing, a hand grip carried by the outer end of the casing, gripping jaws pivotally connected to the fixed collar, link connections be-



tween the pivoted jaws and the sliding collar, and a spring device associated with the hand grip and sliding collar for holding the jaws in closed position.

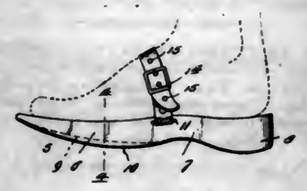
1,486,627. CHAIN FASTENER. OLOF BODBEN, Port Wing, Wis. Filed Sept. 15, 1923. Serial No. 662,833. 1 Claim. (Cl. 24—241.)

A chain fastener comprising a plate member having parallel spaced side portions provided at their points between their ends with slots leading in from the edges thereof, the inner ends of the slots being disposed to one side of the median longitudinal dimensions of the said side portions, a shackle pivotally connected with the side portions of the plate member at a point between the said slots and the ends of the side portions of the plate member and between the median longitudinal dimension of the side portions of the plate member and the intermediate portion of the plate member, a locking plate pivotally connected with the side portions of the first mentioned plate member for swinging movement between the side portions thereof and having a slot leading in from one edge and adapted to register with the slots in the side portions of the said plate member, the inner end of the slot in the said locking plate when the said locking plate is in a closed position with relation to the said plate member being disposed approximately in alinement with the median longitudinal dimensions of the side portions of the first mentioned plate member, the slots of the side portions of the plate member and the locking plate having arcuate inner end walls adapted to receive between them a link of the chain and a pin passing transversely through the side portions of the plate member and the locking plate at a point between the slots and the shackle.



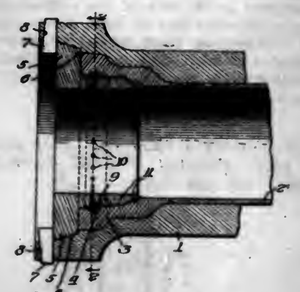
1,486,628. STARTING AND IGNITION SYSTEM. ALVIN E. BUCHENROTH, Toledo, Ohio, assignor, by mesne assignments, to The Electric Auto-Lite Company, Toledo, Ohio, a Corporation of Ohio. Filed May 21, 1919, Serial No. 298,670. Renewed July 26, 1923. 4 Claims. (Cl. 290—38.)

1. In a system of the class described, the combination of a starting motor, a switch therefor, an induction coil, a source of energy connected to supply both said motor and said coil, and means operatively connected with said switch for varying the reluctance of the magnetic circuit of said coil.



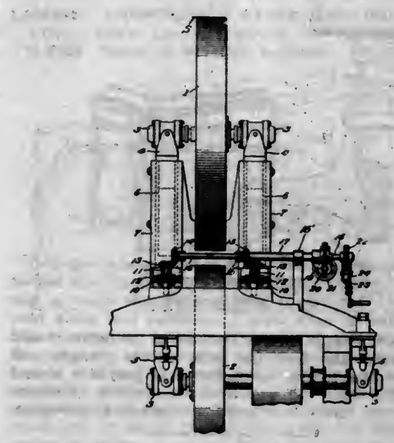
1,486,629. JEWELRY CASE. SAMUEL BUCHSBAUM, Chicago, Ill. Filed Apr. 11, 1921. Serial No. 460,260. 8 Claims. (Cl. 206—6.)

1. A device of the character described comprising a body portion of flexible material provided with a plurality of pairs of flaps, the flaps of each pair being adapted to be folded into overlapping position, means for holding said flaps in overlapped relation, a recessed stiffening member secured to said body portion, and a lining of flexible ma-



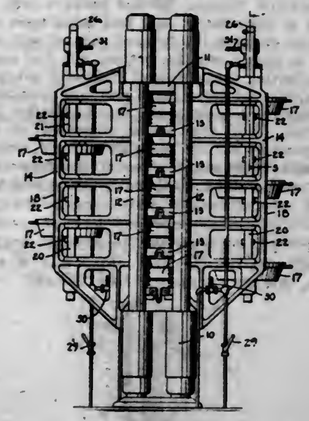
terial covering said stiffening member and extending over said recess, said lining being free over said recess, whereby an article engaging the same will seat itself in said lining.

1,486,630. BATHHOUSE SHOE. GEORGE T. BURNETT, Zeigler, Ill. Filed Apr. 2, 1923. Serial No. 629,297. 1 Claim. (Cl. 36—1.)



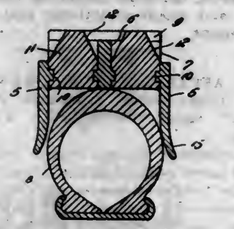
In a shoe of the class described, a single length of wood comprising a sole, instep and heel portion, said sole portion being concaved upon its bottom surface at the toe and ball portion and being rounded in a longitudinal direction, and means for retaining said shoe upon the foot of the wearer.

1,486,631. CORE. JOHN A. BYRNS, Chicago, Ill., assignor to James B. Clow & Sons, Chicago, Ill., a Corporation of Illinois. Filed July 27, 1922. Serial No. 577,844. 1 Claim. (Cl. 22—166.)



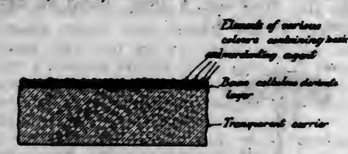
The combination of a tubular metal mold having its internal surface formed to mold the exterior surface of a pipe, a tubular metal core removably secured to the mold and having its exterior surface formed to mold the internal surface of a pipe and having a surface intersecting the mold surfaces of the mold and core and formed to mold the end of a pipe, and a ring of combustible material projecting from the exterior molding surface of the core, the core being formed with a plurality of vents extending from the ring to the bore of the core.

1,486,632. TILT SHAFT FOR BAND MILLS. GEORGE E. CAMPBELL, Chattanooga, Tenn., assignor to The Wheland Company, Chattanooga, Tenn., a Corporation of Tennessee. Filed Mar. 31, 1922. Serial No. 548,351. 6 Claims. (Cl. 143—31.)



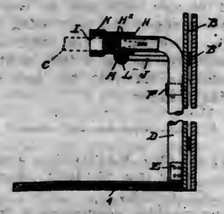
1. Means for tilting a saw-shaft, including movable supports for the opposite ends thereof, horizontal concentric shafts connected with said movable supports, and means for turning one or both of said shafts for raising or lowering said movable supports.

1,486,633. EJECTING APPARATUS FOR PRESSES. FRED S. CARVER, East Orange, N. J. Filed Dec. 22, 1920. Serial No. 432,439. 9 Claims. (Cl. 100—50.)



9. In a press, a frame having pot runways, press pots mounted to slide in the runways, each arranged to be moved into an ejecting position with the pots arranged along the same axial line, an ejecting device arranged for up and down movement, said ejecting device comprising a plurality of projections adapted to be simultaneously introduced upwardly into the press pots from beneath, and pressure means on the press frame for raising said ejecting device, whereby said projections operate to eject press cakes from the press pots.

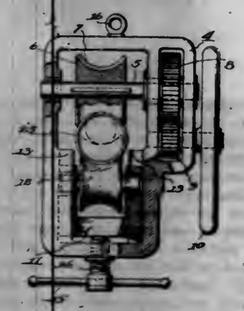
1,486,634. ANTISLIPPING DEVICE FOR VEHICLE WHEELS. WAYNE CASKEY, Walkerville, Mich. Filed Aug. 10, 1923. Serial No. 656,745. 2 Claims. (Cl. 152—14.)



1. An anti-slipping device of the class described comprising a pair of spaced parallel rings, an annular partition disposed midway between said rings, a circular series of uniformly spaced transverse partitions rigidly connecting the rings and the partition at intervals, the rings projecting inwardly beyond the inner edges of said partitions, the partitions projecting outwardly beyond the outer edges of said rings, ribs upon opposed faces of the annular partition and the rings, and cushion tread blocks disposed within the spaces provided between the rings and the partitions and having side grooves in which said ribs are seated, said rings and the annular partition being constructed in arcuate sections detachably and pivotally joined in end to end relation.

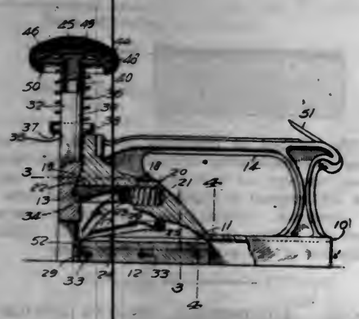
1,486,635. MULTICOLOR SCREEN AND METHOD OF PRODUCING THE SAME. JENS HERMAN CHRISTENSEN, Holte, Denmark. Filed May 18, 1921. Serial No. 470,699. 3 Claims. (Cl. 95—81.5.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. The method of producing multicolor screens consisting in comminuting various liquids each containing at least one dye, at least one mordant, and a substance which will prevent precipitation of the said dyes by the said mordants, causing the coloured elements thus formed to adhere to an underlayer and causing the mordanting of the said dyes to take place.



1,486,636. AUTOMOBILE DECKING DEVICE. ALFRED COPONY, Detroit, Mich., assignor to Copony Auto Loading Company, Detroit, Mich., a Corporation of Michigan. Filed Nov. 6, 1919. Serial No. 336,209. 11 Claims. (Cl. 105—368.)

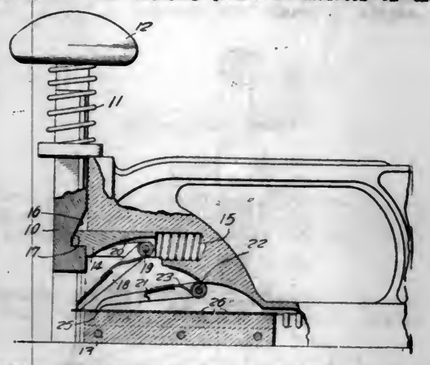
8. A motor vehicle decking apparatus, comprising a sleeve for engaging an extremity of a vehicle axle, a supporting brace for said sleeve pivotally connected



thereto and extending downwardly therefrom, a vertical member abutting against a side wall of a conveyance, engaged by the lower end of said supporting brace and transmitting the stress therefrom to the floor of the conveyance, and means restraining said sleeve against lateral movement.

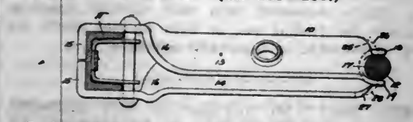
1,486,637. APPARATUS FOR DRAWING BOILER TUBES. PETER COVAL, Pittsburgh, Pa. Filed May 16, 1923. Serial No. 639,358. 4 Claims. (Cl. 29—88.2.)

1. In a device of the character described, a casing formed with an apertured abutment at one end, relatively adjustable gripping rolls within said casing, a bracket fixed to one side of said casing, gearing mounted in said bracket for rotating said rolls, and exterior means for operating said gearing.



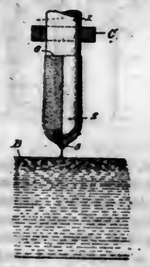
1,486,638. STAPLING MACHINE. JOHN B. CROFOOT, Chicago, Ill. Filed Sept. 8, 1922. Serial No. 587,024. 6 Claims. (Cl. 1—2.3.)

6. A stapling machine comprising a frame, a setting plunger mounted to slide in the frame, a bolt arranged perpendicular to the plunger and mounted to be reciprocated in the frame by the plunger, springs tending to move said plunger and bolt to one limit of their movement, said plunger and bolt being so formed that each limits the movement of the other against the tension of its respective spring, a feed pawl carried by the bolt, and means to maintain the bolt out of limiting action upon the plunger.



1,486,639. STAPLING MACHINE. JOHN B. CROFOOT, Chicago, Ill. Filed Oct. 27, 1922. Serial No. 597,358. 7 Claims. (Cl. 1—2.3.)

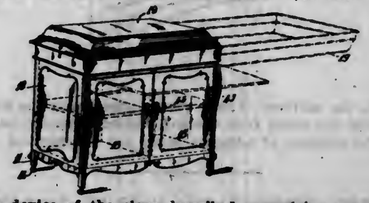
7. A stapling machine comprising a frame, a plunger therein, a staple strip support comprising a knife edge adapted to receive a staple strip composed of a plurality of staple units connected by integral connecting portions and provided with perforations in the backs of the staple units, a spring-pressed bolt reciprocated by the plunger, a bifurcated pawl carried by said bolt having spaced unit engaging points so mounted on the



frame as to engage the perforations in the backs of said staple units and feed the same to the plunger, and adapted in its feeding movement to be projected beyond said knife edge, and a detent proportioned to engage between the units and prevent retroactive movement.

1,486,640. RAILWAY BRAKE BEAM. SETH A. CRONE, East Orange, N. J. Filed June 6, 1923. Serial No. 643,626. 10 Claims. (Cl. 188—231.)

5. A brake-beam strut in one integral bar of forged metal folded to form a U-bend at the forward end of the strut and having parallel angularly set spaced apart sides connected together by said forward fold, the forward end of the strut at said fold being inset on a line horizontally crossing the forward ends of said angularly set sides to form a seat for a truss rod, and said end of the strut having arms integral therewith extending forwardly above and below said seat and pointing in reverse directions to deepen the seat and retain the truss rod thereon, said arms being composed of reversely tapered portions slit on inwardly inclined reverse lines from diagonally opposite edges of the forward end of the strut and bent forwardly to lie above and below the truss rod.



1,486,641. POUCH-MAKING PROCESS. CHARLES H. DASHER, East Orange, N. J. Filed Dec. 2, 1922. Serial No. 604,569. 8 Claims. (Cl. 18—58.)

1. The art of making a viscose article which consists in first depositing on a mandrel a coating of fluid viscose; then predetermining the ultimate length of the finished product by pressing the edge of the fluid back somewhat

with a follower; then producing a flexible tenacious film by effecting a coagulation of the coating while retaining the follower in said position; and subsequently detaching the flexible film from the mandrel.

1,486,642. COMBINATION STOVE AND REFRIGERATOR. LOUIS DOBAY, Benwood, W. Va. Filed July 6, 1923. Serial No. 649,894. 4 Claims. (Cl. 126—37.)

1. A device of the class described comprising a casing divided into upper and lower compartments by a partition, a board slidably supported in the upper compartment above said partition, a stove fixed on said board, leaves extending between the ends of said board and the end walls of the casing and normally covering openings in said partition, and means effecting an operative connection between said board and the said leaves whereby movement of the board in one direction moves a selected leaf to expose the opening under the latter, said means comprising a pair of levers fulcrumed to the casing wall and engaged both with said board and said leaves.

1,486,643. VEHICLE HEADLIGHT. DANIEL C. DOZIER, Norfolk, Va. Filed Nov. 5, 1923. Serial No. 672,899. 4 Claims. (Cl. 240—48.6.)

1. In combination with an electric incandescent lamp, of a shade adapted to be spring fitted around the bulb of the lamp, a segmental opening therein, a multi-colored light emitting medium thereover, and spring means for holding the multi-colored medium over said opening.

1,486,644. DEVICE FOR CONTROLLING THE COOLING AIR, ESPECIALLY FOR THE GONDOLAS OF AIRCRAFT. LUDWIG DÜRR, Friedrichshafen, Germany, assignor to Luftschiffbau Zeppelin Gesellschaft mit beschränkter Haftung, Friedrichshafen, Bodensee, Germany. Filed Sept. 27, 1923. Serial No. 665,239. 6 Claims. (Cl. 244—31.)

1. Device for controlling the cooling air, especially for the gondolas of aircraft, comprising a radiator, an opening in the stream-line-shaped front part of the gondola, two curved and two plane walls, connecting the frame of the radiator with the circumference of the said opening, movable covering parts, guided in the plane walls and curved in such a manner, as to give in each position together with the stationary curved walls a satisfying form of nozzle for the air, flowing through the radiator.

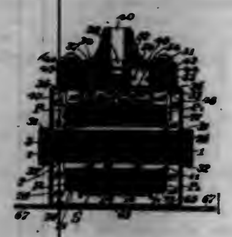
1,486,645. SOCKET FOR ELECTRIC LAMPS OR FUSES. ROBERT EBERHARDT, New York, N. Y., assignor of one-fourth to Emil J. Peskar, New York, N. Y. Filed Mar. 30, 1923. Serial No. 628,795. 4 Claims. (Cl. 173—358.)

1. In an electric lamp socket, an expansible bulb holding member, said bulb holding member being in the form of a sleeve formed in two semicylindrical sections, said sections being hinged to swing on a common axis, and a spring urging said sections toward one another, and means accessible from the exterior of the socket for swinging said sections away from one another.

1,486,646. ALCOHOL, ETC., AND PROCESS OF MAKING SAME. CARLETON ELLIS, Montclair, N. J., and MORTIMER J. COHEN, New York, N. Y., assignors, by mesne assignments, to Seth B. Hunt, trustee, Mount Kisco, N. Y. Filed Apr. 25, 1918. Serial No. 230,079. 29 Claims. (Cl. 260—156.)

1. The process of producing a reactive acid liquor from olefines in relatively low concentrations, such as occur in cracked petroleum and the like, which comprises the step of bringing sulfuric acid of about 1.8 sp. gr. into contact with the olefine containing material gradually, so that substantially less than all of the olefines available will react with the acid at any one time, while agitating and cooling the reaction mixture so that the temperature will be maintained under 30° C., allowing the extract to settle and drawing off the extract.

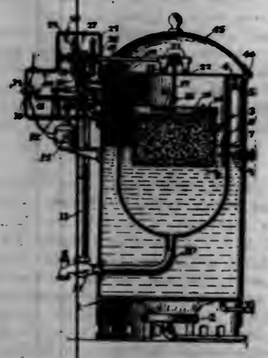
11. The process of producing alcohols from cracked petroleum which comprises the steps of reacting on the olefines of such petroleum while mixed with the other ingredients thereof with sulfuric acid of less than 1.84 and more than 1.57 sp. gr. under sulfating conditions whereby a sulfated extract of the olefines is formed with a minimum formation of sulfonated bodies, separating the sulfated extract from the residual hydrocarbons and reacting thereon with a hydrolyzing agent.



22. A liquid reaction product of sulfuric acid and hydrocarbon material containing olefines and saturated hydrocarbons, a major proportion whereof consists of sulfated derivatives of olefines of over two carbon atoms, which product also comprises a minor proportion of oily polymers and is free from derivatives of ethylene.

1,486,647. PRODUCTION OF ACID EXTRACT AND ALCOHOLS FROM HYDROCARBON GASES. CARLETON ELLIS, Montclair, N. J., and MORTIMER J. COHEN, New York, N. Y.; George Cohen, Adolph Breslauer, and Herman Asher executors of said Mortimer J. Cohen, deceased; said Ellis and the executors of said Cohen, deceased, assignors, by mesne assignments, to Seth B. Hunt, trustee, Mount Kisco, N. Y. Original application filed Mar. 20, 1917, Serial No. 156,197. Divided and this application filed Apr. 19, 1920. Serial No. 375,083. 9 Claims. (Cl. 260—98.)

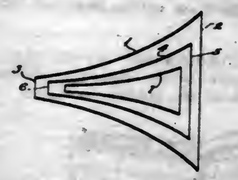
2. The process of separating olefine material of over two carbon atoms, in reactive form, from a mixture of saturated and unsaturated gaseous hydrocarbons, which consists in treating such gases with sulfuric acid of reactive strength below that of acid of 1.84 specific gravity, while subjecting the reaction mixture to cooling to a temperature such that unsaturated hydrocarbons having less than three carbon atoms are not absorbed and which produces, in liquid form, sulfated derivatives of the olefines having three or more carbon atoms as a major proportion of the product of reaction of the sulfuric acid on such gases and avoids undue conversion of such olefines into tars and the like.



5. As a new article of manufacture, a product consisting of a mixture of monohydric alcohols derived from gaseous olefines of cracked petroleum, said gaseous olefines comprising propylene and olefines higher in the olefine series than propylene, said product comprising secondary alcohols and being free from ethyl alcohol.

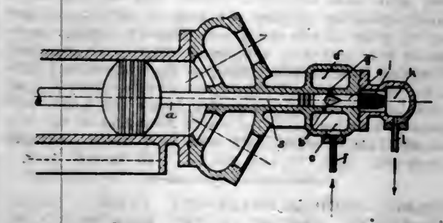
1,486,648. INDUCTION COIL. WILLIAM A. EVANS, Fort Washington, Pa., assignor to Atwater Kent Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Dec. 31, 1919. Serial No. 348,603. 29 Claims. (Cl. 175—357.)

1. Ignition apparatus comprising primary and secondary circuits, core structure comprising superposed laminæ each having a yoke portion and a transversely extending tongue, primary coils in said primary circuit spaced from each other on said tongue, a secondary coil in said secondary circuit disposed on said tongue between said primary coils, a source of unidirectional current in said primary circuit, and an interrupter of the closed circuit type in said primary circuit.



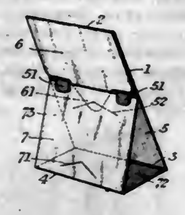
1,486,649. COFFEE PERCOLATOR. HENRY EWBET, Los Angeles, Calif. Filed Jan. 31, 1923. Serial No. 616,050. 10 Claims. (Cl. 53—3).

1. A percolator including a percolating receptacle and a liquid chamber surrounding the same and communicating with said receptacle and arranged for gravity flow of liquid from said chamber to said receptacle.



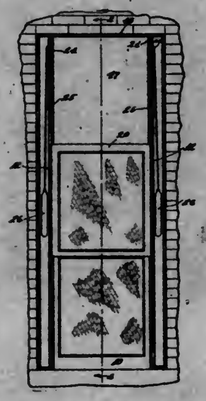
1,486,650. HORN FOR SOUND INSTRUMENTS. ARTHUR L. FOLEY, Bloomington, Ind., assignor to George Fabyan, Riverbank, Ill. Filed Mar. 3, 1923. Serial No. 622,472. 1 Claim. (Cl. 181—27.)

In a sound-conveying device, a plurality of nested spaced horns of successively diminishing length, the shorter being inside and terminating as to both ends of each horn short of the corresponding end of the next outer



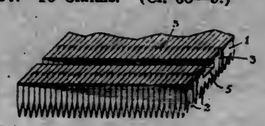
horn, the surfaces of said horns approaching one another toward the small ends thereof, whereby opposed portions of the surfaces of adjacent horns are non-parallel.

1,486,651. REFRIGERATING MACHINE. ERICH FREUNDLICH, Dusseldorf, Germany. Filed May 5, 1921. Serial No. 467,229. 3 Claims. (Cl. 103—9.)



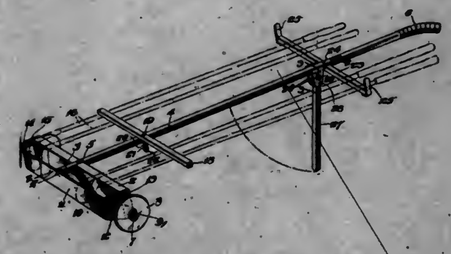
1. In a refrigerating machine in combination, a compressor, a piston and piston rod in said compressor, a liquid feed pump connected with said compressor, an extension of said piston rod projecting into said pump and forming the piston therein, a suction port in said pump disposed near the end of the pressure stroke of said pump piston corresponding to the minimum velocity thereof and a pressure valve closing said pump, the section of said port being reduced in the direction towards said valve.

1,486,652. COMBINED PHOTOGRAPH FOLDER AND EASEL. JOSEPH J. FROELICH, Kaukauna, Wis., assignor to Taprell Loomis & Company, Chicago, Ill. Filed Aug. 6, 1923. Serial No. 655,953. 3 Claims. (Cl. 40—149.)



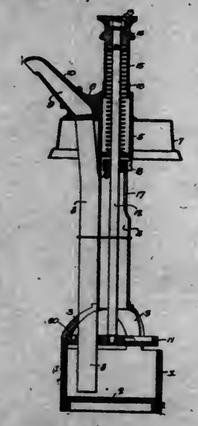
1. A photographic folder and easel comprising a panel having a front photograph-receiving face and flaps joined to opposite edges of said panel by connections bendable through more than 180°, said flaps being of a size to substantially cover said front face when folded thereover, and one of said flaps having a transverse fold, the portion of said flap between said fold and said panel serving as a supporting base and the rest of said flap serving as a brace to support said panel when said flap is folded back and engaged with the rear face of the panel to form a triangular easel therewith, there being means to retain said parts in the form of said easel, said means being invisible at said front face.

1,486,653. WINDOW. STEV GEROUX, Chicago, Ill. Filed Aug. 12, 1922. Serial No. 581,299. 1 Claim. (Cl. 20—52.1.)



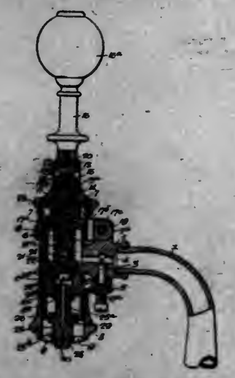
A building wall having a window opening, an upper sash, a lower sash, said wall having a space above said opening into which said sashes may be moved, and an upwardly movable closure between said window opening and said space, said closure spanning the path of travel of the lower sash only, and adapted, when said lower sash is moved into said space, to be lifted by said lower sash to a position removed from the paths of travel of both sashes.

1,486,654. PRESSING DEVICE. BENJAMIN D. GOLDBERG, Brooklyn, N. Y. Filed May 16, 1923. Serial No. 639,257. 16 Claims. (Cl. 68—9.)



1. A pressing device consisting of thin metal plates each having an edge formed into a series of fine teeth and assembled together as a mass of plates engaged with one another and held firmly in position to present a fabric supporting surface consisting of a multiplicity of compactly arranged metal points.

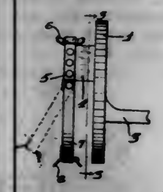
1,486,655. GOLF-CLUB CARRIER. HARVEY GOURLEY, Cheltenham Township, Montgomery County, Pa. Filed Dec. 9, 1922. Serial No. 605,784. 12 Claims. (Cl. 280—53.)



1. A golf club carrier, consisting of a wheeled frame having at front a transversely extending support for the club shafts near their heads, a transverse pocket in front of said support for the reception of the club heads, a rear transverse support for the club shafts near their handles, and a movable locking device carried by said frame for frictionally engaging the club shafts to secure them in fixed position on said frame.

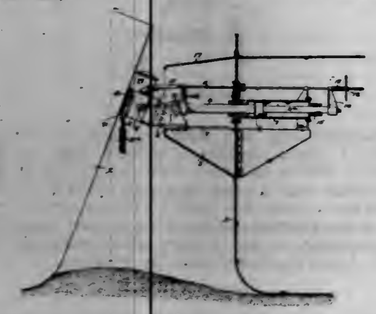
1,486,656. SIRUP PUMP. ROBERT M. GREEN, Jr., Philadelphia, Pa., assignor to Robert M. Green & Sons, Philadelphia, Pa., a Firm consisting of Robert M. Green, jr., Philadelphia, Pa., and Edgar L. Green, Devon, Pa. Filed Dec. 2, 1920. Serial No. 427,739. 3 Claims. (Cl. 225—35.)

3. The combination in a pump for liquid of a cap; a cylinder; a piston therein; a delivery pipe for the cylinder; a member connected to the cylinder and to the cap; a piston rod; a collar adjustably mounted on the rod, arranged to come into contact with the member connected to the cylinder and cap so as to limit the downward movement of the plunger which regulates the amount of fluid discharged from the cylinder.



1,486,657. SODA-WATER DRAFT. ROBERT M. GREEN, Jr., Philadelphia, Pa., assignor to Robert M. Green & Sons, Philadelphia, Pa., a Firm composed of Robert M. Green, jr. Filed July 21, 1921. Serial No. 486,457. 1 Claim. (Cl. 225—23.)

In a soda water draft, the combination of a casing, valve means therein for causing the delivery of fine or coarse streams of water, automatic means tending to actuate said valve means to prevent the discharge of water, a handle movable to either of two positions to actuate said valve means, and means for temporarily retaining said handle in a position in which the valve



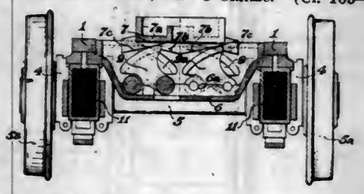
means permits delivery of a coarse stream comprising a spring-pressed plug mounted in said casing independent of the valves and adapted to engage a portion of said handle.

1,486,658. TIRE CARRIER FOR AUTOMOBILES AND THE LIKE. WALTER R. GREEN, Chicago, Ill. Filed Feb. 1, 1922. Serial No. 533,206. 4 Claims. (Cl. 224—29.)

1. The combination with a main tire carrier, of an auxiliary carrier having a pivoted tire carrying portion swingable away from the main carrier, and means for supporting said auxiliary carrier on the main carrier.

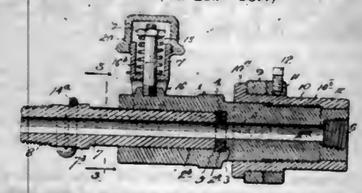
1,486,659. ART OF CONNECTING SUBMERGED OBJECTS. WILLIAM J. HAGMAN, Philadelphia, Pa. Filed Mar. 7, 1919. Serial No. 281,257. 36 Claims. (Cl. 61—69.)

18. The combination of a driving spindle; a drill; and a structurally weak element connecting said spindle and said drill.



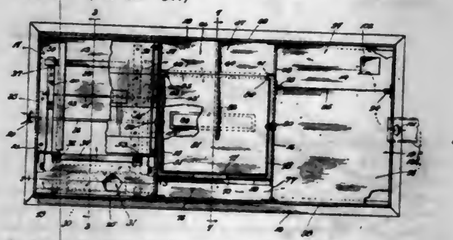
34. The combination in a drilling and bolting machine of a bar having a drill portion and a tap portion; means including a spring, for rotating the bar and feeding it longitudinally; a split yieldable ring positioned to temporarily arrest movement of the bar after it has drilled a hole and designed to yield after said spring has been compressed to a predetermined extent.

1,486,660. AUTOMOBILE. JOHN HAJDU, Mercer, Pa. Filed Feb. 17, 1923. Serial No. 619,550. 3 Claims. (Cl. 280—95.)



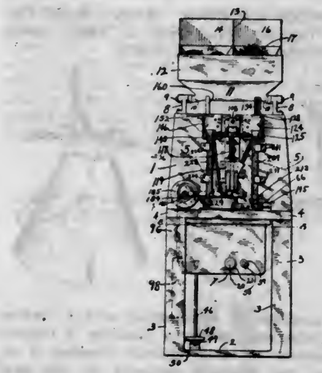
1. In an automobile, wheels, a wheel frame resting thereon, a body longitudinally movable on said frame, steering means applied to certain of said wheels comprising a pair of transverse rods spaced longitudinally one behind the other, the front rod being supported by the wheel frame and the rear rod by the said body, and an operative connection between said rods whereby they are caused to move oppositely in unison, comprising a rock arm pivoted between its ends and engaged at opposite ends with the respective rods, said rock arm being of telescopic construction to permit of relative displacement, longitudinally of the automobile, of the said rods without disengagement of the rock arm therefrom, said rock arm also including two parts hinged together on a horizontal axis to accommodate relative vertical displacement of the said rods.

1,486,661. TRUCK FOR RAILROAD ROLLING STOCK. ROBERT F. HALL, Schenectady, N. Y. Filed Aug. 31, 1923. Serial No. 660,371. 8 Claims. (Cl. 105—187.)



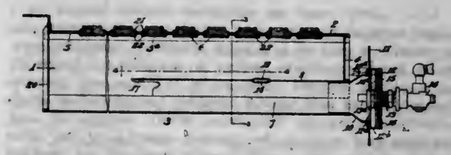
1. In a railroad truck, the combination of a main frame; a bolster, adapted to traverse laterally, relatively thereto; a plurality of bearings, disposed in pairs, the units of which are oppositely inclined, on opposite sides of the longitudinal central plane of the bolster; a swing frame, fixed to the main frame; and a plurality of swinging rockers, each journaled in the swing frame, and having two curved cam faces, each adapted to work against a unit of a pair of bolster bearings.

1,486,662. FLUID COUPLING. CHARLES HAMILTON, New York, N. Y. Filed June 21, 1922. Serial No. 569,898. 9 Claims. (Cl. 285—169.)



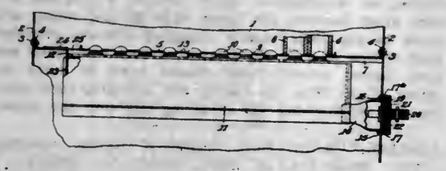
4. A coupling comprising a body having a bore adapted to receive a tubular member having a shoulder, a washer within the bore to co-operate with said member, a bail having means at one end to engage said shoulder, a nut operative upon said body, a ring journaled on the nut, and means movably connecting the bail with said ring.

1,486,663. ANIMAL TRAP. IRAD W. HILLS, Stanley, Wis. Filed Apr. 6, 1923. Serial No. 630,329. 18 Claims. (Cl. 43—67.)



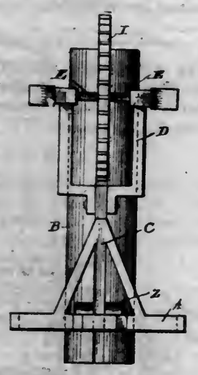
6. An animal trap including a trap body having an entrance chamber and a cage accessible from said chamber, a mirror in the chamber, a picture carrying member shiftable by an animal in said chamber to a position for displaying a frightening picture to be reflected in the mirror for frightening the animal from said chamber to enter the cage, and automatic trapping means interposed between said chamber and the cage.

1,486,664. ASSEMBLING MACHINE FOR INSULATOR KNOBS. JOHN EDGAR HIRES, Langhorne, Pa., assignor to Automatic Machinery and Equipment Company, Inc., Philadelphia, Pa., a Corporation of Delaware. Filed May 12, 1921. Serial No. 469,016. 19 Claims. (Cl. 10—158.)



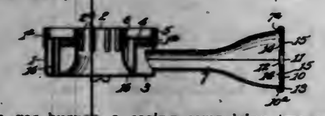
3. A machine adapted to assemble parts of an insulator knob, having two parts with a hole through each, a flexible washer, and a holding member for holding said parts together, said machine comprising, a frame, a main shaft, means for driving said main shaft, a receptacle on said frame, adapted to hold and individually discharge said washers and said members, a washer feeding means, a member feeding means, each adapted to receive respectively, washers and members from said receptacle, means for actuating both of said feeding means simultaneously, a member positioning device, a knob top part compartment, a knob base part compartment, knob part positioning means, adapted to take said knob parts individually from said compartments and bring them in registration with one another, said compartments being so fixed on said frame, to be positioned to feed knob parts to said knob part positioning means, said washer feeding and said member feeding means being adapted to bring a washer and a holding member in line with said registered knob parts, whereby said member feeding means assembles said member with said washer and with said knob parts, means for distorting said member to prevent its withdrawal from said knob parts, means for guiding the assembled knob parts to said distorting means, and gearing synchronously connected with various parts of said machine to cause said machine parts to function co-ordinately in a cycle, whereby said knob parts, said washer and said holding means are assembled.

1,486,665. BURNER FOR RADIANT GAS HEATERS. WILLIAM W. HOLLOWAY, Wheeling, W. Va., and HENRY KIELBERG, Martins Ferry, Ohio, assignors to Whitaker-Glessner Company, Wheeling, W. Va., a Corporation of West Virginia. Filed July 26, 1922. Serial No. 577,723. 7 Claims. (Cl. 158—104.)



7. A burner for radiant gas heaters, comprising a sheet metal casing having an upper portion of approximately U-shape, inverted, providing a top and depending side walls, a semi-cylindrical bottom attached to said side walls, and a member arranged complementally with respect to said bottom to form an intermediate fuel passage, said side walls and said member having flanges, and said bottom having hook-like lateral edges disposed in clamping relation to said flanges.

1,486,666. BURNER AND RADIANT SUPPORT FOR GAS HEATERS. WILLIAM W. HOLLOWAY, Wheeling, W. Va., and HENRY KIELBERG, Martins Ferry, Ohio, assignors to Whitaker-Glessner Company, Wheeling, W. Va., a Corporation of West Virginia. Filed July 26, 1922. Serial No. 577,724. 1 Claim. (Cl. 126—92.)

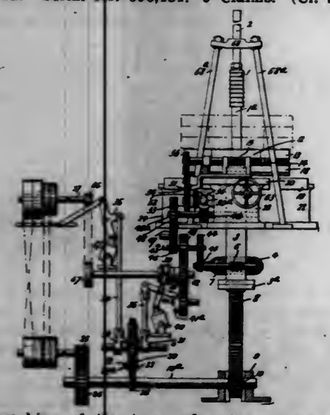


In a radiant heater, the combination with a stove casing and a horizontal radiant support mounted within said casing, said support having therein a plurality of apertures adapted to be embraced by radiants seated upon said support, and also having an elongated opening in an end thereof, of a tubeless hollow sheet-metal gas burner underlying said support and having a flat top, grids mounted on said top and adapted for directing gas upward through said apertures, an induction tube upon which the inlet end of said burner is carried and which is detachably mounted upon said casing, and a laterally disposed tongue carried by the opposite end of said burner above the level of said top and disposed in seated relation to said radiant support whereby said end of the burner is supported, said tongue being projected through the elongated opening of said support and being movable along said opening in positioning said burner.

1,486,667. GAUGE FOR CENTERING SHAFTS. WILLIAM J. JERMAN, Cleveland, Ohio. Filed Nov. 20, 1920. Serial No. 425,386. 2 Claims. (Cl. 33—189.)

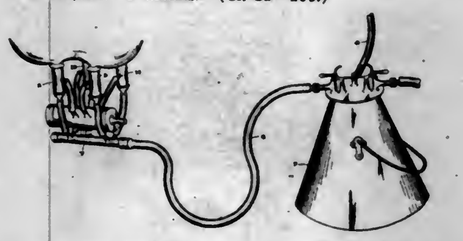
1. In a device for accurately positioning a scribing cutter with reference to a shaft upon which the cutter is to operate, in combination, a base member having diverging arms, a bar connecting the outer extremities of said arms, a radial securing means in said bar, a vertical support mounted upon said base at the junction of said arms, a fork at the free extremity of said support, and transversely adjustable gauge screws in the arms of said fork.

1,486,668. GAS BURNER. HENRY KIELBERG, Martins Ferry, Ohio, assignor to Wheeling Steel Corporation, Wheeling, W. Va., a Corporation of West Virginia. Filed Sept. 27, 1923. Serial No. 665,087. 5 Claims. (Cl. 158—116.)



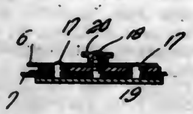
1. In a gas burner, a casing comprising two substantially cylindrical upright concentrically related walls having an intermediate closed bottom, a ring-like closure fitted between the upper ends of said walls, said walls having their closure engaging surfaces provided with crimps whereby are formed between said walls and said closure concentrically related rows of ports for egress of gas from the casing, and a mixing tube opening into said casing for supplying gas into the latter.

1,486,669. CARROUSEL. JAMES F. KLINE, Amarillo, Tex. Filed Feb. 26, 1923. Serial No. 621,279. 3 Claims. (Cl. 46—27.)



2. In a device of the class described, a base block having radial sockets, radial feet in the sockets, a standard carried by the block, a gear fixed on the standard, spider arms mounted to rotate about the standard, rock shafts in the spider arms, gears on the rock shafts for engaging the fixed gear on the standard, rings on the ends of the spider arms having slotted portions, links engaging the crank shafts and passing through the slots, brackets on the rings, seats on the brackets, and rocking levers on the brackets engaging the links.

1,486,670. GEAR-CUTTING MACHINE. ROBERT JAMES MCLEOD, West Drayton, England. Filed Dec. 12, 1922. Serial No. 606,451. 9 Claims. (Cl. 90—1.)



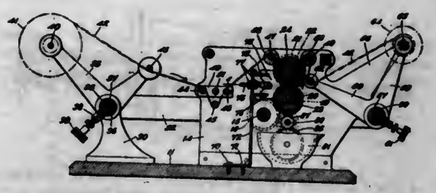
1. A machine of the type referred to, comprising a single reciprocating member provided with cutting teeth rigidly secured thereto and a plurality of blank holders common to and adapted to be arranged at equal distances from said member so that a number of blanks can be acted upon by the teeth of such member at one operation substantially as described.

1,486,671. MILKING MACHINE. ROBERT MABS, Calgary, Alberta, Canada. Filed June 23, 1921. Serial No. 479,841. 5 Claims. (Cl. 31—100.)

1. A milking machine, in combination with a teatcup and a vacuum extracting device, a pulsator, a teatcup claw disposed beneath the said pulsator chamber, a reciprocable piston rod disposed centrally in the said chamber and provided with a piston subject to atmospheric pressure, a cam configurated on the said piston rod in relation to a cylindrical sleeve slidable within the said chamber, an annular coil spring interiorly fitted to the said slidable sleeve and adapted to expand when the said cam engages it and to travel along the said cam as the result of contraction of the said annular coil spring, the said annular coil spring carrying the said slidable sleeve in the direction opposite to that of the said piston, a main port positioned to connect the said chamber with the said teatcup claw, a secondary port connecting the said chamber with the atmosphere, grooves configurated in the said slidable sleeve, upper and lower transverse grooves connecting the said upper and lower longitudinal openings positioned in the said chamber, the flexible inner chamber of the said teatcups connected to the said teatcup claw, the outer rigid casing of the rear teatcups connected to the said chamber, the outer rigid casing of the front teatcups connected with the said grooves configurated in the said slidable sleeve, the said sleeve slidable within the said chamber functioned to open and close ports inmparting a draw or suction on the front teats disposed in the front teatcups and a massage on the rear teats disposed in the rear teatcups simultaneously and alternately.

1,486,672. SAFETY RAZOR AND BLADE HOLDER. GIUSEPPE MAZZONI, Chicago, Ill. Filed July 27, 1923. Serial No. 654,115. 1 Claim. (Cl. 30—12.)

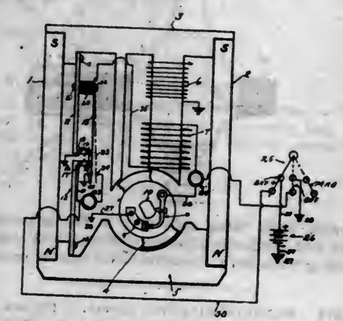
In a safety razor an elongated handle formed of a single strip of springy sheet metal centrally return-bent to provide a pair of integrally connected normally separated handle members having a plurality of longitudinally alined opposed openings in the free end portions thereof, one of said handle members having hollow studs projecting inwardly therefrom about certain of said openings and entering the opposed openings of the other handle member when said handle members are brought together, said hollow studs being adapted to enter the openings of a conventional safety razor blade, said handle members being further provided with alined transverse slots inwardly of the openings, a catch of substantially L shape attached to the outer surface of one of the handle members and extending forwardly and



then laterally through said slots and terminating in a hooked free end adapted to engage the other handle member adjacent its slot for retaining the handle members in clamping engagement with a blade disposed therebetween, a transversely curved tension plate disposed against the outer surface of one of the handle members and having a central clamping screw and end pins projecting through the openings of the handle members, a toothed guard plate disposed between the other handle member and the razor blade and provided with openings through which said clamping screw and pins project, and a nut upon said clamping screw engaging the outer surface of the last-named handle member for clamping the parts together.

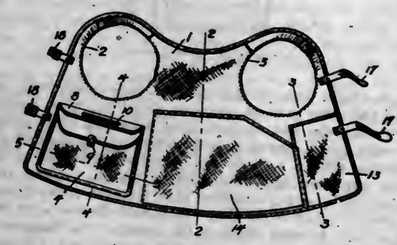
1,486,673. GARMENT AND METHOD OF CUTTING THE SAME. DAISY W. MELL, Athens, Ga. Filed Mar. 29, 1923. Serial No. 628,464. 4 Claims. (Cl. 2—113.)

2. A body garment for infants, having at its lower edge two projecting tabs located at opposite points, and at its upper edge provided with arm holes, and front and back neck openings of the same depth as the depth of the arm holes, said arm holes and said openings being separated by strips which are adapted to be overlapped in pairs and fastened together to form shoulder straps, and fastening means on said straps, such fastening means arranged so that front and back strips on either side of the central opening may be fastened together, or two front strips and two back strips may be fastened together to permit the garment to be arranged on the wearer with the tabs at front and back, or with the tabs at the two sides.



1,486,674. RIBBON-INKING MACHINE. FREDERICK GEORGE MEYER, Washington, D. C. Filed June 8, 1922. Serial No. 566,890. 8 Claims. (Cl. 91—50.)

1. A device of the class described comprising a solid inking roll having an unbroken surface, means for supplying ink at a plurality of points on said surface, and a plate member resiliently engaging said surface for preventing the mixing of said ink prior to its application to the ribbon.

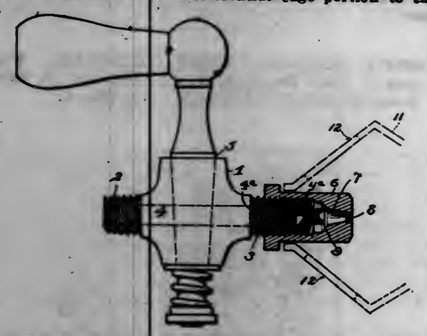


8. A machine of the class described comprising a frame; a pair of inking rolls rotatably mounted in said frame; a readily removable ink reservoir carried by said frame; a drum provided with a gear rotatably mounted in said reservoir, both adapted to pick up ink therefrom; a gear meshing with said first named gear and engaging the surface of one of said rolls, adapted to transfer ink from said drum and first named gear to the surface of said roll at separated points thereon; and means for driving said rolls and said second named gear.

1,486,675. REVERSE-CURRENT CONTROLLER. WILLIAM C. NEIN, New York, N. Y. Filed Mar. 15, 1920. Serial No. 365,803. 5 Claims. (Cl. 290—41.)

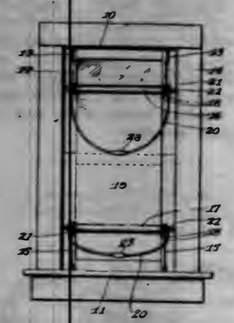
2. In an ignition system, the combination of an ignition current generator having permanent field magnets, an auxiliary source of current adapted to supply unidirectional current, manual means for connecting the generating winding of the generator to said auxiliary source of current, and automatic means for preventing all flow of current from the auxiliary source through the generating winding except when said current flows in a predetermined direction.

1,486,676. FISHING VEST. HANS N. NILSSEN, Duluth, Minn. Filed Apr. 16, 1923. Serial No. 632,307. 2 Claims. (Cl. 2—102.)



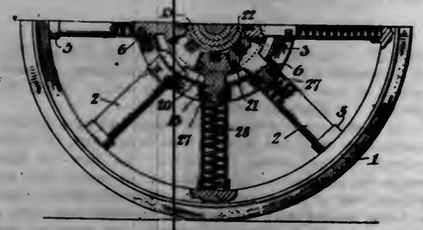
1. The combination with a vest of the class described of a fish basket permanently fixed thereto, a removable metal bottom within said basket, and drain holes within the bottom of the basket in the outermost edge thereof beneath the removable bottom.

1,486,677. VALVE. HENRY W. O'DOWD, Jersey City, N. J., assignor to William M. Crane Company, a Corporation of New York. Filed Oct. 15, 1921. Serial No. 507,935. 5 Claims. (Cl. 158—118.)



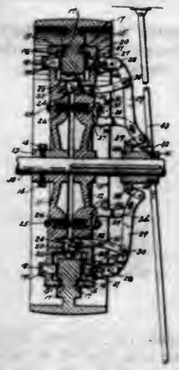
5. In combination with a valve casing having a passage therethrough provided with a discharge end, a valve mounted in the casing to control the flow of fluid through the passage, a cap applied to the casing over the discharge end of the passage and adjustable axially, said cap being formed with a discharge aperture and with a chamber whose walls converge towards said aperture, and a member on the casing projecting axially from the discharge end of the passage and having its terminal end formed with a circumferential edge portion adapted to

cooperate with the converging walls of the chamber in forming a circular constricted passage between the two, the relation of said circumferential edge portion to the



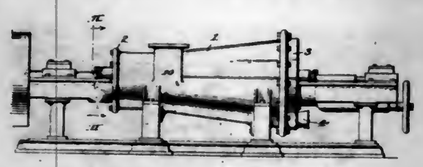
converging walls being such that in the adjustment of the cap said circumferential edge portion will engage the converging walls in a circumferential line of contact.

1,486,678. WINDOW SHADE. EDWIN T. PETERS, Havre, Mont. Filed June 2, 1922. Serial No. 565,391. 3 Claims. (Cl. 156—10.)



1. A shade comprising a pair of rollers disposed one above the other and in parallel relation, cords secured above one roller and cords secured below the other roller, the cords being secured to and wound on the ends of the respective rollers, a shade web secured at its ends to the rollers and extending therebetween, flanges on the ends of the rollers, and a weighted yoke for each roller having its arms formed with eyes embracing the ends of the rollers and bearing frictionally against the flanges to maintain the rollers in adjusted positions.

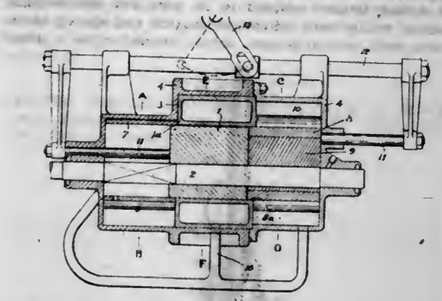
1,486,679. CUSHION WHEEL. GEORGE M. PETERS, Kirkwood, Mo. Filed Sept. 13, 1920. Serial No. 409,929. 5 Claims. (Cl. 152—53.)



5. A resilient wheel for vehicles comprising a hub having a portion mounted on an axle of the vehicle and provided with pairs of inboard and outboard flanges and a spoke-engaging part having side plate extensions interposed between each pair of flanges and radially movable relatively thereto, a rim, a plurality of tubular spokes connecting said rim and the hub part, plungers adapted to reciprocate in said spokes, said plungers having side and end recesses formed therein, roller bearings mounted in said recesses for engaging the spokes and said hub respectively and spring means acting between said rim and plungers for yieldingly supporting the axle portion.

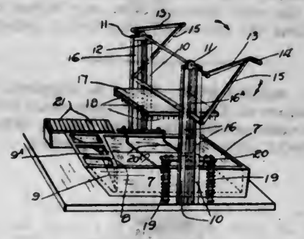
1,486,680. POWER-TRANSMISSION MECHANISM. WILLIAM H. PETER, Cleveland, Ohio. Filed Dec. 17, 1921. Serial No. 523,022. 11 Claims. (Cl. 192—53.)

10. A transmission mechanism of the character described comprising spaced rotatable disks, an annular element disposed between the margins of said disks, the disks being formed with inwardly turned flanges and the member with grooves receiving said flanges whereby the member is supported, and manually controlled means for first frictionally engaging the disks with said member and then positively engaging the disks with said member.



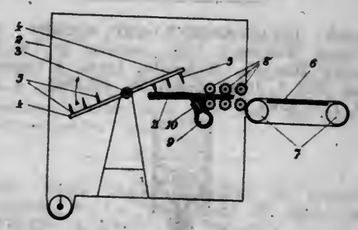
1,486,681. JORDAN ENGINE. WALTER EDWIN PETTINGILL, East Providence, R. I., assignor to Bird & Son, Inc., East Walpole, Mass., a Corporation of Massachusetts. Filed Mar. 8, 1923. Serial No. 623,733. 4 Claims. (Cl. 92—27.)

4. In a Jordan engine, the combination of a shell having a neck portion; a feed opening arranged tangentially thereof and at a point removed from the neck, said opening discharging directly onto the adjacent wall of the shell; knives located interiorly of the shell except at that portion where the feed opening is located; a plug mounted for rotation in the shell; and knives carried by the plug.



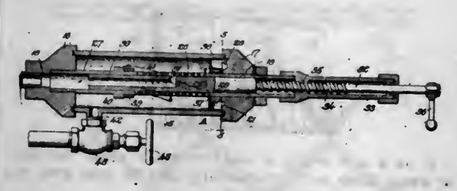
1,486,682. ROTARY PUMP. HARRY C. PHILLIPS, Gloucester, England. Filed June 11, 1923. Serial No. 644,687. 10 Claims. (Cl. 103—120.)

1. A rotary pump, compressor, prime mover, or the like, having in combination a revoluble inner element with a plurality of radial projections, an eccentrically disposed revoluble outer element with exterior pockets, an outer casing for the outer element, said revoluble inner member being adapted to traverse axially of the revoluble outer



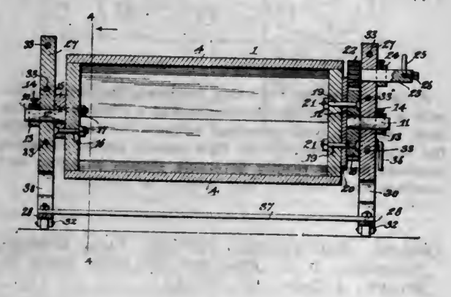
element, and a complementary block movable correspondingly with the inner element so as to take up displacement, whereby the capacity of the pockets is varied for admission or discharge of fluid.

1,486,683. MACHINE FOR COATING CONFECTIONERY AND OTHER EDIBLE MATERIALS. JOHN EDWARD SELVES PLUMRIDGE and HERBERT EASTON, Brisbane, Queensland, Australia. Filed Dec. 2, 1921. Serial No. 519,422. 3 Claims. (Cl. 91—4).



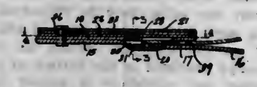
2. In machines of the class described, a trough containing a coating preparation, a tray adapted to carry articles to be coated, a vertical slidable plate provided with projections on its underside and adapted on its descent to force the tray into the trough containing the coating preparation, said projections being so fixed at points that they will not contact with said articles substantially as described.

1,486,684. MEANS FOR SCUTCHING AND BREAKING FIBROUS PLANT STALKS. FRANTIŠEK A. POŽÁR, Ceska Bela, Czechoslovakia. Filed May 22, 1922. Serial No. 562,754. 4 Claims. (Cl. 19—9.)



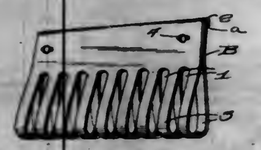
1. The improved scutching of fibrous plant stalks, comprising means for submitting plant stalks to the force of a blast and thereby keeping them in a substantially horisontal position, and means adapted to submit them to a scutching action while in this position.

1,486,685. LIQUID-FUEL BURNER. GEORGE D. REINHARDT, Tulsa, Okla. Filed May 19, 1922. Serial No. 562,109. 21 Claims. (Cl. 158—75.)



1. In a liquid fuel burner, a casing having a liquid fuel inlet, an apertured tube for conveying fuel from the casing, and rotatable means to remove accumulated deposits of fuel from the tube.

1,486,686. DOUGH PUNCHING AND FOLDING MACHINE. WILLIAM ROECKER, Marion, Ohio. Filed May 2, 1923. Serial No. 636,249. 2 Claims. (Cl. 259—8.)

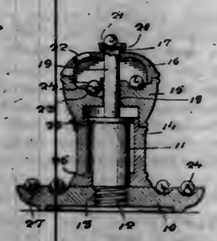


1. In combination, a pair of opposed vertical skeleton supports, a rectangular bearing block secured within the upper portion of said supports, receptacle bearing trunnions extending into said blocks intermediate the ends thereof, a power shaft mounted in one of said blocks, a pinion carried on the inner end of said shaft, a gear moving with one of the trunnions and meshing with said pinions, and means extending through one of the blocks and engaging the gear to lock the trunnions.

1,486,687. RAILROAD-CAR-DOOR SEAL. JOHN A. ROELL, West Jackson, Miss. Filed Feb. 12, 1923. Serial No. 618,653. 6 Claims. (Cl. 292—322.)

1. A car seal comprising an attaching head having a passageway therein open from an end thereof, said attaching head providing a locking barb extending transversely across said passageway and having a retaining lug extending laterally of the plane of said barb, and a flexible shackle portion connected at one end to said attaching head and having the free end thereof provided with an opening which when the free end is inserted into the passageway of said attaching head will receive said barb therethrough whereby the lug of said barb will be snapped into position to prevent detachment of the free end of the shackle from said barb.

1,486,688. COMB. FRIEDRICH ROSCHER, Washington, D. C. Filed Mar. 1, 1923, Serial No. 622,130. Renewed Jan. 31, 1924. 6 Claims. (Cl. 132—18.)



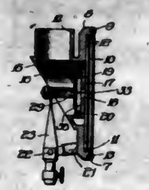
1. As a new article of manufacture, a comb, the teeth of which being each substantially oval in form with the wider end outwardly disposed.

1,486,689. PASTEBOARD-BOX CLOSURE. FRANK HENRY SCHADE, Cudahy, Wis. Filed Apr. 13, 1922. Serial No. 552,239. 8 Claims. (Cl. 229—47.)

5. In a device of the class described, the combination with a relatively rigid container and a closure therefor, each provided with openings adapted to register with the other, of substantially rigid double headed fastening members having readily severable shanks engaging said openings and retaining said closure in position.

1,486,690. EDUCATIONAL DEVICE. PAULO SCHELIGA, Washington, D. C. Filed Sept. 21, 1923. Serial No. 664,104. 1 Claim. (Cl. 35—2.)

A device of the class described embodying a base, a standard rising from the base, a container having an opening therein, means connecting the standard and container whereby the latter may be supported for vertical movement, a seat at the upper end of the standard, a plurality of movable elements within the container and a spiral raceway provided in the bottom of the container, whereby, when the container is moved vertically the movable elements will be deposited singly upon the seat for passage through the opening of the container.



1,486,691. ELECTRICAL CONNECTER. EDWARD SCHWARTZ, New York, N. Y., assignor to Manhattan Electrical Supply Company, Jersey City, N. J., a Corporation of Massachusetts. Filed Sept. 7, 1918. Serial No. 253,076. 1 Claim. (Cl. 173—332.)

An electrical connecter comprising an insulating tubular casing, an insulating button adapted to enter said casing and be secured within the same, together with contacts carried by said button and comprising a cylindrical contact of spring metal having projecting from one edge thereof a combined securing strap and binding screw terminal, and a second contact comprising a pair of spring fingers adapted to be arranged substantially axially within said cylindrical contact and spaced therefrom, said spring fingers being integral with a sheet

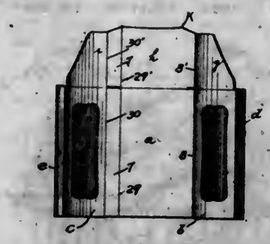
metal strap arranged in extension thereof and forming a combined attaching strap and binding screw terminal, said straps being arranged on opposite sides of the insulating button and secured thereto, the contacts projecting in the same direction from said button and being housed within the surrounding insulating casing.

1,486,692. SOUND BOX. LOUIS K. SCOTFORD, Chicago, Ill., assignor to The Oro-Tone Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 1, 1919. Serial No. 274,412. 17 Claims. (Cl. 274—35.)

1. In a sound box, in combination, a main diaphragm, a secondary diaphragm, said diaphragms forming opposite walls of directly communicating sound chambers, a needle, separate means associated with each of said diaphragms and said needle for causing positive movement of one diaphragm in one direction only and positive movement of the other diaphragm in an opposite direction only.

1,486,693. INCANDESCENT-LAMP SOCKET. IRA R. SELTZER, Waterbury, Conn., assignor to The Gordon Electric Mfg. Co., Waterville, Conn., a Corporation. Filed May 7, 1921. Serial No. 467,760½. 4 Claims. (Cl. 173—358.)

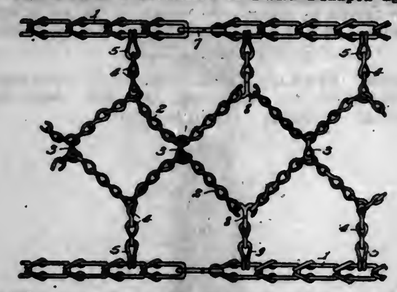
1. In an incandescent lamp-socket, the combination with a molded body formed with internally-arranged passages for the current-receiving wires, of an internally-threaded coupling-sleeve anchored in the said body when



the same is molded, and having its inner end open to communicate with the passages thereof, terminal plates and a spring-contact applied to the body within the periphery thereof, and an insulating shell applied over the body, whereby the current-carrying wires are located within the periphery of the body and their abrasion prevented.

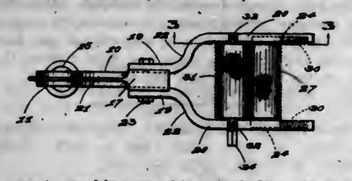
1,486,694. LADLE STOPPER ROD. JAMES E. SHEAFFER, Burnham, Pa. Filed Sept. 6, 1923. Serial No. 661,238. 3 Claims. (Cl. 22—85.)

1. The combination of a stopper rod having a supporting rod; a sleeve brick enclosing the rod; a graphite head; and a protecting sleeve extending over the joint between the graphite head and the sleeve brick.



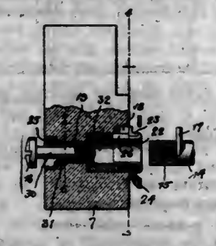
1,486,695. FOLDING DISPLAY DEVICE. JOSEPH B. SINOBB and ARTHUR B. LEVY, New York, N. Y. Filed Apr. 1, 1921. Serial No. 457,662. 6 Claims. (Cl. 206—44.)

1. In a display device, a pair of oppositely disposed containers, and an intermediate section hingedly connecting the containers and having a fold line between its hinged side edges to admit folding of the containers in superposed relation upon each other and upon the intermediate section.



1,486,696. TIRE CHAIN. CHARLES W. SNODGRASS, Mannington, W. Va. Filed June 23, 1922. Serial No. 570,439. 1 Claim. (Cl. 152—14.)

A tire chain comprising circular side chains, a pair of continuous twisted-link chains intermediate said side chains, a single cross link coupling together said twisted-link chains at regular intervals throughout the lengths of the latter, and a series of alined cross links connecting said side chains to said twisted-link chains at points midway between said single-link couplings, thereby to form a succession of diamond-shaped figures

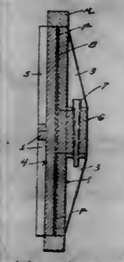


located remote from said side chains and adapted to rest in substantial entirety upon the tread portion of a tire.

1,486,697. MACHINE FOR MASHING BEEFSTEAK AND THE LIKE. FLOYD STILLSON, Williamsburg, Ontario, Canada. Filed Nov. 15, 1922. Serial No. 601,184. 3 Claims. (Cl. 17—26.)

1. A meat mashing machine including frame members; rollers mounted in said frame members for rotation; said rollers having circumferential rows of teeth formed thereon; means for resiliently forcing one of said rollers toward the other roller; a bracket for supporting said frame members; a block formed at one end of said bracket and having recesses in the sides thereof; said frame members having inwardly offset ends engaged in said recess; means for securing said ends in said recess; a substantially U-shaped bracket member carried at the other end of said standard; and an adjustable clamping member carried by said substantially U-shaped bracket member to clamp the standard on a support; said standard having a reinforcing rib extending practically the entire length thereof.

1,486,698. SWITCH HANDLE. GEORGE B. THOMAS, Bridgeport, Conn., assignor to The Bryant Electric Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Sept. 22, 1921. Serial No. 502,437. 7 Claims. (Cl. 200—172.)

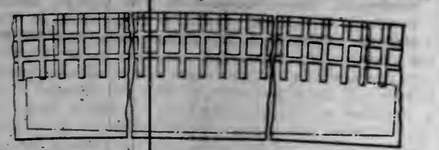


1. A handle for rotary snap switches comprising a button recessed to receive a switch spindle, a sleeve secured within said recess, and a cover-pressing spring washer secured by said sleeve to the button.

7. A handle for rotary snap switches, comprising a button pierced by a hole, a sleeve secured against rota-

tion in said hole, a screw having a rolled thread spaced from the head of the screw, and means associated with the sleeve and forming an abutment engaged by the screw thread to prevent the escape of the screw from the button when the latter is detached from the spindle.

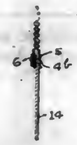
1,486,699. FURNACE DOOR. CHARLES H. THORNDELL, Connellsville, Pa. Filed Aug. 28, 1922. Serial No. 584,762. 3 Claims. (Cl. 110—173.)



3. In combination with a furnace door provided with an outwardly projecting boxing of non-circular cross-section, a liner positioned adjacent to the inner face of the door and provided with an integral outwardly projecting element fitting snugly into said boxing, and a member inserted through said element of the liner and the boxing and acting to force the liner toward the door and to secure the door and the liner together.

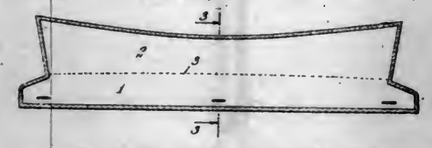
1,486,700. EXTENSION RAIL. HAROLD P. TOMPKINS, Charleston, W. Va. Filed June 8, 1923. Serial No. 644,226. 5 Claims. (Cl. 238—10.)

5. An extension for the tracks in mines, etc., comprising a pair of channeled members having inner straight portions to rest on the heads of the car rails and outer inclined portions to rest on the floor of the mine, and each of said rail extensions being centrally and longitudinally channeled to receive the flanges of car wheels therein.



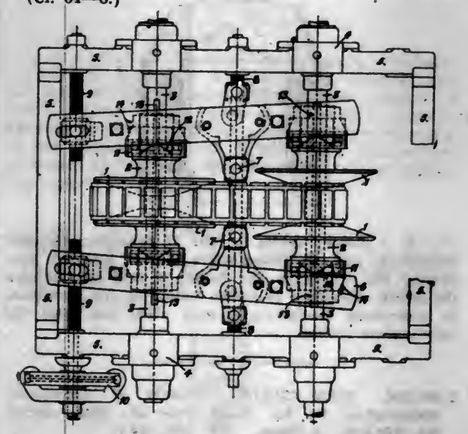
1,486,701. COLLAR. JOHN MANNING VAN HEUSEN, Jamaica Plain, Mass., assignor to Van Heusen Products, Inc., a Corporation of Delaware. Filed Jan. 25, 1922. Serial No. 531,757. 8 Claims. (Cl. 139—386.)

2. A folding collar made of multiple ply interwoven fabric comprising a neckband portion and a turn-down portion, said collar having woven in at least one of said portions a plurality of relatively narrow thickened zones which tend to stiffen the collar and which are adapted to facilitate the folding of the collar along a longitudinal curvilinear line of fold.



1,486,702. COLLAR BAND. JOHN MANNING VAN HEUSEN, Jamaica Plain, Mass. Filed Jan. 25, 1922. Serial No. 531,758. 2 Claims. (Cl. 2—41.)

2. In the manufacture of shirts, the method of attaching a collar band made of multiple-ply interwoven fabric having two integral extensions from the lower edge thereof, one of said extensions being longer than the other, which consists in placing the collar band and the shirt fabric together with the edge of the longer extension coincident with the edge of the shirt fabric, passing a row of stitches through the longer extension and the shirt fabric, said row of stitches being beyond

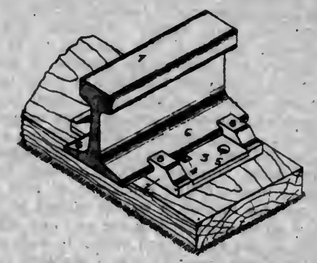


the edge of the shorter extension; folding the neckband over so that it lies in the plane of the shirt fabric, placing the shorter extension over the other side of the shirt fabric and passing a row of stitches through both the longer and shorter extensions and also through the shirt fabric.

1,486,703. COLLAR AND COLLAR FABRIC. JOHN MANNING VAN HEUSEN, Jamaica Plain, Mass., assignor to Van Heusen Products, Inc., a Corporation of Delaware. Filed Feb. 6, 1922. Serial No. 534,328. 8 Claims. (Cl. 139—386.)

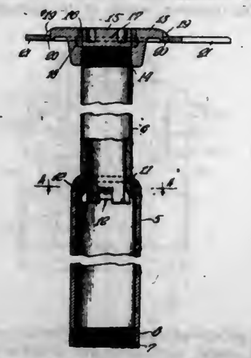
1. A collar fabric or collar of straight multiple ply interwoven fabric having a fold portion extending longitudinally of the fabric and being longitudinally curved in the plane of the fabric, the warp threads of the fabric on each side of and adjacent to the fold portion having the same curvilinear arrangement as the fold portion, and the weft threads of the fabric being parallel and uniformly spaced from each other.

1,486,704. VARIABLE-SPEED GEAR. THOMAS VICARS and EDWARD LYNTON VICARS, Earlestown, England. Filed July 7, 1921. Serial No. 482,984. 1 Claim. (Cl. 64—8.)



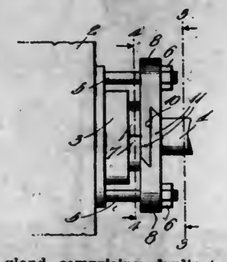
In a variable speed gear, the combination of a frame, two parallel shafts mounted therein, a spline on each shaft extending substantially the full length of the same, a pair of cone-shaped driving elements held on said shaft by the spline and adapted to slide toward and away from each other, a reduced portion on the outer end of the bearing of each driving element to provide a shoulder, a ball thrust bearing mounted thereon, V-shaped elements associated with said ball thrust bearing, levers pivoted between the parallel shafts and having their relatively inner edge portions engaging the said V-shaped elements, said levers being otherwise free of connection with the driving elements, and means cooperating with the levers for operating the same to cause said levers to exert endwise pressure on the V-shaped elements of one pair of driving elements while freeing pressure on the V-shaped elements of the other pair of driving elements.

1,486,705. DECORATIVE COATING AND METHOD OF FORMING THE SAME. CHARLES E. WALKER, Hamilton, Ohio. Filed Mar. 6, 1922. Serial No. 541,475. 2 Claims. (Cl. 41—35.)



1. A method of decorating consisting in applying a stiff body of dyed paper pulp containing dye decementitious substances to one face of the article to be decorated, then treating the coating to simulate bark, then adding knots to the coating, then drying the article, then subjecting the article to baking to the desired degree, then dipping the baked article into glycerine and silica, then stroking the article with a brush, and then heating the article for a predetermined period.

1,486,706. TIE PLATE. JOSEPH A. WALSH and JAMES F. KENNEDY, Pittsburgh, Pa.; James J. Walsh executor of the said Joseph A. Walsh, deceased. Filed Dec. 4, 1922. Serial No. 604,696. 1 Claim. (Cl. 238—290.)

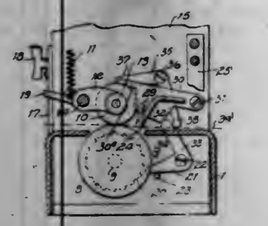


A tie plate for rails comprising substantially flat top and bottom sections, said top section having flange engaging lugs at one edge thereof in the corner portions, the opposite end of the top plate being reduced in width, projections at each corner of the bottom plate at one end thereof of a thickness equal to the thickness of the first plate, said reduced end of the top plate fitting between said projections, and a flange engaging lug on each projection, said plates having registering spike holes therein at each end thereof and located between the lugs, said top section only providing the seat for a rail when laid thereon.

1,486,707. GATE BOX. ARTHUR L. WARNER, Elgin, Ill., assignor to Illinois Iron and Bolt Company, Carpentersville, Ill., a Corporation of Illinois. Filed Mar. 1, 1920. Serial No. 362,486. 2 Claims. (Cl. 137—18.)

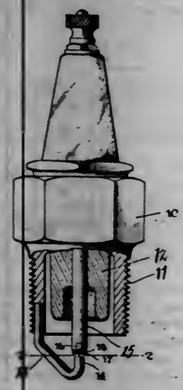
1. A gate box comprising two telescopically arranged pipe sections, the outer section having one of its end edges inturned to restrict the bore and the inner section being slightly smaller than the restricted bore and having outwardly projecting resilient tongues which engage the inner wall of the outer section to hold the two sections in any longitudinally extended position.

1,486,708. TWO-PIECE PACKING GLAND. ANDERSON J. WELLS, South Greensburg, Pa. Filed Jan. 20, 1921. Serial No. 438,766. 1 Claim. (Cl. 286—33.)



A packing gland comprising duplicate separable sections each having a sleeve forming portion and a collar forming portion at the outer end of its sleeve forming portion, the collar forming portions having extended outer end portions having openings for receiving fasteners to hold the gland in place about a shaft, and tongues extending longitudinally from the inner end of each collar forming portion at opposite sides of the sleeve portion and extending beyond the sleeve forming portion and having beveled ends with the end of the tongue at one side of the sleeve portion beveled in an opposite direction to the end of the tongue at the opposite side of the sleeve, the collar forming portion having recesses extending longitudinally of the collar from the inner ends of the tongues and under cut at their inner ends and adapted to receive the tongues of the other section when the sections are put together with the edges of the sleeve forming portions contacting and the tongues extending in overlapping relation.

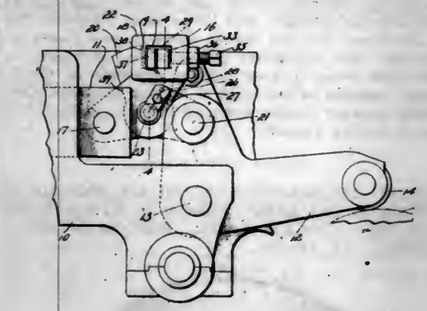
1,486,709. ANTISPINNING DEVICE. JOHN L. WHEELER, St. Louis, Mo., assignor to The Measuregraph Company, a Corporation of Delaware. Filed May 19, 1922. Serial No. 562,253. 5 Claims. (Cl. 33—130.)



1. In an anti-spinning device, the combination of a measuring roller, a detent wheel mounted to rotate therewith, a detent pawl, a movably mounted presser

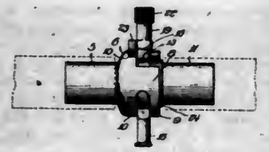
roller to press the fabric against the measuring roller during the measuring movement, a movable member mounted so as to be supported by the fabric when being pulled past the measuring roller, means actuated by said movable member when it is unsupported by the

fabric, for actuating the detent pawl to co-operate with the detent wheel and stop the measuring roller, and automatic means for disengaging the detent pawl from the wheel when the presser roller is moved away from the measuring roller.



1,486,710. SPARK PLUG. JOSEPH S. WHITTIER, Houlton, Me. Filed June 15, 1923. Serial No. 645,682. 4 Claims. (Cl. 123—169.)

1. A spark plug having opposed terminals one terminal having a hollow cylindrical conformation and being externally grooved to form a sharp annular fin adjacent to its lower end, substantially as set forth.

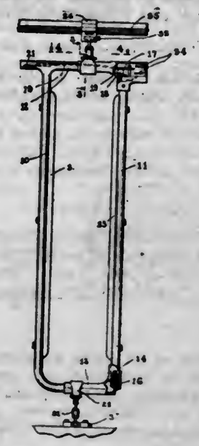


1,486,711. CONNECTION MECHANISM. RICHARD LESTER WILCOX, Waterbury, Conn., assignor to The Waterbury Farrel Foundry and Machine Company, Waterbury, Conn., a Corporation of Connecticut. Filed June 4, 1921. Serial No. 475,091. 6 Claims. (Cl. 74—48.)

4. In a connection mechanism, companion members comprising an arm member and a shearing member, operatively connected with each other, a shearing element having a section at one end separated from the remainder of said shearing element by a weakened portion; and movable means for securing said shearing element in said arm member, all of said parts being so associated that said shearing member is held against relative movement by said shearing element and a projecting portion of said arm member whereby said members and element operate as a unit under normal strains, but move relatively to each other under abnormal strains, at which

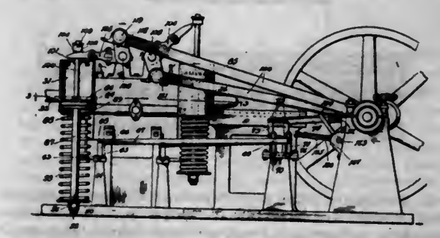
time the projecting section of said shearing element will be broken off at said weakened portion and released from engagement with both of said members, the pressure of the shearing member thereon being applied at a point beyond its securing means.

1,486,712. HOSE COUPLING. RICHARD J. WILLIAMS, Virginia, Minn. Filed Mar. 28, 1921. Serial No. 456,451. 1 Claim. (Cl. 285—177.)



In a pipe coupling, an enlarged socket member having a seat therein, a compressible packing in said seat, oppositely positioned axially and circumferentially extending arms carried by the member, the surface of the arms adjacent the body portion of the member being inclined inwardly toward the point of junction with the body, the body opposite said inclined portion of the arms being provided with axially extending serrations, a second member having a face adapted to fit into said socket member and engage the packing, a shoulder on said member, a rotatable locking ring fitted behind said shoulder and retained in place by a fixed ring secured to the member, oppositely located arms extending from the locking ring and provided with surfaces adapted to engage the inclined surfaces of the body member arms, said arms being provided with extensions for manual operation, a sleeve fitting about one of said arms and radially movable thereon, a washer carried by the end of the arm, a spring surrounding the arm and engaging the inner face of the washer and spring in such manner as to urge the sleeve inwardly, and a serrated foot carried by the sleeve and adapted to engage the serrations upon the body member to automatically and adjustably lock the ring and thus the second member to the socket member.

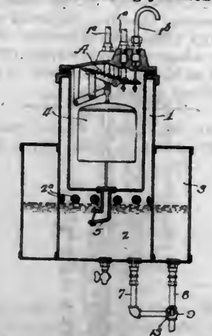
1,486,713. STANCHION. LEWIS KEMPER WILSON, Waukesha, Wis. Filed June 9, 1922. Serial No. 567,095. 7 Claims. (Cl. 119—149.)



1. In a stanchion, a fixed stanchion member, a movable stanchion member pivotally and slidably connected at its lower end portion to the lower end portion of the

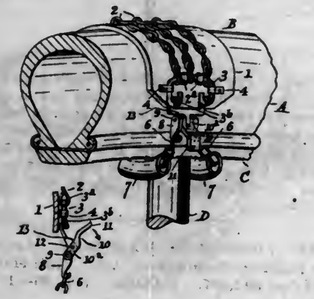
fixed stanchion member and having a locking engagement at its upper end with the upper end of the fixed stanchion

member, said movable stanchion member being unlocked by a downward movement of the movable stanchion member.



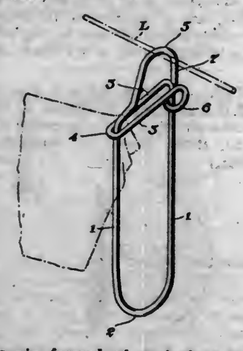
1,486,714. INTERNAL-COMBUSTION ENGINE. ROBERT S. WITTMEIER, Portland, Oreg. Filed Aug. 23, 1921. Serial No. 494,479. 10 Claims. (Cl. 123—61.)

7. In an internal combustion engine of the precompression type, an explosion cylinder, and means for compressing a gaseous charge prior to delivery to the said cylinder comprising a charge compression cylinder having a charge intake and a port in communication with the explosion cylinder, a piston working in the charge compression cylinder, means urging the said piston in the direction of its compression stroke, the piston having a stem extending exteriorly of the cylinder, a tappet head upon the stem, and means coacting with the tappet head to move the piston on its intake stroke, said means comprising an oscillatory tappet arm including pivotally supported relatively separable members, and means yieldably resisting separation of the members, the members, in the movement of the arm in one direction, being arranged to ride over and past the tappet head and engage behind the same, and in the movement of the arm in the other direction being arranged to act against the head to exert force upon the said stem and finally disengage from the head to release the piston for actuation by the said urging means.



1,486,715. VACUUM FUEL-FEED RESERVE SYSTEM. ANDREW C. WOOD, Chicago, Ill., assignor to Stewart-Warner Speedometer Corporation, Chicago, Ill., a Corporation of Virginia. Filed May 11, 1922. Serial No. 560,090. 5 Claims. (Cl. 158—46.5.)

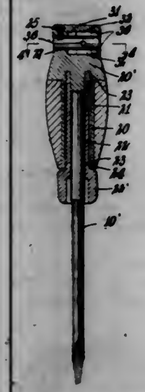
1. In a vacuum fuel feeding device having connections for supplying a carbureter and for deriving fuel for such supply, a three-chambered receptacle having its three chambers connected for fuel delivery from the first into the second and from the second into the third; conduits from the second and third chambers for delivery to the carbureter, said conduits making junction with each other



for ultimately supplying the carbureter through the same passage, and a valve at their junction adapted to be adjusted for delivery to the carbureter alternatively either from the second chamber or from the third chamber.

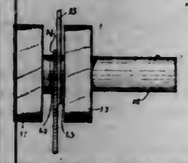
1,486,716. ANTISKID TIRE SHOE. EDWARD CHARLES WOOD, Nyah West, via Swan Hill, Victoria, Australia. Filed Nov. 14, 1922. Serial No. 600,842. 2 Claims. (Cl. 152—14.)

1. An anti-skid shoe for wheel tires, comprising a flexible saddle disposed over the tire, chains disposed over said saddle and adapted to tread on the road, stirrups connected to the chains and to the saddle, and spring fitted means connected to the stirrups on opposite sides of the shoe whereby the latter will embrace the tire.



1,486,717. CLOTHESPIN. FRANK YOUNG, Phoenix, Ariz. Filed May 12, 1923. Serial No. 638,551. 1 Claim. (Cl. 24—139.)

A clothes pin formed of a single strand of material comprising a pair of arms conected at adjacent ends, the free end portion of one of the arms being continued by

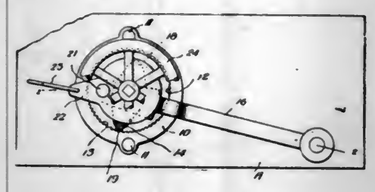


inwardly inclined reverted arms, the free end portion of the second arm extending between the reverted arms and terminating in an inwardly facing hook member, said second arm possessing inherent resiliency and constantly urging toward the intermediate portion of the reverted arms, said hook member being inwardly offset, said offset being positioned adjacent to the lower or outer end portions of the reverted arms.

1,486,718. TOOL HANDLE. FRANK ZYGMUNT, Plantsville, Conn. Filed Oct. 4, 1922. Serial No. 592,275. 3 Claims. (Cl. 145—61.)

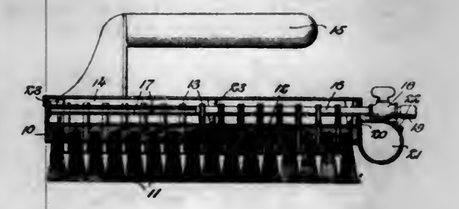
1. A tool of the type specified comprising an elongated handle, a hammer head slidable in one end of said handle transversely to the latter, said hammer head being adapted to be confined entirely within the handle when not in use and to be projected partially from the handle for use, and integral lugs on said hammer head adapted to engage abutment shoulders on said handle to hold the hammer head projected.

1,486,719. LICENSE-TAG FASTENER. ANTHONY BENNETT ALDRICH, Washington, D. C. Filed May 25, 1923. Serial No. 641,447. 1 Claim. (Cl. 85—1.)



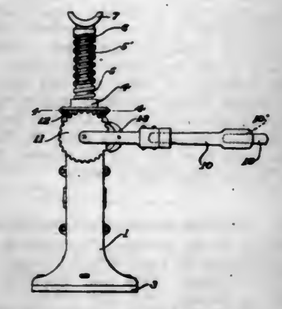
A fastening comprising a screw threaded member having a transversely elongated head arranged for gripping between the fingers, and a cooperating internally threaded socket member closed at one end and having a transversely elongated enlarged finger grip at its other end.

1,486,720. LENS. WILLIAM BAUSCH and MAX POSER, Rochester, N. Y., assignors to Bausch & Lomb Optical Company, Rochester, N. Y., a Corporation of New York. Filed Aug. 24, 1920. Serial No. 405,585. 4 Claims. (Cl. 240—48.4.)



1. A prismoidal refracting headlight lens of uniformly increasing thickness from top to bottom and having its entire incident and emergent surfaces uniformly continuous from apex to base, one of said surfaces being formed of a series of uniform contiguous astigmatizing cylindrical lenses with a dispersing power in the horizontal meridian only.

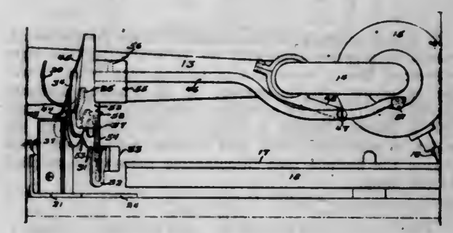
1,486,721. LEVER. HENRY A. BENNETT, Aurora, Ill. Filed Mar. 28, 1922. Serial No. 547,435. 4 Claims. (Cl. 74—118.)



1. In a device as set forth, an operating rod, a lever, a pawl carried by said lever, said pawl and lever provided with registering slots receiving therethrough said rod, said pawl provided with opposed operating tips, and a double toothed internal ratchet cooperating with said pawl.

1,486,722. BRUSH. AARON G. BERNÁT, San Diego, Calif. Filed Nov. 12, 1921. Serial No. 514,732. 7 Claims. (Cl. 26—7.)

1. A brush including a brush back provided at its bottom with bristles and carrying at its top a chamber, tubes extending through said brush back and having their upper ends opening into said chamber, whereby steam delivered to the chamber is supplied to said bristles, and means for delivering steam to the chamber below the upper end of said tubes whereby waters of condensation are prevented from reaching the bristles.

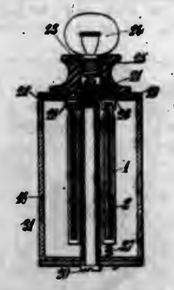


1,486,723. JACK. MAURICE F. BERNSON, Canadian, Tex. Filed July 12, 1921. Serial No. 484,111. 2 Claims. (Cl. 254—102.)

1. A jack of the class described comprising a standard having a bore therein and vertical grooves in the walls of the bore, the ends of the bore being of larger diameter

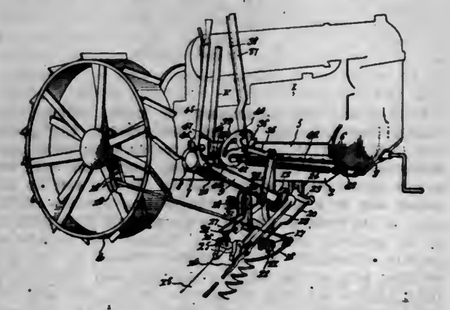
than the major portion thereof with sloping shoulders connecting the enlargements with the walls of the grooves, a nut rotatably connected with the top of the standard, a screw threaded member located in the bore of the standard and passing through the nut, a projection at the lower end of the member for engaging the grooves to prevent rotary movement of the member until the projection reaches the enlargements, ratchet means for rotating the nut, a second screw threaded member located in the first member and having screw threads thereon, the first member being interiorly screw threaded to receive the second member and a supported head on the upper end of the second member.

1,486,724. REPEATING DEVICE FOR SOUND-REPRODUCING MACHINES. CHARLES WILLIAM BLOEMKER, Philadelphia, Pa. Filed May 9, 1921. Serial No. 467,850. 7 Claims. (Cl. 274—15.)



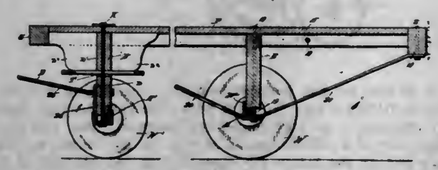
1. In a sound reproducing machine, a member movable in opposite directions and having record engaging sound reproducing means thereon whereby said member is moved in one direction due to engagement of the sound reproducing means with the grooves of the record; means for raising the sound reproducing means out of engagement with the record; means actuated under tension and embracing said first member for moving said member in an opposite direction; and means actuated by said first named member and operative on said raising means to permit lowering of said sound reproducing means into engagement with grooves of the record.

1,486,725. KNIFE. WALLACE R. BROWN, Olean, N. Y. Filed Feb. 3, 1923. Serial No. 616,744. 3 Claims. (Cl. 30—10.)



1. A knife of the class described comprising a handle, a sheath pivoted thereto to swing into or out of the handle, a blade pivoted to the sheath near one end to fold into the sheath or to swing outward in line with the sheath, and means on the handle to hold the sheath in the folded position with the blade closed or to engage the blade and hold the same in the open position, said means comprising a bail, the bail having a locking lip and said blade having a notch to receive said lip when the blade is in the open position and the sheath folded into the handle, the bail being swingable over the back of the sheath when the blade is folded into sheath and the sheath folded into the handle.

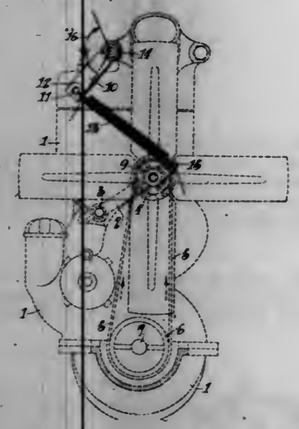
1,486,726. RECUPERATION CELL. CHARLES FRANÇOIS BUFFARD, Paris, France. Filed Sept. 9, 1922. Serial No. 587,206. 4 Claims. (Cl. 204—29.)



1. In a recuperation cell, a silver chloride electrode, a diaphragm enclosing this electrode, a zinc electrode surrounding the silver chloride electrode, perforations in the said zinc electrode, means for controlling the opening of the zinc electrode.

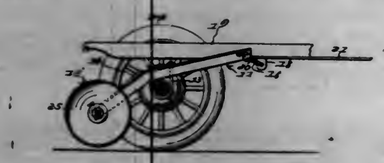
1,486,727. MOWER ATTACHMENT FOR TRACTORS. FRED CHANDLER, Yakima, Wash. Filed Aug. 31, 1920. Serial No. 407,161. 5 Claims. (Cl. 56—25.)

1. An attachment for tractors comprising a mower including a mower shoe, a slotted bracket carried by said shoe, a link engaging slidably through said bracket and having attachment at its outer end to the mower, means attached to the inner end of the link for raising the mower, and brace means connected longitudinally and transversely of the tractor and between the tractor and said shoe.



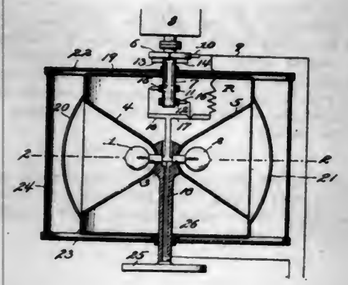
1,486,728. TOBACCO TRUCK. ANDREW JACKSON CHESSON, Kinston, N. C. Filed Sept. 18, 1920. Serial No. 410,002. 4 Claims. (Cl. 280—29.)

1. In a truck, a front bolster comprising a stationary section and a movable section, blocks for bracing the stationary section, a fifth wheel secured to the stationary section, a king bolt extending through said stationary section for rotatably supporting the movable section on the stationary section, said king bolt projecting beyond the lower edge of the movable section, an axle ar-



ranged at the lower edge of the movable section, wheels journaled on said axle, and an L-shaped bar carried by the king bolt and confining the axle in one of its lower corners between the king bolt projecting therethrough and the upstanding end of the L-shaped bar.

1,486,729. FAN-BELT ADJUSTER. JAMES H. CLARK, Richmond, Va., assignor to Henry J. Cohn, Richmond, Va. Filed Mar. 8, 1923. Serial No. 623,748. 2 Claims. (Cl. 64—52.)



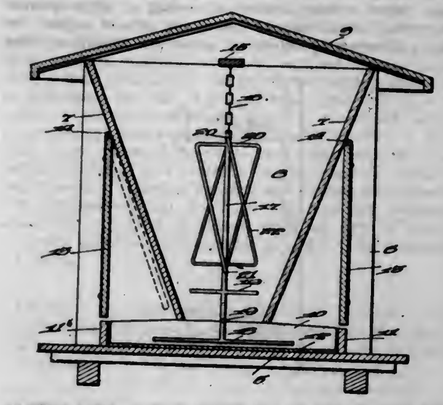
1. In a fan belt adjustment for motor vehicles, the combination with the pivoted fan bracket, the grease cup of that bracket, and one of the securing bolts commonly used to secure the top water connection with the motor, of an arm plate secured to the fan belt by the grease cup in a manner for permitting arcuate adjustment of the position thereof, a second arm plate adapted to be securely clamped, in a manner for permitting arcuate adjustment of the position thereof, by the said securing bolt of the water connection, and bent out at right angles and back to provide an ear, the said ear being apertured, and a coil spring connecting the said apertured ear and arm plate for the purposes specified.

1,486,730. ANTISKID AND GRIP DEVICE FOR MOTOR-DRIVEN VEHICLES. LOUIS COLLETTE, Spencer, Mass. Filed Nov. 1, 1921. Serial No. 512,090. 1 Claim. (Cl. 188—[illegible])

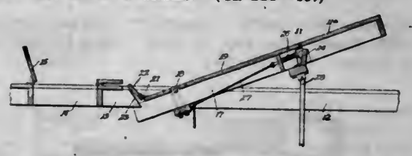
A device for the purpose indicated comprising a rocking or tilting frame provided with side bars having clips for effecting a pivotal connection between them and the rear axle of a vehicle, shoes carried by the frame at the rear end of the latter for contact with the surface of a roadway or street, the side bars beyond the clips being arranged on converging lines, a crank shaft mounted for rocking movement and provided with terminal arms pivotally connected with the extremities of the side bars of the frame and having an intermediate crank, and a longitudinally movable operating rod terminally connected with said intermediate crank for rocking the crank shaft and thereby tilting the frame.

1,486,731. ELECTRIC ILLUMINATING DEVICE. WALTER H. COOK, New Orleans, La. Filed July 1, 1920. Serial No. 393,274. 12 Claims. (Cl. 240—49.)

1. An illuminating device comprising an electric lamp, means cooperative therewith for concentrating the light therefrom into a beam and projecting such beam, means for supplying electric current of illuminating strength intermittently but at a regular frequency to said lamp, and a shutter having a blade of less width than the width of said light beam and movable across said beam during the periods that illuminating current is supplied to the lamp.



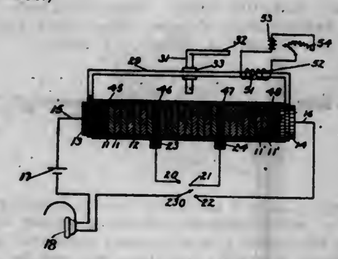
1,486,732. EXERCISING APPARATUS. JOHN J. COOPER, Stamford, Conn. Filed Sept. 24, 1921. Serial No. 502,941. 10 Claims. (Cl. 46—69.)



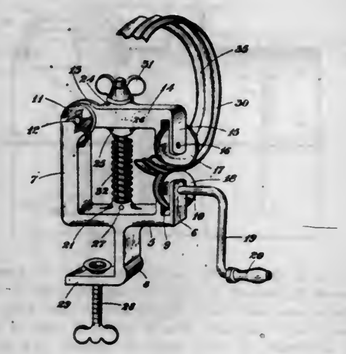
1. An exercising apparatus comprising treads arranged one alongside the other for a person to stand on to move the treads alternately in a downward direction, inclined guideways for the treads to slide on up and down, and resistances connected with the treads to resist the downward movement of the treads and assist in the upward movement thereof.

1,486,733. STOCK FEEDER. CHARLES W. CORL, State College, Pa. Filed Oct. 25, 1922. Serial No. 596,846. 2 Claims. (Cl. 119—54.)

1. In a feeder, the combination with a trough and a hopper delivering thereinto, of an upright shaft in the hopper having actuating means in the trough, upper and lower cross arms respectively projecting from different sides of the shaft within the upper and lower portions of the hopper, diagonally disposed rod portions connecting said upper and lower cross arms, and outstanding agitator fingers carried by the shaft below the lower cross arms and located in the lower end of the hopper adjacent to its outlet into the trough.

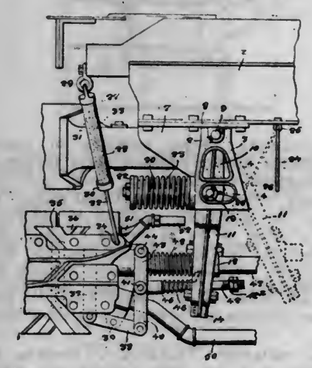


1,486,734. DUMP. MATHEW M. EGAN, Fort Worth, Tex. Filed May 10, 1922, Serial No. 559,858. Renewed Jan. 29, 1924. 3 Claims. (Cl. 214—49.)



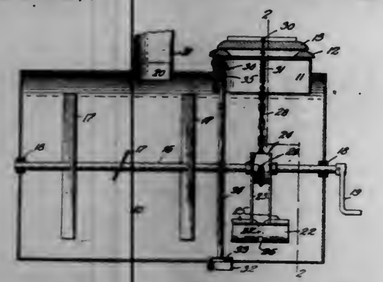
1. A dump comprising a platform including a stationary portion and a movable portion, means located adjacent one end of the movable portion for pivotally mounting the same to permit of said portion being tilted, a hinged member secured to one end of the movable portion and means formed on the stationary portion and engaging the hinged member, whereby, when the movable portion is inclined the hinged member will be inclined in a reverse direction to define a stop.

1,486,735. APPARATUS FOR PRODUCING AND RECEIVING SIGNALS. REGINALD A. FESSENDEN, Brookline, Mass., assignor to Submarine Signal Company, Portland, Me., a Corporation of Maine. Filed Aug. 15, 1918. Serial No. 249,943. 7 Claims. (Cl. 177—386.)



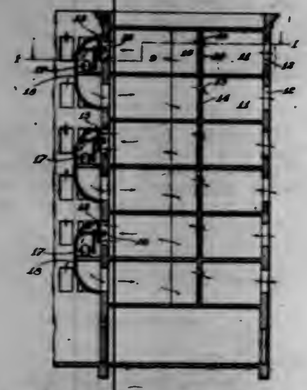
1. Means for submarine signaling comprising a plurality of plates of microphonic material, arranged as a column, and exposed to the action of the impulses to be received.

1,486,736. MACHINE FOR RETHREADING FRUIT-JAR RINGS. THOMAS J. FOSTER, Guelph, Ontario, Canada. Filed Feb. 7, 1922. Serial No. 534,828. 2 Claims. (Cl. 153—72.)



1. A rethreading apparatus for jar closure rings, comprising a frame, said frame formed with vertical arms one of which is of less length than the other and bifurcated, a bracket member formed on said frame, a clamp screw carried by said bracket member, a member hingedly mounted on one of said arms and having depending bifurcated portion, a roller revolvable in the bifurcation of said member, a roller mounted in the bifurcation of the short arm of said frame, the first mentioned roller formed with a convexed outer edge portion, the other of said rollers formed with a peripheral groove registering with the edge portion of the said first mentioned roller, a bolt connected to said frame and extending through said hingedly-mounted member, and a spring arranged on said bolt for tensioning the rollers into engagement with the ring to be threaded.

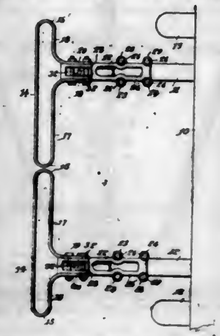
1,486,737. AUTOMATIC COUPLING FOR RAILWAY CARS. THOMAS J. FUTRELL, Streator, Ill., assignor to Futrell Coupler Company, Inc., Seattle, Wash., a Corporation of Washington. Filed July 23, 1920, Serial No. 398,331. Renewed July 31, 1923. 14 Claims. (Cl. 285—24.)



4. In a railway car coupling construction, the combination of the frame of a car body, pendent spaced brackets thereon, and a U-shaped swinging hanger having arms pivotally connected with said brackets.

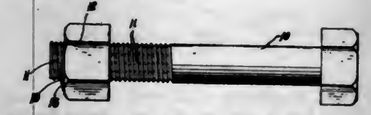
1,486,738. TOILET. JOHN F. GEIBEL, Buffalo, N. Y., assignor to Kaustine Company, Inc., Buffalo, N. Y. Filed Sept. 17, 1920. Serial No. 410,859. 9 Claims. (Cl. 4—115.)

1. In a toilet, the combination of a sewage tank adapted to contain a disinfecting solution, a toilet seat mounted on said tank, a cover for said seat, a device in said tank movable into a position out of said solution adjacent to said seat to receive sewage passing into said tank and adapted to swing by its own weight into a position in which said device is immersed in said solution, and a connection between said seat cover and said device whereby the opening of said seat cover moves said device into its upper position adjacent to said seat and whereby the weight of said device moves said seat cover into closed position.



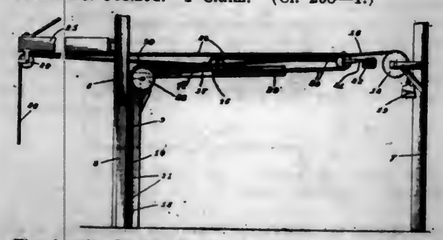
1,486,739. VENTILATING SYSTEM. ERNST GLANTZBERG, New York, N. Y. Filed Nov. 3, 1922. Serial No. 598,824. 2 Claims. (Cl. 98—27.)

1. A ventilating system including in combination with a building having adjacent floors presenting corridors, chambers communicating with said corridors and windows in the outer walls of said rooms, of a fan, and means for connecting said fan to different floors whereby to cause air to be sucked through said windows, rooms and corridors of one floor and to be expelled into the corridors, rooms and through the windows of the second floor with which said fan is connected.



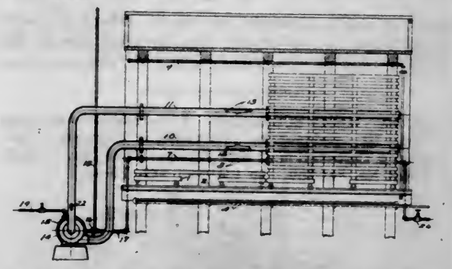
1,486,740. BUMPER. CLARENCE V. GESSLER, Indiana, Pa. Filed Mar. 28, 1923. Serial No. 628,306. 2 Claims. (Cl. 293—65.)

1. A bumper for the purpose set forth comprising a skeleton impact element formed of a strip of spring steel and T-shaped in contour, a clamping element formed of an upper and a lower section, said upper section including a rearwardly extending and upwardly curved shank having its lower face curved throughout for seating on the upper face of the vehicle spring and said upper section further including a body portion completely extending into the shank of said impact element, transversely extending means for fixedly securing



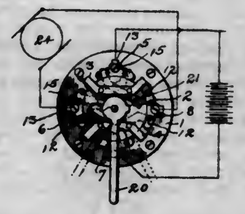
said body portion to the shank of said impact element, said lower section having its upper face curved throughout and adapted to be positioned against the lower face of the vehicle spring, and vertically disposed means arranged at each side of and extending through said sections for securing them together and for connecting the vehicle spring therewith.

1,486,741. NUT LOCK. WALTER P. GROVES, Edwardsville, Kans. Filed Feb. 10, 1923. Serial No. 618,413. 2 Claims. (Cl. 151—12.)



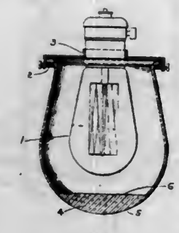
1. In combination, a bolt provided with a plurality of longitudinally extending grooves, a nut threaded onto the bolt and having its outer face formed with a recess, a pawl pivoted at one end within said recess and having a chisel point engaging the periphery of the bolt, said pawl being swingable in a plane at right angles to the face of the nut, and a leaf spring pivoted at one end upon the face of the nut and swingable in substantially the same plane with the face of the nut whereby to be selectively engaged upon or disengaged from the pawl, said spring normally operating to hold the spring within the recess, and means for preventing the spring from moving casually out of engagement with the pawl.

1,486,742. GARAGE DOOR. PETER W. HAGAN, Saskatoon, Saskatchewan, Canada. Filed June 14, 1922. Serial No. 568,291. 1 Claim. (Cl. 268—1.)



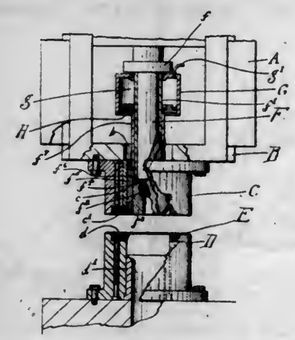
The herein described door for garages including the combination with a building having a door opening therein, of vertical tracks secured to the opposite sides of the door-way, horizontal tracks extending from the upper ends of the vertical tracks, rollers interposed between said tracks, a door including a plurality of hinged slats mounted in the vertical tracks and movable over the rollers to the horizontal tracks, flexible members passing through the slats for pivotally connecting the slats together, a pulley attached to these flexible members, a cable attached to the pulley for forcing the door to lowermost position, a second cable attached to said pulley, a weight attached to the last mentioned cable, an additional pulley mounted in spaced relation to the door, a cable passing over said pulley and over the first mentioned pulley and attached at one end to a stationary member within the building and having its opposite end extended within reach of the operator whereby when the said cable is pulled, the door will be moved to raised position, substantially as and for the purposes set forth.

1,486,743. DRYING KILN. EDWIN A. HALLAM, Portland, Oreg., assignor to (Mrs.) Mary B. Hallam, Portland, Oreg. Filed Mar. 15, 1921. Serial No. 452,609. 5 Claims. (Cl. 34—46.)



1. A drying kiln including walls forming a chamber, certain of said walls cooperating with material contained in said chamber to define a peripheral space within said chamber, and air inlet and exhaust pipes communicating with said chamber and connected to opposite sides of an air impeller to form with said chamber a closed circulation system, said inlet and exhaust pipes being provided with orifices opening into said peripheral space and arranged to avoid a directional flow from said orifices against the contents of said chamber but to induce a distributive drift of the relatively stagnant body of air in said chamber through interstitial spaces in the material contained therein.

1,486,744. ELECTRIC SWITCH. FOREST H. HARTZELL, Dayton, Ohio. Filed Nov. 14, 1916. Serial No. 131,809. 7 Claims. (Cl. 200—164.)

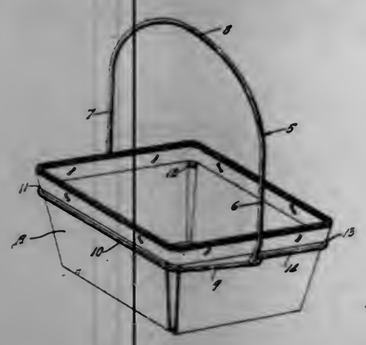


7. An electric switch comprising a plate of insulating material having a circular opening therein, a second plate of insulating material located within the circular opening of the first mentioned plate said plates being relatively rotatable in a common plane, resilient fingers carried by one of said plates and extending beyond the periphery thereof, into overlapping relation with both faces of the other plate, whereby said overlapped plate will be located intermediate the planes of said overlapping resilient fingers, and electrical contacts carried by the overlapped plate, with which certain of the said resilient fingers make contact upon relative rotation of the plates.

1,486,745. INCANDESCENT-ELECTRIC-LAMP GLOBE. LEE HASELTON, Eugene, Oreg. Filed Jan. 28, 1922. Serial No. 532,355. 1 Claim. (Cl. 240—100.)

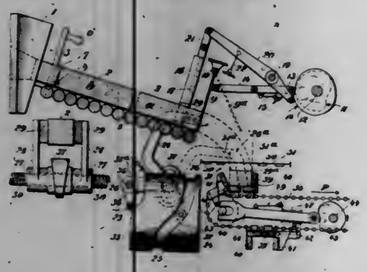
As a new article of manufacture, a globe for incandescent electric lamps, formed in one piece and closed at one end and having at said end a solid body or bull's eye of clear glass with a convex exterior surface and a plane interior surface and also having frosting between the bull's eye and said open end.

1,486,746. POWER PRESS. JOHN HEISEL, Mount Healthy, Ohio, assignor to The Cincinnati Galvanizing Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Sept. 14, 1921. Serial No. 500,489. 4 Claims. (Cl. 113—46.)



1. In a device of the class described the combination of concentric fixed dies, concentric movable dies, a reciprocating shaft upon which the movable dies are mounted adapted to carry the movable dies into cooperative relationship with the fixed dies, a fluid tank containing fluid under constant pressure, a piston reciprocally mounted in the fluid tank, and means connecting a movable die and the piston, whereby the last mentioned die may yieldingly engage one of the fixed dies during movement of a second of the movable dies.

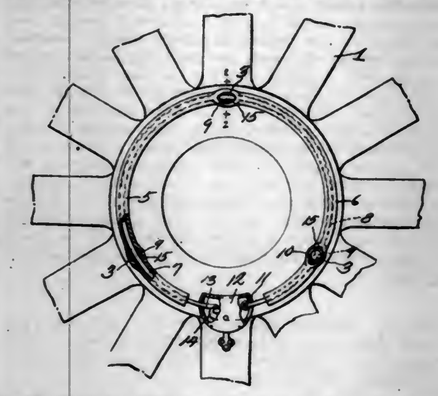
1,486,747. BASKET CARRIER. LOUIS HIBBARD, Sayre, Pa. Filed Sept. 25, 1922. Serial No. 590,431. 1 Claim. (Cl. 224—48.)



A fruit basket carrier formed from a single length of resilient wire bent intermediate its ends to define an inverted substantially U-shaped bail constituting a handle,

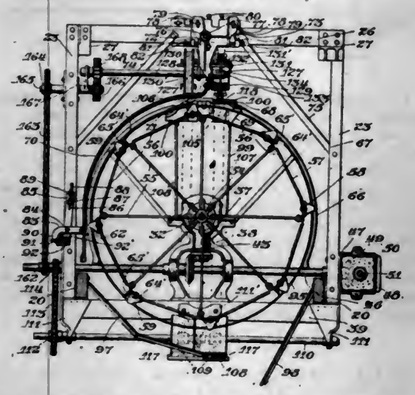
and having its end portions extended laterally in opposite directions and then in parallel relation, with the terminal portions bent inwardly at right angles to said parallel portions and coiled about the lower ends of the bail whereby to define a substantially rectangular frame adapted to receive a basket and to engage beneath the usual

thickened upper edge thereof, the lower ends of the U-shaped bail portion being inwardly offset with respect to the major portion whereby the arms of the bail will clear the upper edge of the basket while the junctures of the arms of the bail with the terminals of the bail will closely hug the basket.



1,486,748. COMBINED MOLDING AND WRAPPING-UP MACHINE FOR BUTTER, MARGARINE, AND THE LIKE. WILHELM HILGERS, Dusseldorf, Germany. Filed Oct. 29, 1921. Serial No. 511,524. 5 Claims. (Cl. 93—2.)

1. A combined molding and wrapping-up machine for butter, margarine, and the like, comprising, in combination, a press adapted to deliver a beam of the material to be proceeded with; a wrapping-up machine arranged in front of the delivery opening of said press on a lower level; a set of rollers so arranged as to be adapted to allow pieces of said beam of material to roll down to said wrapping-up machine; a flap arranged at the lower end of said set of rollers; means located near to the said press and being adapted to cut off a comparatively long piece of the beam of material; and means located near to said flap and being adapted to cut off from said long piece such short pieces as are to be wrapped up.

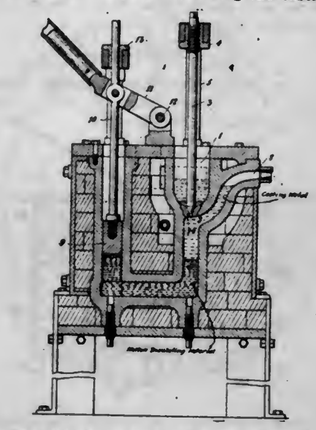


1,486,749. LOCK FOR ODOMETERS. DOYLE HILL, Omaha, Nebr. Filed Oct. 3, 1922. Serial No. 592,128. 2 Claims. (Cl. 235—96.)

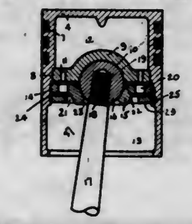
1. The combination with a hub odometer, an annular flange carried by said odometer, said flange engaging the outer side of a wheel, securing bolts extending through the wheel and the odometer flange and concentrically dis-

posed, of means connecting the inner ends of the bolts and disposed in engagement with the inner side of the wheel for locking said bolts against removal.

1,486,750. HEMP SCUTCHER. LUD. HOLLAND-LETZ, Oak Park, Ill., assignor to International Harvester Company, a Corporation of New Jersey. Filed Dec. 1, 1919. Serial No. 341,756. 15 Claims. (Cl. 19—3.)



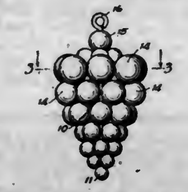
5. A scutching machine, including in combination, a plurality of cleaning members and feeding mechanisms, including a pair of endless conveyors, one of said conveyors being disposed longitudinally with respect to the axis of one of said cleaning members and travelling entirely around said cleaning member, with one lap located in close proximity with the other member, and another of said conveyors traveling entirely around the last mentioned member with one of its laps located in close proximity to the first mentioned member, and the other of said conveyors being positioned above said first-named conveyor and being adapted to cooperate with said conveyor in gripping the fiber between said conveyors.



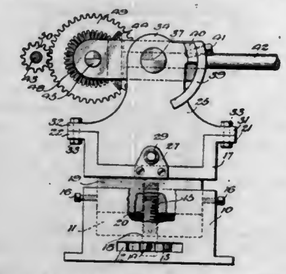
1,486,751. METHOD OF PRESS CASTING AND MEANS THEREFOR. CARL JOHAN HULT, Stockholm, Sweden, assignor to Aktiebolaget Svenska Pressgjuteriet, Stockholm, Sweden, a Corporation. Filed Apr. 22, 1922. Serial No. 556,081. 2 Claims. (Cl. 22—70.)

1. A method of pressure casting consisting in interposing between the molten casting metal and the pressure

medium, a substantial insulating molten material which remains at a lower temperature during the casting operation than the casting metal so as to protect the pressure medium against the high temperature of the casting metal.



1,486,752. UNIVERSAL JOINT FOR PISTONS. JOHN B. HUMPERT, San Francisco, Calif. Filed Mar. 8, 1922. Serial No. 542,180½. 2 Claims. (Cl. 74—108.)



1. A universal joint for a piston and rod, consisting of a concave member adapted to position centrally within the piston, a co-operating ball mounted on the end of the rod, a concave member adapted to enclose the remaining portion of the ball and provided with an opening through which the rod is adapted to reciprocate about the center of the said ball; holding means securing and locking the two said concave members about the ball, said means comprising a washer having a projecting key engaging a slot cut within said piston and a locking nut in screw thread engagement with the said piston, and holding said washer in its locked position.

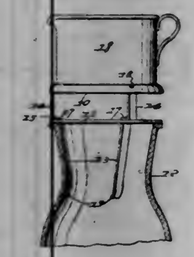
1,486,753. ORNAMENTING DEVICE. RUFUS C. HYNDS, Brooklyn, N. Y. Filed Feb. 21, 1923. Serial No. 620,493. 10 Claims. (Cl. 41—10.)

1. A device of the character described, comprising a vertical member, a plurality of arms rotatably mounted on the vertical member, and ornaments carried by said arms.

1,486,754. POWER-TRANSMISSION DEVICE. JOSEPH IMPELLIZIERI, Brooklyn, N. Y. Filed Aug. 1, 1922. Serial No. 578,928. 7 Claims. (Cl. 74—101.)

1. An adjustable power transmission mechanism of the character described, comprising a hollow base, a plunger carrying a guide plate mounted in the hollow base, means for operating the plunger along vertical lines, a bearing block slidably mounted in the guide plate, means for adjusting the bearing block in a horizontal plane provided in conjunction with the guide plate, a shaft carried by the bearing block, and means mounted on the shaft for connecting it to a prime mover.

1,486,755. WEEDING TOOL. FRANK INGERSOLL, Hannibal, Mo. Filed Sept. 19, 1922. Serial No. 589,226. 3 Claims. (Cl. 55—65.)



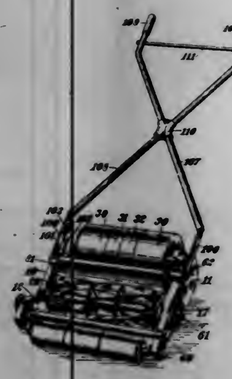
1. A weeding tool having a stem, pivotally mounted cooperating jaws carried by the stem and provided with terminal soil penetrating edges, a sleeve slidingly mounted on the stem, and means actuable by said sleeve for closing the jaws and consisting of arms carried by the jaws and extended longitudinally of the stem and a spreader carried by the sleeve for engagement with said arms.

3. A weeding tool having a tubular stem, cooperating earth penetrating jaws carried by and pivotally mounted upon said stem and provided with cam faced operating arms, a plunger slidingly mounted in the stem and terminally disposed between said jaws, and a sleeve slidingly mounted upon the stem, having a spreader for cooperation with the cam faced jaw operating arms and having a pin and slot connection with said plunger.

1,486,756. CUP STAND FOR LAMPS. JOHN J. JASKE, Michigan City, Ind. Filed Feb. 9, 1922. Serial No. 535,247. 2 Claims. (Cl. 126—258.)

1. A receptacle supporting stand for lamp chimneys having spaced seat and bearing rings and yielding arms depending from the bearing ring for engagement with

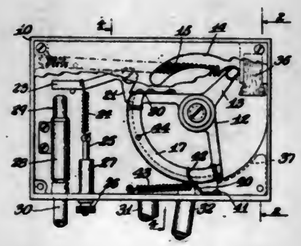
the lamp chimney, the bearing arms being extended between and secured to said rings to form spacing mem-



bers or standards, and having outwardly directed shoulders or offsets resting upon and secured to the upper surface of the bearing ring.

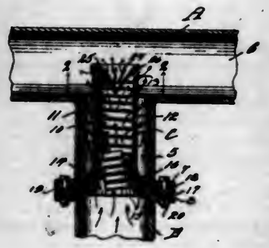
1,486,757. METHOD OF AUTOMATIC REGULATION OF THE SUPPLY OF OXIDIZING AGENTS, SUCH AS NITRIC ACID, NITRATE SOLUTION, OR OTHERS IN THE MANUFACTURE OF SULPHURIC ACID. ERNST JENSEN, The Hague, Netherlands. Filed May 31, 1923. Serial No. 642,682. 5 Claims. (Cl. 23—1.)

3. In the process for the manufacture of sulphuric acid by the chamber process the step which consists in maintaining a substantially constant temperature gradient in the reacting gases by varying the supply of oxidizing gases to the chambers.



1,486,758. LAWN MOWER. ARTHUR ERNEST JERRAM, Leicester, England. Filed Aug. 16, 1920. Serial No. 403,899. 15 Claims. (Cl. 56—252.)

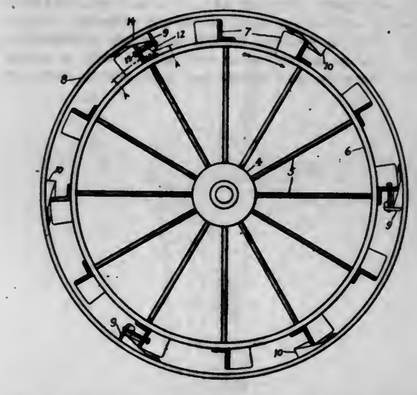
1. In a lawn-mower the combination of two frame members, a bearing in one of them, a hollow driving-member rotatable in said bearings, a shaft mounted at one end within said driving member and extending therefrom to the other frame-member, a cutting reel supported at one end by and rotatively engaged with said driving-member, and supported at the other end by said shaft, a bearing in said other frame-member for the other end of said shaft, said bearing having an opening to permit endwise withdrawal of the shaft through it from within the cutting reel and driving member.



5. In a lawn mower the combination of a driving roller, a sprocket wheel, an epicyclic multiplying gear coupling said driving roller to said sprocket wheel, a rotary cutting reel, a second sprocket wheel operatively connected to said cutting reel and a chain connecting the two sprocket wheels.

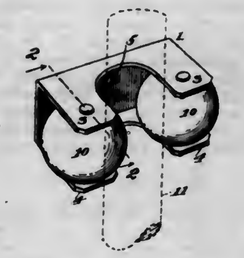
1,486,759. FLASH-LIGHT GUN. EVERARD L. JOHNSON, Patchogue, N. Y. Filed Sept. 2, 1922. Serial No. 585,860. 5 Claims. (Cl. 67—28.)

1. A flash-light gun of the class described comprising a suitable casing, a trough at one side of the casing and extending longitudinally thereof, one corner portion of the casing being recessed to provide a pocket opening outwardly into said trough, and said casing being provided with an aperture opening into said pocket and the interior of the casing, and spark generating elements mounted within the casing and adapted to discharge sparks into the pocket and trough of said casing.



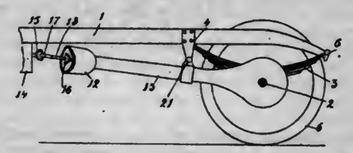
1,486,760. INTAKE-MANIFOLD ATTACHMENT. FRANK A. JOHNSON, Aurora, and JOHN AHLGREN, Batavia, Ill. Filed Mar. 17, 1923. Serial No. 625,806. 5 Claims. (Cl. 48—180.)

5. As a new article of manufacture, a charge refining device for an internal combustion engine comprising a spirally wound body of substantially the same diameter throughout its entire length, a cap carried by the outer end of the body, a pair of clamping plates, compression gaskets disposed between the plates, means for bringing the plates toward each other, and frusto-conical shaped flanges formed on the inner edges of the plates for receiving the inner end of said coiled body.



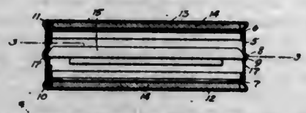
1,486,761. SLIP-OVER TIRE. EDWARD A. JOHNSTON, Chicago, Ill., assignor to International Harvester Company, a Corporation of New Jersey. Filed June 9, 1920. Serial No. 387,719. 6 Claims. (Cl. 301—39.)

2. In combination, a wheel provided with traction lugs, a slip-over tire having a plurality of cams on its inner periphery for engagement with the traction lugs, whereby rotation of the wheel in one direction will tend to tighten the tire on the lugs and rotation in the oppo-



site direction will tend to loosen the tire from the lugs, and means for detachably securing one of the cams to a traction lug.

1,486,762. BROOM RATCHET OR HOLDER. THEODORE S. JONES, Noxen, Pa. Filed Feb. 28, 1923. Serial No. 621,878. 3 Claims. (Cl. 24—249.)



1. In a broom holder the combination of a casing, shafts on said casing spaced transversely of each other and adapted to have a slight longitudinal movement, and balls on said shafts adjustable longitudinally thereof.

1,486,763. SUSPENSION DEVICE FOR AUTOMOBILES OR OTHER VEHICLES. LUCIEN JOUBERT, Paris, France. Filed Oct. 23, 1922. Serial No. 596,533. 3 Claims. (Cl. 180—1.)

1. A suspension for automobiles and other vehicles having springs supporting the frame or body upon an axle and road wheels, comprising a member connected at one end to the axle and having a weight-mass acting on its other end, the said member being connected to the vehicle frame and operative under the influence of said weight-mass to dampen the reactions of the springs, axle and wheels.

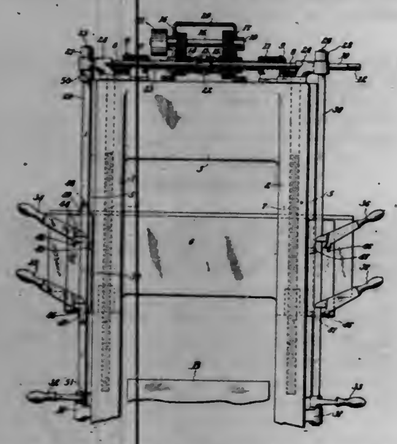
1,486,764. VANITY CASE. WILLIAM G. KENDALL, Newark, N. J. Filed Dec. 13, 1922. Serial No. 606,658. 3 Claims. (Cl. 132—83.)

1. A vanity case comprising a body portion having two open sides, a centrally disposed channel formed in said body portion, and a rigid compact carrier, said rigid compact carrier adapted to be removably secured in the channel of the body portion of the vanity case.

1,486,765. REFILL FOR VANITY CASES. WILLIAM G. KENDALL, Newark, N. J. Filed Apr. 23, 1923. Serial No. 634,076. 6 Claims. (Cl. 132—83.)

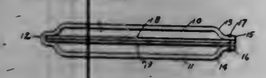
1. In a vanity case, a body, a strap extending transversely of the body and pivotally connected thereto, and a compact carried by said strap.

1,486,766. BARREL-HEADING PRESS. NOAH S. KIBLER, Woodstock, Va. Filed Feb. 15, 1923. Serial No. 619,151. 2 Claims. (Cl. 147—6.)



1. A barrel heading press comprising a base, a pivoted supporting frame carried thereby and shiftable to and from vertical position, a releasable device for holding said frame in vertical position, a barrel head carrying and pressure applying plunger element slidably connected with said frame and provided with means for detachably connecting the barrel head therewith for carrying it to closure position with respect to the end of a barrel, means for operating the plunger element in one direction to secure the barrel head in closure position and for operating the element in the opposite direction to separate said connecting means from the barrel head, and means operated from the plunger element for releasing said holding device.

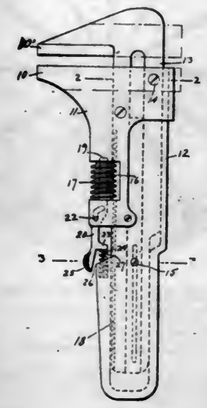
1,486,767. GENERAL SAFETY INTERLOCK. DAVID C. KLAUSMEYER, Cincinnati, Ohio, assignor to The Cincinnati Bickford Tool Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Apr. 9, 1923. Serial No. 631,008. 8 Claims. (Cl. 90—87.)



7. In a metal-planing machine, a supporting structure, comprising stanchions and a bridge-member, combined with a cross-head mounted slidingly on ways formed

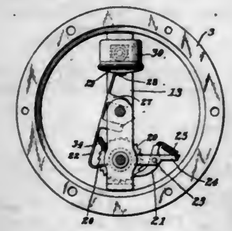
upon said stanchions; duplex adjusting devices, comprising lead-screws connected with, and rotatable to elevate, said cross-head; a powder-operated shaft on said bridge, geared to actuate said adjusting screws; quadruplex clamping-means, comprising bolts with hand-levers, mounted on, and operable to secure, said cross-head to said stanchions in adjusted position; and in combination therewith, a general safety interlock co-ordinating the operation of said adjusting devices and clamping-means, said interlock comprising duplex rock-shafts extending along said stanchions respectively past said cross-head adjacent to said hand-levers, and connected over-head, for co-rotation, by a link having a power-control element,

each of said rock-shafts having manually operable means by which they may be rocked simultaneously to shift said power-control element into high-speed, low speed and neutral positions, and said interlock comprising also a structure and relative arrangement of said rock-shafts and clamp-hand-levers such that when set to clamp said cross-head to said stanchions, a portion of each of said hand-levers will act to prevent rocking of said shafts, and so that each hand-lever must relax its bolt before said power element can be shifted from neutral position, and conversely none of said hand-levers can be operated to set its bolt, for clamping said cross-head, while said power-control-element is set for movement of said adjusting devices.



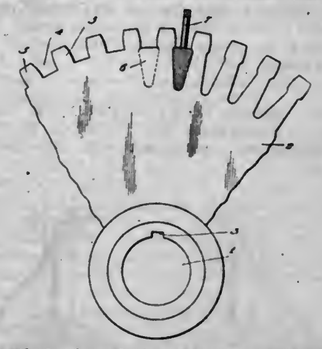
1,486,768. HAIR CURLER. ANNIE KRAKOWIECKA, New York, N. Y. Filed Feb. 9, 1922. Serial No. 535,322. 1 Claim. (Cl. 132—41.)

A hair curler, comprising an open frame, a pair of bars pivotally supported at one end on the frame and adapted to extend longitudinally of the frame, said frame being formed at one end with an offset recess to house the free ends of the bars, said bars normally projecting beyond their pivotal support in contact for a portion of their length and being inherently divergent beyond said point of contact toward their free ends.



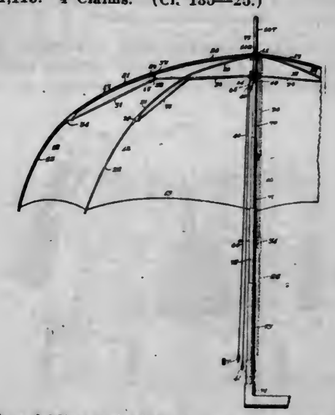
1,486,769. WRENCH. KAZIMIERZ J. KRUKOWSKI, West Hammond, Ill. Filed June 2, 1922. Serial No. 565,369. 1 Claim. (Cl. 81—157.)

A wrench, comprising a fixed jaw and a movable jaw, said fixed jaw having a handle extension and said movable jaw having an extension slidably fitted within said handle extension, said fixed jaw being formed with a rectangular recess to expose a rack formed on the extension of the movable jaw, a worm arranged in said recess to cooperate with the teeth of said rack, a pin rotatably supporting said worm, said pin being extended in part beyond the fixed jaw and formed to provide a handle, to permit endwise movement of said pin at will, a spring arranged between said handle and fixed jaw to move the



handle and thereby the pin in one direction, said pin being formed with an angularly related slot having a lower portion in parallelism with the pin and an upper portion at an angle thereto, and a member carried by the fixed jaw to engage in said slot, whereby in the movement of the pin by the handle that portion of the pin carrying the worm and the worm is moved laterally to disconnect the worm and rack to permit quick readjustment of the movable jaw relative to the fixed jaw.

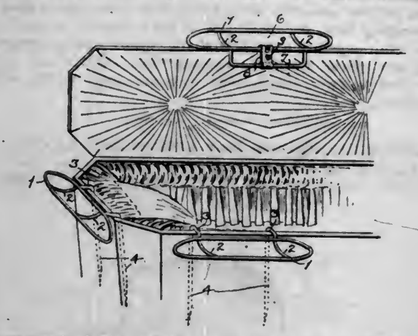
1,486,770. GASOLINE REGISTER. HARRY G. LEE, New York, N. Y., assignor of one-third to Wilson E. Porter, New Haven, Conn., and one-third to Richard H. Whitehead, New York, N. Y. Filed Aug. 3, 1922. Serial No. 579,315. 2 Claims. (Cl. 235—91.)



2. In a gasoline register of the character described, a casing, a vacuum cup located in the upper portion of the casing and having a movable diaphragm across its lower side, a shaft journaled in the casing, a dial secured to the shaft, a second shaft journaled in the casing, a ratchet wheel on the second shaft, gears connecting the shafts, and an actuating pawl suspended from said diaphragm and arranged to straddle and engage the ratchet wheel to produce a step by step rotary movement to the ratchet wheel and thereby actuate the said gears, the shafts and the dial.

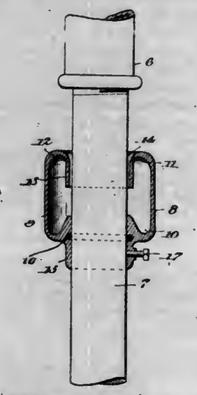
1,486,771. METHOD OF PRODUCING DEEPER TOOTH SPACES IN TOOTHED WHEELS AND MEANS THEREFOR. FREDRIK LJUNGSTRÖM, Lidingo-Brevik, Sweden, assignor to Aktiebolaget Ljungströms Ångturbin, Stockholm, Sweden, a Corporation. Filed Sept. 19, 1922. Serial No. 589,245. 3 Claims. (Cl. 90—15.)

1. A method of producing deepened tooth spaces in toothed wheels, comprising producing first teeth and tooth spaces of substantially normal shape according to any suitable method and then deepening the tooth spaces by means of an end mill.



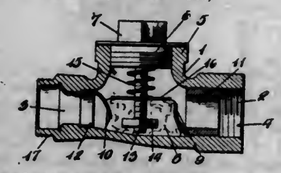
1,486,772. FOLDING UMBRELLA. ANGEL LOPEZ, Brooklyn, N. Y. Filed Nov. 1, 1920. Serial No. 421,115. 4 Claims. (Cl. 135—25.)

1. In a folding umbrella, a stick, a crown held thereon, ribs pivoted on the crown and each made of an inner section, an outer section and a middle section, links connecting the sections with each other, a runner slidable on the stick, braces each made of an inner and outer section, the inner section being pivoted on the runner, a link connecting the sections of the brace with each other, a link connecting the brace link with the link connecting the inner and middle sections of the rib with each other, and a slide connected with the outer end of a brace and adapted to slide over the link connecting the middle and outer rib sections with each other.



1,486,773. FLOWER RACK FOR BURIAL CASKETS. ALLEN MCCLAIN, Xenia, Ohio. Filed Apr. 22, 1919. Serial No. 291,873. 2 Claims. (Cl. 211—14.)

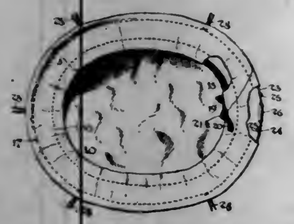
2. Means for supporting flowers upon a burial casket, comprising a bracket shelf for the flowers adapted to fulcrum upon the edge of the supporting portion of the casket, and angularly disposed legs to be projected beneath the upholstering of the casket to resist the tilting



movement of the device upon the edge of the casket under the influence of the weight of the flowers.

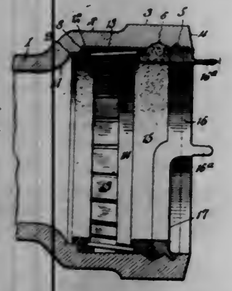
1,486,774. OIL COLLECTOR FOR TOOL STOCKS. PHILIP H. MCDERMOTT, New York, N. Y. Filed Aug. 19, 1922. Serial No. 583,027. 5 Claims. (Cl. 10—126.)

1. The combination with a tool stock, of cups mounted on the handles of the stock and each having a plurality of communicating wells, the walls of one of the wells of each cup being curved inwardly toward the adjacent handle and then extended along one side of the handle in spaced parallel relation thereto.



1,486,775. SOAP-MIXING DEVICE. WILLIAM R. MCGRATH, Atlanta, Ga. Filed June 20, 1923. Serial No. 646,642. 1 Claim. (Cl. 299—83.)

A device of the character described comprising a body having inlet and outlet ways therein, a soap receiving and storage chamber within the intermediate portion of said body, oppositely disposed curved baffles fixedly mounted within the chamber adjacent the inlet and outlet ways and adjacent the opposite sides of said chamber, said baffles being of lengths and widths less than the internal area of said chamber and inlet and outlet ways,

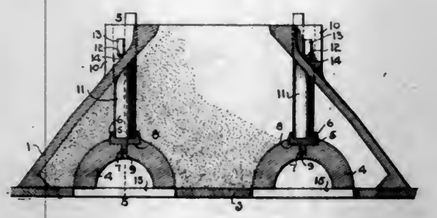


the upper intermediate portion of the body having a neck-like extension formed integral therewith, a closure plug for the open end of said neck-like extension, a shank depending from the inner side of said closure, an adjustable stop engaged with said shank, and a spring pressed follower plate movably engaged with said shank and adapted to have engagement with the soap within said chamber.

1,486,776. COMBINED HAT LINING AND BANDEAU. JANIE A. MCKNIGHT, Lincolnton, N. C. Filed Dec. 3, 1923. Serial No. 678,285. 4 Claims. (Cl. 2—190.)

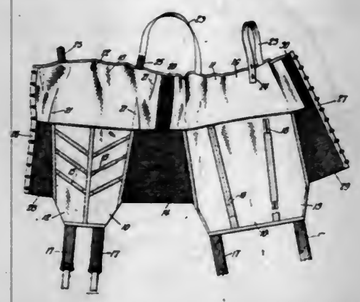
1. An attachment for hats for the purpose set forth, comprising a crown-shaped lining provided with a pocket at its lower end, an adjustable loop formed of spring wire mounted in said pocket, a bandeau arranged within the lining and projected away from the lower portion thereof and provided with means within its upper end for adjusting its size, means for securing the lower end portion of the bandeau and the lower end portion of the lining together, said adjusting means projecting from the bandeau to provide for the adjusting of said means, and a series of independent removable elements extending through the lower portion of the bandeau and lining in proximity to said loop for detachably securing them in position within the crown of a hat.

1,486,777. PRECALKED JOINT FOR CAST-IRON PIPES AND METHOD OF MAKING SAME. JAMES R. MCWANE, Birmingham, Ala. Filed June 10, 1922. Serial No. 567,334. 14 Claims. (Cl. 285—115.)



1. A prepared joint for pipe, comprising bell and spigot portions, with a series of filler blocks constituting a backing for the sealing material, fibrous packing material lodged against the filler blocks, and sealing lead at the mouth end of the joint in compacting relation to the fibrous packing material, said lead having substantially one-half of its circumference calked, by compressing the lead against the fibrous packing material.

11. The method of forming pre-calked joints for bell and spigot pipes, consisting in inserting a mandrel within the bell end of one of the pipes and supporting the same in spaced relation, with the inner end of the mandrel abutting the inner end of the belt, then placing packing material within the bell and between it and the mandrel, then pouring lead material into the outer end of the space between the mandrel and the bell so as to cause it to engage the packing material, and then with the mandrel still in position calking the lead material substantially half way around by pressing the lead and forcing the same into the adjacent packing material.

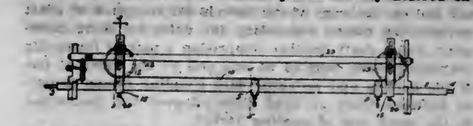


14. A prepared joint for bell and spigot pipes, provided with a sealing lead at the mouth end of the joint, said sealing lead being provided with bendable tongues formed thereon.

1,486,778. MEANS FOR CASTING PIPE. JAMES R. MCWANE, Birmingham, Ala. Filed Oct. 18, 1922. Serial No. 595,391. 19 Claims. (Cl. 219—184.)

1. In means for casting pipe horizontally, a flask and core, means for supporting the intermediate portions of the cores in the flask, including a plurality of chaplets, said supporting means having metal-to-metal contact throughout the cope and drag sections and the core.

1,486,779. GIRDLE BRASSIÈRE. CLARENCE MAYER, Chicago, Ill. Filed Mar. 17, 1922. Serial No. 544,454. 5 Claims. (Cl. 2—73.)



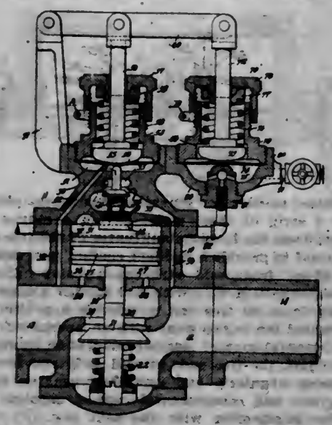
1. A garment comprising a girdle constructed and arranged to encircle the figure from the waist downwardly over the hips; said girdle comprising fabric front and back portions to cover respectively the abdominal and back portions of the figure, and elastic webbing hip-covering portions at the sides secured to said front and back portions respectively and constructed and arranged to conform to the contour of the figure at the hips; one of said elastic webbing portions being divided longitudinally and having cooperating fastening means along its adjacent edges for securing the girdle about the figure.

1,486,780. YARN-GUIDE RECIPROCATING MECHANISM. MAX MAZIK, New York, N. Y. Filed Jan. 17, 1923. Serial No. 613,197. 6 Claims. (Cl. 66—12.)

1. An attachment for a knitting machine provided with a tube bar and two carrying plates, of a flexible member

connected to said plates, and means for moving said flexible member so as to shift said plates to any desired ex-

tent, said means including a multiplying mechanism operated through said tube bar and provided with a pair of winding member for said flexible member.



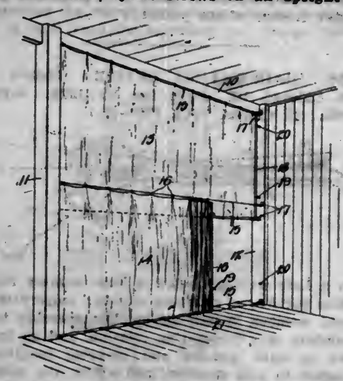
1,486,781. CATALYTIC MATERIAL FOR THE OXIDATION OF AROMATIC COMPOUNDS BY MEANS OF OXYGEN-CONTAINING GASES. JOSEPH V. MEIGS, Montclair, N. J., assignor, by mesne assignments, to Carleton Ellis, Montclair, N. J. Filed Feb. 11, 1919. Serial No. 276,380. 11 Claims. (Cl. 23—28.)

1. A catalyzer mass comprising ferric vanado chromate and adapted for use in oxidizing aromatic hydrocarbons.

9. A catalyzer consisting essentially of a chromate compound of iron, such chromate being in a solid vesiculated condition.

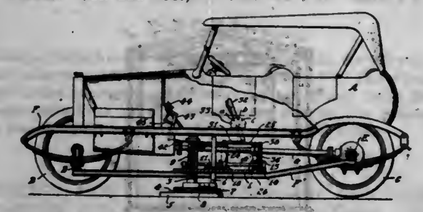
11. A salt of an oxid of a metal of the eighth group of the periodic system having an atomic weight of about 56 to 59, with an acid-forming oxid of a metal of the fifth to sixth groups of the periodic system, such latter metal having an atomic weight between 51 and 96, such salt being in an intumesced condition and capable of serving as a catalyst for oxidation reactions.

1,486,782. COMBINED PRESSURE REGULATING AND GOVERNING APPARATUS. JULES P. METZGER, Carlstadt, N. J., assignor to The Leslie Company, Lyndhurst, N. J., a Corporation of New Jersey. Original application filed Jan. 14, 1920, Serial No. 351,352. Divided and this application filed July 13, 1920. Serial No. 395,987. 5 Claims. (Cl. 181—153.)



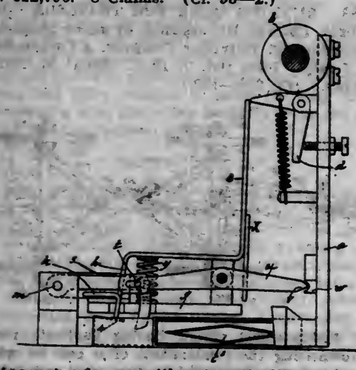
1. A device of the character described including a fluid pressure regulating device, a diaphragm for controlling said device, a casing, a second diaphragm within said casing, an adjusting spring regulating means associated with each of said diaphragms, an equalizing means connected to said regulating device, and fluid pressure means acting upon one of the faces of each of said diaphragms.

1,486,783. PORCH AWNING. HENRY W. MILLER, Miami, Fla. Filed Feb. 12, 1923. Serial No. 618,674. 2 Claims. (Cl. 156—10.)



2. A porch awning comprising overlapping upper and lower sections, a pair of guide-wires for each section,

rings at the upper and lower edges of each section slidable on said wires, eyelet screws on an upright at one



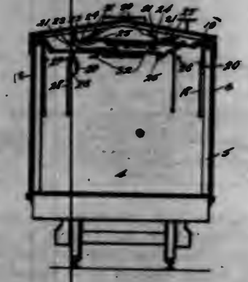
end of the sections and hooks secured to the sections for engagement with said eyelet screws, substantially as set forth.

1,486,784. AUTOMOBILE JACK. MAJOR MINGO, Dodge City, Kans. Filed Nov. 7, 1922. Serial No. 599,558. 8 Claims. (Cl. 254—86.)

4. An automobile jack comprising a frame member adapted to be carried by the vehicle, a counter shaft thereon adapted to be driven from the main driving shaft of the vehicle, means adapted to be connected with the counter shaft to raise the vehicle, manually operated means also adapted to raise the vehicle at will, and means driven from the counter shaft to rotate the vehicle when raised.

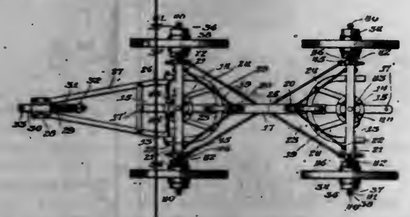
1,486,785. FILLING MACHINE AND THE LIKE FOR USE IN THE AUTOMATIC PACKING OF CIGARETTES AND OTHER ARTICLES. WALTER EVERETT MOLINS, London, England. Filed Jan. 15, 1923. Serial No. 612,706. 8 Claims. (Cl. 93—2.)

1. Apparatus for use with automatic filling and packeting machines for the purpose of indicating an improperly



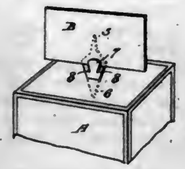
filled packet comprising a detecting member adapted to enter the improperly filled space in a packet to prevent the proper closure of the packet.

1,486,786. HAIR-WAVING DEVICE. JOSEPH MORDNILLA, Chicago, Ill. Filed Jan. 25, 1923. Serial No. 614,863. 13 Claims. (Cl. 132—37.)



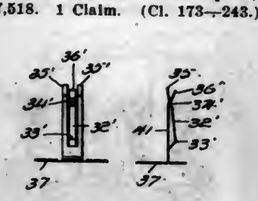
1. In a hair waving device, a base member having a troughlike portion, a clamping member cooperating with said base member, a pair of handles operable to move said members into cooperating relation, and an iron also actuated by said handles and movable longitudinally with respect to said members and within the confines of the trough-like portion of said base member when said members are operated.

1,486,787. INSIDE CAR DOOR. HARVEY H. MOTT, Astoria, Oreg. Filed June 24, 1920. Serial No. 391,374. 4 Claims. (Cl. 20—27.)



1. The combination with a freight car having a doorway in each side thereof, of suspension hooks carried by the car roof, a door adapted to be swung inwardly for each door-way, each door having a loop on the inner side thereof and a hook whereby the hook of the car may be engaged with the loop of the door and the hook on the other door engaged with the loop of the first mentioned door.

1,486,788. RUNNING GEAR FOR TRAILERS. JAMES A. MOXEY, Chicago, Ill., assignor, by mesne assignments, to International Harvester Company, a Corporation of New Jersey. Filed Oct. 7, 1918. Serial No. 257,121. 3 Claims. (Cl. 280—102.)

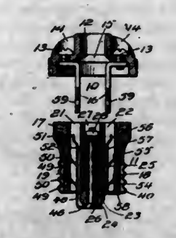


1. A double ended trailer having duplicate running gears comprising the combination of a pair of wheeled axles, a reach bar connected to the axles and extended equal distances beyond them at each end, hounds connected to the axles and having arms the ends of which project beyond the axles, means on the ends of the reach bar and on the arms of the hounds for reception of draft connections, means connecting the axles for joint movement, and a draft member comprising a pair of forwardly converging bars coupled at one end to the arms of one of the hounds and provided with coupling means mounted between their forward ends adapted for connection to the reach bar of another trailer.

1,486,789. CARD HOLDER. LEONARD L. NICKEL, Englewood, N. J. Filed Apr. 18, 1922. Serial No. 554,745. 3 Claims. (Cl. 40—11.)

1. As a new article of manufacture, a card holder formed of a single blank of bendable material having a plurality of oppositely extending points arranged normally in the same general plane and a springy tongue struck from the blank between said points, and associated with one of said points to co-act therewith in the manner of a clamp and to secure a card between said tongue and said one point, the other of said points adapted to penetrate an object to hold the device secured thereto.

1,486,790. SEPARABLE ATTACHMENT PLUG. NORMAN W. NUTT, Trenton, N. J. Filed Sept. 1, 1921. Serial No. 497,518. 1 Claim. (Cl. 173—243.)

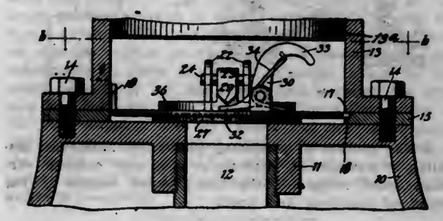


A contact member for separable attachment plugs, comprising a strip of sheet metal having a tongue portion displaced from the longitudinal center of the free end portion thereof to provide a resilient contact jaw, said tongue being off-set from said strip at a point adjacent its point of connection therewith and further angularly bent inwardly from its free end to provide a projecting portion adapted for engagement with an aperture formed in a complemental contact member adapted to be engaged in the said jaw, the free ends of said strip and tongue portions being angularly and oppositely bent or flared for guiding the said complemental contact member into cooperative engagement with the said jaw.

1,486,791. SEPARABLE ATTACHMENT PLUG. NORMAN W. NUTT, Trenton, N. J. Original application filed Sept. 1, 1921, Serial No. 497,518. Divided and this application filed Jan. 12, 1923. Serial No. 612,189. 1 Claim. (Cl. 173—343.)

A contact member for separable attachment plugs, comprising a strip of sheet metal having a plurality of tongue portions displaced from and to one side of the opposite longitudinal edges thereof and arranged to tension the strip into operative contacting position, the free end portion of the said strip being angularly bent in a manner to act as a guide for the cooperative engagement with the

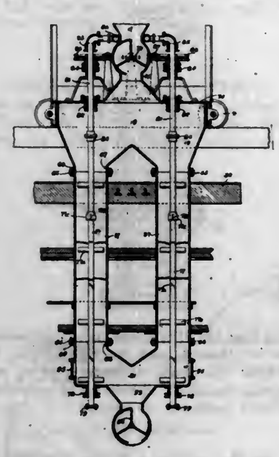
strip of a complementally disposed contact member, and a projection formed on said strip inwardly from the angularly bent end portion thereof and on the side of the same opposite to that from which the tongue portions are



projected, said projection being adapted for engagement in an aperture formed in the said complemental contact member for retaining the same in cooperative contacting engagement with the said strip.

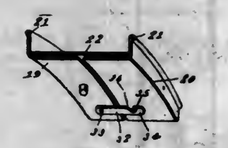
1,486,792. PROCESS OF MAKING A COFFEE SUBSTITUTE. HINRICH OHLHAVER, Sande, near Bergedorf, Germany. Filed Mar. 16, 1923. Serial No. 625,617. 2 Claims. (Cl. 99—11.)

1. A process for the production of a coffee substitute from albumino-starch compounds, consisting in impregnating the compound with a solution of phosphates and heating to temperatures at which the albuminous substances coagulate and the starch is changed into paste, previous to roasting.



1,486,793. PUMP-VALVE LIFTER. ERNEST DUTTON ORTON, Farmersville, N. Y. Filed Mar. 2, 1922. Serial No. 540,500. 2 Claims. (Cl. 137—34.)

2. The combination with a pump including a plunger and a flap check valve, of means disposed in the path of movement of and engageable by the plunger upon movement of said plunger to the lower limit of its stroke for effecting the opening of said valve to release water imprisoned thereabove, said means comprising an arm extending diametrically across the valve and having a V-shaped lower edge, a trip arm pivotally supported within the pump barrel and having a foot disposed beneath said edge of the arm on the valve, a spring for holding said foot normally out of engagement with the arm, and a terminal projecting above the valve structure and for engagement by the pump plunger to throw the arm against the action of its spring for effecting lifting engagement of the foot with the arm of the valve to open the same.

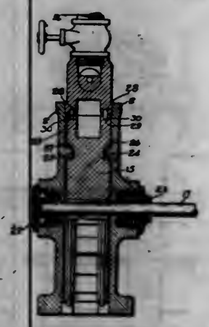


1,486,794. APPARATUS FOR THE TREATMENT OF COAL OR SIMILAR CARBONACEOUS SUBSTANCES. ERNEST OWEN, New York, N. Y. Filed Jan. 28, 1921. Serial No. 440,730. 6 Claims. (Cl. 202—9.)

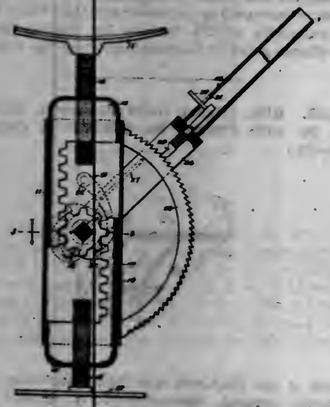
2. In an apparatus of the character described, a plurality of coking tubes, a furnace having a heating chamber through which said tubes extend, means connected with the heating chamber for utilizing the heat passing therefrom to effect the preheating of the charge prior to the introduction of the same to said coking tubes, means for conveying the charge from the preheater to the tubes, means in each tube for agitating the charge during its

passage therethrough and means in each tube for effecting the collection and removal of the gases evolved therefrom, and means surrounding the lower portion of said tubes disposed exteriorly of the furnace for cooling the residue of the charge prior to its discharge from the tubes.

1,486,795. RIM. HARRY OWEN, Roosevelt, Utah. Filed Jan. 30, 1920. Serial No. 355,272. 1 Claim. (Cl. 301—35.)



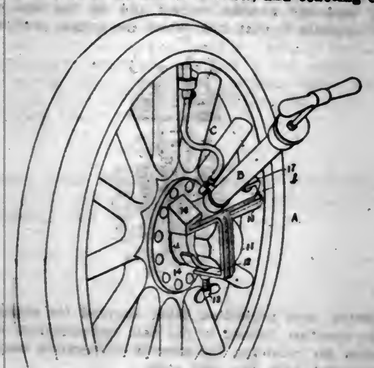
A rim of the character described comprising a pair of detachably secured circumferentially divided sections, means for securing the sections in cooperative association, a ring bridging the secured sections and arranged on the outer side thereof, a plurality of diametrically arranged equi-distantly spaced lugs projecting inwardly from the ring and being adapted to space the ring from the sections and a stud projecting inwardly from one of said sections for the purpose specified.



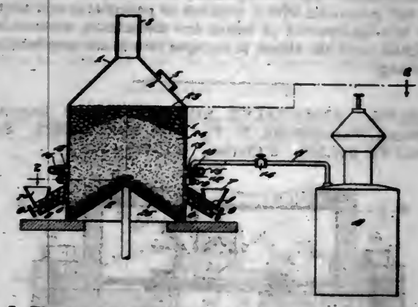
1,486,796. ROTARY MOTOR. RIENZI EVELYN PENISTON, Lake City, Colo. Filed May 10, 1921. Serial No. 468,215. 1 Claim. (Cl. 64—36.)

In a motor of the class described, a casing having aligned openings and provided with tubular bosses surrounding said openings, the bores of the bosses being larger than the said openings and having their outer ends screw-threaded, a rotor in the casing, a shaft upon which the rotor is mounted, said shaft extending through the openings of the casing with one end within one of the tubular bosses and its other end extending beyond the other boss, a bearing sleeve in the inner portion of the bore of

each boss, bearing sleeves on the shaft within the bosses and having flanged outer ends, balls within the said sleeves, a flanged cap screwing into the boss through which the end of the shaft does not project and into engagement with the bearing sleeve therein, a flanged member screwing into the other boss into engagement with the bearing sleeve therein and provided with an opening through which the shaft extends, and a packing box through which the shaft extends and screwing into the opening of said member.



1,486,797. JACK. GEORGE A. PIPER, Bridgewater, S. Dak., assignor of one-half to George W. Laing, Bridgewater, S. Dak. Filed May 18, 1923. Serial No. 639,841. 5 Claims. (Cl. 254—95.)

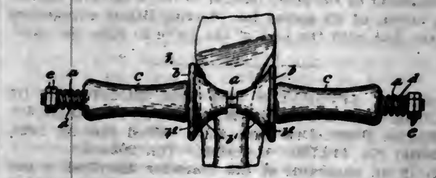


1. A jack including a hollow body oblong in cross section and formed in one piece to present walls of unbroken continuity in cross section, heads fitting in the body at the top and bottom to lie adjacent to the walls thereof at all sides, rack bars on said heads disposed oppositely and lying in the opposite ends of the body to have guided movement in the latter, said heads having threaded bores coaxial with the body, a threaded stem engaging in said bore of the lower head, a base plate from which said stem rises, a load element, a stem threaded into the bore of the upper head and carrying said load element, a pinion disposed between and meshing with said rack bars, and means to turn said pinion.

1,486,798. PUMP-SUPPORTING ATTACHMENT FOR VEHICLES. VOLNEY GLASS REED, Osmond, Nebr. Filed Mar. 13, 1923. Serial No. 624,783. 6 Claims. (Cl. 103—218.)

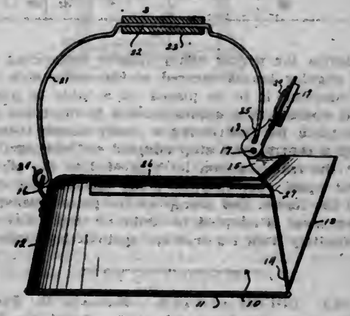
1. A pump supporting attachment for wheels comprising a transverse head forming a pump seat, a yoke supporting said head and adapted to be disposed with its lower end beneath the hub of a wheel, and coacting clamp means on the under side of said head and on said yoke at the lower end.

1,486,799. PROCESS OF GENERATING GAS. JAMES HENRY REID, Readsboro, Vt., assignor to International Nitrogen Company, Cleveland, Ohio, a Corporation of Delaware. Filed Mar. 25, 1920. Serial No. 368,498. 8 Claims. (Cl. 48—202.)



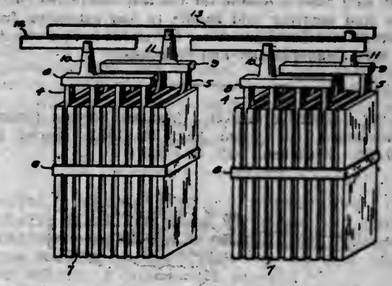
5. The process of producing gas which comprises distilling a mixture of bituminous coal and calcium carbonate, and subjecting the incandescent residue to the action of acetylene and water.

1,486,800. WATER-RESISTANT ROPE. FELIX RIESENBERG, Tuckahoe, N. Y. Filed Apr. 24, 1923. Serial No. 634,327. 1 Claim. (Cl. 19—145.)



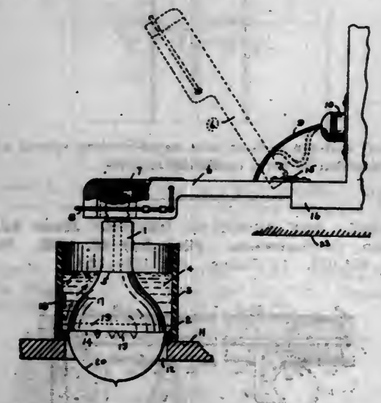
The method of forming waterproof cordage which consists of combining with the fiber from which the cordage is formed and in spun relation therewith, down of the "*Ceiba pentandro*" and known as "kapok."

1,486,801. SHOE-SHANK FORMER. JOSEPH E. ROUSSEAU, Haverhill, Mass. Filed May 1, 1922. Serial No. 557,498. 5 Claims. (Cl. 12—34.)



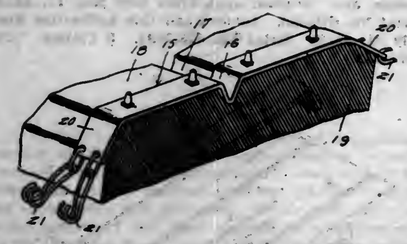
5. A tool for forming the shanks of shoes comprising a shaft, a pair of rolls mounted on said shaft and axially movable thereon from a normal position in which their adjacent ends abut, said rolls having corresponding, longitudinally concaved shank-forming surfaces tapering from their opposite to their abutting ends and extending continuously from one to the other when in said normal position, a pair of handles mounted for axial movement on said shaft and respectively engaged at their adjacent ends with the opposite ends of said rolls, the opposite end portions of said handles being chambered and having coiled springs arranged therein about said shaft, so that the adjacent ends of the springs engage the handles at the bottoms of the chambers thereof, and means on the shaft to engage the opposite ends of the springs to hold them under tensional engagement with the handles.

1,486,802. TEAKETTLE. BENJAMIN R. ROYER, Dodge City, Kans. Filed Oct. 13, 1923. Serial No. 668,321. 1 Claim. (Cl. 53—9.)



A kettle comprising a shell-like body having a closed top, a spout on one side thereof having communication with the interior of the kettle through the body at the lower portion thereof, a steam escape pipe located entirely within the top of the body having one end about an opening formed in the side wall of the body and communicating with the spout whereby steam in the upper portion of the body may pass through the pipe and into the spout, said pipe extending diametrically of the body adjacent the top thereof and having its opposite end disposed adjacent the portion of the wall of the kettle remote from the spout whereby passage of water through the pipe to the spout upon tilting of the kettle is prevented.

1,486,803. METHOD OF CONNECTING STORAGE BATTERIES FOR ELECTROLYTIC FORMATION. FRED D. RUCKMAN, Cleveland, Ohio. Filed Jan. 17, 1921. Serial No. 437,686. 4 Claims. (Cl. 204—29.)

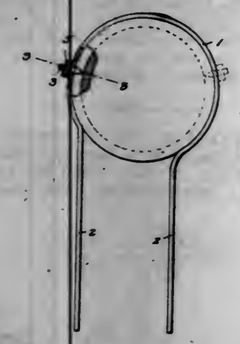


2. The method of manufacturing and charging a series of storage battery plates wherein the positive and negative terminals of the plates are connected to bus bars which includes the steps of casting terminal posts to obtain bifurcated upper ends thereon, autogeneously welding the terminal posts to the plates and connecting the welded plates to the bus bars by compressing and deforming the bifurcated portion of the terminal post whereby connections of intimate contact are formed between the bus bars and the terminal posts without resorting to lead burning or welding.

1,486,804. APPARATUS FOR SILVERING. CHARLES H. RUDDE and GEORGE M. D. SHADWICK, San Francisco, Calif. Filed Aug. 19, 1922, Serial No. 583,000. Renewed Jan. 14, 1924. 3 Claims. (Cl. 91—12.4.)

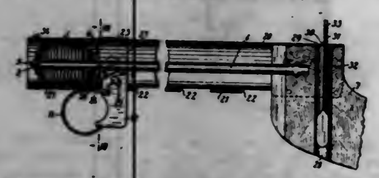
2. Apparatus for silvering an incandescent lamp consisting of a cup provided with an open bottom having a soft gasket adapted to snugly hold the equatorial portion of an incandescent lamp and leaving a portion of the glass surface exposed within the cup and above the lamp filament, and movable contacts adapted to engage and energize the lamp.

1,486,805. NONSKID DEVICE. HOWARD SAMUELS and ROBERT BRIGGS, Delhi, N. Y. Filed Apr. 4, 1922. Serial No. 549,422. 1 Claim. (Cl. 152—14.)



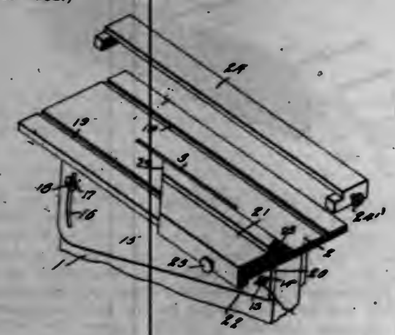
An anti-skid device comprising a bar, said bar bent to provide a V-shaped inwardly deflected portion midway its length, said V-shaped portion adapted to fit snugly within the V-shaped groove in the tread of a double tread tire, traction lugs carried by the portions of the bar intermediate the V-shaped portion and the ends of the bar, and said bar having its end portions inwardly and laterally inclined to snugly engage the inclined edges of the tire.

1,486,806. PISTON-GROOVE CLEANER. ARVINE SHEPARD, Duncan, Okla. Filed May 7, 1920. Serial No. 379,580. 2 Claims. (Cl. 15—104.01.)



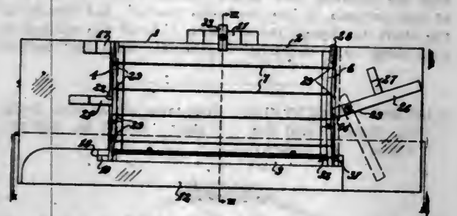
1. A piston groove cleaning tool comprising a resilient, curved scraper carrying member adapted to partly en-

compass a piston, a scraper mounted on said carrying member and normally urged inwardly by the resiliency



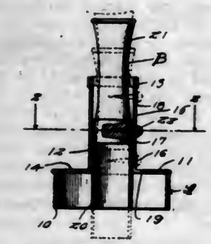
thereof, and the ends of said member being spaced apart and extended to form operating handles.

1,486,807. TOY SHOOTING DEVICE. JOSEF SKÁLA, Pizen, Czechoslovakia. Filed July 16, 1923. Serial No. 651,933. 12 Claims. (Cl. 124—12.)



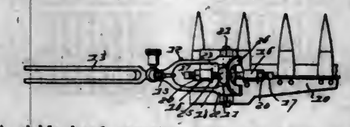
1. A shooting device, comprising a coiled spring projectile, a carrier concentrically disposed relatively to the projectile, said carrier affording an abutment for engagement by the forward end of the projectile, means for applying tension to the projectile in opposition to the abutment and means for releasing the tensioned projectile.

1,486,808. PORTABLE SAW. CURTIS E. SMITH, St. Joseph, Mo. Original application filed May 17, 1921, Serial No. 470,333. Divided and this application filed July 31, 1922. Serial No. 578,719½. 5 Claims. (Cl. 143—132.)



1. In a portable saw, a housing, a bed plate mounted on the housing and adjustable vertically and longitudinally of the top of said housing, longitudinal grooves in the bed plate, a mitre gage having a depending tongue slidable in a groove, means on the gage embracing a longitudinal edge of the bed plate and cooperating with said tongue sliding in the groove for maintaining said gage in position on the bed plate, said gage having an an inclined face adapted to support a piece of material to be sawed and a saw slot centrally disposed in the bed plate and in line with the inner edge of the gage.

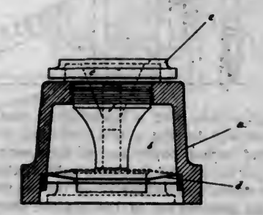
1,486,809. FRAME-WIRING DEVICE. LOUIS E. STARR, Santa Paula, Calif. Filed Mar. 20, 1922. Serial No. 547,910. 1 Claim. (Cl. 140—93.)



A device for wiring honey frames comprising a base plate, angular braces secured to the under side of said plate adapting it to be placed on a table to present a slanted working face, guides secured to the upper surface of the plate for positioning a honey frame thereon including a central end stop adapted to bear against one end of the frame, a cam lever pivoted to the plate, and adapted upon operation to press against the opposite end of the frame, and a stop on the plate against which the cam lever is adapted to strike to stop its movement and definitely limit its pressure against the frame.

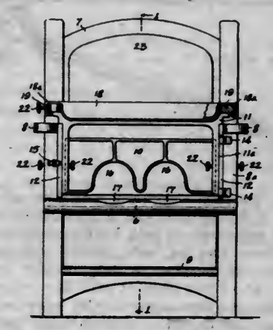
1,486,810. DOUGH CUTTER. WALLACE W. STAUFFER, Akron, Ind. Filed Oct. 27, 1922. Serial No. 597,332. 2 Claims. (Cl. 107—51.)

1. A cutting article of the class described including a cutter having a depending cutting wall, a disk from which said wall depends, a tube rising from said disk and provided with an elongated slot and branch slots extending therefrom, a cutter slidably and axially movable in said tube, a handle for the last mentioned cutter, and a stud securing said handle to and extending from the second mentioned cutter for movement in and coaction with said elongated slot and branches.



1,486,811. SICKLE HEAD. CHARLES BENTON STRANG, Lindenwood, Ill. Filed Aug. 29, 1921. Serial No. 496,623. 3 Claims. (Cl. 56—303.)

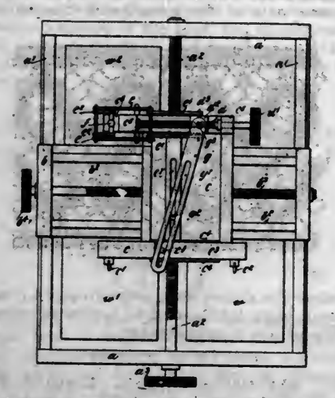
2. A sickle head carrying a journal block, a pitman engaging clip, and a link connecting the clip with the journal block, the journal block having a longitudinal axis of movement on the pitman head, and the link having a transverse axis of movement with relation to the



journal block and having a pivotal connection with the said clip with the axis of said movement in a plane perpendicular to the axis of the movement with respect to the block, the link being of looped construction arranged in straddling relation with the block, and provided at its inner end with an upwardly directed looped guard finger.

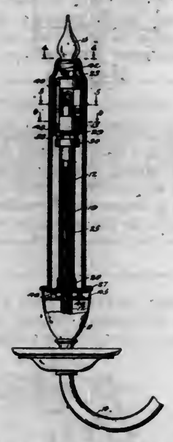
1,486,812. INK BOTTLE AND INK POT. GEORGE SWEETSER, London, England. Filed June 24, 1922. Serial No. 570,561. 2 Claims. (Cl. 120—63.)

1. An ink pot and well, comprising a reservoir having its lower inner surface enlarged forming an annular shoulder spaced from the lower end and provided with an opening in its top, an elastic diaphragm secured upon the shoulder, an ink well extending into the reservoir, and a removable cover for the ink well, said cover being smaller than the enlarged lower end of the reservoir and upon which, when removed, the reservoir is adapted to be placed with its diaphragm in contact therewith, substantially as and for the purpose set forth.



1,486,813. CHAIR. JOHN ATLEE TALLMAN, Toledo, Ohio. Filed Mar. 20, 1923. Serial No. 626,335. 5 Claims. (Cl. 155—189.)

1. In a chair for a child, the combination with a seat member and a superstructure comprising back and side retainers for such seat member, of an auxiliary superstructure adjustable on the first-mentioned superstructure, a tray structure horizontally slidable on said auxiliary superstructure, and a stock structure vertically slidable on said auxiliary superstructure.

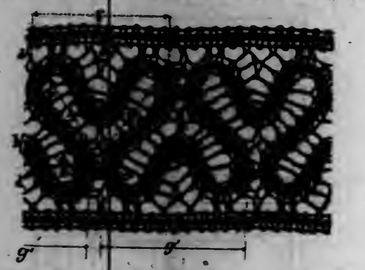


1,486,814. MECHANICALLY REPRODUCING PORTRAITS IN RELIEF FROM STEREOSCOPIC PHOTOGRAPHS. ELIZABETH EDITH TOWNSEND, Northdown, near Margate, England. Filed Nov. 25, 1922. Serial No. 603,380. 6 Claims. (Cl. 41—25.)

1. A method of reproducing a copy of the surface of a three-dimensional figure, in the round, in relief or in intaglio from a pair of stereoscopic photographs of said figure characterized in that means utilizing the detail in one photograph are employed to control the movements of the cutting tool of a carving machine in two dimensions (e. g. height and breadth) and means for utilizing

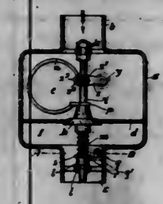
the variations between the two photographs to control the movements of the tool in the third dimension (e. g. depth), as set forth.

1,486,815. ELECTRIC FITTING. JOHN THOMAS TROTTER, Brooklyn, N. Y. Filed Apr. 28, 1922. Serial No. 557,154. 4 Claims. (Cl. 173—349.)



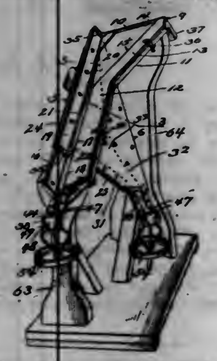
1. A device of the character described comprising a tubular member, a second tubular member rotatably mounted thereon, an insulated block carried by said first-mentioned tubular member, electrical conductors extending through the first-mentioned tubular member, a lamp socket carried by said block, a plurality of contact plates carried by said block, one of said conductors being in circuit with the lamp socket, the other conductor being connected to one of said contact plates, and means carried by the second-mentioned member and adapted upon rotation thereof to engage two of the contact plates and establish a circuit from the conductors through the lamp socket.

1,486,816. MACHINE-MADE LACE. EMIL BÖSEBECK, Barmen, and EUGEN TÜRCK, Langerfeld, near Barmen, Germany. Filed Aug. 26, 1921. Serial No. 495,725. 4 Claims. (Cl. 96—24.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



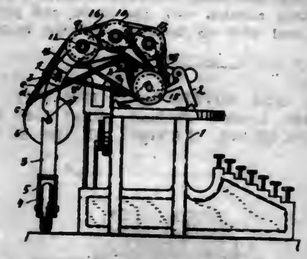
1. An all-machine-braided lace, comprising a groundwork and an element resembling a continuous miniature ribbon of substantially uniform width and texture

throughout, running sinuously to and fro within the lace, said ribbon-like element being formed integral with said ground-work, part of the ground-work threads, at the



points where the ground-work is interrupted by said ribbon-element, being interbraided in a manner corresponding to the texture of said element.

1,486,817. EXPLOSION ENGINE. HERMANN WARTENBERG, Charlottenburg, near Berlin, Germany. Filed Oct. 18, 1922. Serial No. 595,307. 9 Claims. (Cl. 236—93.)



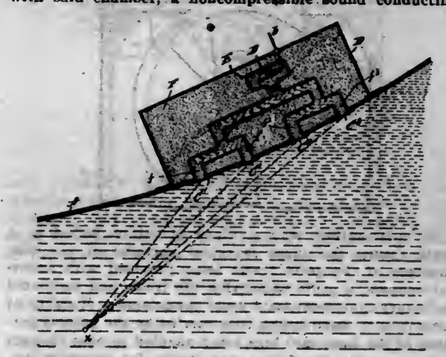
1. In a device of the character described, the combination with a casing, of a valve adapted to control the passage through said casing, a resilient member acting to yieldingly support said valve, a valve rod loosely carrying the valve, and a thermostatic member connected with said rod and mounted in the casing to act upon the valve in counteraction to the action of the said resilient member.

1,486,818. WASHER SORTING AND ASSEMBLING DEVICE. LEO S. WHITEHEAD, Akron, Ohio. Filed July 11, 1922. Serial No. 574,336. 9 Claims. (Cl. 83—92.)

1. In a washer sorter and assembling device of the class specified, a main chute disposed at an angle of inclination for gravitating operation and provided with an inlet opening at the upper end, and a laterally projecting chute intersecting the main chute at an angle and having communication with a portion of one side of said main chute, both chutes being provided with lower independent outlet means.

1,486,819. TYPEWRITER ATTACHMENT. WILLIAM H. WIRM, Grand Rapids, Mich. Filed May 8, 1922. Serial No. 559,468. 3 Claims. (Cl. 197—127.)

1. In combination with a typewriting machine, and an auxiliary carriage having a reel arranged to carry writing paper and carbon paper and to feed such paper properly to the platen on the machine, said auxiliary carriage arranged to move longitudinally of the machine with the corresponding movements of the platen, shafts revolubly mounted upon said auxiliary carriage for receiving and storing each used sheet of carbon paper separately from the others, a pulley mounted upon the end of each of said shafts and a corresponding pulley mounted upon the platen shaft, a belt engaging said pulleys in such a manner that the revoluble movements of the platen will revolve all of said shafts, said shafts so arranged that the several used sheets of carbon paper may be automatically separated from each other after printing, and each sheet stored upon its respective shaft and the printed paper may be stored separately from the carbon paper.



1,486,820. WRECKING TOOL. JAMES LOUIS WILDER, Concord, N. H. Filed Jan. 11, 1922. Serial No. 528,482. 1 Claim. (Cl. 254—25.)

A tool of the class described consisting of a metallic bar having a handle portion, a tool member disposed transversely relatively to said handle portion, the longitudinal median line of said handle portion passing through said tool member, a substantially semicircular crook offset out of and open at said line connecting said handle portion and tool member, the outer main surface of said tool member being substantially flat from the distal end of said tool to said line and being in a plane substantially at a right angle to the handle, the outer curved surface of the crook merging into said flat main wall substantially at said median line, the inner surface of said tool member extending from substantially said line towards the first surface to provide a chisel, and said tool member having its distal end on the side of said line opposite to the crook and being widened and having a slot to permit it to function as an extracting claw.

1,486,821. SUBMARINE SIGNALING. ROBERT L. WILLIAMS, Newton, Mass., assignor to Submarine Signal Company, Portland, Me., a Corporation of Maine. Filed Apr. 25, 1918. Serial No. 230,802. 6 Claims. (Cl. 181—26.)

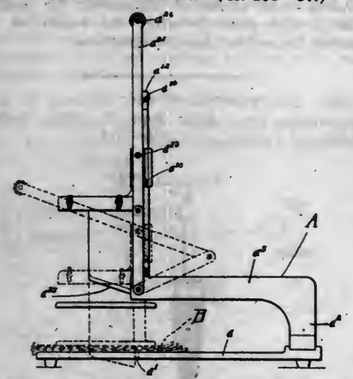
5. In a device for determining the direction of subaqueous sound signals, a plurality of receiving units mounted on the port and starboard side of a vessel, positioned so as to be screened from one another by the vessel itself, a plurality of diaphragms spaced substantially in a horizontal plane in the skin of the vessel, a plurality of sound conducting tubes, said diaphragms each closing an end of a conducting tube, a receiver, a chamber, said receiver being positioned in said chamber, the other end of said conducting tubes communicating with said chamber, a noncompressible sound conducting

medium connecting said receiver with said diaphragms through the sound conducting tubes, the length of said conducting tubes being proportioned so that only sounds from directly ahead of the vessel will be transmitted in phase to the receiver whereby the direction of the sound source may be determined by both port and starboard receivers or either receiver.

1,486,822. NECKTIE. ISADORE DAVID WOLFSON and FAY EVELYN WOLFSON, New York, N. Y. Filed Oct. 17, 1922. Serial No. 595,119. 7 Claims. (Cl. 2—11.)

1. As a new article of manufacture, a necktie including terminal members formed of flexible material arranged in two plies, and a continuation of one of said terminal members constituting a band for connecting the terminal members, said continuation being adjustable to vary the length of the necktie and including two plies of flexible material, one of which is an integral prolongation of one of the plies of the last-mentioned terminal member and the other of which is a strip of flexible material stitched at one end to the inner end of the other ply of said member and stitched at its sides to the sides of said prolongation, said strip being of thinner material than the material of either of said plies.

1,486,823. GOLF CLUB. EDWIN C. ALLEN, Chicago, Ill. Filed Nov. 6, 1922. Serial No. 599,423. 14 Claims. (Cl. 46—4.)

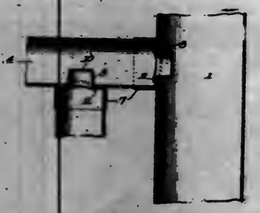


4. A golf club including a shaft, a head provided with two striking faces arranged so that when either face is in a substantially horizontal position the other face is in striking position and having its weight distributed so that the center of gravity thereof is disposed substantially different with respect to the ball striking point in the several positions of the head, and an adjustable connection between the shaft and head permitting adjustment of the head to position either striking face in striking position.

1,486,824. SELF-ADJUSTING DOORKNOB. AUGUSTUS ANDERSON, Terre Haute, Ind. Filed July 28, 1922. Serial No. 578,254. 1 Claim. (Cl. 292—352.)

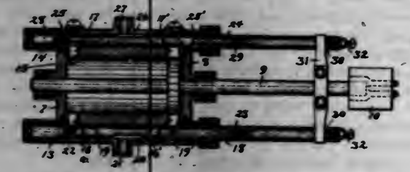
A device of the class described comprising a knob and its shank with a longitudinally directed socket and a laterally directed guideway in the shank communicating with the socket and an obliquely directed guideway communicating with the laterally directed guideway, a spindle movable in the socket and having a plurality of ratchet teeth, a plug movably engaging in said laterally directed guideway and with a tooth at the inner end to engage the teeth of the spindel one at a time and laterally enlarged at the outer end to bear upon the shank when in operative position to hold the plug from abnormal inward movement, said plug having a V shaped recess registering when in one position with the obliquely directed guideway, a spring within the guideway and engageable at one end in the recess of the plug, and means for holding said spring within the guideway.

1,486,825. MACHINE FOR SLITTING PLIES OF FABRICS. DAVID B. ASHMAN, Baltimore, Md., assignor to The Goldberg Padding Machine Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Sept. 28, 1921. Serial No. 503,762. 8 Claims. (Cl. 164—57.)



1. In a device for slitting plies of fabrics the combination with a flat base having two spaced apart tubes extending vertically thereabove, of a knife support having a tubular bearing at each end which bearings slide on the exterior of the tubes so as to sustain the support in horizontal position between the tubes, means to reciprocate the knife support upon the tubes, and a depending knife mounted on the support.

1,486,826. METAL FITTING. WILLIAM J. ATKINSON, Atlanta, Ga. Filed June 28, 1923. Serial No. 648,260. 8 Claims. (Cl. 5—283.)

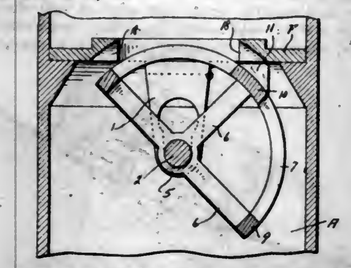


1. A fitting for the tubular members of metal beds and the like comprising, in combination, a cup shaped, sheet metal ferrule having an opening in its lower end, and a

tapered extension secured in said opening adapted to enter and be held in frictional engagement with the wall of an opening of the same shape in a transverse tubular

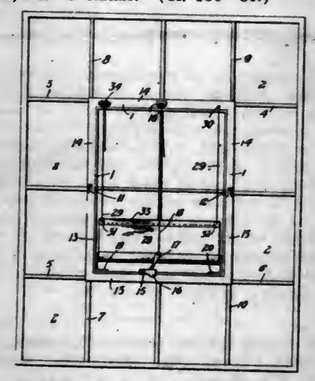
element, said ferrule having a curved bottom to conform to the periphery of the tubular element adjacent said extension.

1,486,827. DRIVING MECHANISM FOR ORE CONCENTRATORS. EDWARD A. BARNES, Fort Wayne, Ind., assignor to The Deister Concentrator Company, a Corporation of Indiana. Filed Feb. 12, 1919, Serial No. 276,518. Renewed July 30, 1923. 2 Claims. (Cl. 121—164.)



1. In apparatus of the class described, a driving-head with piston rod a cylinder with a reciprocating piston therein and feed and exhaust valves through which fluid under pressure is applied to and exhausted from the cylinder; an actuating bar fixed on the piston rod and having independent driving relation respectively with said valves; and means of adjustment for each valve adapted to independently effect the regulation of the movements thereof in opposite directions.

1,486,828. DISPENSING PUMP. HAROLD W. BARNES, Indianapolis, Ind. Filed Sept. 7, 1922. Serial No. 586,598. 6 Claims. (Cl. 103—218.)

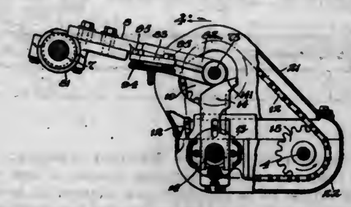


1. In a dispensing pump, the combination with a pump structure having a barrel, of a sleeve through which said barrel is movable, a collar associated with the sleeve and means for distorting the collar to lock the sleeve in engagement with said barrel.

1,486,829. REVOLVING GRATE AND FRAME FOR STEEL RANGES. JULES A. BASTIEN, Gloucester, N. J. Filed Dec. 9, 1922. Serial No. 605,853. 1 Claim. (Cl. 126—177.)

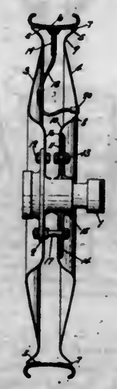
In combination with a stove structure including a grate frame, the inner marginal portions of the side members of the grate frame being provided with undercut recesses, a grate underlying the frame and supported for rotary movement, said grate comprising a plurality of arcuate bars, outstanding lugs carried by the central portions of the bars, said lugs being adapted to pass through the recesses of the frame, and means for normally limiting the movement of the grate with respect to the frame, said bars having portions at all times extending partially within the frame but below the upper surface of the adjacent portions of the frame, the lugs being of a length to extend above the frame when moving between the side members of the frame.

1,486,830. SHADE FITTING. AUSTIN D. BRIXEY, New York, N. Y., assignor to Ordinator Company, Inc., a Corporation of New York. Filed Mar. 8, 1917. Serial No. 153,230. 6 Claims. (Cl. 156—30.)



6. The combination with a window sash, of shade roller brackets secured to the interior of the sash, said brackets each having a foot and a support extending at substantially right angles therefrom, said support having its free end laterally offset outside the planes normal to said foot and passing through the edges thereof, the right angled portion of each bracket being fitted into a corner of the said sash with the offset portion extending away from the window pane.

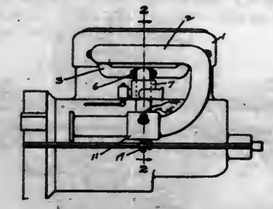
1,486,831. CHAIN-DRIVE MECHANISM FOR BOBBIN SHAFTS OF ROVING FRAMES. HARRY BROOK, Woonsocket, R. I., assignor to Woonsocket Machine & Press Co., Inc., Woonsocket, R. I., a Corporation of Rhode Island. Filed Oct. 29, 1923. Serial No. 671,404. 2 Claims. (Cl. 118—41.)



1. Bobbin-shaft chain-drive mechanism for roving frames comprising in combination with the two bobbin-

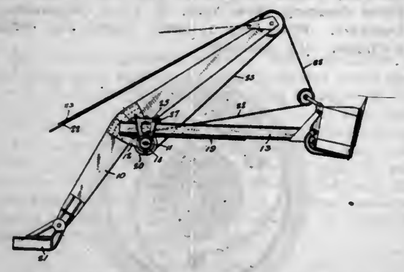
shafts of a roving frame, sprocket-wheels respectively fixed on the respective bobbin-shafts, a sprocket-wheel connected with the sleeve of a roving frame compound, an intermediately located jackshaft, sprocket-wheels on

said jackshaft, a sprocket-chain extending from the sprocket-wheel of the compound to one of those on the jackshaft, and a second sprocket-chain connecting another sprocket-wheel on the jackshaft directly with each of the sprocket-wheels upon the respective bobbin-shafts.



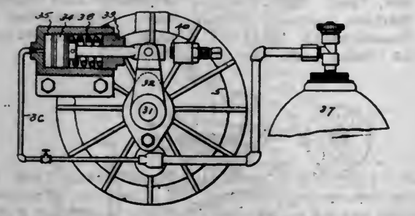
1,486,832. VEHICLE WHEEL. GEORGE F. DRADY, Dayton, Ohio, assignor to The Dayton Disc Wheel Company, Dayton, Ohio, a Corporation of Ohio. Filed June 6, 1922. Serial No. 566,248. 6 Claims. (Cl. 301—63.)

1. In a vehicle wheel, a pair of oppositely disposed discs spaced apart, the outer faces of the discs being convex but having external concave central depressions, inturned peripheral flanges on the discs converging slightly inwardly, an annular rim, said flanges having a wedging engagement within the inner circumference of the annular rim, a flanged hub extending centrally through the discs with its flange bearing against the outer face of one disc within the central concave depression thereof, bolts connecting the hub flange to the adjacent disc independent of the opposite disc, a collar surrounding the hub and bearing against the outer face of the other disc within the external concave depressions thereof, bolts connecting said collar to the adjacent disc independent of the opposite disc and a plurality of additional bolts extending through both discs and connecting the hub flange and the collar by the adjustment of which the discs are drawn one toward the other to force the tapered flanges of the disc deeper within the annular rim upon which they exert radial expanding pressure, substantially as specified.



1,486,833. METHOD AND MEANS FOR VAPORIZING FUEL IN INTERNAL-COMBUSTION ENGINES. GEORGE LAWRENCE ERTS, New York, N. Y. Filed Aug. 25, 1921. Serial No. 495,275. 12 Claims. (Cl. 123—122.)

1. The method of vaporizing liquid fuel for an internal combustion engine which consists in mixing fuel with air, segregating unvaporized portions of the fuel and then agitating the segregated portions without substantial

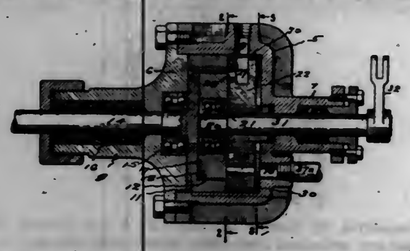


atomization by passing therethrough a gas whereby the same are vaporized and again mixed with the air.

1,486,834. SADDLE-BLOCK STRUCTURE FOR POWER SHOVELS. MITCHELL L. FYKSE, Milwaukee, Wis., assignor to Bucyrus Company, South Milwaukee, Wis., a Corporation of Wisconsin. Filed Feb. 21, 1923. Serial No. 620,369. 7 Claims. (Cl. 214—135.)

1. In a power shovel the combination of a boom, a bifurcated dipper handle having limbs straddling said boom, a pair of separate saddle block structures, one at each side of said boom overhanging a limb of said dipper handle, a shaft carried by said boom supporting said dipper handle and connecting said saddle block structures to retain them in proper working relation with respect to said dipper handle.

1,486,835. ROTARY PUMP. EBENEZER HILL, Norwalk, Conn. Filed Oct. 12, 1922. Serial No. 594,028. 16 Claims. (Cl. 230—30.)

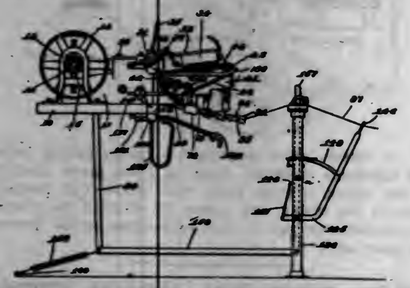


1. A rotary pump comprising a casing having intake and discharge openings, co-acting pump gears rotatable in the casing, a valve plate with intake and discharge ports in the casing, and means for altering the relation of the discharge port to the compression spaces between the gear teeth.

1,486,836. ROTARY-PUMP PRESSURE CONTROL. EBENEZER HILL, South Norwalk, Conn., assignor to The Hill Compressor & Pump Company, New York, N. Y., a Corporation of Delaware. Filed Apr. 28, 1923. Serial No. 635,372. 13 Claims. (Cl. 230—30.)

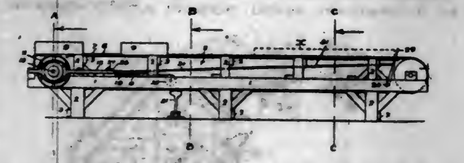
1. A rotary pump comprising a casing having an intake and a discharge, co-acting eccentrically mounted pump members having a compression space between them,

a plate in juxtaposition to the side faces of said members having a discharge port in communication with the



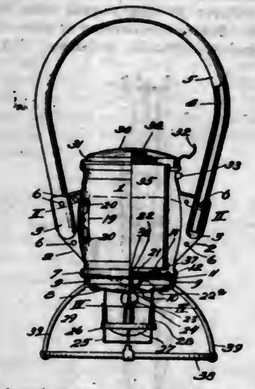
compression space, and means for advancing and retracting the compression spaces with relation to the discharge port.

1,486,837. ROTARY PUMP. EBENEZER HILL, South Norwalk, Conn., assignor to The Hill Compressor & Pump Company, New York, N. Y., a Corporation of Delaware. Filed May 1, 1923. Serial No. 635,850. 8 Claims. (Cl. 230—30.)



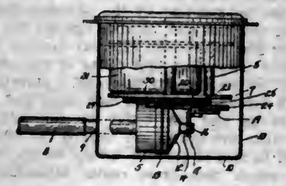
1. A rotary pump having a casing with a pumping chamber, and a rotatable pumping element within the chamber, said chamber having an annular cavity adjacent to the periphery of the pumping element, and said pumping element having means for causing lubricant to flow under centrifugal action to and exert pressure in said annular cavity.

1,486,838. LACE-TIPPING MACHINE. CARL A. MATSON, Lynn, Mass., assignor to Matson Lace Tipping Machine Company, Boston, Mass., a Corporation of Massachusetts. Filed Oct. 6, 1922. Serial No. 592,814. 16 Claims. (Cl. 12—1.)



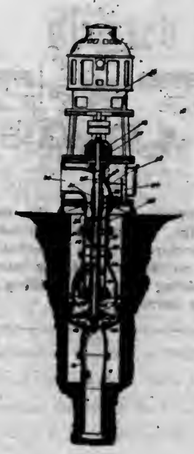
1. In a machine of the class described, the combination of means for looping an indeterminate length of lacing into loops of predetermined length, means for grasping each loop at a plurality of points, means for impregnating a section of each loop with a solution of molded or moldable material, and means for shaping and setting the impregnated portions of the loops.

1,486,839. CONVEYER. DAVID G. MORRISON, Warren, Ohio. Filed Nov. 18, 1922. Serial No. 601,709. 3 Claims. (Cl. 191—232.)



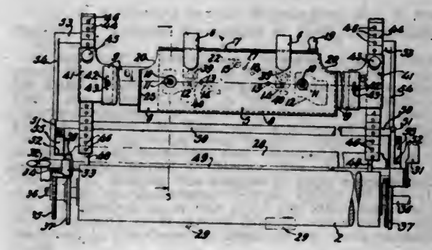
3. A conveyer of the class described consisting of a suitable frame, a conveyer mounted thereon of less width than the article to be conveyed and adapted to be operated intermittently, clutching mechanism for starting the conveyer automatic stopping mechanism for stopping the conveyer and gauges for positioning the articles upon the conveyer.

1,486,840. ELECTRIC LANTERN. HENRY B. PATCH, Kansas City, Mo. Filed June 19, 1922. Serial No. 569,529. 2 Claims. (Cl. 240—8.5.)



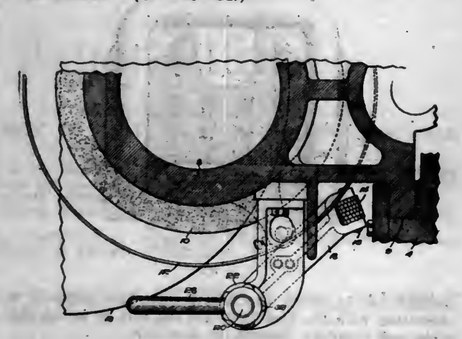
1. In an electric lantern, a body, an underlying skeleton guard therefor, an electric lamp depending from the bottom of the body, a pair of U-shaped frames depending from the body, a lens holder slidable on the U-shaped frames toward and from the lamp, and clamp springs carried by the lens holder and frictionally engaging the leg-portions of the U-shaped frames.

1,486,841. VACUUM-WIND AUTOMOBILE CLOCK. WILSON E. PORTER and RICHARD H. WHITEHEAD, New Haven, Conn., assignors to New Haven Clock Co., New Haven, Conn., a Corporation. Filed Apr. 4, 1923. Serial No. 629,854. 2 Claims. (Cl. 58—47.)



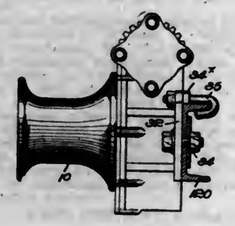
1. In a vacuum-wind automobile clock, the combination with a clock-movement having a main-spring-arbor, of a vacuum-chamber adapted to be connected with the intake manifold of an internal combustion engine, a diaphragm applied to the said chamber, and connection between the said diaphragm and arbor including a spring-retracted lever whereby the arbor is rotated step-by-step by the movement of the diaphragm, due to the pulsations created in the vacuum-chamber.

1,486,842. LUBRICATING SYSTEM FOR DEEP-WELL PUMPS. VICTOR SCHLEYER, Anderson, Ind., assignor, by mesne assignments, to Midwest Engine Corporation, Indianapolis, Ind., a Corporation of Delaware. Filed Oct. 30, 1920. Serial No. 420,693. 18 Claims. (Cl. 103—102.)



1. In a deep-well pump, the combination of a shaft extending down into the well, a rotary pump having a runner on said shaft, a water-discharge pipe extending upward from the pump and surrounding said shaft, intermediate bearings for said shaft, pipes interconnecting said bearings and surrounding the shaft within said water-discharge pipe, a lubricant-pump with which the lower end of the series of the bearing-connecting pipes connects, and a lubricant-return pipe connected with the discharge of said lubricant pump and leading upward to a point outside the well.

1,486,843. TYPEWRITING MACHINE. JESSE A. B. SMITH, Stamford, Conn., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Dec. 2, 1920, Serial No. 427,686. Renewed Nov. 13, 1923. 26 Claims. (Cl. 197—127.)

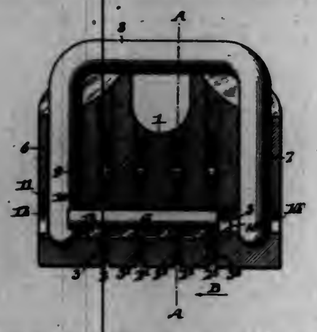


1. In a front-strike typewriting machine, the combination with a platen, of a paper-table or tablet at the front of the platen above the printing line, means for holding a work-sheet on the tablet, a leading-edge gage for the work-sheet, a finger-piece, finger-piece actuated means for shifting said leading-edge gage relatively to the tablet and said sheet-holding means, whereby the work-sheet may be adjusted on the tablet to different line-space positions, and means for detaining said leading-edge gage at its different line-space positions.

1,486,844. ABRASIVE-WHEEL DRESSER. HENRY K. SPENCER, Watertown, Mass., assignor to The Blanchard Machine Company, Cambridge, Mass., a Corporation of Massachusetts. Filed May 10, 1921. Serial No. 468,252. 16 Claims. (Cl. 125—11.)

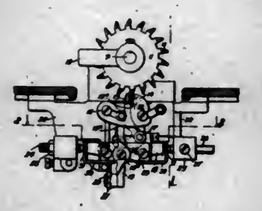
1. In a vertical grinding machine, the combination of a horizontal work-support, a vertical abrasive wheel having a lower, horizontal end face which operates on the upper side of work held on the upper face of said work support and having a portion which projects laterally beyond the margin of said work support, a carrier which carries said wheel axially and means also carried by said carrier for dressing said lower, horizontal end face during the grinding operation, comprising a dresser mounted to travel horizontally across and beneath the laterally projecting portion of said end face.

1,486,845. AUTOMOBILE WINCH. ARTHUR M. STANLEY, Lynn, Mass., assignor to Mead-Morrison Manufacturing Company, East Boston, Mass., a Corporation of Maine. Filed Apr. 3, 1919. Serial No. 287,287. 7 Claims. (Cl. 254—166.)



1. A winch attachment adapted to be mounted on the frame of an automobile and comprising a reversible support, a winch head and reversible driving gearing therefor including a worm and worm gear supported by said support, flexible driving means for said worm; and means providing for the reversible attachment of said support to the automobile frame in either one of two positions, in one of which said winch head and its driving means are at a different height as compared with the other position.

1,486,846. COMBINATION OR PERMUTATION LOCK. ALESSANDRO VALENTE, London, England. Filed June 8, 1922, Serial No. 566,799. Renewed July 12, 1923. 6 Claims. (Cl. 70—113.)



1. A lock, including a casing, a locking bolt within the casing slidable axially by gravity to locking and unlocking

positions, lugs carried by the bolt, stopping means cooperating with the end lugs to limit movement of the

locking bolt in either direction, permutation elements cooperating with the lugs to retain the bolt in locked position, and a shackle lockable by said bolt.

1,486,847. TYPEWRITING MACHINE. GEORGE A. SEIB, Ilion, N. Y., assignor to Remington Typewriter Company, Ilion, N. Y., a Corporation of New York. Filed June 12, 1922. Serial No. 567,564. 7 Claims. (Cl. 197—88.)

1. In a typewriting machine, the combination of a traveling carriage, escapement devices therefor comprising a dog carrier having a detachable yielding part, and a support on which said dog carrier is mounted through said yielding part, said yielding part wholly supporting said dog carrier.

Patents Nos. 1,486,848 to 1,487,697.

THE
OFFICIAL GAZETTE
OF THE
United States Patent Office.

Vol. 320—No. 3. TUESDAY, MARCH 18, 1924. Price—$5 per year.

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $5.00 per annum; single numbers, 10 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

Interference Notices.

U. S. PATENT OFFICE, *Washington, Mar. 3, 1924.*

Clarence E. Kenyon, his assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of the Eckman Chemical Company, 926 Paxton Block, Sixteenth and Farnam Streets, Omaha, Nebr., for registration of a trade-mark and trade-mark registered October 12, 1915, No. 106,110, to Clarence E. Kenyon, Great Falls, Mont., and a notice of such declaration sent by registered mail to said Clarence E. Kenyon at the said address having been returned by the post office undeliverable, notice is hereby given that unless said Clarence E. Kenyon, his assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

KARL FENNING, *Acting Commissioner.*

U. S. PATENT OFFICE, *Washington, Mar. 4, 1924.*

William P. Sumner, his assigns or legal representatives, take notice:

An interference having been declared by this Office between Kinney Brothers, 243–245 Water Street, Binghamton, N. Y. for registration of a trade-mark and trade-mark registered January 15, 1907, No. 89,624, to William P. Sumner, Jacksonville, Fla., and the Office having been unable to secure service upon said party, notice is hereby given that unless said William P. Sumner, his assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

KARL FENNING, *Acting Commissioner.*

U. S. PATENT OFFICE, *Washington, Mar. 4, 1924.*

The Lithotone Colortype Company, its assigns or legal representatives, take notice:

An interference having been declared by this Office between the Niagara Lithograph Co., 209–219 West Thirty-eighth Street, New York, N. Y., for registration of a trade-mark and trade-mark registered April 10, 1900, No. 34,443, to The Lithotone Colortype Company, Chicago, Ill., and a notice of such declaration sent by registered mail to The Lithotone Colortype Company at the said address having been returned by the post office authorities as undeliverable, notice is hereby given that unless The Lithotone Colortype Company, its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

KARL FENNING, *Acting Commissioner.*

U. S. PATENT OFFICE, *Washington, Feb. 21, 1924.*

Calista O. Van Slyck, her assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of William A. Whitmore, 810 West Pratt Street, Baltimore, Md., for registration of a trade-mark and trade-mark registered March 19, 1895, No. 26,243, to Calista O. Van Slyck, Lomaada Park, Calif., and a notice of such declaration sent by registered mail to said Van Slyck at the said address having been returned by the post office undeliverable, notice is hereby given that unless said Van Slyck, her assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

KARL FENNING, *Acting Commissioner.*

ADVERSE DECISIONS IN INTERFERENCE.

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed:

Pat. 1,259,310, R. von Reppert, Calculating machine, decided January 25, 1924, claims 30, 34, 48, and 81.

Pat. 1,276,864, M. C. J. Billingham, Paper-stock-treating machine, decided March 1, 1924, claims 23 and 24.

Pat. 1,459,890, E. B. Hine, Strip feeding and punching apparatus, claim 6.

Condition of Applications Under Examination at Close of Business March 7, 1924.

Room No.	(Total number of applications awaiting action, excluding Trade-Mark Division, 82,010; Trade-Mark Division, 1,747. Oldest new case, June 3, 1923; oldest amended, June 9, 1923. The dates given are 1923 except where * indicates 1924.) Divisions, Examiners, and subjects of inventions.	Oldest new application and oldest action by applicant awaiting office action. New.	Amended.	No. of applications awaiting action.
314	1. LOEFFLER, F. A., Closure Operators; Fences; Gates; Harrows and Diggers; Plant Husbandry; Plows; Planting; Scattering Unloaders.	July 5	Aug. 6	1,086
128	2. HADEN, C. F., Bee Culture; Dairy; Preserving; Presses; Tents, Canopies, Umbrellas, and Canes; Tobacco.	June 18	Aug. 9	1,116
175	3. RICH, WM. J., Electric Heating and Rheostats; Electrochemistry; Heating; Metal Founding; Metallurgical Apparatus; Metallurgy; Metal Treatment; Plastic Metal Working.	Oct. 30	Oct. 5	880
234	4. MERRITT, A. P., Conveyers, Chutes, Skids, Guides, and Ways; Conveyers, Fluid Current; Conveyers, Power Driven; Excavating; Handling—Hand and Hoist-Line Implements; Material or Article Handling; Pushing and Pulling Implements; Railway Mail Delivery; Traversing Hoists.	July 26	July 23	1,169
167	5. MACNAB, J. F., Bookmaking; Books, Strips, and Leaves; Harvesters; Jewelry; Manifolding; Music; Printed Matter; Tying Cords or Strands.	June 28	July 7	1,358
318	6. LEWERS, A. M., Bleaching and Dyeing; Chemicals; Chemistry—Carbon Compounds; Explosive, Pyrotechnic, and Match Compositions; Fertilizers; Liquid Coating Compositions; Plastic Compositions; Substance Preparation.	June 2	July 20	1,761
312	7. JARBOE, C. G., Games and Toys; Optics; Photography	Aug. 15	Aug. 17	2,472
133	8. CLIFT, J. W., Beds; Chairs and Seats; Furniture; Kitchen and Table Articles; Store Furniture; Supports.	Oct. 1	Nov. 22	1,551

DECISIONS IN PATENT AND TRADE-MARK CASES.

Court of Appeals of the District of Columbia.

ART METAL CONSTRUCTION CO., INC., *v.* TEXTILE PUBLISHING CO., INC.

No. 1,818. Decided January 7, 1924.

1. TRADE-MARKS — OPPOSITION — "THE OFFICE ECONOMIST"—"DRY GOODS ECONOMIST."

The decision of the First Assistant Commissioner, sustaining the opposition, affirmed.

Decision of First Assistant Commissioner.

2. SAME—SAME—WAIVER OF APPEAL.

The presentation of an amendment limiting the use of applicant's mark, after a judgment sustaining an opposition, and made to avoid such judgment, constitutes a waiver of the right of appeal from the judgment.

3. TRADE-MARKS—OPPOSITION—AMENDMENT AFTER JUDGMENT.

In an opposition proceeding in which a judgment sustaining the opposition has been rendered, an amendment made inter partes limiting the applicant's use of the mark should not be admitted without an inter partes hearing, and then only when it appears to clearly relate to matters not concluded by the judgment and not requiring additional evidence.

4. SAME—SAME—AMENDMENT INSUFFICIENT.

Where an opposition to the registration of applicant's trade-mark for a periodical was sustained, an amendment merely restricting the periodical to a house organ published less frequently does not escape the judgment.

Mr. C. W. Parkes for Art Metal Construction Co. Inc.

Mr. Joseph L. Levy for Textile Publishing Co. Inc.

Before SMYTH, Chief Justice, ROBB, Associate Justice, and MARTIN, Presiding Judge of the United States Court of Customs Appeals.

SMYTH, *C. J.:*

The Art Metal Construction Co., Inc., applied to the Commissioner of Patents for the registration of the words "The Office Economist" as a trade-mark for a "Magazine or journal issued monthly." Opposition to the registration was offered by the Textile Publishing Co., Inc., who owned the registered mark "Dry Goods Economist," which it applied to a weekly periodical, on the assumption that the goods of the parties possessed the same descriptive properties and that the marks were deceptively similar. Testimony was taken.

The Examiner of Trade-Mark Interferences held that the opposition should be sustained on the ground stated by the opposer, but gave leave to the applicant to amend its description of the goods and suggested that the words "House organ" be substituted for the phrase a "Magazine or journal issued monthly." He further said that if such an amendment was made the mark would then be entitled to registration. From this decision the Art Metal Construction Co. did not appeal but amended substantially as suggested. Then the Examiner dismissed the opposition.

[1] Opposer appealed to the Commissioner, who reversed the Examiner so far as his decision granting leave to amend was concerned, stating that an opportunity should have been given to the opposer to offer testimony relative to the right of the applicant to make the amendment. He also ruled that the presentation by the applicant of the proposed amendment should be considered as a waiver of the right to register the trade-mark for "A magazine or journal issued monthly," and a waiver of the right to appeal from the decision of the Examiner of Interferences "sustaining the opposition, as to these goods." A hearing before the Examiner followed. He found that the applicant had a right to make the amendment, was entitled to have the mark registered, and he dismissed the opposition. On appeal this decision was reversed by the First Assistant Commissioner, who ruled that the first judgment of the Examiner in which he held tacitly that the goods were of the same class, and that the marks were so similar that if used they would be likely to confuse, was res judicata, and that, since it had not been appealed from, it was binding on the applicant. The amendment, he held, did not change the situation, for the reason that applicant's periodical would have the same appearance and would contain the same matter whether sold on the news stands, distributed as a house organ, or published monthly or weekly; that it so closely resembled the opposer's publication that the reader would be liable to confuse the two, and that it was plain that if the mark was registered injury would be done the opposer.

In these views we concur and hence affirm the decision of the Commissioner.

Affirmed.

The decision of First Assistant Commissioner Kinnan, rendered in this case January 11, 1923, is as follows:

This is an appeal from the decision of the Examiner of Trade-Mark Interferences dismissing the opposition and adjudging that the applicant is entitled to the registration of "The Office Economist" as a trade-mark for a periodical published monthly as a house organ.

The opposer's mark is the notation "Dry Goods Economist". It is registered in this Office as a trade-mark for a weekly periodical.

Applicant originally applied for registration of its mark as a trade-mark for a magazine or journal issued monthly, and the opposition was instituted to the registration of the mark on this class of goods. Testimony was duly taken, and on April 29, 1921, the Examiner of Trade-Mark Interferences rendered decision sustaining the opposition

and adjudging that the applicant is not entitled to the registration for which it has made application. The last paragraph of this decision reads as follows:

It is further adjudged, however, that if upon the final determination of this proceeding the applicant should amend its particular description of goods in such a way as to define the periodical disclosed in its Exhibits 1, 2, and 3, the applicant would then be entitled to the registration for which it has made application. The substitution of the words "house organ" for the language "a magazine or journal issued monthly" would be such an amendment.

Between the date of final hearing before the Examiner of Trade-Mark Interferences and the date of his decision the applicant proffered an amendment to its description of goods so that its mark would apply only to a periodical published monthly as a house organ. Following the decision the opposer petitioned the Commissioner requesting him to exercise supervisory authority and praying—

that the case be remanded to the Examiner of Interferences for Trade-Marks with directions to strike from the record the papers irregularly filed as aforesaid while the case was awaiting decision, to reconsider his decision and decide the case on the record without adjudication or recommendation based on matters in futurity.

[2] In answering the petition the Commissioner cited decisions sanctioning the practice of considering the proposed amendment inter partes, but called attention to the fact that there had been no inter partes hearing on the matter. He accordingly rendered the following decision:

Presentation by the applicant of the proposed amendment is considered a waiver of the right to register the trade-mark for a "magazine or journal issued monthly," and a waiver of the right to appeal from the decision of the Examiner of Interferences sustaining the opposition, as to these goods.

The case is remanded to the Examiner of Interferences with directions to set down for inter partes hearing the question whether the amendment is supported by evidence in the case, and if the amendment is entered, the merits of the opposition as directed against the case as amended.

If the facts warrant the Examiner of Interferences will enter the amendment and make such order in the opposition as seems proper.

The petition to strike from the record was denied. After an inter partes hearing the Examiner of Trade-Mark Interferences entered the amendment and rendered a decision dismissing the opposition.

[3] In opposer's brief, filed with this appeal, the contention is vigorously made that after final hearing the amendment of the applicant's case inter partes was improper. The authorities cited and the new equity rules have been kept in mind. A court has a wide discretion in suggesting amendments on its own motion when it thinks substantial justice requires such action. Truly enough, however, what has been adjudicated and concluded by the decree must not be disturbed. The amendment should not be admitted without an inter partes hearing, and then only if it clearly appears to relate to matters not concluded by the judgment and which can be determined without further evidence being submitted. This matter loses its importance, however, in view of my disposition of the case.

It is not believed the amendment justifies the dismissal of the opposition or avoids the probability of confusion.

The mere fact that applicant's magazine is circulated as a house organ does not, as I view the matter, entitle applicant to the registration of a trade-mark which otherwise would not be registrable.

[4] By presenting the amendment and failing to appeal from the decision of the Examiner of Trade-Mark Interferences sustaining the opposition to the registration of the mark for a "magazine or journal issued monthly" applicant admits that it is not entitled to such registration. Applicant's periodical has the same appearance and contains the same matter whether it is sold on the news stands or distributed as a house organ or is published monthly or weekly. If it so closely resembles the opposer's periodical that the reader is liable to confuse the two, it is plain injury may be done the opposer. While distribution as a house organ may tend to reduce the probabilities of confusion in some cases, it does not follow that it will in all cases or that all readers will be cognizant with the manner of distribution. I am unable to reach any other conclusion than that the mere fact that one periodical is published at more widely separated times than another is restricted to one class of readers, but which class may fairly include those classes reached by the periodical of such another, and is distributed as a house organ does not entitle the applicant to the registration of a trade-mark that is so similar to that of a prior owner and registrant as to otherwise cause confusion of origin. The opposition should, in my judgment, be sustained.

The decision of the Examiner of Trade-Mark Interferences is reversed.

Court of Appeals of the District of Columbia.

CALIFORNIA PACKING CORPORATION *v.* SANTA ANA PRESERVING CO.

No. 1,577. Decided January 7, 1924.

1. TRADE-MARKS—"DEL SUR" AND "DEL MONTE"—NOT DECEPTIVELY SIMILAR.

Where the marks neither sound alike nor look alike and one familiar with the one would not be likely to confuse it with the other and purchase goods bearing it on the assumption that, because they did bear it they originated with the opposer, and where, when each mark is considered as a whole, the marks are not sufficiently similar to deceive either the eye or the ear, although both marks commence with the same Spanish word "Del," *Held* that the marks are not deceptively similar.

Decision of Assistant Commissioner.

2. SAME—SAME—SAME—USE OF THE PREFIX "OF THE" IN SPANISH.

Where the sole ground of similarity as far as the words are concerned is the Spanish prefix "Del," meaning "of the," and no one would think of suggesting interference if the parties had chosen the words with the prefix "The," *Held* that a translation of the article into the Spanish language is not materially different from the article in English.

Mr. Archibald Cox and *Mr. W. G. Henderson* for California Packing Corporation.

Mr. A. E. Wallace for Santa Ana Preserving Company.

Before SMYTH, Chief Justice, ROBB, Associate Justice, and MARTIN, Presiding Judge of the United States Court of Customs Appeals.

SMYTH, *C. J.*:

The question here concerns the right of Santa Ana Preserving Company to have registered as a trade-mark, for use on jellied fruits, fruit jelly, fruit preserves, and canned fruit, the words "Del Sur," inclosed within a border of somewhat irregular but symmetrical outline. Opposition was interposed by California Packing Corporation on the footing that it was the owner of "Del Monte," a mark applied by it to goods of the same character as those of the applicant, long before the latter had adopted its mark. The Examiner of Interferences found there was no similarity between the marks and dismissed the opposition. This action was affirmed by the Assistant Commissioner on appeal, and the opposer brings the case here asking us to reverse him.

It is conceded that the opposer adopted and applied its mark first, and, of course, that the goods of the parties have the same descriptive properties. This leaves but one question for determination, viz, are the marks so similar that if both were used in commerce they would be likely to produce confusion in the minds of prospective purchasers. The marks neither sound alike nor look alike. One familiar with the mark "Del Sur" would not be likely to confuse it with the other mark and purchase goods bearing it on the assumption that, because they did bear it, they originated with the opposer. To be sure both marks commence with the Spanish word "Del," meaning "of the," but we must consider each mark as a whole, and, when we do, the marks are not sufficiently similar to deceive either the eye or the ear. It has been ruled that "Don Caesar" was not an infringement of "Don Carlos" (*Chance v. Gulden*, 165 Fed. 624), and that "Union World" did not infringe "Union Leader" (*American Tobacco Co. v. Globe Tobacco Co.*, 198 Fed. 1015); yet in each mark the first word, as here, was the same.

While the outlines of the marks before us have something in common, this is not sufficient to justify the conclusion that they are deceptively similar.

The courts look with disfavor upon any mark which indicates that its owner, being the last comer, is bent upon appropriating a part of his business rival's goodwill, but we are convinced that applicant's mark would not serve such a purpose, and therefore affirm the Commissioner.

Affirmed.

The decision of Assistant Commissioner Fenning, rendered in this case July 7, 1922, is as follows:

[2] The California Packing Corporation appeals from the action of the Examiner of Interferences dismissing an opposition filed by it against the application of the Santa Ana Preserving Company for registration of its trade-mark consisting of the words "Del Sur," surrounded by a fanciful border. Opposer's mark is "Del Monte," surrounded by a fanciful border. The goods of the parties are the same. So far as the words are concerned, clearly the sole ground of similarity is "Del." This is Spanish for "of the." Obviously if the parties had chosen the marks "The Monte" and "The Sur" no one would be so bold as to suggest interference between them. I am unable to see why a translation into the Spanish language of the article should be considered materially different from the use of the article in English. It is suggested that one desiring to purchase goods bearing the mark "Del Monte" might ask for "Del" something and be given "Del Sur," but if one asked for "the" something, he might get almost anything. The opposer's mark is generally in Gothic or Old English type, whereas applicant's mark is in block type. The contours of the outlines surrounding the two marks are notably different, and I am unable to see that there is a similarity of appearance between them. Opposer prints its words on a red background, and in one label applicant does the same; but that fact is not sufficient to cause confusion. It is suggested that both words are Spanish words, and therefore one desiring to purchase "Del Monte" goods may merely say he wants the thing with the Spanish name; but that doctrine would easily lead to limiting the number of trade-marks available to the trade to the number of foreign languages in existence. Such a doctrine can not appeal to the conscience.

The Examiner of Interferences is affirmed and the opposition is dismissed.

Court of Appeals of the District of Columbia.

WILLIAMS EVANGELINE CONFECTION CO. *v.* U. R. S. CANDY STORES.

No. 1,652. Decided January 7, 1924.

1. TRADE-MARKS—"EVANGELINE"—GRADE MARKS.

The fact that the mark was used only on one class or grade of the goods put out by a registrant does not establish that it is to be treated merely as a grade mark.

2. SAME—TRANSFER OF PROPERTY OF A CORPORATION BY THE STOCKHOLDERS AS SUCH—MARK NOT ABANDONED.

Where the stockholders of a corporation entered into an agreement with the appellee by which they conveyed or purported to convey to it all their interest in the capital stock which they owned and attempted to transfer all contracts, trade-marks, brand names, etc., owned by the corporation to the appellee and where the corporation continued to use the mark as before, *Held* that the act of the stockholders did not amount to an abandonment of the mark by the corporation, since the stockholders of a corporation as such can not convey the property of the corporation.

Mr. F. S. Maguire, *Mr. W. T. Estabrook*, and *Mr. John F. Corcoran* for Williams Evangeline Confection Co.

Mr. E. T. Fenwick for U. R. S. Candy Stores.

Before SMYTH, Chief Justice, ROBB, Associate Justice, and MARTIN, Presiding Judge of the United States Court of Customs Appeals.

SMYTH, *C. J.*:

This is an interference proceeding in which are involved two applications—one by the appellant,

and the other by the appellee—for registration of the word "Evangeline" as a trade-mark for candies. The Examiner of Interferences held that neither party was entitled to registration because, as he found, the claimed mark was owned and used by Fuerst & Kraemer, Ltd., a corporation, long before either of the applicants had adopted it. From his decision the Williams Evangeline Confection Company, but not the U. R. S. Candy Stores, Inc., appealed to the Commissioner of Patents, who sustained the Examiner.

If the Examiner's facts be correct, his view of the law is sound. Section 7, Trade-Mark Act, 33 Stat. 726; *Schierling v. Schulze Baking Co.*, 46 App. D. C. 50; 240 O. G. 642.

Appellant concedes that the mark was used by Fuerst & Kraemer, Ltd., long before it had adopted the mark, but contends that it was used as a grade mark and not as a trade-mark. In addition it asserts that if it be found that this contention is not correct and that the use made of it was a trade-mark use, then that Fuerst & Kraemer, Ltd. had abandoned it.

[1] The mark, it is true, was used only on one class or grade of the candy put out by Fuerst & Kraemer, Ltd., but this does not establish that it is to be treated merely as a grade mark. *Lawrence Manufacturing Co. v. Tennessee Manufacturing Co.*, 138 U. S. 537, 547; 55 O. G. 1528. In that case it was held that—

> if the primary object of the mark be to indicate origin or ownership, the mere fact that the article has obtained such a wide sale that it has also become indicative of quality, is not of itself sufficient to debar the owner from protection, and make it the common property of the trade,

citing *Burton v. Stratton*, 12 Fed. Rep. 696.

From 1911 to the present time thousands of cartons of candy bearing the mark "Evangeline" have been placed in interstate commerce by Fuerst & Kraemer, Ltd. By that name the candy has been ordered by the trade and sold by the retailers. No other mark has been used on the carton. Nor has any witness said it was ever treated as a grade mark. The name, in our judgment, clearly indicates origin of the candy. There is nothing in *Touraine Co. v. F. E. Washburn & Co.*, 286 Fed. 1020; 309 O. G. 676, which lends support to appellant's contention. In that case the word "Touraine" was claimed as a trade-mark for candy and confections. The foreman for twenty-five years of Washburn & Co., manufacturer of the candy, testified that the word referred distinctly to the grade or quality of the chocolate. Another one who had been in the service of Washburn & Co. for seven years gave testimony to the same effect. Washburn & Co. used the word "Waleco" as a trade-mark and applied this to all cartons and packages upon which the mark "Touraine" appeared. They received from applicant at times packages of candy bearing the mark "Touraine" and distributed them to the trade without objection. For fourteen years, with full knowledge of the use of the mark by the applicant, Washburn & Co. took no exception to its use. In the light of these facts, and for other reasons given in the opinion, it was held that the word "Touraine" had never been used as a trade-mark by Washburn & Co.

[2] The claim of abandonment is baseless. Fuerst & Kraemer, Ltd., as we have said, is a corporation. The stockholders thereof entered into an agreement with the Candy Stores corporation by which they conveyed, or purported to convey, to it all their interest in the capital stock which they owned, and attempted to transfer all contracts, trade-marks, brand names, etc., owned by Fuerst & Kraemer, Ltd., to the Candy Stores corporation. It is said in behalf of the appellant that this act by the stockholders amounted to an abandonment of the mark by Fuerst & Kraemer, Ltd. Of course, this can not be so. It is elementary that the stockholders of a corporation as such can not convey the property of the corporation. *Eichelberger et al. v. Arlington Building, Inc., et al.*, 280 Fed. 997; *Button v. Hoffman*, 61 Wis. 20; and *Rough v. Breitung*, 117 Mich. 48, Elliott on Private Corporations, 5th Ed., p. 9. Therefore the attempt just mentioned was futile. Moreover, the testimony is quite clear to the effect that from that time down to the institution of these proceedings Fuerst & Kraemer, Ltd., continued to use the mark as before, which indicates that it had no intention of disposing of it. The case of *Sauers Milling Co. v. Kehlor Flour Mills Co.*, 39 App. D. C. 535; 189 O. G. 525, is not in point. There the owners of the trade-mark attempted to convey it without conveying the business with which it was connected. It was held that the attempt was without legal efficacy, but that it might be used as evidence of a purpose to abandon the mark. Here, as we have seen, no attempt was made by the owner of the mark, Fuerst & Kraemer, Ltd., to convey it, but by the stockholders, persons who had no right to it.

We are satisfied that there is no error in the record, and therefore affirm the decision of the Commissioner.

Affirmed.

U. S. Circuit Court of Appeals—Sixth Circuit.

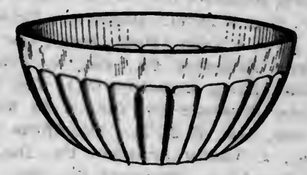
IMPERIAL GLASS CO. *v.* A. H. HEISEY AND CO.

No. 3,845. Decided December 4, 1923.

1. PRINTED PUBLICATIONS—MANUFACTURERS' CATALOGUES.
   Manufacturers' catalogues issued for circulation among the trade are more effective in spreading information among persons skilled in that art than if the same catalogues were only on file in some public library. The evidence of the superintendent that these catalogues had been sufficiently circulated to bring them to his notice and possession is enough to indicate due publication.
2. SAME—SAME—ACT OF 1836 CONSTRUED.
   Reeves v. Keystone Co., arising under the act of 1836, merely holds that the publication of a manufacturer's catalogue, which is not found in a library, must be proved by some evidence other than the imprint.
3. DESIGNS—PATENTABILITY.
   While it is not questioned that patentable designs may arise from regrouping familiar forms and decorations, yet when all that was done was to take an existing piece of table glassware provided with flutes and substitute a slightly-different form of flute already in common use on other articles of glassware, there can be no patent monopoly.

Mr. H. E. Dunlap and *Mr. William L. Symons* for Imperial Glass Co.

Messrs. Kay, Totten, and Brown for A. H. Heisey and Co.



APPEAL from the District Court Southern District of Ohio, Eastern Division.

Before DENISON and DONAHUE, Circuit Judges, and WESTENHAVER, District Judge.

DENISON, *Cir. J.*:

The district court made the usual interlocutory decree for injunction and accounting in a suit brought for the infringement of Design Patent No. 43,852, issued to plaintiff below April 15, 1913, upon an application filed by A. J. Sanford, February 3, 1913.

The design is said to be for a nappy, which is defined by the testimony as a round bowl for containing fruit, preserves, sauce, or anything of that sort. It is shown in the following figure:

The ornamentation consists of a series of panels, called flutes, which in horizontal cross sections show a concave recess extending in from the otherwise smooth exterior surface. At the upper end, this concavity is brought out to the surface upon lines vertically concave, and the contact line between the smooth surface and the flute takes the form of an arch or curve at the corners, connected by a straight horizontal line. The whole may be described as a flat top arch. This leaves above it a horizontal band of plain glass.

In a considered opinion, the district court concluded that there was infringement. This result is not seriously questioned, if the patent is given even the minimum narrow scope which it must have in order to be treated as valid.

While recognizing the rule that a design patent must disclose something more than ordinary skill in arrangement of common features in order to be valid (*Boldt v. Nerison Co.*, C. C. A. 6, 194 Fed. 871; *Mygatt v. Schaffer*, C. C. A. 2, 218 Fed. 827; *Steffens v. Steiner*, C. C. A. 2, 232 Fed. 862), the district court also concluded that this patent successfully passed that test. We are compelled to reach the opposite conclusion; and, in so doing, we depend particularly upon two considerations.

[1, 2] The first is this: The defendant produced printed catalogues of different glass manufacturers, including some of its own, all evidently issued for circulation among the trade, and all of which defendant's superintendent testified had been in his possession since before 1911. These catalogues showed a great variety of designs tending to support the defense, and, if they do not anticipate, they at least emphasize the trifling character of the distinction upon which the patent must stand. The trial court rejected these, thinking that they were not prior publication within the meaning of the patent law, and basing this conclusion upon *Reeves v. Keystone Co.*, Fed. Cases No. 11,660, vol. 20, pp. 466, 471; and *Briton v. White Co.*, 61 Fed. 93. We think these catalogues should have been received and considered. Certainly, manufacturer's catalogues so circulated are more effective in spreading information among persons skilled in that art than if the same catalogues were only on file in some public library. *Reeves v. Keystone Co.*, arising under the act of 1836, merely holds that the publication of a manufacturer's catalogue, which is not found in a library, must be proved by some evidence other than the imprint. Whether such imprint would, under the present statute, be prima facie evidence of publication need not be decided. The evidence of the superintendent that these catalogues had been sufficiently circulated to bring them to his notice and possession is enough to indicate due publication. The decision in *Briton v. White Co.* (D. C., Conn.), seems to be in point, but we think it is mistaken. It depends (61 Fed. 95) upon *Reeves v. Keystone Co.* (which, as we have seen, does not support it); *Parsons v. Colgate*, 15 Fed. 600; 24 O. G. 203, and *Fermentation Co. v. Koch*, 21 Fed. 587; 29 O. G. 535. The former (D. C. N. Y.) stands upon the distinction that the act of 1836, which governed that patent, called for prior description in a "public work" instead of in a "printed publication," as is specified in the present statute; and in the latter (D. C. Mich.), this distinction is overlooked.

[3] The second consideration controlling in our minds is the fact that, as early as 1908, defendant was producing and marketing a nappy or berry bowl which is in evidence as Exhibit M, and which was identical with the design patent in every respect save two. One difference was that the flutes were relatively wider, and with the same sizes of bowl there would be about two-thirds as many flutes in Exhibit M as appeared in the patented design. The other difference was that, in Exhibit M, the top of each flute was in the form of an arc instead of a flat topped arch. The first is plainly one which has no differentiating importance—at least when the distinction is as that between 16 and 24. The second likewise does not impress us as substantially changing the appearance of the design; but however that might be, we find also that the precise form of flute in this respect was in common use by defendant and others as early as 1909 upon jelly glasses, tumblers, sugar bowls, sirup pitchers, and a line of table glassware, which line, however, did not include nappies. While we do not question that patentable designs may arise from regrouping familiar forms and decorations, yet when all that was done was to take an existing piece of table glassware having these flutes and substitute a slightly different form of flute

already in common use on other articles of glassware, we are satisfied that there can be no patent monopoly. *Smith* v. *Whitman Co.*, 148 U. S. 675; 63 O. G. 912; *Knapp* v. *Will Co.*, C. C. A. 2, 278 Fed. 380; 290 O. G. 645; *Whiting Co.* v. *Alvin Co.*, C. C. A. 2, 288 Fed. 77; 314 O. G. 379.

For these reasons the decree must be reversed, and the case remanded with instructions to dismiss the bill.

ADJUDICATED PATENTS.

(D. C. Conn.) The Taylor patent, No. 867,622, for a screw clamp, claims 3, 4, and 5, *Held* valid and infringed. *James L. Taylor Mfg. Co.* v. *Steuernagel*, 294 Fed. Rep. 362.

MOERIS

Particular description of goods.—Watches, Watch Movements, and Parts of the Same.
Claims use since about Feb. 15, 1910.

Ser. No. 188,897. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) THE EAGLE CARBURETOR COMPANY, Cleveland, Ohio. Filed Nov. 26, 1923.

RADIO – POWR.

Particular description of goods.—Filament-Heating Transformers and Parts Thereof.
Claims use since on or about Oct. 1, 1923.

Ser. No. 188,907. (CLASS 24. LAUNDRY APPLIANCES AND MACHINES.) THE HOLLAND MAID CO., Holland, Mich. Filed Nov. 26, 1923.

Holland Maid

Particular description of goods.—Laundry Washing Machines and Ironing Machines.
Claims use since Feb. 1, 1923.

Ser. No. 188,936. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) STAAR STORAGE BATTERY CO., Chicago, Ill. Filed Nov. 26, 1923.

Staar 2 YEAR GUARANTEE Storage Battery

No claim is made to the words "2 Year Guarantee" and "Storage Battery" apart from the mark shown in the drawing.
Particular description of goods.—Storage, Radio, Ignition, and Lighting Batteries.
Claims use since May 23, 1923.

Ser. No. 188,954. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) ELECTRICAL RESEARCH LABORATORIES, Chicago, Ill. Filed Nov. 27, 1923.

DUO-REFLEX

Particular description of goods.—Radio Electrical Appliances—Namely, Transformers, Coils, Fixed Condensers, Variable Condensers, Audiofrequency Transformers, Radiofrequency Transformers, Radio Sets, and Component Parts Thereof.
Claims use since Apr. 1, 1923.

Ser. No. 188,955. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) ELECTRICAL RESEARCH LABORATORIES, Chicago, Ill. Filed Nov. 27, 1923.

ERLADYNE

Particular description of goods.—Radio Electrical Appliances—Namely, Transformers, Coils, Fixed Condensers, Variable Condensers, Audiofrequency Transformers, Radiofrequency Transformers, Radio Sets, and Component Parts Thereof.
Claims use since Apr. 1, 1923.

Ser. No. 188,956. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) ELECTRICAL RESEARCH LABORATORIES, Chicago, Ill. Filed Nov. 27, 1923.

ERLAFLEX

Particular description of goods.—Radio Electrical Appliances—Namely, Transformers, Coils, Fixed Condensers, Variable Condensers, Audiofrequency Transformers, Radiofrequency Transformers, Radio Sets, and Component Parts Thereof.
Claims use since Apr. 1, 1923.

Ser. No. 188,957. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) ELECTRICAL RESEARCH LABORATORIES, Chicago, Ill. Filed Nov. 27, 1923.

TRIPLEX

Particular description of goods.—Radio Electrical Appliances—Namely, Transformers, Coils, Fixed Condensers, Variable Condensers, Audiofrequency Transformers, Radiofrequency Transformers, Radio Sets, and Component Parts Thereof.
Claims use since Apr. 1, 1923.

Ser. No. 188,970. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) PEARL RADIO CORPORATION, Philadelphia, Pa. Filed Nov. 27, 1923.

PEARLCO

Particular description of goods.—Variometers, Variocouplers, Transformers, Condensers, Potentiometers, Rheostats, Jacks, Loud Speakers, Honeycomb Coils, Amplifiers, and Complete Radio Sets.
Claims use since Mar. 1, 1922.

Ser. No. 188,972. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) RADIONOGRAPH CORPORATION OF AMERICA, New York, N. Y. Filed Nov. 27, 1923.

RADIONOGRAPH

Particular description of goods.—Complete Radio Receiving Sets Using Phonographs for Mechanical Sound Amplification.
Claims use since about Aug. 20, 1923.

Ser. No. 188,974. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) THE SECTRON RADIO CO., Cleveland, Ohio. Filed Nov. 27, 1923.

SECTRON

Particular description of goods.—Radio Receiving Sets.
Claims use since May, 1923.

Ser. No. 189,007. (CLASS 33. GLASSWARE.) THE NONIK GLASSWARE CORPORATION, New York, N. Y. Filed Nov. 28, 1923.

DURA

Particular description of goods.—Table Glassware.
Claims use since July 1, 1923.

Ser. No. 189,014. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) ALEX. SHEPPARD AND SONS, INC., Philadelphia, Pa. Filed Nov. 28, 1923.

MORNING SIP

Particular description of goods.—Roasted Coffee.
Claims use since about Jan. 1, 1903.

Ser. No. 189,022. (CLASS 45. BEVERAGES, NONALCOHOLIC.) WORLD BOTTLING CO., LTD., New Orleans, La. Filed Nov. 28, 1923.

JUDY PUNCH

The word "Punch" is disclaimed apart from its association as shown.

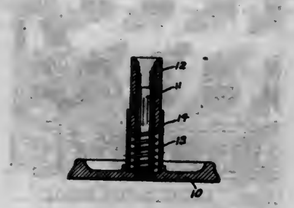
REISSUES

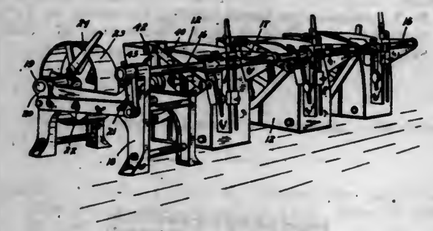


MARCH 18, 1924.

15,794. SHOE. WILLIAM H. CARY, Brockton, Mass., assignor to Avon Sole Company, Avon, Mass., a Corporation of Massachusetts. Filed Jan. 31, 1924. Serial No. 689,770. Original No. 1,475,747, dated Nov. 27, 1923, Serial No. 648,459, filed June 29, 1923. 2 Claims. (Cl. 36—14.)

1. A welted shoe comprising a welt, a base unit consisting of an upper layer of a tough substantially non-extensible homogeneous composition of fibre and rubber to maintain the shape of the shoe and form an anchorage for stitches and a lower layer of crude rubber for cohering homogeneously to the upper layer throughout its entire area, stitches passing through and uniting the welt and base unit and a relatively thick tread member of crude rubber cohering homogeneously to the lower layer of the base unit throughout its entire area, whereby the base unit and tread member form an indivisible outer sole with the stitches embedded well beneath the tread surface.

15,795. CIGARETTE-EXTINGUISHING DEVICE. HOWARD N. JONES, Providence, R. I., assignor, by direct and mesne assignments, to Universal Safety Ash Tray Company, Inc., Providence, R. I., a Corporation of Rhode Island. Filed Mar. 22, 1922. Serial No. 545,854. Original No. 1,372,143, dated Mar. 22, 1921, Serial No. 381,765, filed May 15, 1920. 6 Claims. (Cl. 131—51.)

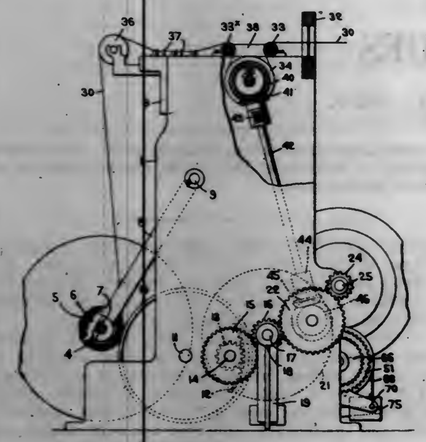


2. An ash receiver comprising a recessed body, a tubular member supported by said receiver and having a closure member for one end thereof, said tubular member being of a diameter to approximately fit and being adapted to receive, smother and so extinguish the lighted end of a cigarette, said tubular member and said closure member being movable one relatively to the other to discharge the contents of the tubular member into the receiver when desired.

15,796. ABRASIVE FOR GRINDING AND SMOOTHING GLASS. WILLIAM L. KANN, Pittsburgh, Pa. Filed July 9, 1923. Serial No. 650,481. Original No. 1,387,649, dated Aug. 16, 1921, Serial No. 369,068, filed Mar. 26, 1920. 5 Claims. (Cl. 51—278.)

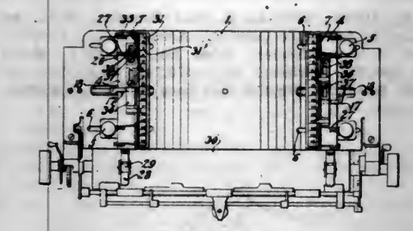
1. The method of grinding, smoothing and finishing glass preparatory to polishing, comprising supplying to the glass a natural crystalline abrasive of such character that as it is crushed and broken the smaller grains or particles thereby produced are of distinct crystalline form, and continuously collecting and supplying to the glass such abrasive during the grinding, smoothing and finishing operations, substantially as described.

15,797. TRANSMISSION MECHANISM FOR FEEDERS CONNECTED IN A GANG. EMIL R. DRAVER, Richmond, Ind. Filed Jan. 31, 1921. Serial No. 441,439. Original No. 1,296,637, dated Mar. 11, 1919, Serial No. 231,320, filed Apr. 29, 1918. 11 Claims. (Cl. 83—44.)



1. A self-contained gang of machines having a common power-driven shaft mounted in suitable bearings thereon, a variable stroke ratchet mechanism on each machine, a variable stroke connection between each ratchet mechanism and said common shaft, and means for throwing said variable stroke connections, independently into and out of action at will.

15,798. TENSION MECHANISM FOR TEXTILE AND OTHER MACHINES. ALONZO E. RHOADES, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Dec. 4, 1923. Serial No. 678,535. Original No. 1,366,100, dated Jan. 18, 1921, Serial No. 364,064, filed Mar. 8, 1920. 10 Claims. (Cl. 28—35.)

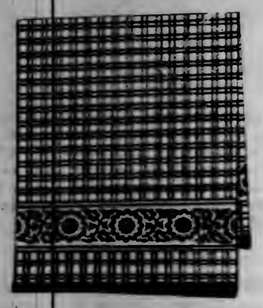


1. A warp beaming machine comprising a warp receiving beam and means for rotating the same at a constant surface speed, a rotatable controller engaging the warp in advance of said warp receiving beam, means for con-

tinuously driving said controller and automatically operable means for regulating the speed of rotation of said

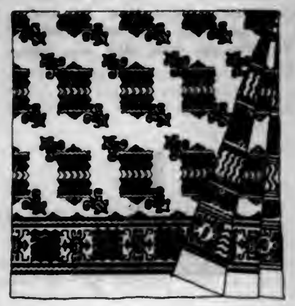
controller to maintain a constant tension upon the warp between said controller and said beam.

15,799. COLLATING DEVICE FOR TYPEWRITERS AND ADDING MACHINES. JOHN A. WHERRY, New Orleans, La., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed June 4, 1921. Serial No. 475,122. Original No. 1,324,632, dated Dec. 9, 1919, Serial No. 294,775, filed May 5, 1919. 25 Claims. (Cl. 197—127.)



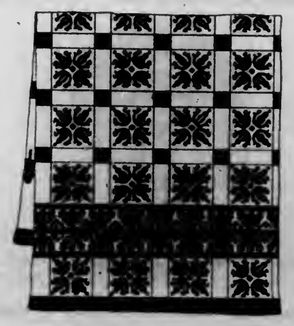
1. A collating device including a board, superimposed sheet clamping and alining members arranged on the upper side of the board, and means for raising said members from the board.

DESIGNS



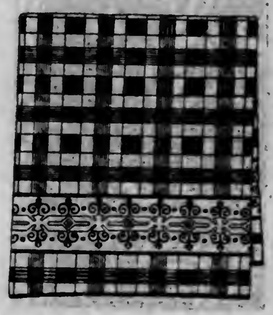
MARCH 18, 1924.

64,230. BLANKET. FREDERICK A. ANDREWS, Brooklyn, N. Y., assignor to Esmond Mills, Smithfield, R. I., a Corporation of Massachusetts. Filed Dec. 27, 1923. Serial No. 8,165. Term of patent 7 years.



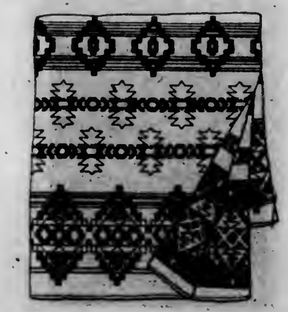
The ornamental design for a blanket or similar article substantially as shown.

64,231. BLANKET. FREDERICK A. ANDREWS, Brooklyn, N. Y., assignor to Esmond Mills, Smithfield, R. I., a Corporation of Massachusetts. Filed Dec. 27, 1923. Serial No. 8,166. Term of patent 7 years.



The ornamental design for a blanket or similar article substantially as shown.

64,232. BLANKET. FREDERICK A. ANDREWS, Brooklyn, N. Y., assignor to Esmond Mills, Smithfield, R. I., a Corporation of Massachusetts. Filed Dec. 27, 1923. Serial No. 8,167. Term of patent 7 years.



The ornamental design for a blanket or similar article substantially as shown.

64,233. BLANKET. FREDERICK A. ANDREWS, Brooklyn, N. Y., assignor to Esmond Mills, Smithfield, R. I., a Corporation of Massachusetts. Filed Dec. 27, 1923. Serial No. 8,168. Term of patent 7 years.

The ornamental design for a blanket or similar article substantially as shown.

64,234. BLANKET. FREDERICK A. ANDREWS, Brooklyn, N. Y., assignor to Esmond Mills, Smithfield, R. I., a Corporation of Massachusetts. Filed Dec. 27, 1923. Serial No. 8,169. Term of patent 7 years.

The ornamental design for a blanket or similar article substantially as shown.

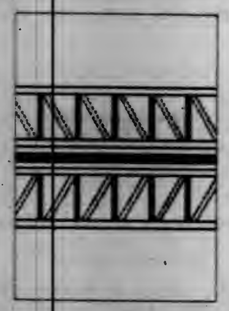
64,235. BLANKET. FREDERICK A. ANDREWS, Brooklyn, N. Y., assignor to Esmond Mills, Smithfield, R. I., a Corporation of Massachusetts. Filed Dec. 27, 1923. Serial No. 8,171. Term of patent 7 years.

The ornamental design for a blanket or similar article substantially as shown.

64,236. BIAS TRIMMING. JULIUS BAER, New York, N. Y., assignor to Webbing & Edging Corporation, New York, N. Y., a Corporation of New York. Filed Dec. 29, 1923. Serial No. 8,189. Term of patent 7 years.

The ornamental design for bias trimming, substantially as shown.

64,237. DOLL. CECILIA R. BARNEY, Palo Alto, Calif. Filed Oct. 8, 1923. Serial No. 7,422. Term of patent 3½ years.



The ornamental design for a doll, as shown.

64,238. DOLL. JAMES E. BEACH, Jr., Fairoaks, Calif. Filed Mar. 19, 1923. Serial No. 5,524. Term of patent 7 years.

The ornamental design for a doll substantially as shown.

64,239. KNITTED FABRIC. CURT FEIG, Philadelphia, Pa. Filed Jan. 26, 1923. Serial No. 5,001. Term of patent 7 years.

The ornamental design for a knitted fabric as shown.

64,240. COAT. NEWTON H. FOGG, Sanford, Me. Filed Dec. 9, 1920. Serial No. 429,599. Term of patent 7 years.

The ornamental design for a coat, as shown.

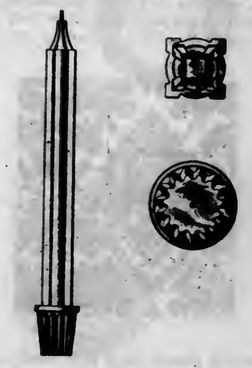
64,241. LAMP. WILFRED B. GODDARD, San Francisco, Calif., assignor to Thomas Day Company, San Francisco, Calif., a Corporation of California. Filed Jan. 29, 1924. Serial No. 8,475. Term of patent 3½ years.

The ornamental design for a lamp substantially as shown.

64,242. PILE FABRIC. JAMES GOWANS, Leonia, N. J., assignor to Sidney Blumenthal & Co., Inc., New York, N. Y., a Corporation of New York. Filed Nov. 6, 1923. Serial No. 7,688. Term of patent 7 years.

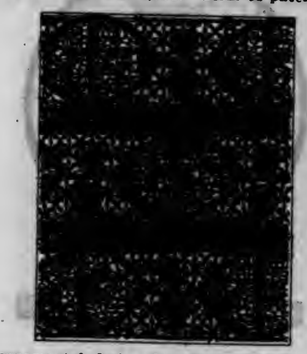
The ornamental design for a pile fabric, as shown.

64,243. PILE FABRIC. JAMES GOWAN, Leonia, N. J., assignor to Sidney Blumenthal & Co., Inc., New York, N. Y., a Corporation of New York. Filed Nov. 6, 1923. Serial No. 7,689. Term of patent 7 years.



The ornamental design for a pile fabric, as shown.

64,244. LENS FOR AUTOMOBILE STOP AND DIRECTION SIGNALS. BERTRAM J. GRIGSBY, Park Ridge, Ill., assignor to Grigsby-Grunow-Hinds Co., Chicago, Ill., a Corporation of Illinois. Filed Apr. 29, 1922. Serial No. 2,021. Term of patent 14 years.



The ornamental design for a lens for automobile stop and direction signals, as shown.

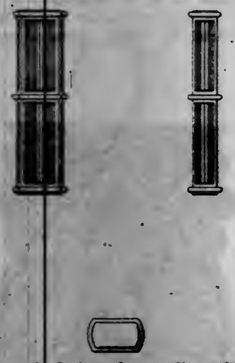
64,245. CANDLE. HENRY GRUESSER, Cincinnati, Ohio, assignor to The Emery Candle Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Mar. 11, 1922. Serial No. 1,127. Term of patent 7 years.

The ornamental design for a candle, as shown.

64,246. TEXTILE FABRIC OR SIMILAR ARTICLE OF MANUFACTURE. EUGENE IRVING HANSON, New Rochelle, N. Y., and ALFRED JACOB HEINKE, Towaco, N. J., assignors to H. R. Mallinson & Co. Inc., New York, N. Y., a Corporation of Delaware. Filed Dec. 13, 1923. Serial No. 8,006. Term of patent 3½ years.

The ornamental design for a textile fabric or similar article of manufacture substantially as shown.

64,247. TEXTILE FABRIC OR SIMILAR ARTICLE OF MANUFACTURE. EUGENE IRVING HANSON, New Rochelle, N. Y., and ALFRED JACOB HEINKE, Towaco, N. J., assignors to H. R. Mallinson & Co. Inc., New York, N. Y., a Corporation of Delaware. Filed Dec. 13, 1923. Serial No. 8,008. Term of patent 3½ years.

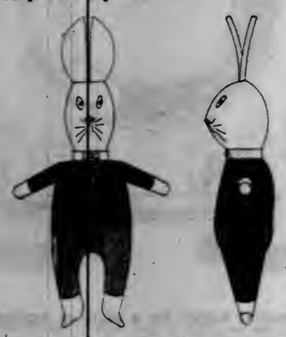


The ornamental design for a textile fabric or similar article of manufacture substantially as shown.

64,248. PLATE OR SIMILAR ARTICLE. GEORGE HASSALLS, Penkhull, England, assignor to Hugh C. Edmiston, New York, N. Y. Filed Nov. 5, 1923. Serial No. 7,682. Term of patent 3½ years.

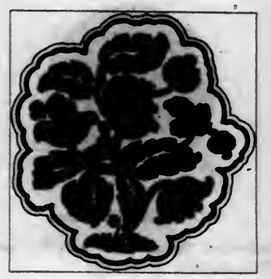
The ornamental design for a plate or similar article, as shown.

64,249. LIP-STICK HOLDER. SIMON A. JAROSLAWSKI-FIORET, New York, N. Y. Filed Nov. 28, 1923. Serial No. 7,903. Term of patent 14 years.



The ornamental design for a lip stick holder, as shown.

64,250. LIP-STICK HOLDER. SIMON A. JAROSLAWSKI-FIORET, New York, N. Y. Filed Nov. 28, 1923. Serial No. 7,904. Term of patent 14 years.

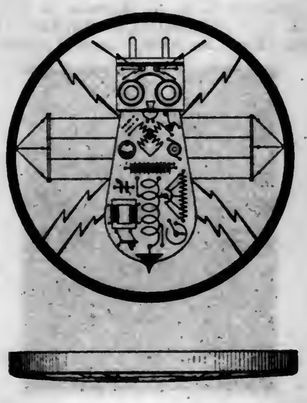


The ornamental design for a lip stick holder, as shown.

64,251. RABBIT DOLL. CHRISTENA KRATING, Council Bluffs, Iowa. Filed Mar. 28, 1923. Serial No. 5,617. Term of patent 7 years.

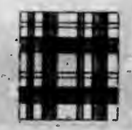
The ornamental design for a rabbit doll, as shown.

64,252. PILE FABRIC. CLARENCE V. KOZLAY, New York, N. Y., assignor to Sidney Blumenthal & Co. Inc., New York, N. Y., a Corporation of New York. Filed Nov. 24, 1923. Serial No. 7,868. Term of patent 7 years.



The ornamental design for a pile fabric substantially as shown.

64,253. PILE FABRIC. CLARENCE V. KOZLAY, New York, N. Y., assignor to Sidney Blumenthal & Co. Inc., New York, N. Y., a Corporation of New York. Filed Nov. 24, 1923. Serial No. 7,870. Term of patent 7 years.

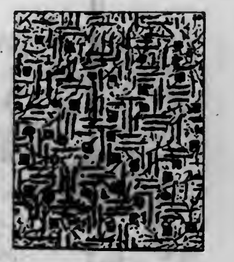


The ornamental design for a pile fabric, substantially as shown.

64,254. BADGE OR SIMILAR ARTICLE. EARL RAY LOCKE, Cleveland, Ohio. Filed June 12, 1922. Serial No. 2,626. Term of patent 14 years.

The ornamental design for a badge or similar article substantially as shown and described.

64,255. TEXTILE FABRIC. CHARLES E. LORD, Tarrytown, N. Y. Filed May 31, 1923. Serial No. 6,352. Term of patent 3½ years.

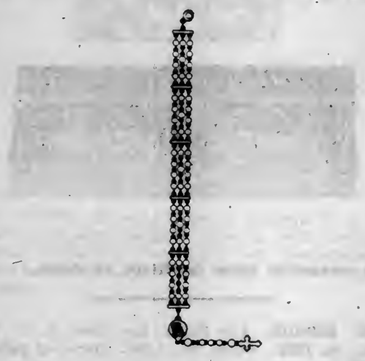


The ornamental design for a textile fabric, as shown and described.

64,256. PINCUSHION. REUBEN L. MARSHALL, Aurora, Ill. Filed Apr. 28, 1922. Serial No. 2,009. Term of patent 7 years.

The ornamental design for a pincushion as shown.

64,257. PAPER. RICHARD L. MARWEDE, New York, N. Y., assignor to Hampden Glazed Paper & Card Company, a Corporation of Massachusetts. Filed Oct. 25, 1923. Serial No. 7,595. Term of patent 14 years.



The ornamental design for paper as shown.

64,258. DESK. JOSEPH R. MCCARGAR, Grand Rapids, Mich., assignor to Stow & Davis Furniture Company, Grand Rapids, Mich., a Corporation of Michigan. Filed Dec. 24, 1923. Serial No. 8,140. Term of patent 7 years.

The ornamental design for a desk, substantially as shown.

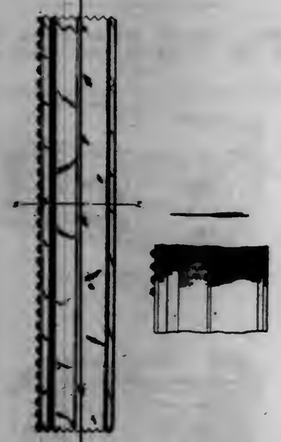
64,259. BRACELET. THOMAS F. MCDERMOTT, Providence, R. I. Filed June 21, 1923. Serial No. 6,546. Term of patent 7 years.

The ornamental design for a bracelet, as shown.

64,260. BOX. JOHN W. MILLER, Cardin, Okla. Filed Aug. 15, 1923. Serial No. 7,021. Term of patent 7 years.

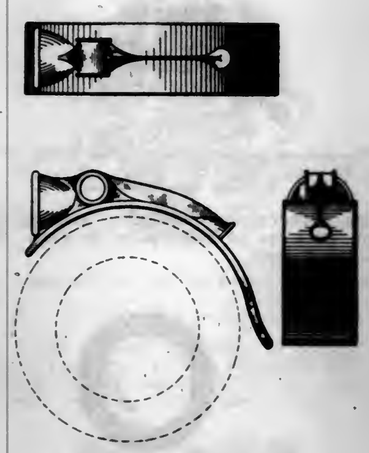
The ornamental design for a box as shown.

64,261. FRINGE. FRANKLIN W. OEHRLE, Philadelphia, Pa. Filed May 31, 1923. Serial No. 6,360. Term of patent 3½ years.



The ornamental design for fringe, as shown.

64,262. FRINGE. FRANKLIN W. OEHRLE, Philadelphia, Pa. Filed June 5, 1923. Serial No. 6,392. Term of patent 3½ years.



The ornamental design for fringe, as shown.

64,263. RIBBON. LEO PLATT, New York, N. Y. Filed Mar. 16, 1922. Serial No. 1,205. Term of patent 7 years.

The ornamental design for ribbon as shown and described.

64,264. SIGNAL-LIGHT AUTOMOBILE FENDER. JOHN PODMAJERSKY, Chicago, Ill. Filed Oct. 24, 1923. Serial No. 7,577. Term of patent 14 years.

The ornamental design for a signal light automobile fender as shown.

64,265. PORTABLE LAMP. GROSVENOR P. ROBINSON, Summit, N. J., assignor to Lighting Studios Company, New York, N. Y., a Corporation of New York. Filed Jan. 8, 1924. Serial No. 8,278. Term of patent 7 years.

The ornamental design for a portable lamp, as shown.

64,266. TOY DOG. ALBERT Z. SEROR, Jersey City, N. J. Filed Nov. 15, 1922. Serial No. 4,302. Term of patent 3½ years.

The ornamental design for a toy dog, as shown.

64,267. PAPER. THOMAS L. STONE, Newark, N. J., assignor to Hampden Glazed Paper & Card Company, Holyoke, Mass., a Corporation of Massachusetts. Filed Aug. 14, 1923. Serial No. 7,008. Term of patent 14 years.

The ornamental design for paper as shown.

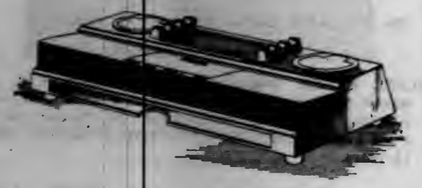
64,268. PAPER. THOMAS L. STONE, Newark, N. J., assignor to Hampden Glazed Paper & Card Company, Holyoke, Mass., a Corporation of Massachusetts. Filed Aug. 14, 1923. Serial No. 7,010. Term of patent 14 years.

The ornamental design for paper as shown.

64,269. PAPER. THOMAS L. STONE, Newark, N. J., assignor to Hampden Glazed Paper & Card Company, Holyoke, Mass., a Corporation of Massachusetts. Filed Aug. 14, 1923. Serial No. 7,012. Term of patent 14 years.

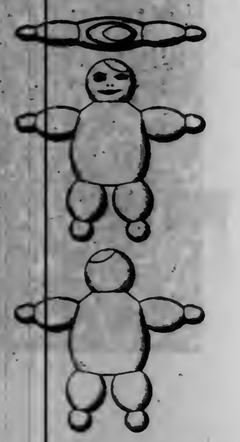
The ornamental design for paper as shown.

64,270. PAPER. THOMAS L. STONE, Newark, N. J., assignor to Hampden Glazed Paper & Card Company, Holyoke, Mass., a Corporation of Massachusetts. Filed Aug. 14, 1923. Serial No. 7,013. Term of patent 14 years.



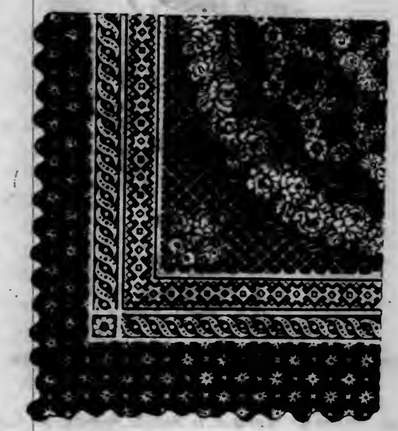
The ornamental design for paper as shown.

64,271. PAPER. THOMAS L. STONE, Newark, N. J., assignor to Hampden Glazed Paper & Card Company, Holyoke, Mass., a Corporation of Massachusetts. Filed Oct. 25, 1923. Serial No. 7,593. Term of patent 14 years.



The ornamental design for paper as shown.

64,272. COMBINATION TRAY, PENRACK, AND INKWELL. JOHN ALBERT STRAUB, Muskegon, Mich. Filed Oct. 18, 1922. Serial No. 4,016. Term of patent 14 years.



The ornamental design for combination tray, penrack and inkwell as shown.

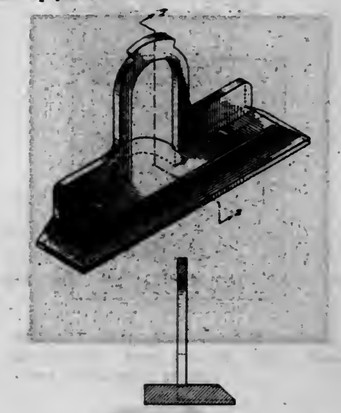
64,273. DOLL. ROSE VERR, Chicago, Ill. Filed Sept. 19, 1923. Serial No. 7,263. Term of patent 3½ years.

The ornamental design for a doll, as shown.

64,274. BEDSPREAD OR SIMILAR ARTICLE. RICHARD VOIT, Philadelphia, Pa. Filed Nov. 23, 1923. Serial No. 7,863. Term of patent 14 years.

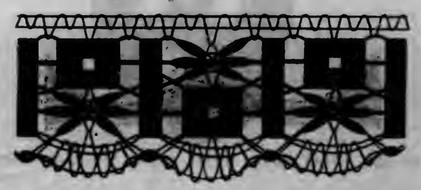
The ornamental design for a bedspread or similar article as shown.

64,275. ORNAMENTAL LAMP. VICTOR R. WILL, Sacramento, Calif. Filed Oct. 16, 1923. Serial No. 7,513. Term of patent 3½ years.



The ornamental design for an ornamental lamp as shown.

64,276. NECK-DUSTER BRUSH. PERCY B. T. WILLIAMS, Philadelphia, Pa. Filed Dec. 1, 1923. Serial No. 7,932. Term of patent 14 years.



The ornamental design for a neck duster brush, substantially as shown.

64,277. DISPLAY STAND. RUSSELL M. WILLIAMS, Winsted, Conn., assignor to William L. Gilbert Clock Company, Winsted, Conn., a Corporation of Connecticut. Filed Feb. 15, 1922. Serial No. 703. Term of patent 3½ years.

The ornamental design for a display stand, as shown.

64,278. LACE. HARRY B. BARNUM, Stratford, Conn., assignor to The American Fabrics Company, a Corporation of Connecticut. Filed Sept. 1, 1923. Serial No. 7,140. Term of patent 14 years.

The ornamental design for lace substantially as shown.

64,279. LACE. HARRY B. BARNUM, Stratford, Conn., assignor to The American Fabrics Company, a Corporation of Connecticut. Filed June 22, 1923. Serial No. 6,551. Term of patent 14 years.

The ornamental design for lace substantially as shown.

64,280. RING. MARTIN L. BOWDEN, Brooklyn, N. Y., assignor to J. B. Bowden & Co., New York, N. Y., a Copartnership composed of Martin L. Bowden, Martin L. Bowden, jr., and Gardiner S. Bowden. Filed Aug. 28, 1923. Serial No. 7,110. Term of patent 3½ years.

The ornamental design for a ring substantially as shown.

64,281. TOY ANIMAL. BRYAN IRVIN DAY, Fort Madison, Iowa. Filed Aug. 13, 1923. Serial No. 7,001. Term of patent 7 years.

The ornamental design for a toy animal as shown.

64,282. TEXTILE FABRIC OR SIMILAR ARTICLE. EDWIN I. GOLDING, New York, N. Y. Filed Oct. 10, 1923. Serial No. 7,452. Term of patent 3½ years.

The ornamental design for a textile fabric or similar article as shown and described.

64,283. LACE. SAMUEL H. PAGE, Stratford, Conn., assignor to The American Fabrics Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Jan. 15, 1924. Serial No. 8,317. Term of patent 14 years.

The ornamental design for lace substantially as shown.

64,284. LACE. SAMUEL H. PAGE, Stratford, Conn., assignor to The American Fabrics Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Jan. 15, 1924. Serial No. 8,316. Term of patent 14 years.

The ornamental design for lace substantially as shown.

64,285. LACE. SAMUEL H. PAGE, Stratford, Conn., assignor to The American Fabrics Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Jan. 15, 1924. Serial No. 8,315. Term of patent 14 years.

The ornamental design for lace substantially as shown.

64,286. RUG. LESLIE R. PATTERSON, Kansas City, Mo. Filed Nov. 16, 1923. Serial No. 7,781. Term of patent 14 years.

The ornamental design for a rug, as shown.

64,287. LACE. HANS ALBERT PHILIPS, Stratford, Conn., assignor to The American Fabrics Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Jan. 15, 1924. Serial No. 8,320. Term of patent 14 years.

The ornamental design for lace substantially as shown.

64,288. TRUNK LOCK. ELMER B. STONE, New Britain, Conn. Filed Jan. 19, 1922. Serial No. 275. Term of patent 14 years.

The ornamental design for a trunk lock shown in the accompanying drawing.

64,289. CANDY EASTER EGG. HARRIS NEWTON SUMMER, Cascade, Md. Filed Dec. 22, 1922. Serial No. 4,675. Term of patent 7 years.

The ornamental design for a candy Easter egg as shown.

64,290. CANDY EASTER EGG. HARRIS NEWTON SUMMER, Cascade, Md. Filed Dec. 22, 1922. Serial No. 4,676. Term of patent 7 years.

The ornamental design for a candy Easter egg as shown.

64,291. CANDY EASTER EGG. HARRIS NEWTON SUMMER, Cascade, Md. Filed Dec. 22, 1922. Serial No. 4,677. Term of patent 7 years.

The ornamental design for a candy Easter egg as shown.

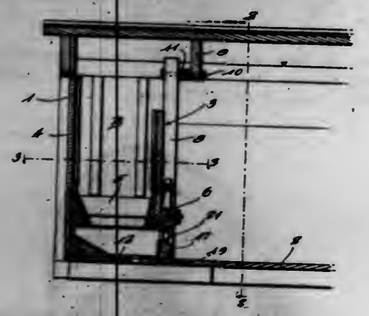
64,292. CANDY EASTER EGG. HARRIS NEWTON SUMMER, Cascade, Md. Filed Dec. 22, 1922. Serial No. 4,678. Term of patent 7 years.

The ornamental design for a candy Easter egg as shown.

64,293. CANDY EASTER EGG. HARRIS NEWTON SUMMER, Cascade, Md. Filed Dec. 22, 1922. Serial No. 4,679. Term of patent 7 years.

The ornamental design for a candy Easter egg as shown.

PATENTS

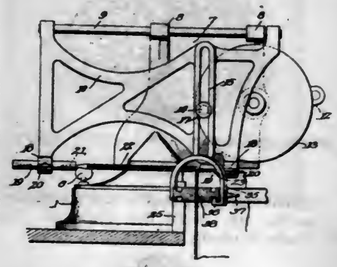


GRANTED MARCH 18, 1924.

1,486,848. TOY GUN. WILLIAM L. ALLEE, Topeka, Kans. Filed May 23, 1923. Serial No. 640,951. 1 Claim. (Cl. 12—2.)

A toy gun comprising a stock, a reduced extension projecting from one end thereof and having its upper surface grooved, a barrel supported on the extension adjacent the outer end thereof and projecting an appreciable distance beyond said extension, an extension projecting rearwardly from one end of the barrel and terminally connected with the stock, the extension of said barrel being spaced from and arranged directly above the extension on said stock, and defining therewith a guide, a plunger arranged to slide in said guide and having an inclined under surface, and a shoulder at one end of said surface, a trigger formed from a single piece of wire and designed to engage said shoulder to hold the plunger retracted, said plunger having a transverse opening, an endless elastic element passed through said opening and secured to the outer end of the extension on said stock, and adapted to forcibly move the plunger in one direction when released from said trigger.

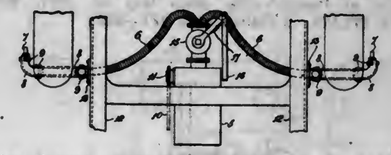
1,486,849. ICE BUNKER. ARTHUR AUDET, Concord, N. H. Filed Feb. 8, 1923. Serial No. 617,812. 3 Claims. (Cl. 62—19.)



1. A refrigerator car ice bunker comprising an inner transverse wall spaced from one end wall of the car and terminating in vertically spaced relation with the car floor, a drip pan under the bunker removable by sliding it under said inner wall, a removable barrier for holding said pan in place, said barrier being interposed between the aforesaid inner wall and the floor of the car, coacting means on the barrier and the car for securing the lower portion of said barrier in place, said means being releasable by outwardly swinging the upper portion of the barrier, and releasable means for securing the upper portion of said barrier normally against such outward swinging.

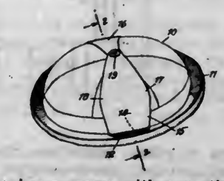
1,486,850. SPORTSMAN'S LICENSE HOLDER AND PROTECTOR. HARRY R. AVERY and GIDEON RIETVELD, Knoxville, Iowa. Filed June 26, 1923. Serial No. 647,804. 5 Claims. (Cl. 40—19.)

1. In a device of the class described, the combination of lower flexible metal plate, an upper flexible metal plate having an opening therein and a sheet of flexible transparent material covering said opening, both of said plates on each side being provided with outwardly extended loops and flexible straps passing through said loops and designed to be passed around a gun stock for securing both plates to the gun stock and for forming a hinged connection between the upper and lower plates at one side.



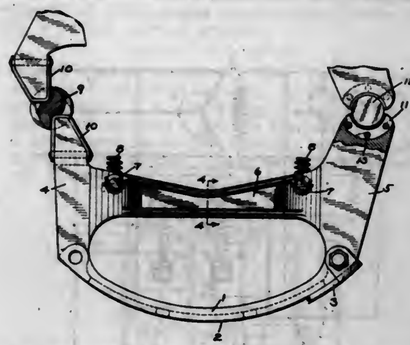
1,486,851. SAW-FILING MACHINE. WILBERT M. BALDWIN, Mason, Mich. Filed Dec. 2, 1922. Serial No. 604,551. 4 Claims. (Cl. 76—35.)

1. A saw filing machine comprising a base, guideways connected therewith, a saw holder mounted to slide in said guideways, a frame adjustably mounted on the base, a reciprocating file holder carried by the frame, said holder having a slot therein, a disc mounted to rotate in the frame and having a crank pin engaging the slot, a handle for rotating the disc, feed means for the saw holder and a cam on the disc for actuating such means.



1,486,852. MEANS FOR PREVENTING SPLASHING OF MUD OR RAISING OF DUST BY VEHICLE WHEELS. EDWARD THOMAS BARLOW, Manchester, England. Filed July 6, 1921. Serial No. 482,704. 1 Claim. (Cl. 180—84.)

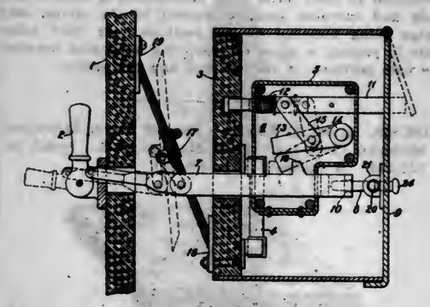
The combination with a vehicle frame and the vehicle wheels; of an air compresser mounted on said frame; brackets fixed to the sides of the frame and extending downward and outward to terminate outside of and in front of said wheels, tubing extending from said compresser and supported by said brackets, the outer lower ends of the brackets and the tubing being curved rearwardly and downwardly, and nozzles on the ends of the



tubing directed rearwardly and downwardly to cause air passing from said nozzles to strike the ground at the points of contact of said wheels with the ground.

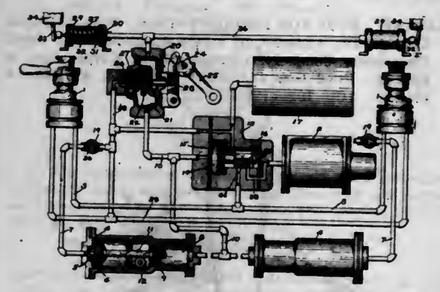
1,486,853. HAT. MAYER BARSKY and HARRY FARBER, New York, N. Y. Filed Jan. 5, 1923. Serial No. 610,847. 2 Claims. (Cl. 2—172.)

1. A hat having a crown with a continuous brim, the crown and the brim being separated by slots for a short distance at the sides thereof, ear flaps permanently united to the crown adjacent said slots, the ends of said flaps carrying means whereby the same may be secured together above the head or below the chin of the wearer.



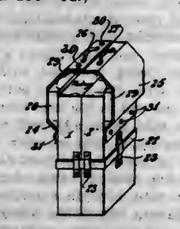
1,486,854. BRAKE-SHOE HEAD. JOHN R. BARTHOLOMEW, Berkeley, Calif., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Feb. 3, 1923. Serial No. 616,849. 4 Claims. (Cl. 188—236.)

3. A brake shoe head comprising an arcuate section for receiving a brake shoe, end sections connected to opposite ends of the arcuate section, one end section having a separate metal bearing member for the pivot pin which is cast into the metal of the brake head.



1,486,855. SAFETY-SWITCH INTERLOCK. HAROLD G. BAXTER, Baldwin, N. Y., assignor, by mesne assignments, to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 20, 1919. Serial No. 339,258. 8 Claims. (Cl. 200—50.)

7. In a dead-front switch board, the combination with an operating handle at the front of its pannel and a fuse box at the rear of the panel having a door, of a movable switch member, means associated with the handle for actuating the movable switch member when the fuse box



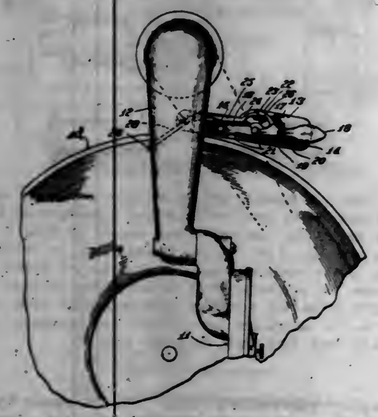
door is closed and means for locking the switch in open position operable from the rear of the panel and independently of the cover for releasing the switch.

1,486,856. SAFETY CAR-CONTROL EQUIPMENT. CARL H. BECK, Montclair, N. J., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed June 9, 1921. Serial No. 476,194. 5 Claims. (Cl. 303—6.)

1. The combination with a straight air brake equipment including a brake cylinder and a straight air brake valve device for controlling the supply of fluid to the brake cylinder, of an emergency brake pipe, an emergency valve device operated upon a reduction in brake pipe pressure for supplying fluid to the brake cylinder, and a valve device for normally supplying fluid under pressure to the emergency valve device and manually operative to vent fluid from the brake pipe.

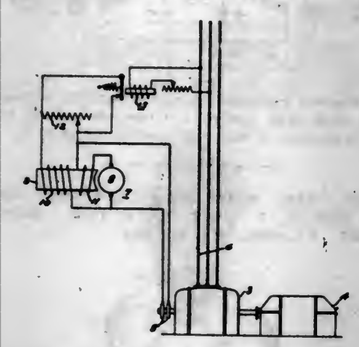
1,486,857. TRAVELING CASE. JOHN R. BEMIS, Springfield, Mass. Filed Aug. 12, 1922. Serial No. 581,385. 6 Claims. (Cl. 190—51.)

2. A traveling case for the purpose described comprising two box-like sections hinged together at one of their ends, one section having a compartment at its hinged end



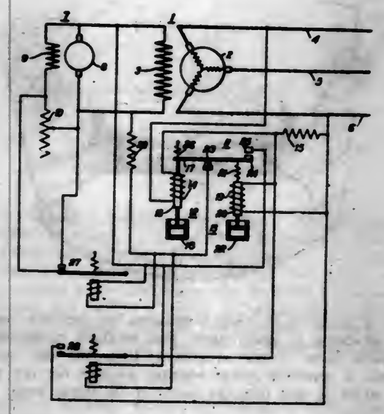
portion designed for receiving rubbers, a cover or lid for closing the compartment, each section having strips connected to their outer ends and extending beyond said ends and carrying handles secured to the strips, said strips being attached to the sections near their outer ends to provide a space for receiving a package between the side portions of the sections and the strips.

1,486,858. CARPET LINER. BERGET HENRI BLOCKSOM, Michigan City, Ind. Filed Mar. 2, 1923. Serial No. 622,274. 6 Claims. (Cl. 28—4.)



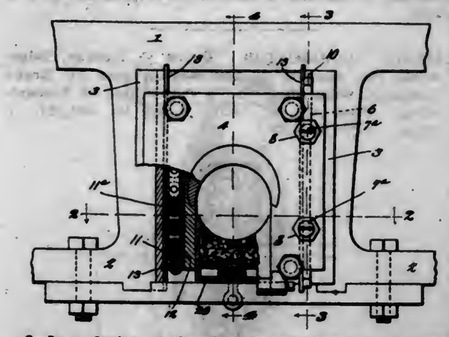
1. In a pad of the kind described, the combination of a body portion comprising a sheet of fibrous resilient material, and a sheet of protective material on one of its surfaces comprising interwoven threads, said threads at intervals extending from said protective layer through the body portion of the pad and forming loops at the opposite surface of said pad.

1,486,859. STOP FOR PHONOGRAPHS. BURR B. BLOOD, Chicago, Ill., assignor, by mesne assignments, to Jewel Phonoparts Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 21, 1920. Serial No. 418,446. 8 Claims. (Cl. 192—122.)



1. A stop of the class described, comprising a base plate, a brake lever pivoted intermediate of its ends on the base plate and provided with a turn-table engaging portion while the other end constitutes a hand lever, the hand lever portion being provided with an arcuate extension concentric with the pivotal point of the lever, a spring secured at one end to the base plate while the other end is secured to said lever adjacent the turn-table engaging portion thereof, a trip member pivotally secured on the base plate adjacent to the turn-table engaging end of said lever, said trip member being adapted to form holding relation with said arcuate extension, and tone-arm engaging means having adjustable relation with said trip member and adapted to cause oscillation of the latter away from said arcuate extension when said means is engaged by the tone-arm.

1,486,860. VOLTAGE-REGULATING SYSTEM. CLARENCE A. BODDIE, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed May 26, 1917. Serial No. 171,171. 2 Claims. (Cl. 171—229.)

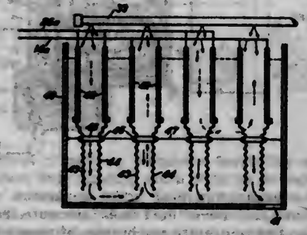


1. In a system of voltage regulation, the combination with an alternating-current dynamo-electric machine and a Tirrill-type regulator, of a differential-compound exciter therefor, and means whereby said regulator periodically adjusts the excitation of the shunt field winding of said exciter from a major value to a minor value, the series excitation of said exciter being intermediate said two values of the excitation of said shunt winding.

1,486,861. VOLTAGE REGULATOR. CLARENCE A. BODDIE, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 26, 1919. Serial No. 319,905. 13 Claims. (Cl. 171—229.)

1. In a voltage-regulator system, a main control element comprising a main magnet, contact members operated by the main magnet, a resistor included in circuit with the main magnet and having the value thereof varied in accordance with the operation of said contact members, and an auxiliary magnet controlled by the contact members and adapted to assist the main magnet.

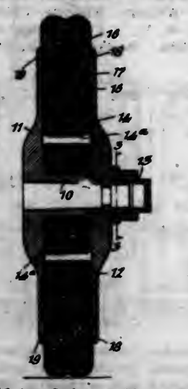
1,486,862. ENGINE DRIVING BOX. ANDREW S. BRANDOCK, Pueblo, Colo. Filed Dec. 21, 1923. Serial No. 682,018. 5 Claims. (Cl. 105—81.)



2. In a device of the class described a box; a transversely tapered wedge plate, means for mounting said plate between the box and an engine frame for edgewise transverse movement, a pressure plate engaging the outer edge of said wedge plate, and spring means bearing on said pressure plate for advancing the wedge plate.

1,486,863. CONTINUOUSLY-LOADED SIGNALING CONDUCTOR. OLIVER E. BUCKLEY, Maplewood, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 16, 1921. Serial No. 492,724. 9 Claims. (Cl. 178—45.)

1. A loaded signaling conductor comprising a central wire, said wire being surrounded by a conducting layer composed of strips shaped to fit snugly together and form a smooth exterior surface.

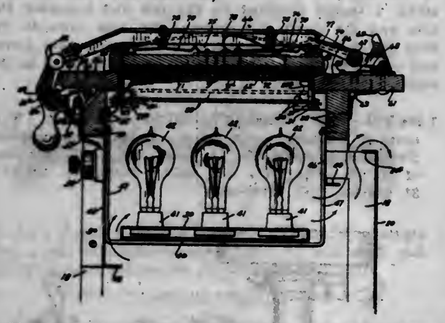


1,486,864. CONTROL APPARATUS. LEWIS WARRINGTON CHUBB, Edgewood Park, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Original application filed June 9, 1919, Serial No. 302,793. Divided and this application filed Sept. 28, 1921. Serial No. 503,912. 6 Claims. (Cl. 219—57.)

1. In a liquid rheostat, the combination with a plurality of electrodes, of a plurality of non-conducting curtains hung from the bottoms of said electrodes, and means for constricting the space between said curtains.

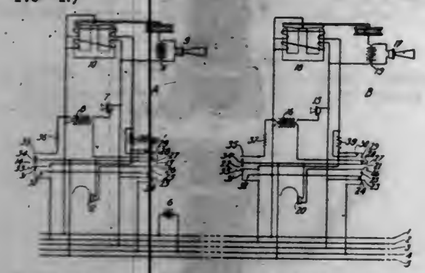
1,486,865. CUSHIONED VEHICLE WHEEL. WILLIAM MORE DECKER, Buffalo, N. Y. Filed Dec. 20, 1920. Serial No. 432,001. 3 Claims. (Cl. 152—29.)

1. A cushioned wheel, comprising a hub carrying spaced disks, a rubber tread-ring held between said disks, an inner core member surrounding said hub, and an outer core member of rubber interposed between said inner



core member and said tread-ring, said outer core-member being constructed of softer rubber than said inner core member.

1,486,866. SOUND PRODUCER. LEE DE FOREST, New York, N. Y., assignor, by mesne assignments, to De Forest Phonofilm Corporation, Jersey City, N. J., a Corporation of Delaware. Filed Aug. 20, 1918. Serial No. 250,718. 7 Claims. (Cl. 179—118.)

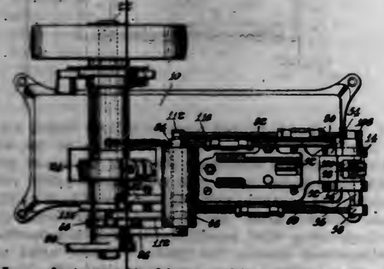


1. The combination with an elastic air filled container, of electric wires, and means for expanding and contracting said container in accordance with the current flowing through said wires.

1,486,867. PHOTOPRINTING MACHINE. GLEN M. DYE and JOHN M. WELCH, Minneapolis, Minn., assignors to Pako Corporation, Minneapolis, Minn., a Corporation of Delaware. Filed Sept. 10, 1921. Serial No. 499,632. 16 Claims. (Cl. 95—73.)

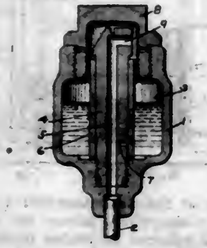
11. In a photo printing machine a lamp house, a printing head frame with a transparent plate at the top of said lamp house, a modifying screen in the upper portion of said lamp house, below said transparent plate, vertical corner guides engaging with the corners of said modifying screen, elevator arms associated with said corner guides and supporting said modifying screen, and means for simultaneously moving the several elevator arms to adjust said modifying screen toward and from the negative.

1,486,868. INTERCOMMUNICATING TELEPHONE SYSTEM. HENRY C. EGERTON, Maplewood, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed May 27, 1920. Serial No. 384,537. 9 Claims. (Cl. 179—1.)



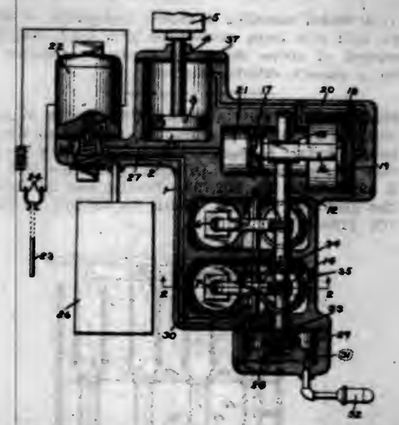
1. In a telephone system having a plurality of stations, switching means provided at each station to simultaneously connect said station in intercommunicative relation with every other station, and additional switching means at each such station to exclude from intercommunicative relation all of such stations where the said additional switching means is not operated.

1,486,869. ROTARY HAMMER. JOHN ELIAS, Plum Coulee, Manitoba, Canada. Filed Jan. 7, 1922. Serial No. 527,667. 1 Claim. (Cl. 78—34.)



In combination, an elevated open ended frame, a driving shaft carried by the frame, a pair of opposing discs secured to the shaft, an eccentrically positioned pivot pin connecting the discs, a hammer, an arm carrying the hammer and pivotally mounted on the pin, a stop pin engaging one side of the arm, an anchor pin extending between the discs, a strap extending radially between the anchor pin and the shaft, a rod pivotally attached to the hammer arm and passing slidably through the strap, a spring mounted on the rod and engaging the arm and the strap and pressing the arm towards the stop pin and an anvil mounted on one end of the frame and adapted normally to be struck by the hammer in the rotation of the shaft.

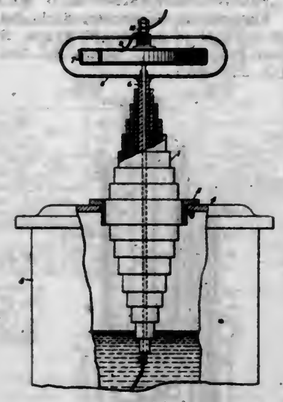
1,486,870. FASTENER-ATTACHING MACHINE. WILLIAM E. ELLIOTT, Lynn, Mass., assignor to American Button & Fastener Co., Augusta, Me., a Corporation of Maine. Filed Nov. 11, 1920. Serial No. 423,312. 31 Claims. (Cl. 218—10.)



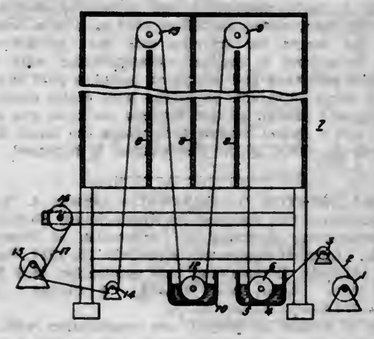
1. In a fastener-attaching machine, attaching mechanism, means for delivering to the attaching mechanism fasteners and their securing staples, and means acting in the initial operation of the machine for delivering to the attaching mechanism a device for cooperation with a staple.

1,486,871. LUBRICATOR. CLYDE C. FARMER, Edgewood, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Apr. 27, 1921. Serial No. 464,967. 1 Claim. (Cl. 184—69.)

In a lubricator for air compressors, the combination with an oil cup casing and a removable cap having a pocket, of a plug secured within the casing and extending into said pocket and having a central passage adapted to communicate with the compressor, and a lateral passage in said plug which connects the central passage with the pocket in the removable cap and through which fluid and oil from the compressor is diverted to one side of the cap to permit filling of the oil cup casing at the other side.



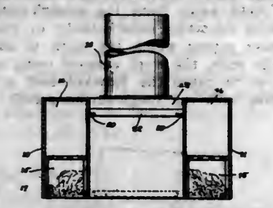
1,486,872. LOAD-BRAKE DEVICE. CLYDE C. FARMER, Pittsburgh, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Feb. 23, 1923. Serial No. 620,796. 9 Claims. (Cl. 303—22.)



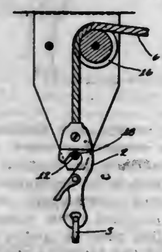
1. In an empty and load brake apparatus, the combination with a source of fluid under pressure from which fluid is supplied to operate the brakes, of means for maintaining different maximum degrees of pressure in said source according to the empty or loaded condition of the car.

1,486,873. ELECTRICAL PROTECTIVE DEVICE. CHARLES LE G. FORTESCUE, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 9, 1918. Serial No. 227,421. 5 Claims. (Cl. 175—90.)

1. The combination with a conductor and an insulating bushing therefor, of a reactor connected in circuit with the conductor adjacent to one end of the bushing, and an electric stress distributing member connected to the conductor and having a relatively wide expanse of uninterrupted conducting surface surrounding and extending transversely to the conductor between the bushing and the reactor.



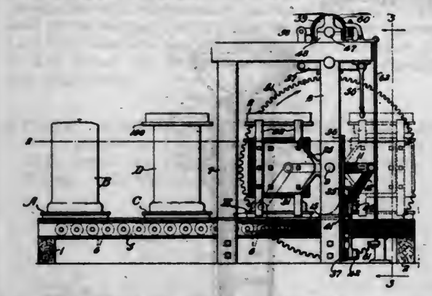
1,486,874. ARMATURE-SLOT INSULATION AND METHOD OF MAKING THE SAME. LOUIS T. FREDERICK, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 8, 1919. Serial No. 270,142. 4 Claims. (Cl. 154—40.)



1. A method of making composite insulating material that comprises impregnating cloth with an adhesive, subjecting the treated material to heat to harden the adhesive, subjecting the cloth to further treatment in a bath of another adhesive of greater viscosity than the first, partially drying the second adhesive on the cloth and applying paper to one side of the treated cloth.

1,486,875. BARBECUE PIT. EDWARD A. FREEMAN, Jackson, Tenn. Filed Aug. 24, 1923. Serial No. 659,172. 2 Claims. (Cl. 126—29.)

1. In a barbecue pit, furnace sections arranged longitudinally and in spaced relation to each other, a head with which the said furnace sections communicate, a stack rising from the head, a horizontal grate in each furnace section, and a grid for supporting meat in the space between the furnace sections.



1,486,876. HANGING APPARATUS. JOSEPH E. FUGMAN, Cleveland, Ohio. Filed Dec. 7, 1922. Serial No. 605,479. 5 Claims. (Cl. 254—135.)

1. A hanging apparatus comprising a hanger having a cross bolt, a pulley supported by the hanger, a rope running over the pulley, and a hook connected to the rope and adapted to be attached to an article to be hung and to engage the bolt, and provided with means actuated by movement of the hook across the bolt to automatically disengage the same from the bolt.

1,486,877. CLAY-PIPE-HANDLING DEVICE. GEORGE W. GANG, Malvern, Ohio. Filed July 25, 1921. Serial No. 487,496. 6 Claims. (Cl. 25—40.)

1. In a machine for turning pipe sections, a rotatable shaft, a pair of cradle members keyed to said shaft and slidable thereon and means for rotating said shaft.

1,486,878. EVENING AND GRADING MACHINE. JOSEPH GOULDBOURN, Leicester, England, assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed May 6, 1921. Serial No. 467,454. 2 Claims. (Cl. 69—13.)

1. A machine for operating upon pieces of work, some of which are thick, in accordance with the thickness of the thinnest spot in a selected locality thereof, having,

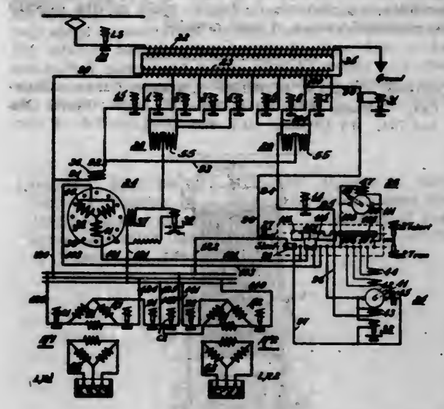
in combination, a smooth-surfaced roll held from bodily movement, a rough-surfaced roll parallel thereto and mounted to yield away from the smooth-surfaced roll, said rolls being normally substantially in contact, and a work support across which the work is advanced to the bite of the rolls, the work support being so inclined and located as to cause the forward end of the work to contact first with the rough-surfaced roll.

2. Mechanism for seizing and feeding comparatively thick leather blanks comprising upper and lower rolls normally held substantially in contact but capable of relative yielding movement of separation, the periphery of the upper roll being substantially smooth and that of the lower one provided with comparatively wide, longitudinally extending grooves, and a table for facilitating presentation of the blank to the rolls, said table being so located and inclined that the leading lower corner of the blank is received in a groove of the lower roll and the leading upper corner lifted into contact with the upper roll, the plane of the leading edge of the blank at the time of contact being substantially radial to the upper roll.

1,486,879. FOCUSING FLASH LIGHT. JOHN GRAVES, Madison, Wis., assignor to French Battery & Carbon Company, Madison, Wis., a Corporation of Wisconsin. Filed Apr. 24, 1922. Serial No. 556,178. 8 Claims. (Cl. 240—8.5.)

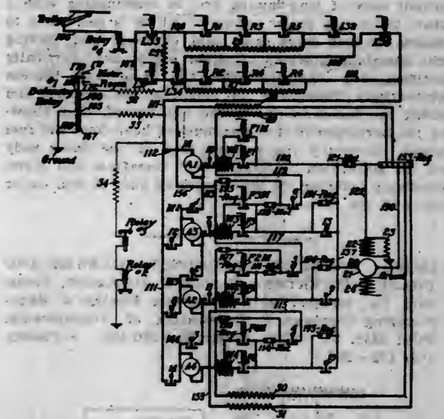
3. In a device of the class described, a case, a battery inside the case, means for reciprocating the battery in one direction, spring mechanism moving the battery in the other direction, an electric lamp in the case, means conveying current from the battery thru the lamp and back to the battery, under all conditions of movement of the battery, and a lamp focusing reflector selectively reciprocable by reciprocating the battery.

1,486,880. LIQUID DISPENSING AND MEASURING DEVICE. FRANCIS H. GRIFFITHS, Springfield, Mass., assignor of one-half to J. Edward Evans, New York, N. Y. Filed Feb. 7, 1922. Serial No. 534,730. 12 Claims. (Cl. 221—95.)



1. In a liquid dispensing and measuring device, a measuring tank, means for filling said tank, and means for draining said tank to different levels comprising a conduit communicating with said tank and having an outlet, a part of said conduit being adjustable as to the level of its outlet, a valve in said conduit located between the tank and said outlet, and a second conduit thru which the liquid flowing from the outlet in the first conduit is dispensed.

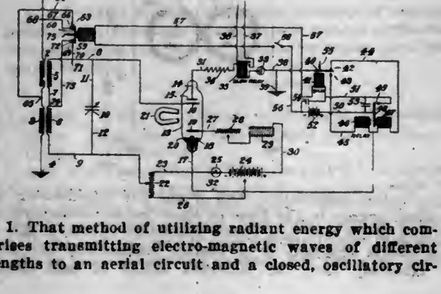
2. In a liquid dispensing and measuring device, a measuring tank, means for filling said tank to a certain level, and means for draining said tank to different levels comprising a conduit communicating with the bottom of said tank and having an outlet, a part of said conduit being adjustable as to the level of its outlet, a valve in said conduit located between the tank and said outlet, and a second conduit thru which the liquid flowing from the outlet of the first conduit is dispensed.



1,486,881. SYSTEM OF CONTROL. ARTHUR J. HALL, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Original application filed July 19, 1917, Serial No. 181,536. Divided and this application filed May 12, 1919. Serial No. 296,486. 6 Claims. (Cl. 172—274.)

1. In a system of control, the combination with an alternating-current supply circuit and an electrical load, of a phase-converter interposed between said supply circuit and said load, a starting motor for said phase-converter, a plural-position switching device for effecting starting connections of the motor in one position and different running connections of the motor in another position, and means, dependent upon inoperativeness of the phase-converter circuits, for actuating said switching device to the starting position.

5. A system of control comprising a single-phase transformer winding, a polyphase driving induction motor, a phase-converter having a primary and a secondary winding for changing single-phase into polyphase energy, a starting motor for said phase-converter, a main switching device having positions corresponding to "starting" and "running" connections of the starting motor, manual means for effecting the connections of said starting motor through said switching device to said transformer winding, and a relay governed by the electrical condition of said starting motor for effecting the connection of said primary phase-converter winding across a portion of said transformer winding.



1,486,882. SYSTEM OF CONTROL. ARTHUR JOHN HALL, Winchcombe, England, and JOHN A. CLARKE, Jr., Edgewood Park, and PAUL L. MARDIS, Swissvale, Pa., assignors to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed June 9, 1920. Serial No. 387,558. 35 Claims. (Cl. 172—179.)

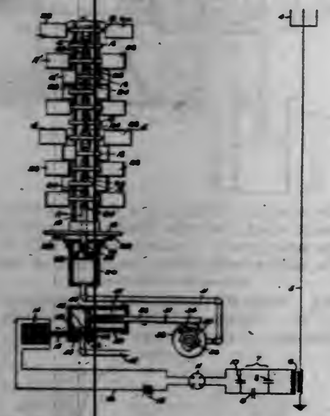
1. In a system of control, the combination with a dynamo-electric machine adapted for both motoring and regeneration, and provided with a plural-part field winding, of means for exciting said field winding during regeneration, means for excluding one part of said field winding from circuit at times during motoring, and a switching device having a single position adapted for governing such exclusion and for controlling said exciting means.

28. In a system of control, the combination with a dynamo-electric machine having a plural-section field winding, of a line switch for said machine, a "full-field" switch for connecting the entire field winding in circuit, a "short-field" switch for connecting a portion of the field winding in circuit, means for initially preventing the closure of said line switch while said "full-field" switch is open, means for subsequently closing the "short-field" switch, and means dependent upon such closure for maintaining the closure of the line switch.

1,486,883. METHOD OF HYDRATING CEMENT AND THE LIKE. ERLE PALMER HALLIBURTON, Duncan, Okla. Filed June 20, 1922. Serial No. 569,738. 12 Claims. (Cl. 83—73.)

1. The method of producing a fluent mixture of liquid and cement which comprises mixing the cement and such liquid in substantially a vacuum created only by the action of a high velocity stream or current of such liquid.

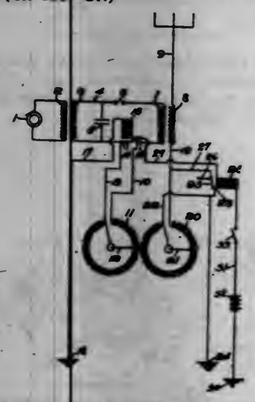
1,486,884. STEAM GENERATOR. WILLIAM HAMER, Elton, Bury, England. Filed May 19, 1919. Serial No. 298,055. 9 Claims. (Cl. 110—97.)



1. In steam generators having external flues in a setting, means for maintaining an air-tight joint between the boiler shell and the front of the setting to prevent leakage of cold air therebetween into the side flues, comprising movable joint-members mounted between the front wall of the setting and the shell and means for pressing said joint-members against the shell so that they yield to and follow the movements thereof under expansion and contraction.

1,486,885. RADIODYNAMIC DUPLEX SYSTEM. JOHN HAYS HAMMOND, Jr., Gloucester, Mass. Filed July 30, 1915, Serial No. 42,848. Renewed July 24, 1923. 27 Claims. (Cl. 250—2.)

1. That method of utilizing radiant energy which comprises transmitting electro-magnetic waves of different lengths to an aerial circuit and a closed, oscillatory cir-

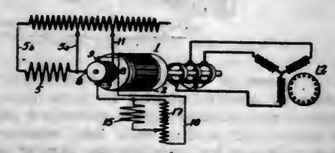


cuit, controlling an alternating current by impulses impressed upon said aerial and closed, oscillatory circuits, causing changes in the electrical constants of said aerial and closed, oscillatory circuits by said alternating current, and operating a part as a result of said changes in the electrical constants of said aerial and closed, oscillatory circuits.

1,486,886. SYSTEM FOR TELEDYNAMICALLY CONTROLLING MOVING BODIES. JOHN HAYS HAMMOND, Jr., Gloucester, Mass. Filed June 3, 1914, Serial No. 842,764. Renewed July 24, 1923. 8 Claims. (Cl. 250—2.)

1. A system for the control of moving bodies by radiant energy, comprising in combination a movable body provided with a visible signal carried thereby and movable with respect thereto about a substantially horizontal axis to vary the effective visibility of said signal, steering means carried by said body, and means responsive to radiant energy to control said steering means and to move said signal about said axis.

1,486,887. ELECTRORADIANT SIREN. JOHN HAYS HAMMOND, Jr., Gloucester, Mass. Filed July 13, 1914, Serial No. 850,621. Renewed July 24, 1923. 2 Claims. (Cl. 250—17.)

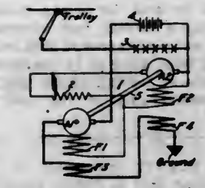


2. The combination with means for transmitting radiant energy in the form of siren waves, comprising an open aerial circuit, a closed oscillatory circuit, a pair of elements arranged to be rotated continuously to simultaneously vary the electrical values of said circuits respectively to maintain said circuits in resonance, and means for simultaneously short circuiting said elements to render said elements ineffective while moving to vary the electrical values of said circuits.

1,486,888. STEAM BOILER. CHARLES GILBERT HAWLEY, Chicago, Ill. Filed June 6, 1923. Serial No. 643,731. 10 Claims. (Cl. 122—235.)

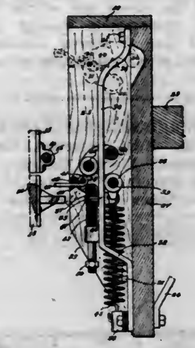
1. A casing or setting containing a tall combustion chamber admitting of the substantial maturity of an upright body of long-flaming fire, in combination with a steam boiler, the major extent of which is positioned to receive the hot gases from said chamber, and, having heat absorbing portions of minor extent that vertically partition said chamber, divide the flame body therein substantially throughout the height of the chamber and permit the flames to rise to the top thereof, thus allowing the development of a maximum of heat from the fuel burned, increasing the radiant area of the flame body and the absorption of radiant heat therefrom and correspondingly reducing the heat absorbing duty of said major extent of the boiler.

1,486,889. COMBINED FREQUENCY CHANGER AND PHASE CONVERTER. RUDOLF E. HELLMUND, Swissvale, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Mar. 31, 1919. Serial No. 286,433. 9 Claims. (Cl. 172—238.)



1. In combination with a source of single-phase alternating current, a dynamo-electric machine, commutator means for establishing a uniform field rotating at a constant speed therein, means whereby polyphase energy differing in frequency from that of said source may be derived from said machine, and means for maintaining said rotating field uniform irrespective of the difference between said frequencies.

3. In combination with a single-phase source of alternating current, a dynamo-electric machine having a commutator member energized therefrom, means associated

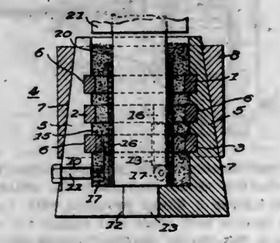


with said commutator member for establishing a uniform field rotating at a constant speed relative thereto, means for varying the speed of said machine while the rotating-field speed is maintained constant, means for maintaining the rotating field uniform despite the operation of said last-named means, and means whereby energy of a phase number and frequency differing from the phase number and frequency of the energy supplied to said machine may be derived therefrom.

1,486,890. ELECTRICAL SYSTEM. RUDOLF E. HELLMUND, Pittsburgh, Pa. assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed June 18, 1919. Serial No. 305,106. 9 Claims. (Cl. 171—225.)

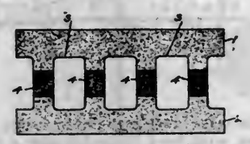
1. The combination with a motor armature winding and a generator armature winding driven thereby, of a plurality of field windings for exciting said armature windings, and counter-voltage-producing means connected to receive certain combinations of the currents traversing said field windings.

1,486,891. AUTOMATIC CONTROL FOR ELEVATOR GATES. DAVID M. HENDRICKS, Newton, Iowa. Filed Dec. 6, 1921. Serial No. 520,440. 2 Claims. (Cl. 187—60.)



2. An elevator gate actuating device comprising a support, a track on said support having one end provided with a curved portion, a carriage on said track, springs for yieldingly holding said carriage from the curved end of said track, a trip device carried by said carriage adapted to yieldingly move in one direction, and means for limiting the movement of said trip device in the opposite direction, said trip device being designed to be operated by a coacting pin and to move said carriage to the curved portion of said track to release said coacting pin, a bumper for absorbing the shock of said carriage when it is returned to its normal position of movement.

1,486,892. TRANSMITTING DEVICE. RAYMOND R. HERRMANN, St. Paul, Minn., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Jan. 24, 1922. Serial No. 531,322. 3 Claims. (Cl. 179—121.)

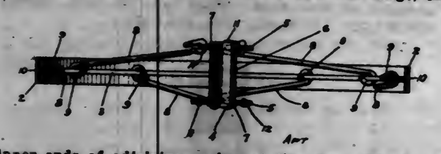


1. In a transmitting device, a coil, a core therefor comprising a section of comminuted magnetic material, a pair of diaphragms having their central portions in contact with the respective ends of said core, and a magnetic member joining the peripheries of said diaphragms.

1,486,893. COLLECTOR RING. WALTER H. HIMES, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed May 11, 1921. Serial No. 468,704. 8 Claims. (Cl. 171—322.)

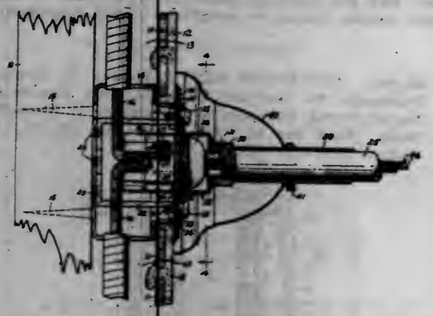
1. A current-collecting device comprising a plurality of collector rings disposed in spaced relation with respect to each other, a plurality of conductors attached to said rings and an insulating material so molded around said conductors and between said rings as to maintain them in position as a unitary structure.

1,486,894. BUILDING MATERIAL. OLIVER P. HIPPLE, Wilkins Township, Allegheny County, Pa. Filed Oct. 6, 1920. Serial No. 415,132. 3 Claims. (Cl. 72—43.)



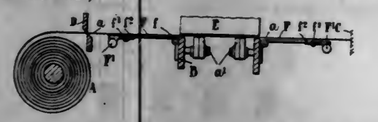
1. A building block comprising a plurality of concrete portions and a mixture of cinders and cement connecting and secured to the concrete portions to render the block heat insulating.

1,486,895. WHEEL. ARTHUR O. HUBBARD, Minneapolis, Minn. Filed Nov. 4, 1921. Serial No. 512,819. 3 Claims. (Cl. 301—56.)



3. A wheel comprising a T-bar rim folded to a circular form, the annular flange of said rim having a series of holes therein, a hub having annular flanges and holes therein, wire spokes having bent ends inserted into the holes in said hub flanges, and clinched therein, the outer ends of said spokes being inserted into the holes in said

rim flange and drawn therein to tension said spokes, the ends of the spokes in said hub flanges being oppositely bent from the ends of the spokes in said rim flange, the



inner ends of adjoining spokes at the same end of said hub being in crossed relation, one group pulling on said hub in one direction and the other group in substantially an opposite direction.

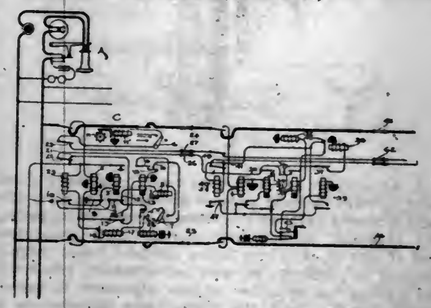
1,486,896. MEANS FOR ATTACHING FIXTURES TO OUTLETS. HARVEY HUBBELL, Bridgeport, Conn. Filed Mar. 1, 1921. Serial No. 448,784. 4 Claims. (Cl. 240—85.)

1. The combination with a fixed supporting device having projecting studs provided with enlarged heads, of a fixture having a flange provided with keyhole slots adapted to receive said studs and engage the same under said heads, a flat spring carried by said flange adapted to engage one of said studs for locking said studs in the narrower portions of said slots, and a stop lug for limiting the movement of said spring.

1,486,897. MEANS FOR BANDING PACKING CASES. GUSTAV HUGUENIN, Cham, Switzerland, assignor to Nestle and Anglo-Swiss Condensed Milk Company, Cham, Switzerland, a Corporation of Switzerland. Filed Oct. 19, 1922. Serial No. 595,690. 3 Claims. (Cl. 100—31.)

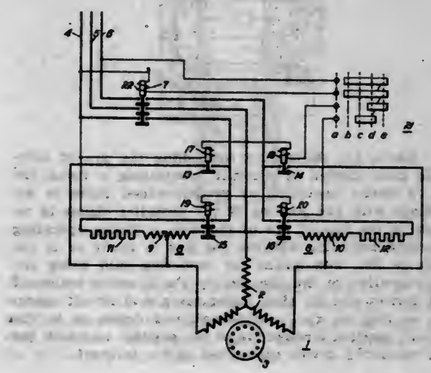
1. Apparatus for applying binder hoops or bands to packing cases, comprising in combination a table adapted to hold the case in predetermined position, a groove in said table for receiving the binding strip and positioning the latter beneath the case, a mounting for a roll of said strip, an abutting stop for said strip as same is fed from said roll, and a cutting device for securing the fed strip from the roll; a folding frame mounted on the table and consisting of hinged arms adapted by manipulation to bend portions of the cut strip against the sides of the case and other portions of the strip on the top of the said case with the later portions lapping the one over the other; a welding means consisting of separate electrodes adapted to conduct the current directly to the flat lapped extremities of the binding strip, and clamping devices for holding the said lapped extremities in position while being subjected to the welding operation.

1,486,898. AUGER BIT OR DRILL. HANS HUNDRIESER, Hahnser, near Berlin, Germany. Filed Aug. 26, 1920. Serial No. 406,143. 2 Claims. (Cl. 255—61.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



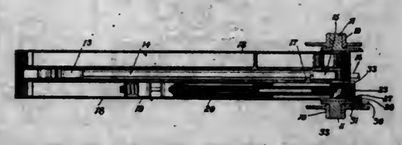
1. An auger-bit or drill for boring rocks, stones and the like, comprising a drilling tool, recesses in the cutting edge thereof and resistances in said recesses, formed by slope breaking faces adapted to operate in the direction of the advance or feeding of the tool like a wedge from the longitudinal axis of the tool towards the outside.

1,486,899. LUG STRAP. FREDERICK A. JACOBS, Killingly, Conn. Filed May 9, 1923. Serial No. 637,854. 2 Claims. (Cl. 135—153.)



1. As a new article of manufacture, a device of the class described comprising a substantially U-shaped fabric lug strap, a substantially U-shaped leather lining within said lug strap, said lining provided on its inner face with beveled ends, a fabric plug within said lining provided with a concaved picker-stick engaging face in parallelism to the contour of the closed end of the lug strap, and a rivet extending transversely through the lug strap, leather lining and plug in spaced relation to the concaved face of the plug, substantially as shown and described.

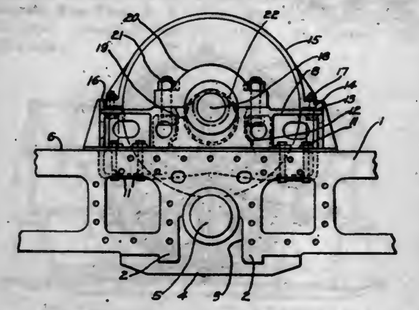
1,486,900. MEASURED-SERVICE PARTY-LINE TELEPHONE SYSTEM. EMIL JACOBSEN, New York, N. Y., assignor to Automatic Electric Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 13, 1919. Serial No. 282,444. 18 Claims. (Cl. 179—9.)



1. In a telephone system, a line, a plurality of stations on said line, a calling device for each station, a meter for each station, a meter operating conductor common to said stations, means for automatically operating the calling device of a calling station to connect the meter of that station to the meter operating conductor when that station initiates a call, a switch responsive to the automatic operation of said calling device and constituting the means by which the proper meter is selected, and other switches then responsive to the manual operation of the calling device at the calling station to extend said line to the called line.

1,486,901. MOTOR-CONTROL SYSTEM. HENRY D. JAMES, Edgewood Park, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Mar. 13, 1920. Serial No. 365,466. 12 Claims. (Cl. 172—179.)

2. In a motor-control system, the combination with an induction motor, a supply circuit and an auto-transformer, of means for controlling said auto-transformer circuit, and a resistor connected in series with said supply circuit and said auto-transformer, upon its primary side.

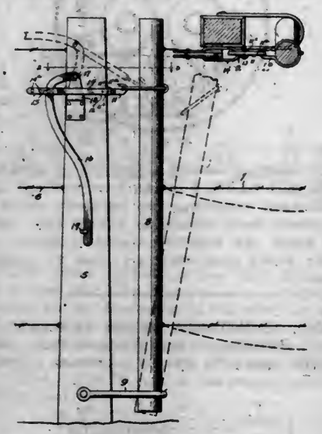


1,486,902. RECUPERATOR MECHANISM FOR GUNS. BRYAN P. JOYCE, Davenport, Iowa. Filed Oct. 9, 1922. Serial No. 593,363. 7 Claims. (Cl. 89—43.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)

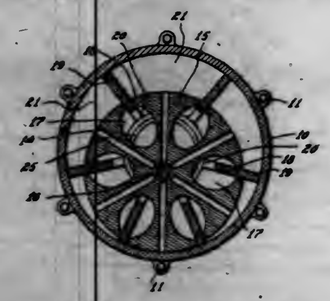
6. A recuperator, including a cylinder, a floating piston within the cylinder, means within the cylinder for controlling the flow of fluid to and from the piston and mechanism actuated by the elevation of the cylinder for operating the controlling means.

1,486,903. MOTOR MOUNTING FOR JACK-SHAFT GEAR DRIVE. HERBERT G. JUNGK and ROBERT SIEGFRIED, Pittsburgh, Pa., assignors to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 18, 1922. Serial No. 555,112. 6 Claims. (Cl. 105—120.)

1. The combination with a locomotive drive mechanism, of a pair of side frames and a motor support disposed transversely thereof and secured thereto, said support comprising a substantially rectangular hollow frame provided with projecting side flanges to locate a motor housing.

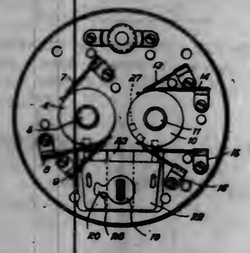


1,486,904. PROTECTIVE CAP FOR FRUIT CONTAINERS. PETER J. KEYMEL, Berryville, Va., assignor of one-half to H. C. Warden, Berryville, Va. Filed Jan. 2, 1923. Serial No. 610,237. 5 Claims. (Cl. 217—124.)



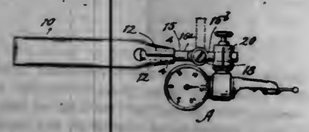
1. As a new article of manufacture, a protective cap for containers of fruit or the like having a cushioning body and a peripheral flange adapted to rest upon the edge of the container and forming a seat for and coextensive with the cover thereof.

1,486,905. BARBED-WIRE-GATE FASTENER. GOTTLIEB L. E. KLINGBEIL, Omaha, Nebr. Filed Mar. 20, 1923. Serial No. 626,307. 3 Claims. (Cl. 292—247.)



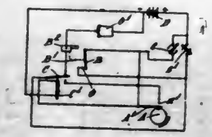
2. A device of the character described comprising a post carried bracket, a lever pivoted thereto at its end, a yoke, means for connecting one end of said yoke to said lever at a plurality of points in the length of the yoke, a hook, means for adjusting the hook longitudinally with respect to the yoke, a draw pole and a loop carried by the draw pole with which the said hook is adapted to engage.

1,486,906. ENGINE. JOSEPH H. KOLAR, Arcadia, Calif. Filed July 5, 1921. Serial No. 482,466. 2 Claims. (Cl. 121—88.)



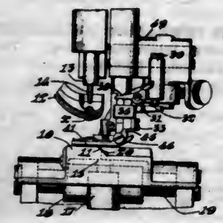
1. A rotary engine embodying a rotatably mounted casing, a rotor mounted to revolve eccentrically within the casing, a concentrically arranged sleeve extending within each end of the casing, a plurality of radially arranged abutments contacting with the inner periphery of the casing, segmental arms carried by the abutments and bearing upon said sleeves and substantially elliptical pockets formed within the rotor and receiving said abutments to permit of relative sliding and rocking movement, inlet and exhaust ports and passages extending through the rotor and communicating with the interior of the casing, said passages alternately registering with the inlet and exhaust ports.

1,486,907. IGNITION AND LIGHTING SWITCH. CHARLES W. LOVELL, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 13, 1922. Serial No. 528,986. 12 Claims. (Cl. 200—44.)



1. The combination with a plurality of movable switch members, each having a plurality of positions, of a locking mechanism comprising two relatively movable engaging members, said mechanism having two positions in one of which the respective switch members are automatically locked upon their actuation to predetermined positions.

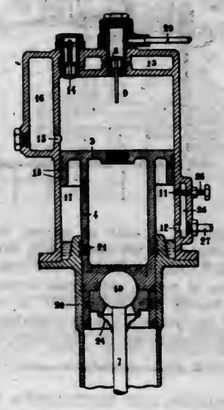
1,486,908. ADJUSTABLE SHANK FOR TEST INDICATORS. HENRY A. LOWE, Cleveland, Ohio. Filed Mar. 31, 1919. Serial No. 286,401. 3 Claims. (Cl. 248—3.)



1. In a device for connecting a test indicator with the tool post of a machine, the combination of a shank having at one end a pair of spring clamping jaws between which is a longitudinal cylindrical recess, a shank extension comprising two arms which are of cylindrical form and are of like diameter and are pivoted together, one of said two arms being fitted friction tight in the cylindrical recess between said jaws, a nut which is rotatably fitted upon the other arm and is adapted to be connected with the test indicator, and means to prevent the rotation of said nut upon said arm.

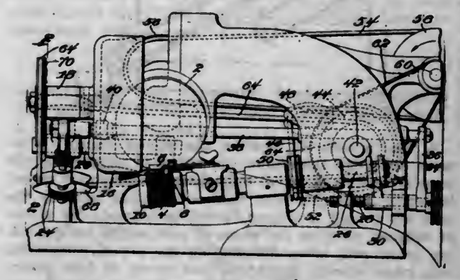
1,486,909. MEANS FOR CONTROLLING THE FIRE OF AUTOMATIC GUNS CARRIED BY AIRCRAFT. OWEN DAVID LUCAS, London, England, assignor to Vickers Limited, Westminster, England, a British Company. Filed Sept. 29, 1922. Serial No. 591,210. 16 Claims. (Cl. 89—28.)

1. Means for electrically controlling the fire of automatic guns carried by aircraft, comprising a firing circuit, a device operating at predetermined times in accordance with the position of the propeller blades in relation to the line of fire of the gun, a device operating in accordance with whether the gun is ready or is unready to fire, and means for rendering said firing circuit operative to fire the gun by the conjoint action of said devices and for then maintaining said circuit operative so long as the second-mentioned device is in the "ready" position irrespective of the position to which the first-mentioned device has moved in the interval.



1,486,910. EYELETING MACHINE. JAMES ERNEST MCINTIRE, Weymouth, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Apr. 5, 1920. Serial No. 371,307. 35 Claims. (Cl. 218—14.1.)

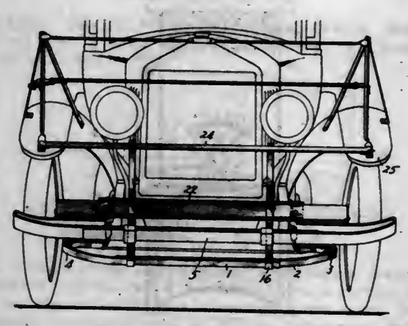
1. An eyeleting machine comprising work-supporting means, a work-feeding and eyelet-clenching tool, and a plurality of relatively movable presser feet arranged to maintain the work on said tool during the feeding period.



1,486,911. PNEUMATIC SUSPENSION FOR VEHICLES. GEORGE LOUIS RENÉ JEAN MESSIER, Bordeaux, France. Filed Apr. 3, 1920. Serial No. 371,104. 5 Claims. (Cl. 267—65.)

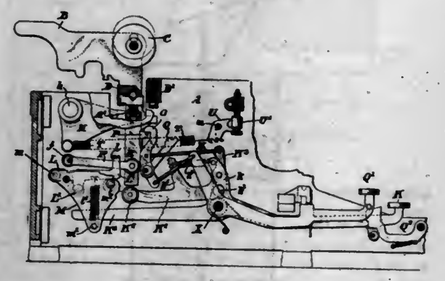
1. A resilient pneumatic shock-absorbing mechanism comprising in combination: a cylinder,—a piston movable in the cylinder, the said cylinder and piston being respectively connected to the bodies to be resiliently connected, an auxiliary inlet chamber,—a valve for the admission of compressed air into the said auxiliary chamber, the said valve being held upon its seat in its closing position by the pressure of the air which is to be admitted into this auxiliary chamber,—means for controlling, in concordance with the position of the piston, the opening or closing of the said valve,—and a non-

return valve for putting the auxiliary chamber in communication with the cylinder and to open into the latter for allowing the compressed air admitted into the said auxiliary chamber to enter into the cylinder and for preventing the reflux of the air.



1,486,912. SKIVING MACHINE. LLOYD G. MILLER, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Feb. 27, 1920. Serial No. 361,765. 6 Claims. (Cl. 69—9.5.)

1. A skiving machine having, in combination, a skiving knife, a presser foot, a feed roll having a portion of its periphery co-operating with the presser foot in presenting the stock to the edge of the knife, and an auxiliary roll co-operating with the periphery of the feed roll and having its end dished to receive the skiving knife.

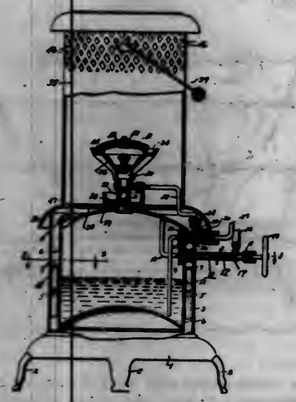


6. A skiving machine having, in combination, a skiving knife, a presser foot, a feed roll having a portion of its periphery cooperating with the presser foot in presenting the stock to the edge of the knife and having a reduced end portion and an auxiliary roll co-operating with the feed roll and having its end dished to receive the skiving knife.

1,486,913. COMBINED TRIP BUMPER AND COLLISION SCREEN FOR AUTOMOBILES. WALTER J. MOORE, New York, N. Y. Filed Feb. 6, 1922. Serial No. 534,500. Renewed Sept. 11, 1923. 24 Claims. (Cl. 293—56.)

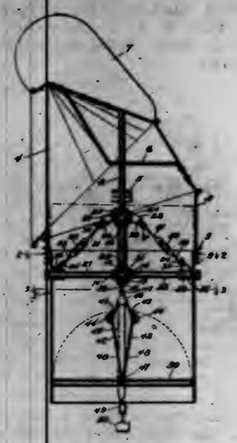
4. The combination with an automobile of a collision screen disposed across an end of the automobile in front of the radiator and the lamps, and a trip bumper supported across this end at a level to contact with the limb of a person struck by the bumper at a point between the knee and the ground whereby the person may be effectively tripped against the collision screen instead of being thrown to the ground and a collision bumper across the end of the automobile at which said screen and trip bumper are disposed.

1,486,914. TYPEWRITING MACHINE. LEWIS C. MYERS, Freeport, N. Y., assignor to Royal Typewriter Company, Inc., New York, N. Y., a Corporation of New York. Filed Feb. 12, 1923. Serial No. 618,576. 17 Claims. (Cl. 197—73.)



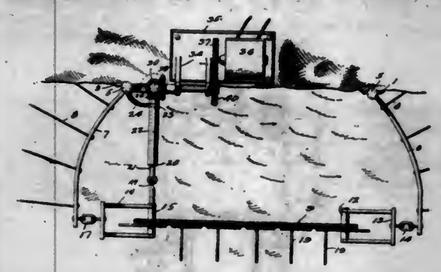
1. In a typewriting machine a case shift mechanism comprising a case shift key, a repulser mechanism and means operated by the depression of the shift key to its full extent to move the repulser mechanism to a position from which it moves rapidly into engagement with the shift mechanism as soon as the key is released and thus imparts a sudden initial impulse to the return movement of the shifted part.

1,486,915. OIL HEATER. SETH J. NORTH and BRYCE W. MCCLYMONT, Detroit, Mich. Filed June 27, 1923. Serial No. 647,900. 7 Claims. (Cl. 126—95.)



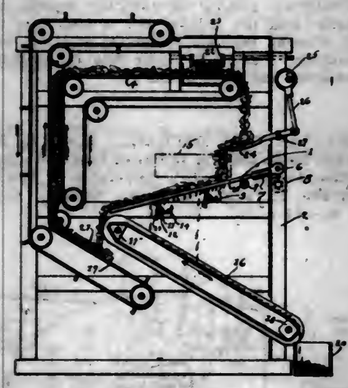
1. An oil heater comprising a hollow base, an oil tank removably supported in the base and provided with a sealed top, an oil burner secured above the tank in spaced relation therewith, a shield secured beneath the burner in spaced relation with the top of the tank, an

oil conduit connected to the burner and opening into the bottom of the tank allowing flow of oil under pressure to the burner, means for regulating the flow of oil



through the oil conduit, means for indicating the pressure in the tank, and a sheet metal drum secured to the base and fitting about the shield in spaced relation with the periphery thereof.

1,486,916. ROTARY VENTILATOR. JAMES NOVY, Muskogee, Okla. Filed Sept. 6, 1922. Serial No. 586,474. 4 Claims. (Cl. 98—3.)

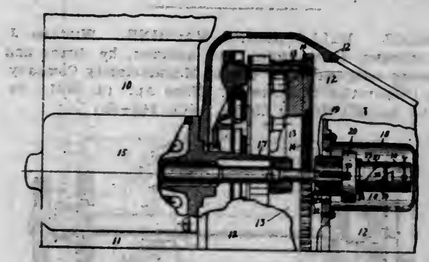


1. In a rotary ventilator, the combination of a stationary base section, a rotary head section, a six-armed bearing housing in the base section, a six-armed bracing head enclosed within the head section above and in vertical alinement with said bearing housing, a tubular shaft guide connecting the upper vertical arm of the bearing housing with the lower vertical arm of the bracing head, radial braces connecting the horizontal arms of the bearing housing with the base section at angles of 90° to each other, bracing members connecting the correspondingly arranged arms of the bracing head with said radial braces extending from the bearing housing, adjusting connections in said arms, and a shaft carried by the head section and extending downwardly through the bracing head and shaft guide into said bearing housing.

1,486,917. CURRENT MOTOR. SADAMA ORIOKA, Honolulu, Territory of Hawaii. Filed May 21, 1923. Serial No. 640,455. 5 Claims. (Cl. 170—90.)

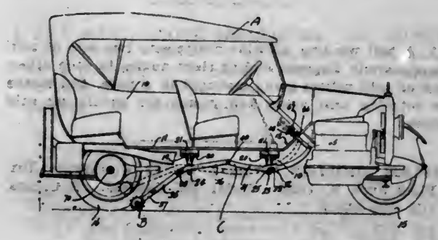
2. In combination, a pair of spaced hinged arms, a current motor supported between and by said arms, means for holding said arms projecting out into a stream of water and so as to rotate said arms toward the bank of said stream whereby the motor may be moved close to said bank, and an extensible shaft operable by said motor for operating a mechanism on the shore of said stream.

1,486,918. PROCESS AND MECHANISM FOR PICKING PODS. CLARENCE H. PLUMMER, Kewaunee, Wis. Filed Jan. 11, 1922. Serial No. 528,411. 15 Claims. (Cl. 130—30.)



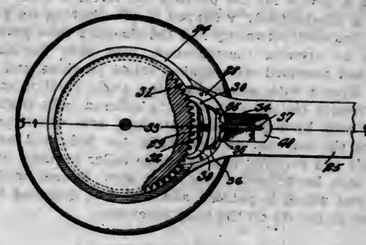
3. The process of treating leguminous plants to remove the pods therefrom, consisting in supporting the mass of stems and leaves comprising the plants at spaced intervals, subjecting such mass to vibration whereby the pods are caused to depend therefrom between the points of support, severing the stems of pods which are depending below said mass, distributing the plants comprising said mass whereby the stems and leaves of such plants are rearranged in the mass and loosened, and again subjecting the mass to vibration and severing the stems of pods depending therefrom.

1,486,919. INTERNAL-COMBUSTION ENGINE. JAMES R. QUINLAN, Pleasant Ridge, Mich. Filed May 8, 1922. Serial No. 559,129. 2 Claims. (Cl. 74—7.)



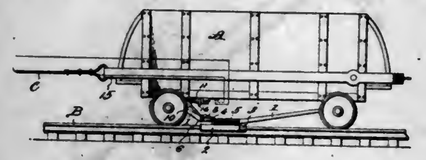
1. In a device of the character described, a starting motor having a shaft extended therefrom, a sleeve secured to said shaft, a second sleeve floated on said shaft, an engaging device floated on said shaft, means for operatively connecting said second sleeve with the engaging device adapted to form a driving connection which will permit unlimited slippage therebetween when a maximum

load has been placed thereon, and means for connecting said first and second sleeves whereby movement of the shaft combined with inertia of the parts associated with



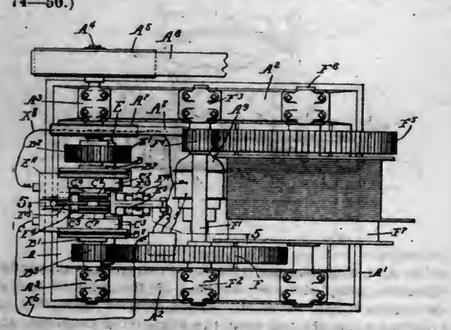
the second sleeve will cause movement of said second sleeve and the parts associated therewith longitudinally of said shaft.

1,486,920. NONSKID BRAKE FOR VEHICLES. JOHN H. RANDALL, Fort Dodge, Iowa. Filed May 20, 1921. Serial No. 471,048. 4 Claims. (Cl. 188—5.)



1. In a non-skid device, the combination with a motor-vehicle, of a non-skid road engaging wheel, brackets beneath said vehicle, and pivotally connected operating means oscillatively and reciprocably carried by said brackets, and supporting said non-skid wheel for selective engagement with a road way.

1,486,921. RATCHET WRENCH. RAYMOND REISS, Boston, Mass. Filed Sept. 28, 1922. Serial No. 591,145. 1 Claim. (Cl. 81—63.)

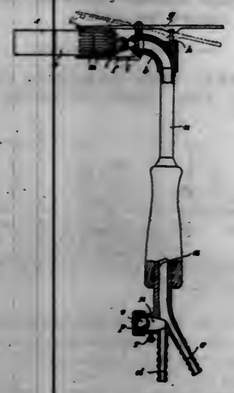


In a ratchet wrench, a head having a ratchet ring, a handle oscillatable about said head, a pair of independently movable pawls pivoted to said handle and engageable with the ratchet ring, a spring urging said pawls away from said ring, a T-shaped lever pivoted to said handle at the junction of its head and stem, said head extended with its arms opposite respective pawls, springs each fixed to one arm of the head and bearing against a respective pawl, a lug projecting downwardly from the stem, and a ratchet segment formed on the handle and having said lug engaged therewith.

1,486,922. BRAKE. ALLIE FRANK ROSS, Corinth, Miss. Filed Sept. 6, 1922. Serial No. 586,468. 3 Claims. (Cl. 188—44.)

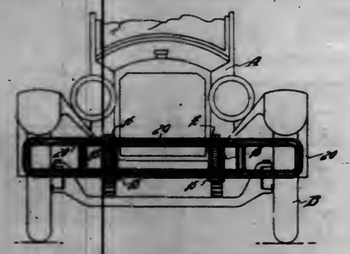
1. A brake of the class described comprising a casting connected with the car, a pair of brake shoes carried by the casting and of tapered formation, spring means for normally holding the shoes in clamping engagement with the rail, weighted means for holding the spring means contracted and electro-magnetic means for holding such weighted means in raised position.

1,486,923. AUTOMATIC REVERSIBLE HOIST. CLYDE P. ROSS, Chicago, Ill., assignor to Roberts and Schaefer Company, Chicago, Ill., a Corporation of Illinois. Filed July 22, 1921. Serial No. 486,733. 4 Claims. (Cl. 74—50.)



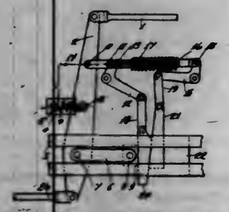
1. In an automatic reversing hoist, a power source and a drive shaft adapted to be continuously driven therefrom in a constant direction of rotation, a driven shaft adapted to be driven from said drive shaft, a pair of pinions rotatably mounted on said drive shaft and an independent driving connection between each of said pinions and the driven shaft, a clutch element for each of said pinions rotatable upon the drive shaft but in non-rotatable relation with said pinion, magnetic clutch members, non-rotatable on the drive shaft, opposed to each of said clutch elements, and electric connections therefor, control means whereby the magnetic clutch members may be singly actuated, a brake adapted intermittently to control said driven shaft, and automatic control means whereby said magnetic clutch members may be actuated one at a time, and whereby said brake is actuated in the intervals of the actuation of said clutch members.

1,486,924. SOLDERING IRON. JOSEPH ALOIS RUPPEL, Seligenstadt, Germany. Filed Apr. 9, 1923. Serial No. 630,995. 4 Claims. (Cl. 158—26.)



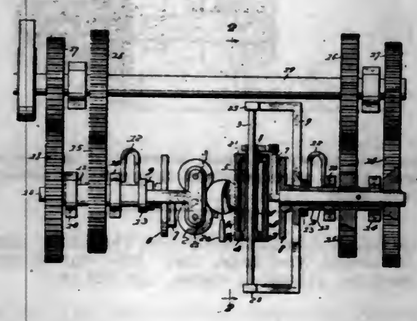
1. In a soldering iron, a bit having a pointed end and channels on opposite sides of said end and running at an angle to the longitudinal axis of the bit and holding

means including tongs bearing directly on the sides of said pointed end at the outer sides of said channels, in



combination with a burner arranged opposite and presented to said pointed end of the bit to direct its flame directly on said pointed end and through said channels.

1,486,925. BUMPER. SYLVESTER SCALPELLI, Joliet, Ill. Filed Aug. 11, 1923. Serial No. 656,796. 6 Claims. (Cl. 293—55.)



5. A spring bumper structure comprising supporting members adapted to be mounted at the forward end of a vehicle frame, outwardly spring pressed forwardly extending arms pivoted upon the supporting members, and springs connecting said arms.

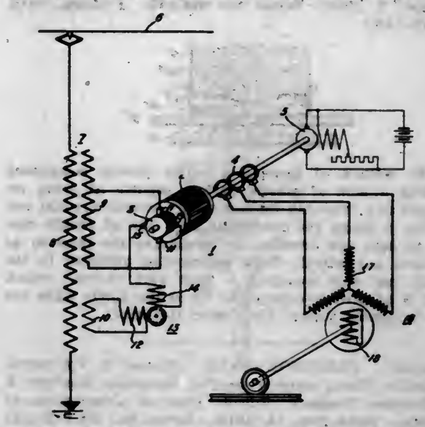
1,486,926. BRAKE APPARATUS. ALFRED SCHEUER, Vienna, and HUGO SCHEUER, Retz, Austria, assignors to Handel Maatschappij H. Albert De Bary & Coy, Amsterdam, Netherlands, a Dutch Company. Filed Aug. 26, 1921. Serial No. 495,505. 16 Claims. (Cl. 188—195.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

9. Braking apparatus for vehicles comprising a brake lever, a fixed abutment, an adjustable means embodying a pair of coacting wedge shaped members connected with and controlled by the brake lever and disposed between the brake lever and the fixed abutment, and a bearing piece disposed between the fixed abutment and the adjustable means.

1,486,927. BALL-WINDING MACHINE. WILLIAM J. SEYFFERT, Germantown, Pa., assignor, by direct and mesne assignments, to Corona Manufacturing Company, a Corporation of Delaware. Filed Apr. 14, 1921. Serial No. 461,400. 9 Claims. (Cl. 242—3.)

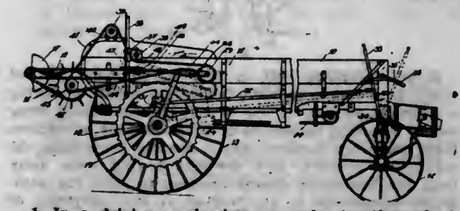
1. A ball winding machine comprising two sets of rollers oppositely disposed and at right angles to each other, each of said rollers being mounted in a yoke, and means for rotating said yokes and means for oscillating said rollers.

1,486,928. HOLDER. JOHN J. SIVLEY, Clarksville, Tex. Filed June 8, 1923. Serial No. 644,269. 2 Claims. (Cl. 129—23.)



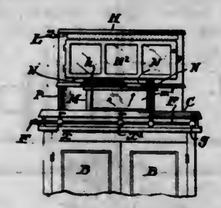
1. In a device for the purpose set forth, a metal body which is substantially V-shaped in plan having its pointed end rounded outwardly and the shoulder thus provided having an opening therethrough, said body having its upper end provided with spaced rolled portions and centrally formed with an outstanding angle portion having its extremity formed with a lip, a substantially U-shaped spring hook having an inner straight arm which passes through the referred to opening in the body and having an angle end received in one of the roller portions of the body, said hook having its outer arm formed with an angle end which is pointed and which is designed to be received in the lip on the body extension.

1,486,929. FREQUENCY-CHANGER SYSTEM. JOSEPH SLEPIAN, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 18, 1919. Serial No. 291,157. 6 Claims. (Cl. 172—281.)



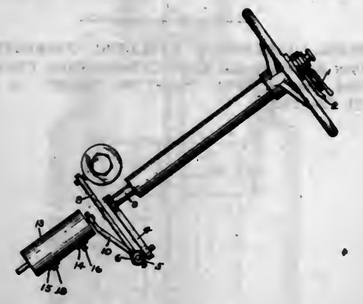
3. In an electrical system, the combination with a single-phase translating device of an armature wipding

connected to slip rings and a commutator, means connecting said single-phase translating device to said wind-



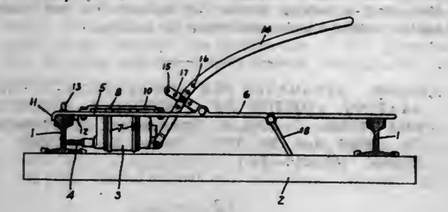
ing through said commutator, and an induction machine having a polyphase primary winding connected to said slip rings and having a single-phase secondary winding.

1,486,930. DRIVE MECHANISM FOR MANURE SPREADERS. ERNEST C. SMITH, Chicago, Ill., assignor to International Harvester Company, a Corporation of New Jersey. Filed Sept. 18, 1919. Serial No. 324,572. 22 Claims. (Cl. 74—21.)



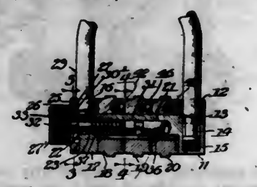
1. In a driving mechanism, an axle, traction wheels supporting the axle and adapted to impart rotation thereto, a driving sprocket mounted on the axle, an endless drive chain positioned in operative relation with respect to said sprocket, and means including a link movable concentrically with respect to said sprocket for engaging and disengaging said drive chain and said sprocket.

1,486,931. GAS STOVE. SELMA STARK, Scranton, Pa. Filed Feb. 12, 1923. Serial No. 618,593. 3 Claims. (Cl. 126—39.)



1. A gas stove comprising a burner plate provided with a centrally arranged burner of large dimensions and with other burners for general use, an oven having a perforated bottom, a stool resting on the burner plate and supporting the oven, and a hinged door for the stool.

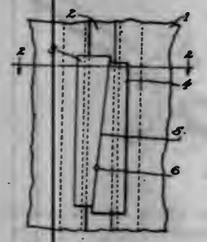
1,486,932. VEHICLE BRAKE. CARLTON D. STEWART, Berkeley, Calif., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed May 5, 1921. Serial No. 467,041. 2 Claims. (Cl. 192—3.)



1. In a motor vehicle control apparatus, the combination with a carburetor and a lever for operating same, of an electro-pneumatic brake apparatus, a contact drum for controlling the circuits of said apparatus, a lever for operating said drum, and a throttle lever operatively connected to said levers.

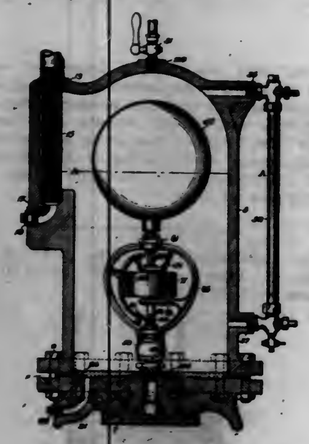
1,486,933. RAIL DRILL. CARL F. STOLTE, Cincinnati, Ohio, and ARTHUR M. GILBERT, Mattoon, Ill. Filed Nov. 21, 1921. Serial No. 516,651. 3 Claims. (Cl. 77—3.)

1. A rail drill comprising a frame for engagement with the rails said frame carrying U-shaped supporting means, a motor drill having a circular casing with the drill mounted eccentrically thereof said casing supported by the U-shaped supporting means whereby a rotary adjustment of the casing in the straps adjusts the drill longitudinally and vertically of the rail web, substantially as set forth.



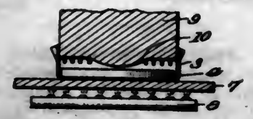
1,486,934. COMBINATION LOCK. JOHN M. STEMIC, Chicago, Ill. Filed June 14, 1920. Serial No. 388,762. 6 Claims. (Cl. 70—113.)

1. In a lock, the combination of a shackle, a member to which one end of the shackle is permanently fastened, said member having a tubular extension, a rotatable element arranged upon the extension, a member arranged for reciprocation within the tubular extension, means for engaging said last mentioned member and releasably



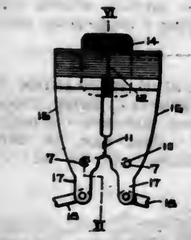
locking said member to the extension, said means being controlled by the rotatable element arranged upon the extension said member which is arranged within the extension having means for releasably engaging the opposite end of said shackle.

1,486,935. FIREPROOF BUILDING CONSTRUCTION. JOHN SWANSON and LYLE C. LOSHBOUGH, Chicago, Ill. Filed Aug. 4, 1919. Serial No. 315,267. 5 Claims. (Cl. 72—105.)



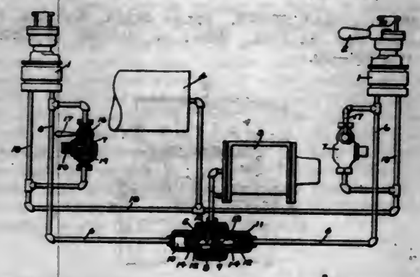
1. A fireproof building construction comprising a wall or ceiling made up of series of tiles or sections of fireproof material, said sections provided with grooves suitably located, fastener receiving devices in said grooves each comprising two separated engaging parts having inclined engaging side faces the side faces of the parts engaging each other when the fastener receiving device is in position and adapted when moved relatively to produce a wedge action so as to hold the parts in position, and a locking device for locking the two parts against relative movement when in position.

1,486,936. APPARATUS FOR AUTOMATICALLY SEPARATING LIQUIDS OF DIFFERENT SPECIFIC GRAVITIES. JOSEPH E. SWENDEMAN, Philadelphia, Pa. Filed Apr. 29, 1920. Serial No. 377,503. 9 Claims. (Cl. 210—84.)



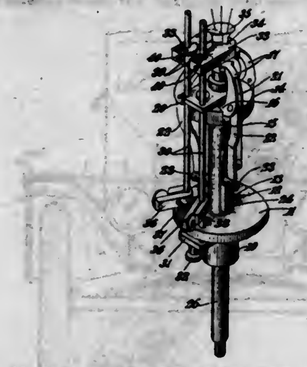
1. In an apparatus for automatically separating liquids of different specific gravities, the combination of a receptacle having an outlet for the heavier liquid; a float whose specific gravity is greater than that of the lighter liquid and less than that of the heavier liquid; a valve seat through which the liquid flows to said outlet; and a balanced valve which seats endwise against said valve seat and is operated by said float.

1,486,937. METHOD OF MAKING BOTTLE CLOSURES. THOMAS L. TALIAFERRO, Chicago, Ill. Filed Sept. 2, 1921. Serial No. 498,107. 1 Claim. (Cl. 113—80.)



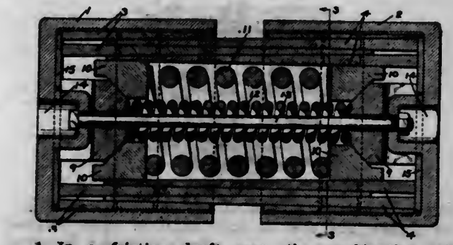
The method of forming a bottle closure comprising placing a disk of plastic rubber, capable of being reshaped and retaining its new shape, within a metal cap having a flange and subjecting said disk of plastic rubber to heat and pressure for re-shaping the same so as to form a relatively thick sealing ring adhering to the metal cap and becoming a fixed part thereof, which ring is adapted to engage the lip of the bottle when the cap is applied thereto for closing the same.

1,486,938. ELECTROMAGNET. ERNEST B. THURSTON, Toledo, Ohio, assignor to The Haughton Elevator & Machine Company, Toledo, Ohio, a Corporation of Ohio. Filed Feb. 14, 1919. Serial No. 277,043. 12 Claims. (Cl. 175—336.)



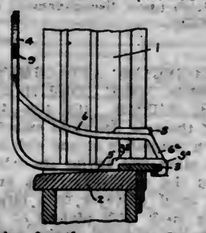
5. An energizing coil, a pair of members, one of which is a rocker member, lamination means providing a magnetic portion for one of said members, there being means normally rocking said rocker member withdrawn from the other member, and a bearing supporting the withdrawn member, said members having seats away from the lamination means coacting to shift the withdrawn member as to its bearing as the energizing of the coil acts upon the lamination means to cause the members to approach.

1,486,939. FLUID-PRESSURE BRAKE. HARRY J. WINTER, Southgate, London, England, assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Mar. 16, 1923. Serial No. 625,493. 8 Claims. (Cl. 303—13.)



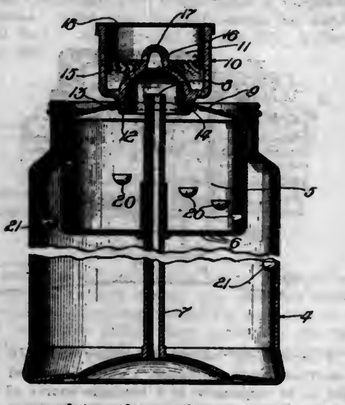
1. In a fluid pressure brake system, the combination with a brake cylinder and a pipe for supplying fluid to the brake cylinder from either end of the car, of means operated by fluid supplied through said pipe from one end of the car for venting fluid from said pipe leading to the other end of the car.

1,486,940. STEM-MAKING MACHINE. NATHAN WISS, Mount Vernon, N. Y. Filed Nov. 17, 1921. Serial No. 515,827. 14 Claims. (Cl. 49—2.)



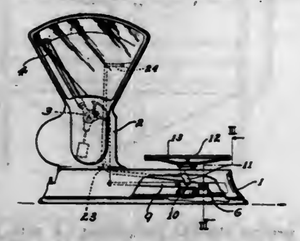
11. In a machine for making from a tubular body a stem having a plurality of lobes formed thereon at an angle with respect to each other, means for supporting a tubular body, a plurality of lobe forming arms arranged in different intersecting planes and adapted to be moved radially toward the axis of said tubular body, and means for simultaneously moving said arms convergingly toward the axis of said tubular body to produce a plurality of radially disposed lobes thereupon, said lobes lying in different intersecting planes.

1,486,941. FRICTION DRAFT GEAR. HARRY F. WOERNLEY, Wilkinsburg, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Apr. 15, 1922. Serial No. 553,092. 5 Claims. (Cl. 213—33.)



1. In a friction draft gear, the combination with counterpart housings having opposed closed ends and facing open ends, of a plurality of alternated longitudinal wedge shaped friction plates mounted in said housings and means for impressing a lateral pressure on said plates.

1,486,942. SAFETY SEAT FOR WINDOW CLEANERS. CARL ALLER, Detroit, Mich. Filed Feb. 15, 1922. Serial No. 536,625. 2 Claims. (Cl. 304—24.)

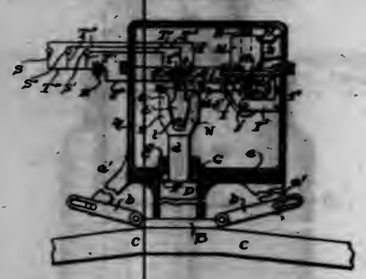


1. A safety device for the purpose described, comprising a back-rest, a pair of arms extending from said back-rest, and projections upon said arms for engaging the sill and for engaging the uprights of a window frame.

1,486,943. PERCOLATOR AND THE LIKE. WILLIAM O. BATES, Jr., Joliet, Ill. Filed Feb. 21, 1923. Serial No. 620,351. 8 Claims. (Cl. 53—3.)

1. In a percolator the combination with the pot, basket, and gusher tube thereof, of a transparent glass top member located above and in immediate proximity to the upper discharge end of the gusher tube, said top member including a circular trap having an inverted cup shaped floor above the upper end of the gusher tube, said floor being provided at its upper extreme end with a perforation of relatively small size as compared to the gusher tube, whereby the major portion of the liquid delivered upwardly through the gusher tube against the partition is immediately diverted downwardly into the basket, and whereby a relatively small portion of said liquid passes through the perforation of the partition into the trap and is retained therein, substantially as described.

1,486,944. WEIGHING SCALE. HARRY S. BERGEN, Toledo, Ohio, assignor to Toledo Scale Company, Toledo, Ohio, a Corporation of New Jersey. Filed Mar. 22, 1922. Serial No. 545,650. 5 Claims. (Cl. 265—49.)



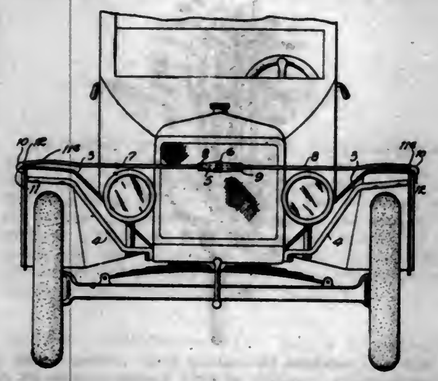
1. In a device of the class described, in combination, a plate, a hollow upwardly-projecting boss formed thereon, said boss being open at its lower end, and a dash pot removably fixed within the open lower end of said boss.

1,486,945. FLAT-SIDED WASHTUB. HELEN F. BIEDEKAPP, Walton, N. Y. Filed Nov. 22, 1922. Serial No. 602,638. 1 Claim. (Cl. 68—31.)

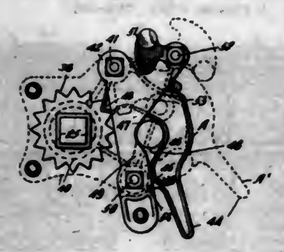
As a new article of manufacture, a wash-tub having a bottom, two vertical flat side walls arranged at right angles to each other, and an arcuate side wall connecting the outer ends of said flat walls, being inclined outward and upward.

1,486,946. TRAIN-CONTROL SIGNAL. ANDREW J. BROOKINS, Chicago, Ill. Filed Apr. 15, 1921. Serial No. 461,529. 13 Claims. (Cl. 246—49.)

1. A permanent magnetic member movably mounted, an electromagnetic member rigidly mounted and arranged to be responsive to a roadside source of electrical energy, and to co-act, when energized, with said permanent magnetic member to move said permanent magnetic member to a selected position and the pole of said electromagnetic member arranged to form, when de-energized, the armature of said permanent magnetic member, to maintain it in said selected position.



1,486,947. SEALING MEANS. WINFRED M. BROOKS, South Orange, N. J. Filed June 12, 1923. Serial No. 644,831. 2 Claims. (Cl. 292—307.)

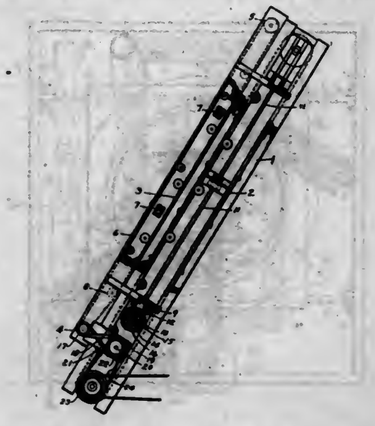


1. A sealing element comprising: a wire bent into a loop by crossing the ends thereof substantially at right angles to each other to provide a main leg and a subsidiary leg, said main leg having transverse notches on one side and a flattened surface on its opposite side at the point where it crosses the subsidiary leg to thereby direct subsequent bending of the main leg substantially at right angles to the plane of the notches.

1,486,948. BRACE FOR AUTOMOBILE FENDERS. THOMAS BURGESS, Vandalia, Mo., assignor of one-half to John B. Crum, Vandalia, Mo. Filed Apr. 17, 1922. Serial No. 553,867. 1 Claim. (Cl. 280—152.)

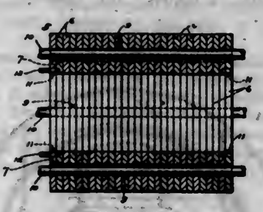
A support for automobile fenders comprising the combination with a pair of fenders and stationary supports secured to the underneath side of said fenders, of a longitudinally adjustable support comprising a pair of bifurcated hooks having shoulders adapted to engage the outer edges of the fenders and having the portion adjacent the shoulders upwardly bowed, a turn buckle for adjusting said adjustable support and jam nuts for holding said turn buckle in an adusted position, said stationary supports and said adjustable support co-acting to prevent the jarring and loosening of the fenders.

1,486,949. CAR-DOOR-OPERATING MECHANISM. ARGYLE CAMPBELL, Chicago, Ill., assignor to Enterprise Railway Equipment Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 27, 1921. Serial No. 525,105. 9 Claims. (Cl. 74—16.)



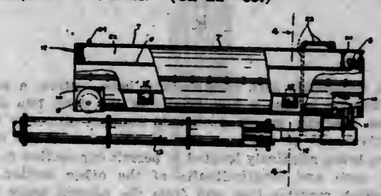
1. The combination with a shaft having a latch wheel thereon; of a latch co-operable with said whel; a detent movable under the force of gravity to a position to retain said latch in inoperative position with reference to said wheel; and means on said latch, movable therewith, engaging said detent for rendering the latter ineffective when the latch is in operative relation to said latch wheel, and controlling the movement thereof under the influence of gravity to permit the same to move into retaining position upon disengagement of said latch from said latch wheel.

1,486,950. CONVEYER ATTACHMENT. ARTHUR W. CURTIS, Seattle, Wash. Filed May 18, 1922. Serial No. 561,874. 1 Claim. (Cl. 198—165.)



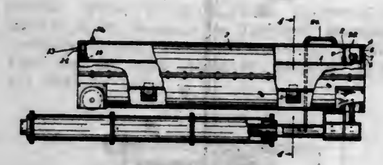
A device of the type described embodying a small conveyer in which the pulley at one end is smaller than the pulley at the other and having its axis placed above the center line of the conveyer; racks extending from the sides of the small conveyer to a large conveyer under it where they mesh with pinions on shafts so that as the pinions are turned the racks will move upward or downward; bevel gears on the ends of the shafts meshing with other bevel gears on a shaft going thru the

conveyer which has a hand wheel on one end; and a counter shaft rotatably mounted in a bracket extending downward from the auxiliary conveyer having a pulley



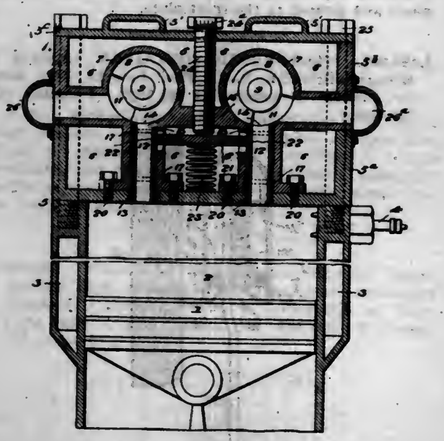
on it that is driven from a pulley on the main shaft of the large conveyer and another pulley on it which drives a pulley on the end of the small conveyer.

1,486,951. ROTARY CASTING. DIMITRI SENSAUD DE LAVAUD, New York, N. Y. Filed May 22, 1919. Serial No. 298,885. 6 Claims. (Cl. 22—65.)



1. A rotary mould, comprising, a plurality of thin metallic rings arranged face to face and welded together at spaced intervals.

1,486,952. CENTRIFUGAL MOLD FOR CASTING PIPE. DIMITRI SENSAUD DE LAVAUD, Paris, France, assignor, by mesne assignments, to Centrifugal Pipe Corporation, a Corporation of Delaware. Filed Aug. 27, 1920, Serial No. 406,442. Renewed May 6, 1922. Serial No. 559,072. 7 Claims. (Cl. 22—65.)

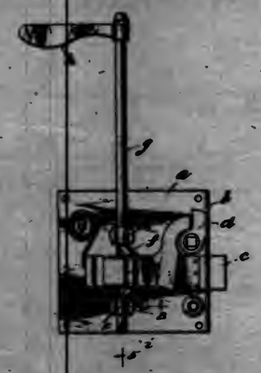


1. A centrifugal mold for casting pipe, comprising, a cylindrical mold adapted to be rotated, and bearing supports for the mold arranged substantially mid-way between the centre and the ends of the mold to effectively balance the mold longitudinally, said supports allowing free longitudinal expansion and contraction of the mold.

1,486,953. ROTARY MOLD. DIMITRI SENSAUD DE LAVAUD, Paris, France, assignor, by mesne assignments, to Centrifugal Pipe Corporation, a Corporation of Delaware. Filed Aug. 27, 1920, Serial No. 406,444. Renewed May 6, 1922. Serial No. 559,073. 5 Claims. (Cl. 22—65).

2. In a rotary mold, a cylindrical casing, a rotary mold axially supported in said casing, ring members secured in said casing and extending toward the periphery of the mold, and expansible piston rings carried by the mold and slidably and rotatably engaging said ring members.

1,486,954. ROTARY VALVE FOR INTERNAL-COMBUSTION ENGINES. OSCAR L. DUGGER, Evansville, Ind., assignor of one-fourth to Charles Moore, Vanderburg County, Ind. Filed Aug. 9, 1920. Serial No. 402,370. 3 Claims. (Cl. 123—190.)



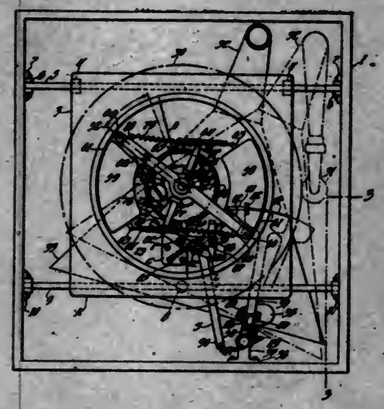
1. The combination with a cylinder of an internal combustion engine, of a head therefor, a rotary valve in said head, a slidable conduit affording communication between the cylinder and the valve and bearing on the latter, spring-means actuating the conduit toward the valve, and means, operable from the exterior of the head, adapted for limiting the movement of said spring-means to determine the relationship of the conduit to the valve.

1,486,955. ELECTRODE ELEMENT FOR GALVANIC BATTERIES AND METHOD OF PRODUCING THE SAME. LE ROY S. DUNHAM, Bloomfield, N. J., assignor to New Jersey Patent Company, West Orange, N. J., a Corporation of New Jersey. Filed Feb. 21, 1922. Serial No. 538,350. 20 Claims. (Cl. 204—38.)

1. An electrode element for galvanic batteries comprising a mass of oxide of copper combined with a material comprising crystallized copper sulphate, said mass being physically and chemically altered by baking, substantially as described.

1,486,956. LATCH BEARING. FRANK EDGAR, Detroit, Mich., assignor to Ternstedt Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed Aug. 23, 1922. Serial No. 583,839. 5 Claims. (Cl. 292—169.)

1. In a lock, a combination of a front plate, a sliding bolt guided transversely thereof, a rotary spindle parallel with the front plate and perpendicular with the sliding bolt arranged to retract the bolt, and a bearing therefor, comprising a sleeve abutting against the front plate, and a bearing cap engaging about the spindle opposite the sleeve and secured to the front plate.

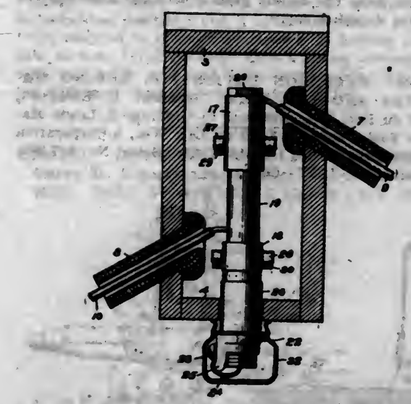


1,486,957. TOOTHBRUSH CONTAINER. ARTHUR E. ENGLAND, Brooklyn, N. Y. Filed June 15, 1922, Serial No. 568,426. Renewed July 26, 1923. 1 Claim. (Cl. 248—63.)

In an article of manufacture, a tubular container for a tooth brush, which container is open at one end, an expansible annular metal channel member removably receivable within said container, and an absorbent disinfectant carrying ring removably receivable within the channel portion of said annular member adapted to be held outwardly by said member to frictionally engage the wall of the container for support at any position therein to which the same may be moved.

1,486,958. PHONOGRAPH. WILLIAM E. GIBBS, East Orange, N. J., assignor to New Jersey Patent Company, West Orange, N. J., a Corporation of New Jersey. Filed May 1, 1920. Serial No. 378,182. 17 Claims. (Cl. 192—122.)

1. In combination, a rotatable member adapted to be driven by a motor, a governing device for controlling and regulating the speed of rotation of said member, and means responsive to variations in the power exerted by the motor in driving said member and acting on said

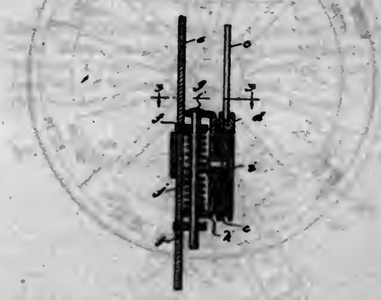


governing device to vary the action of the latter in accordance with said variations to thereby maintain the speed of rotation of said member constant, substantially as described.

1,486,959. COLLAPSIBLE TIRE CORE. ARCHER H. HARRIS, Barberton, Ohio. Filed Nov. 28, 1922. Serial No. 603,744. 4 Claims. (Cl. 154—9.)

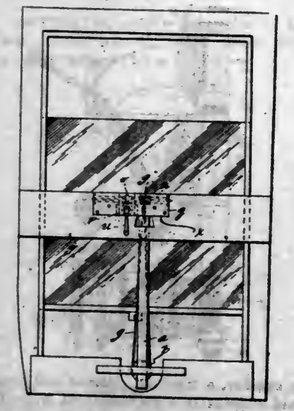
4. A collapsible core comprising a base section, a support therefor having a hub axially of the core, two side sections hingedly mounted on said support adjacent the respective ends of the base section, the axes of the two sections being relatively located to permit one section to be folded upon and longitudinally of the other section, a key section movable into and from the normal space between the free ends of the side sections, a bifurcated frame whereof the arms loosely embrace the hub and depend therefrom, a pivotal connection between the lower ends of the said arms and the support, and guide rods extending inwardly from the key section and slidably fitted to the body of the frame.

1,486,960. EXPULSION FUSE BOX. LESTER C. HART, Cleveland, Ohio, assignor to Hi-Voltage Equipment Company, a Corporation of Pennsylvania. Filed Dec. 22, 1921. Serial No. 524,234. 4 Claims. (Cl. 200—127.)



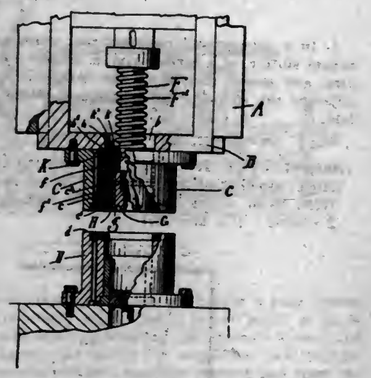
1. In combination, a fuse box, a fuse tube in the box with one end open and extending outside the box, a fuse wire in the tube extending through the open end of the tube to the outside of the box, and a closure cap surrounding the open end and adapted to be blown off when a blow-out of the fuse occurs.

1,486,961. MANUFACTURE OF CHROME ALUM. PETER HARENCLEVER, Hamburg-Billwarder, Germany. Filed Nov. 11, 1922. Serial No. 600,452. 1 Claim. (Cl. 23—13.)



The process for manufacturing chrome alum which consists in dissolving ferro-chrome in a non-oxidising mineral acid capable of dissolving ferrochrome, precipitating from the solution chromium hydroxide, the iron remaining dissolved, separating the chromium hydroxide from the liquid, dissolving the chromium hydroxide in sulphuric acid, adding potassium sulphate and crystallizing.

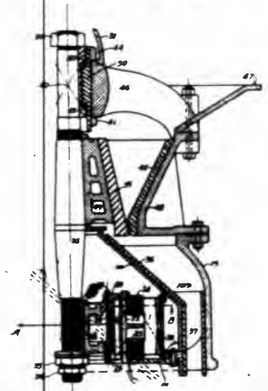
1,486,962. WINDOW-REGULATOR WHEEL SUPPORT. ERNEST E. HEINTZ, Detroit, Mich., assignor to Ternstedt Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed Aug. 23, 1922. Serial No. 583,723. 5 Claims. (Cl. 268—4.)



1. In a window regulator, the combination of a frame, a carrier member provided with a vertical projecting rod, means connected with said frame for slidably and rotatably supporting said rod, one or more of the end portions of the carrier engaging rod, and a rotating member rotatably supported by an intermediate portion of the carrier at a point somewhat radially removed from the axis of the rod, whereby the said carrier member and rotating member are both slidable and rotatable on a vertical axis with respect to said frame on an arc of relatively large radius.

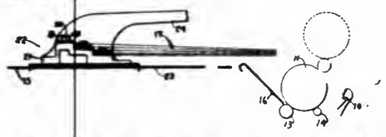
1,486,963. WINDOW REGULATOR. ERNEST E. HEINTZ, Detroit, Mich., assignor to Ternstedt Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed Aug. 23, 1922. Serial No. 582,724. 12 Claims. (Cl. 268—4.)

2. In a window regulator, the combination of a flexible draft member, upper and lower rotatable members over which the flexible draft member runs, and a driving mechanism for the upper rotatable member adjustably fixable at various points along said rotatable member for the purpose specified.



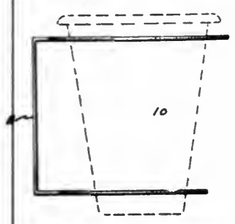
1,486,964. PUNCH PRESS. JOHN HEISEL, Mount Healthy, Ohio, assignor to The Cincinnati Galvanizing Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Mar. 7, 1921. Serial No. 450,445. 3 Claims. (Cl. 113—49.)

1. In a device of the class described the combination of a reciprocating blank holder having a bore the wall of which has a groove therein, a primary die adapted to be reciprocated in the bore in the blank holder and having a transverse slot and a bore therein, a secondary die adapted to be reciprocated in the bore in the primary die



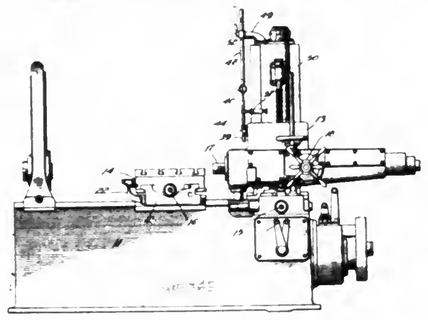
and having a groove therein, a pin reciprocally mounted in the transverse slot in the primary die and extending therefrom adapted to lodge in the grooves in the blank holder and the secondary die, and means operative upon the pin and yieldably holding the pin in engagement with the secondary die.

1,486,965. CRUSHING APPARATUS. THOMAS A. JANNEY, Garfield, Utah. Filed June 30, 1921. Serial No. 481,593. 7 Claims. (Cl. 83—10.)



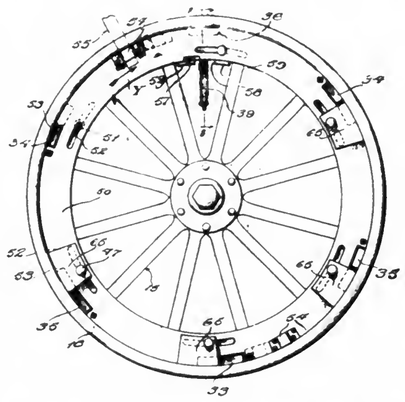
1. In a crusher, a crushing element and means for subjecting said element to a succession of magnetic impulses acting in different directions, thereby imparting movement to said element.

1,486,966. TYPEWRITING MACHINE. ARTHUR A. JOHNSON, New York, N. Y., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Sept. 11, 1920. Serial No. 409,627. 11 Claims. (Cl. 197—126.)



1. In a typewriting machine, the combination with a carbon shifter, of a carbon arm, a support for the carbon arm, and means carried by the carbon arm at a point adjacent the support, for splitting a folded web at the fold.

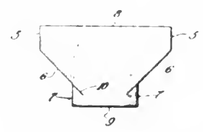
1,486,967. CUP HOLDER. JACOB KAUFMAN, Detroit, Mich., assignor of forty per cent to Aaron Droock, Detroit, Mich. Filed June 27, 1922. Serial No. 571,300. 2 Claims. (Cl. 65—13.)



1. A holder for a drinking cup consisting of an elongate strip of fibrous material having a ring at each end and narrowed between said rings to form a handle, said end rings normally disposed in the same plane as the plane of the handle so that a plurality of said strips may be stacked one above the other, said strip adapted to be bent adjacent each ring so that the rings extend angularly from the handle portion in axial alinement to encircle a drinking cup.

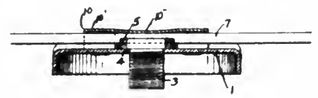
1,486,968. PRECISION DEVICE FOR BORING MACHINES AND THE LIKE. HERBERT E. KEMPTON, Fond du Lac, Wis., assignor to Giddings & Lewis Machine Tool Company, Fond du Lac, Wis., a Corporation of Wisconsin. Filed Oct. 12, 1921. Serial No. 507,302. 3 Claims. (Cl. 77—63.)

1. In a boring machine or the like, a precision device comprising an indicator, measuring means with which said indicator is adapted to coact, and means for supporting the indicator for adjustment upon one of two relatively movable parts of the machine, said means comprising a bracket secured to one of said parts, a rod entered through the bracket, and means for clamping the rod in the bracket so as to permit of the adjustment of the indicator with respect to the measuring means.



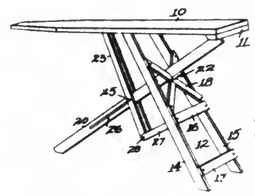
1,486,969. DEMOUNTABLE WHEEL. WILLIAM T. KLINE, Mifflinburg, Pa. Filed Nov. 14, 1922. Serial No. 600,897. 6 Claims. (Cl. 301—26.)

1. A wheel construction of the class described, comprising a pneumatic tire having an air valve and a securing nut therefor, a felloe, a plurality of radial projections on said felloe and a rim having corresponding projections adapted to engage with said first projections to hold the felloe and the rim in spaced relation; means on said felloe adapted to abut in transverse direction with one



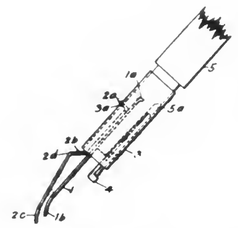
end of each of said other projections, a member revolubly mounted on said felloe, adapted to engage with the opposite ends of said other projections to lock the rim transversely to the felloe, said member being provided with notches corresponding to said other projections and adapted to register therewith when said member stands in unlocking position; and a latch associated with said felloe adapted to secure said member in locking position, said member being provided with a recess corresponding with said latch, and said valve and securing nut engaging with said latch to retain it in position.

1,486,970. ROOFING. FRANK J. KROMENAKER and GRANT M. KROMENAKER, Chicago, Ill. Filed Mar. 18, 1922. Serial No. 544,755. 6 Claims. (Cl. 108—8.)



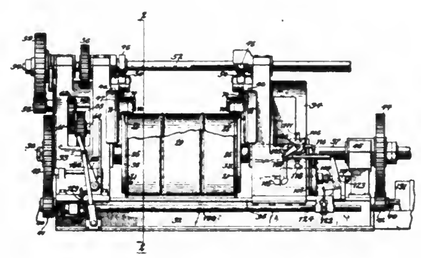
1. As a new article of manufacture, a roofing shingle having a lower edge, ends which extend upwardly in right angular relation thereto, thence outwardly in diverging relation, and thence upwardly again in parallelism with the first mentioned sections thereof, and a top edge parallel to the lower edge, there being slits extending into the body of the shingle in line with the outwardly extended end sections, substantially as described.

1,486,971. LOOM PLATE FOR ELECTRIC FIXTURES. PAUL LESNESKY, Detroit, Mich. Filed June 12, 1922. Serial No. 567,728. 3 Claims. (Cl. 247—22.)



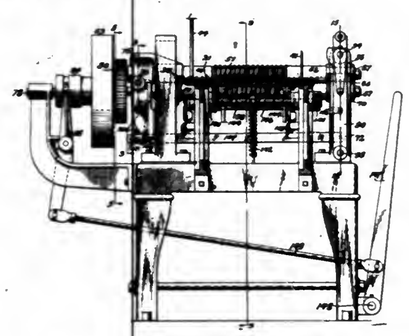
1. The combination with a supporting bar, of a loom plate, and a bridge member having arched extremities embracing said bar and rigidly secured to said plate, said bridge having a deflected portion engaging the bar and frictionally resisting movement of said plate longitudinally of said bar.

1,486,972. IRONING TABLE. GEORGE W. LEWIS, Westboro, Mass., assignor, by mesne assignments, to J. F. Bicknell Lumber Company, Worcester, Mass., a Corporation of Massachusetts. Filed Mar. 5, 1921. Serial No. 449,980. 2 Claims. (Cl. 68—10.)



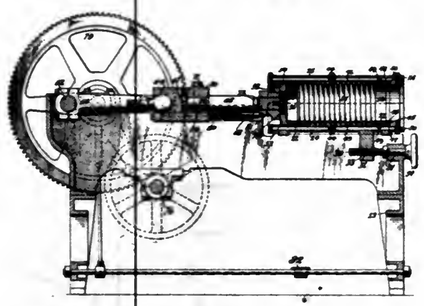
1. A folding ironing table having, in combination, a board, a frame pivoted thereto at an intermediate point in the length of the table and comprising spaced connected side members, a brace pivoted to said table near one end thereof and extending rearward through said frame, the other end of said brace engaging the floor when in operative position and forming with said frame a three-point support for said table, said brace engaging said frame and being supported thereby between its ends when in operative position, a lever pivoted to said board near the center thereof and having a sliding connection to said brace, and a link connecting said lever to said frame and effective to cause said frame, brace and lever to move in unison as a connected structure to open or folded position by a simple continuous movement.

1,486,973. LETTERING PEN. WILLIAM J. LILLY, Tacoma, Wash. Filed May 22, 1922. Serial No. 562,867. 2 Claims. (Cl. 120—111.)



2. A pen of the character described, having blades one of which is adjustable with points curved downward in proximity to each other, a key for securing blades in proper position and a holder, having recesses for receiving blades and key, and a perforated ferrule connected to said adjustable blade.

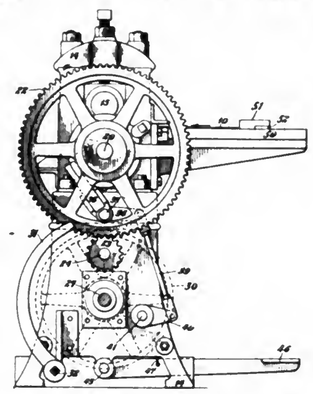
1,486,974. BARREL-SEAMING MACHINE. BROR J. LINDGREN, Buffalo, N. Y., assignor to Niagara Machine & Tool Works, Buffalo, N. Y., a Corporation of New York. Filed Apr. 25, 1921. Serial No. 464,075. 10 Claims. (Cl. 113—23.)



1. A barrel seaming machine comprising a main frame, means for rotatably supporting a barrel which is to be seamed in said frame, a seaming roll movable toward and from said barrel and means for supporting said roll including a carrier movable laterally toward and from the barrel, an axle which is adjustable on said carrier parallel with the axis of said barrel and which has an enlarged central part on which said roll is journaled, and retaining disks arranged on said axle and engaging opposite ends of the enlarged central part thereof and also engaging with opposite sides of said roll.

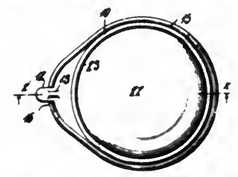
1,486,975. SHEET-METAL-BENDING MACHINE. BROR J. LINDGREN, Buffalo, N. Y., assignor to Niagara Machine & Tool Works, Buffalo, N. Y., a Corporation of New York. Filed Dec. 5, 1921. Serial No. 519,834. 31 Claims. (Cl. 153—61.)

1. A machine of the character described, comprising a support for the sheet to be bent, upper and lower feeding rollers which receive said sheet from said support, bearings in which opposite ends of the lower roller are journaled, a vertically swinging bearing in which one end of the upper roller is journaled, a divided bearing in which the other end of said upper roller is journaled, said divided bearing having a fixed lower section, and an upper movable section, a laterally swinging yoke on which said upper bearing section is mounted, and means for turning the sheet as the same issues from said feeding rollers.



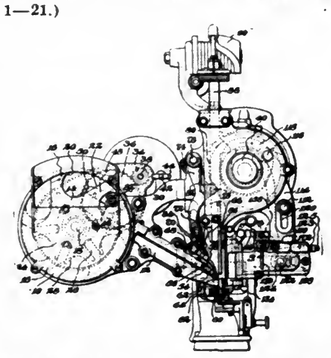
1,486,976. MACHINE FOR COMPRESSING CORRUGATED PIPES. BROR J. LINDGREN, Buffalo, N. Y., assignor to Niagara Machine & Tool Works, Buffalo, N. Y., a Corporation of New York. Filed Mar. 24, 1922. Serial No. 546,482. 11 Claims. (Cl. 153—21.)

1. A machine of the character described comprising a chuck having a cylinder which is adapted to receive a circumferentially corrugated pipe, abutments adapted to engage opposite ends of the pipe and one movable relatively to the other lengthwise of the cylinder, means for reciprocating said movable abutment, and means for adjusting the position of said cylinder in a direction lengthwise of its axis.



1,486,977. CORRUGATING MACHINE. BROR J. LINDGREN, Buffalo, N. Y., assignor to Niagara Machine & Tool Works, Buffalo, N. Y., a Corporation. Filed Aug. 22, 1921. Serial No. 494,044. 4 Claims. (Cl. 153—77.)

1. A corrugating machine comprising a pair of cooperating corrugating rolls each having a plurality of integral, longitudinal corrugations formed on its periphery and also having a plurality of longitudinal recesses having

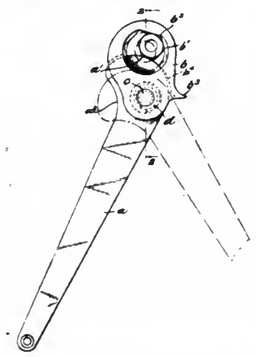


obliquely formed bottoms; and a plurality of longitudinal corrugated bars adapted to be disposed within said recesses.

1,486,978. POWDER-DISPENSING BOX. JAMES V. LOBELL, Newark, N. J. Filed Feb. 21, 1922. Serial No. 538,185. 11 Claims. (Cl. 43—146.)

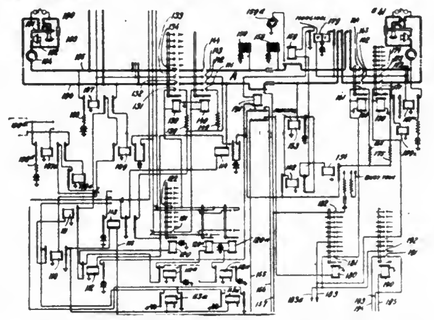
1. A powder box of separable sections joined to provide a container, one of said sections having a lip extension received within a cut-out of the other section, said lip extension being grooved to provide an outlet for the box and adapted to be folded over the outlet to seal the box.

1,486,979. FASTENING-INSERTING MACHINE. FRED L. MACKENZIE, Beverly, and GEORGE GODDU, Winchester, Mass., assignors to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Oct. 8, 1919. Serial No. 329,342. 40 Claims. (Cl. 1—21.)



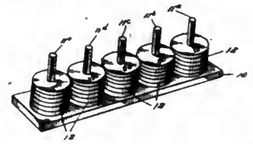
1. In a machine of the class described, two awls, means for forcing one of the awls into the work to feed the same, means for withdrawing said awl at the termination of the feeding movement, and means subsequently operative for forcing both awls into the work preliminary to a fastening inserting operation.

1,486,980. COMBINED CAP AND MUFFLER. JAMES MACWILLIAM, London, England. Filed Apr. 12, 1923. Serial No. 631,543. 1 Claim. (Cl. 2—118.)



An article of the class described comprising a cap of knitted material having a head-receiving portion, an upturned portion thereon of double thickness forming a continuous band, said head-receiving portion havinga its opposite corners at its upper end terminating in points which are extended over the upper edge of the band and are fixedly secured to said band, an ear flap extending downwardly from the lower edge of the band, a strap adapted to extend below the chin of the wearer and connect the opposite sides of the ear flap, and a pair of muffler portions extending from the lower edge of the ear flap and adapted to be wound about the neck of the wearer.

1,486,981. WRENCH. PAUL JULES ERNEST MAGNAN, Tours, France, assignor of one-half to Georges Goullet, Paris, France. Filed Nov. 15, 1922. Serial No. 601,017. 1 Claim. (Cl. 81—98.)



A wrench comprising a handle having an opening for a pivot near its inner end and a recess on one side about the pivot opening and having its inner end beyond the pivot opening formed with its edge eccentric to the pivot opening, a gripping member having legs embracing the inner end of the handle and having pivot openings therein, a pivot pin extending through the pivot openings in said legs and the pivot opening in the handle end, said gripping element having beyond the pivot openings an opening adapted to receive the article to be gripped, having a flat face opposite said eccentric edge, a spring within the recess in the side of the handle acting to swing the gripping element towards the point on the eccentric edge of the handle farthest distant from the pivot opening, a shoulder on the gripping member in position to contact with the eccentric edge of the end of the handle to limit the movement imparted to it by the spring, and a thumb piece extending outward from the gripping member in position to be operated by the hand grasping the handle to swing the gripping member against the force of the spring.

1,486,982. TELEPHONE-EXCHANGE SYSTEM. FRANK R. MCBERTY, Galion, Ohio, assignor to The North Electric Manufacturing Company, Galion, Ohio, a Corporation of Ohio. Filed Mar. 15, 1920. Serial No. 365,921. 89 Claims. (Cl. 179—27.)

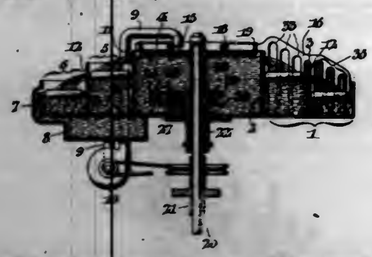
1. In a telephone exchange system, a plurality of lines, a variably operable impulse sending device associated with each line, a plurality of sets of counting relays, a plurality of trunks, a plurality of line switching relays provided with contacts appertaining to said lines, means for actuating said relays to select a trunk and to connect a calling line with one end of the selected trunk, a relay associated with each trunk, a set of counting relays associated with the relay of the selected trunk, means common to said lines for operating the relay associated with the selected trunk to connect said set of counting relays to said trunk, a controlling circuit between the impulse sending device of the calling line and the counting relays associated with the selected trunk, contacts of the relay associated with the selected trunk, in said controlling circuit, another plurality of line switching relays provided with contacts appertaining to said lines, actuating means for the last mentioned switching relays, controlling circuits between said set of counting relays and the actuating means of all of said last mentioned switching relays whereby said trunk may be connected to the called line, and means responsive to the actuation of the contacts of one of the last mentioned switching relays for actuating the relay associated with the selected trunk.

1,486,983. GAME COUNTER. DONALD MCDONALD, Louisville, Ky. Filed June 12, 1922. Serial No. 567,659. 2 Claims. (Cl. 235—90.)

1. In a game counter a rack having a base and a plurality of posts projecting from said base, a plurality of centrally apertured chips disposed on each post, each of said posts being provided with a column of numbers for

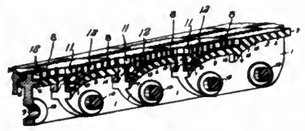
indicating the value of the chips on each post in excess of or less than the original number, said chips being in sets of different values and each chip having its value indicated thereon.

1,486,984. HOTBED. WILLIS MCKEE, Cleveland, Ohio. Filed Sept. 27, 1920. Serial No. 413,027. 14 Claims. (Cl. 198—219.)



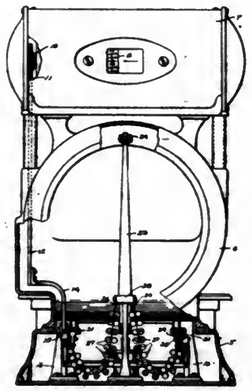
1. A hot bed comprising alternate stationary and movable members adapted to support work, means for imparting vertical reciprocating movement to said movable members, means for imparting horizontal reciprocating movement to said movable members, detachable driving means connecting said vertical and said horizontal reciprocating means whereby when said vertical reciprocating means is operated said vertical and horizontal movements are caused to take place simultaneously, and driving means connected to said vertical reciprocating means for operating it.

1,486,985. STORAGE BATTERY. JAMES F. MONAHAN, East Orange, N. J., assignor to Edison Storage Battery Company, West Orange, N. J., a Corporation of New Jersey. Filed May 1, 1920. Serial No. 378,176. 11 Claims. (Cl. 137—53.)



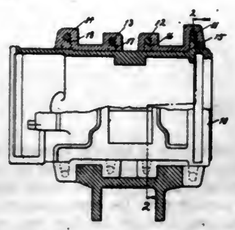
10. A gas valve for storage batteries, comprising a member having a valve seat and an opening therethrough, a rounded weight seated loosely on said member about said opening, and a valve supported by said weight, said weight acting to draw said valve toward the valve seat when the battery is moved from a vertical toward a horizontal position, substantially as described.

1,486,986. COOKING APPARATUS AND METHOD. FRANK E. MORRIS and JOHN C. BERGNER, Philadelphia, Pa. Filed Nov. 4, 1919. Serial No. 335,599. 20 Claims. (Cl. 99—7.)



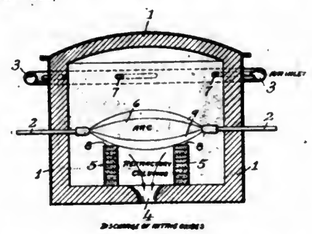
1. The method of frying articles with hot liquor which consists in applying such liquor to both sides of them, with partial immersion, in like measure substantially throughout the cooking period, so as to advance the cooking of the two sides from stage to stage in a corresponding manner.

1,486,987. CHAIN-GRATE STOKER LINK. JOHN P. POLSTER, Toledo, Ohio. Filed Sept. 2, 1921. Serial No. 497,872. 12 Claims. (Cl. 110—40.)



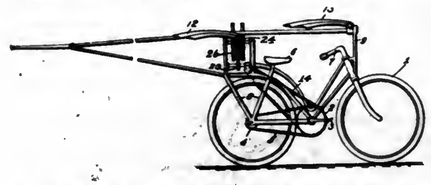
1. In a chain grate, a plurality of links arranged in rows lengthwise of the chain, the links of each row breaking joint with the links of the adjoining rows, each of the links having horizontally protruding lapping portions that extend and lap throughout the length of the links and form substantially vertical and horizontal contacting surfaces between juxtaposed links.

1,486,988. WEIGHING SCALE. ELMER C. POOL, New Castle, Pa., assignor to Toledo Scale Company, Toledo, Ohio, a Corporation of New Jersey. Filed June 12, 1919. Serial No. 303,726. 16 Claims. (Cl. 265—48.)



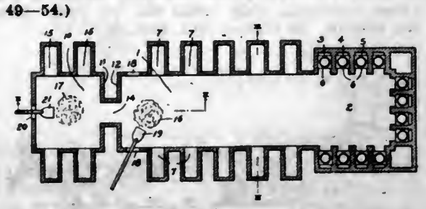
1. In a scale, and in combination with the scale beam thereof, load-offsetting means comprising a flexible element having a plurality of spaced weights thereon, some of said weights comprising a body portion and an auxiliary end piece detachably secured thereto.

1,486,989. PEDESTAL JOURNAL BOX AND PROCESS OF MAKING THE SAME. IVAR A. RANDEL, Chicago, Ill., assignor of one-half to William M. Ryan, Chicago, Ill. Filed Nov. 20, 1922. Serial No. 602,133. 4 Claims. (Cl. 22—206).



1. In a journal box, the combination of a body portion having perforated flanges and guides cast about said flanges with the metal extending through said perforations.

1,486,990. PROCESS AND DEVICE FOR STABILIZING ELECTRIC ARCS. WERNER SIEBERT, Laufenburg, Switzerland, assignor to Nitrum Aktiengesellschaft, Zurich, Switzerland, a Corporation of Switzerland. Filed May 13, 1922. Serial No. 560,726. 3 Claims. (Cl. 204—31.)

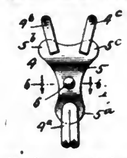


1. The stabilization of electric arcs in electric furnaces by introducing refractory substances into the zone of the electric arc.

1,486,991. FLYING MACHINE. IVAR SILFVENIUS, Lynn, Mass. Filed Mar. 5, 1923. Serial No. 622,904. 4 Claims. (Cl. 244—20.)

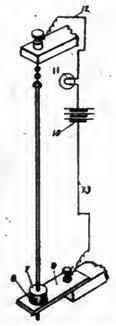
4. In a flying machine, the combination of a bicycle, an operator's seat therefor, a frame mounted on said bicycle comprised of two parallel members, sleeves on the parallel members, wing connections on the sleeves, yoke straps connecting the alternate forward and rear wings on opposite sides of the machine to act to be raised and lowered respectively, and a pedal actuating means for operating both the bicycle and yoke straps.

1,486,992. GLASS-MELTING TANK. HARRY G. SLINGLUFF, Mount Vernon, Ohio, assignor to Pittsburgh Plate Glass Company, a Corporation of Pennsylvania. Filed Nov. 15, 1922. Serial No. 601,079. 12 Claims. (Cl. 49—54.)



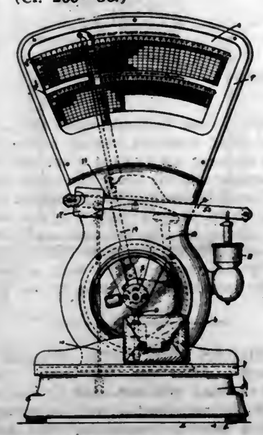
1. The combination with a regenerative glass melting tank having a melting end and a discharge end, of means for supplying molten glass to said melting end of the tank.

10. The process of operating a regenerative glass melting furnace which consists in supplying batch to the melting end of such furnace and also feeding molten glass into such melting end to the rear of said batch.



1,486,993. SNAP HOOK FOR TIRE CHAINS. ERIC STOLPE, Yonkers, N. Y. Filed Apr. 10, 1922. Serial No. 551,017. 2 Claims. (Cl. 152—14.)

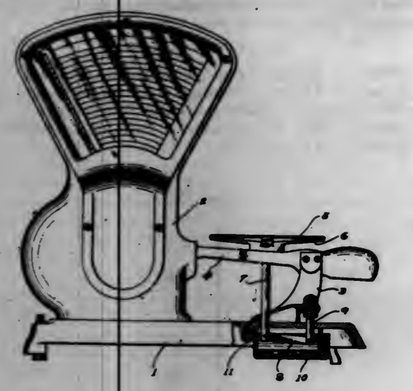
2. A snap-hook for tire chains embodying, in combination, a triangular-shaped connecting member having a body portion formed of a single strand or rod of wire bent to form intermediate its ends a single hook for engagement with a side chain, and two additional hooks



at its opposite ends for engaging and separating two cross chains, and a single spring snap member for simultaneously closing all of such hooks.

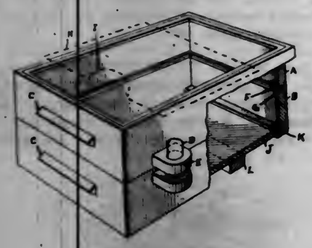
1,486,994. SIGNAL FOR WEIGHING SCALES. EDWARD G. THOMAS, Toledo, Ohio, assignor to Toledo Scale Company, Toledo, Ohio, a Corporation of New Jersey. Filed Oct. 13, 1917. Serial No. 196,514. 3 Claims. (Cl. 177—311.)

2. In a device of the class described, in combination a frame, a vertically-adjustable frusto-conical contact member suspended therefrom, a contact plate having an oval opening of greater diameter than that of said contact member loosely surrounding said contact member, an indicating device, and an electric circuit for operating said indicating device and including said contact member and said contact plate.



1,486,995. AUTOMATIC COMPUTING SCALE. EDWARD G. THOMAS, Toledo, Ohio, assignor to Toledo Scale Company, Toledo, Ohio, a Corporation of New Jersey. Filed Oct. 7, 1918. Serial No. 257,091. 10 Claims. (Cl. 265—36.)

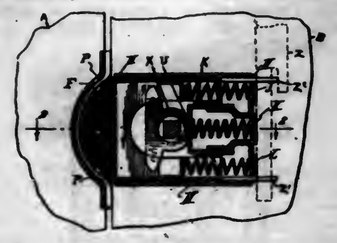
1. In a scale, in combination, a plurality of concentrically arranged and stationary weighting and computing



charts, each having a plurality of concentric rows of graduations, the graduations in each row on each of the inner charts succeeding the graduations in a corresponding row of the next outer chart.

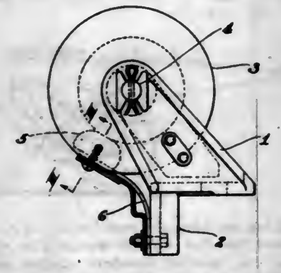
1,486,996. OIL CONTAINER. EDWARD G. THOMAS, Toledo, Ohio, assignor to Toledo Scale Company, Toledo, Ohio, a Corporation of New Jersey. Filed Oct. 19, 1921. Serial No. 508,901. 4 Claims. (Cl. 265—27.)

1. In a weighing scale, in combination, a base, check link mechanism located below said base, and a receptacle surrounding said check link mechanism and adapted to hold oil.



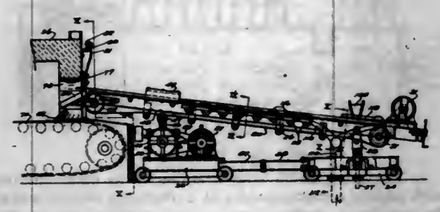
1,486,997. MOLDER'S FLASK. MICHAEL M. WAGNER, Baltimore, Md. Filed Mar. 25, 1920. Serial No. 368,647. 3 Claims. (Cl. 22—96.)

1. In a molder's flask, in combination with complementary cope and drag members having rectangularly disposed interior surfaces, cleats fixed about the inner edges of the drag member slightly above the lower edges thereof, a bottom board whose possible movement toward the upper portion of the flask is limited by the engagement of said cleats against its edge portions, said bottom board and its attached parts being of such total thickness that its displacement relatively to the drag member cannot occur until the intentional emptying of the flask is begun.



1,486,998. VEHICLE DOOR LOCK. WILLIAM R. WILEY, Detroit, Mich. Filed Oct. 26, 1921. Serial No. 510,575. 6 Claims. (Cl. 292—169.)

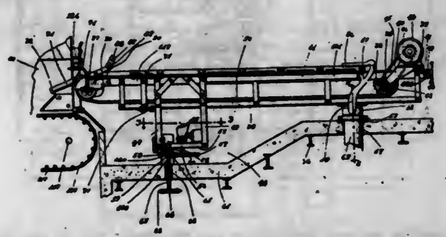
1. In a lock, in combination with a spring-projected latch member, a lubricant-containing filler for the forward end thereof, adapted to supply a film of lubricant over the engaging surface of the latch end, and a complementary keper member having its engaging face



grooved in a plurality of directions whereby said latch member when seated therein is held against undesired working either horizontally or vertically.

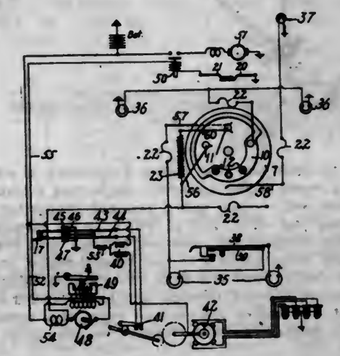
1,486,999. TROLLEY CONTACT. ALONZO W. WILLIAMS, Bolivar, Pa. Filed May 4, 1923. Serial No. 636,573. 1 Claim. (Cl. 191—61.)

The combination of a trolley harp, a trolley wheel journalled in said harp and having a groove in the periphery thereof, a contact block seated in said groove and being correspondingly shaped therewith and contacting against said groove in its entirety, the said contact block being held in said groove by an arm substantially rigid and non-flexible.



1,487,000. CONVEYING MECHANISM. PERCY Q. WILLIAMS, Cincinnati, Ohio. Filed Nov. 21, 1921. Serial No. 516,518. 18 Claims. (Cl. 198—29.)

1. In a device of the class described the combination with a leer of an endless conveyer exterior of the leer, a frame on which said conveyor is supported, said frame mounted to swing about a vertical axis adjacent one end thereof, means to oscillate said frame horizontally about said axis, and means to adjust one end of said frame vertically and thereby vary the inclination of said conveyor.

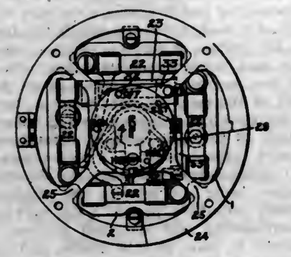


18. The combination of a leer, a conveyor for bottles, means for moving the conveyor longitudinally through the leer, a second conveyor located upon the exterior of the leer and adapted to deposit bottles in a pile upon the first conveyor.

1,487,001. APPARATUS FOR RECEIVING GLASSWARE. PERCY Q. WILLIAMS, Cincinnati, Ohio. Filed June 3, 1922. Serial No. 565,732. 13 Claims. (Cl. 198—31.)

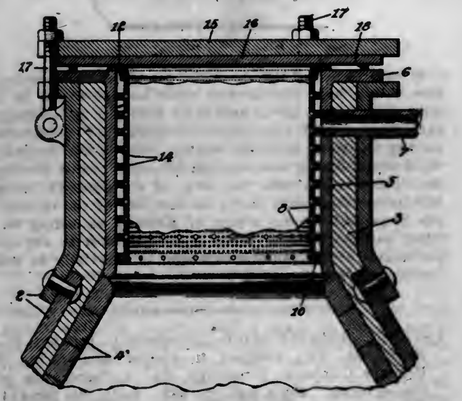
1. In a device of the class described the combination with a pivotally mounted frame and an endless belt movable upon the frame, of a mechanism to oscillate the frame about its pivotal mounting comprising a platform mounted on the frame, a bar over which the platform may move, an arcuate rack mounted on the bar, a motor mounted on the platform, a shaft mounted on the platform having a driving connection with the motor, a gear carried by the shaft engaging the arcuate rack, and means to reverse the motor at the limits of oscillation of the frame.

1,487,002. AUTOMOBILE SWITCH. JAMES L. ADAMS, Jr., Wilkinsburg, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 8, 1914. Serial No. 860,614. 18 Claims. (Cl. 171—97.)



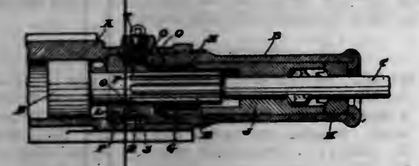
1. In an electrical system, the combination with a lighting circuit and an ignition circuit and circuit-controlling devices therefor, each comprising relatively movable contact members, one of said devices having a plurality of operative positions in which corresponding combinations of contact members are in engagement, of means for locking said circuit-controlling devices, and a single member for effecting the actuation of said devices and the locking of said devices in their respective adjusted positions when said one device is in any of its several operative positions.

8. The combination with a plurality of electrical circuits of a motor vehicle, of a unitary switch mechanism for controlling said circuits, said mechanism having a plurality of operative positions and comprising locking mechanism and a single key member for effecting the actuation of said switch mechanism and the locking of said switch mechanism in said positions.



11. The combination with a lighting system comprising the head, side and tail lights of a motor vehicle and a resistor, of a unitary mechanism comprising an actuating member which operates, according to its position, to effect the connection of the head lights and tail light in circuit with the head lights in parallel relation, the connection of the head lights in series relation and maintain the tail light connections, the connection of all of said lights in circuit and the connection of the side and tail lights in circuit with said resistor.

1,487,003. AUTOMOBILE SWITCH. JAMES L. ADAMS, Jr., Milwaukee, Wis., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Original application filed Sept. 8, 1914, Serial No. 860,614. Divided and this application filed Jan. 30, 1923. Serial No. 615,864. 20 Claims. (Cl. 200—44.)



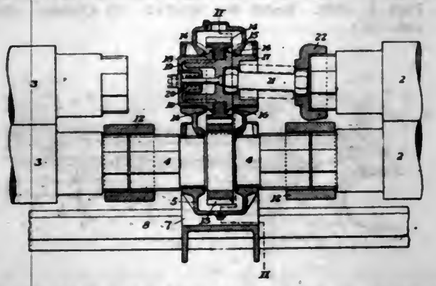
1. In a lighting and ignition switch, the combination with a plurality of circuit-controlling devices each comprising relatively movable contact members, one of said devices having a plurality of operative positions in which corresponding combinations of contact members are in engagement, of a single member for actuating said devices and for locking them in their respective adjusted positions when said one device is in any of its several operative positions.

1,487,004. STRAINER FOR PULP DIGESTERS. CARLTON H. ALLEN, Glens Falls, N. Y., assignor of one-half to Great Northern Paper Company, Millinocket, Me., a Corporation of Maine. Filed Jan. 18, 1922. Serial No. 530,139. 5 Claims. (Cl. 92—7.)

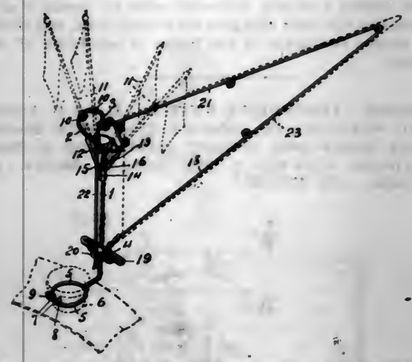
1. A strainer for pulp digesters and the like comprising a hollow sheet metal body perforated to form a screen, and a series of supporting studs projecting from the periphery of said screen.

1,487,005. OILING DEVICE FOR ROCK DRILLS. LEWIS C. BAYLIS, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Mar. 28, 1923. Serial No. 628,172. 2 Claims. (Cl. 184—25.)

1. In a rock drill, the combination with the cylinder and reciprocating piston having a forward extension, and front cylinder washer through which the forward extension of the piston passes, an external circumferential groove in said washer communicating with the moving parts of the machine, of an oiling device for the front end parts of the machine, comprising a flat ring of absorbent material lying in and having substantially the same width as the said external circumferential groove in the front cylinder washer, a pocket being formed in the front cylinder washer beneath the absorbent material, and a space being left between the absorbent material and cylinder forming a pocket, a flat apertured metallic holder surrounding said absorbent material for holding said material in place in said groove, and means on the machine for supplying lubricating material to said groove.



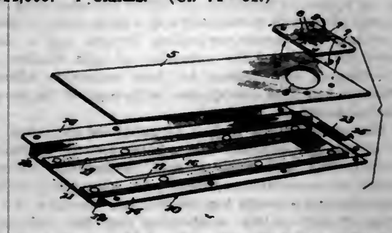
1,487,006. CASE. GEORGE S. BEMIS, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed Jan. 18, 1919. Serial No. 271,787. 2 Claims. (Cl. 206—9.)



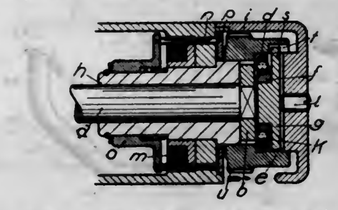
1. In a device of the character described, the combination with a body portion and cover section united by a continuous hinge, one of said parts having a lip reversely extending around the hinge, of means for resiliently holding the parts in closed relation, said means comprising a single spring wire member having a looped portion bent substantially into the form of a shepherd's crook and interlocking with the lip on one side of the continuous hinge and having a pair of laterally extending terminal portions secured to the opposed member on the opposite side of the continuous hinge, substantially as and for the purpose described.

1,487,007. ROLLING MILL. FLORENCE C. BIGGERT, Jr., Pittsburgh, Pa., assignor to United Engineering & Foundry Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Sept. 8, 1922. Serial No. 586,914. 6 Claims. (Cl. 80—54.)

5. In a rolling mill, a two-high roughing stand, a two-high finishing stand, said stands being positioned side by side in end-to-end relationship, a housing intermediate said stands, a spindle journaled in said housing and connecting the lower rolls in the respective stands, a sleeve journaled in said housing, means forming a driving connection between said sleeve and the upper roll of one of said stands, and means for frictionally driving said sleeve from said spindle, substantially as described.

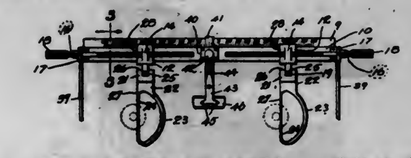


1,487,008. COMBINATION PENNANT AND FLAG HOLDER. WILLIAM L. BLACK, Kansas City, Kans. Filed Oct. 9, 1922. Serial No. 593,171. 4 Claims. (Cl. 248—37.)



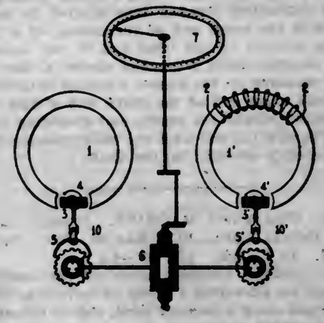
1. A pennant and flag holder comprising a standard having a recess facing upwardly and having a transverse hole below said recess, and a pennant supporting member having two arms, one of which at its forward end has a loop adapted for insertion through said hole, the other arm being adapted to rest in said recess and provided at its forward end with an extension adapted to be releasably inserted through said loop forward of said standard, for holding the pennant supporting member in operative position on said standard, substantially as set forth.

1,487,009. DUSTGUARD CASE FOR AUTOMOBILES. ALBERT HAROLD BLUM and DANIEL TIMOTHY SHANAHAN, Greenville, Miss. Filed June 7, 1923. Serial No. 644,000. 4 Claims. (Cl. 74—81.)



1. In a device of the class described, the combination of a floor board of an automobile provided with a slot, a lever operable in said slot, a guard comprising a plate provided with an opening to receive the lever, means mounted on the plate adjacent the opening engageable with the lever for sealing the opening in the plate, and a guide secured to the floor board to receive the plate and guide it in its oscillating movement.

1,487,010. FRICTION CLUTCH. JACQUES BOHLI, Solothurn, Switzerland, assignor to the Firm Scintilla, Solothurn, Switzerland. Filed Dec. 22, 1922. Serial No. 608,551. 3 Claims. (Cl. 192—30.)

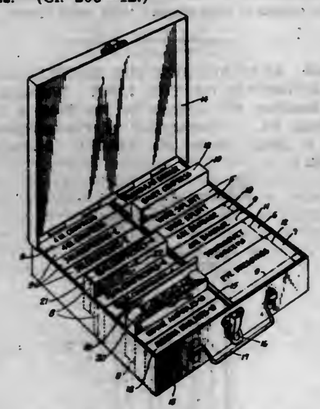


1. In a friction clutch for short periods of working, the combination with a rotary driving shaft, of a rotary driving clutch element connected thereto, an axially slidable rotary driven clutch element, an axially slidable rotary ball bearing ring, a non-slidable rotary ball bearing ring, balls located between said two ball-bearing rings, and positive driving means for carrying said balls roundidly so long as the clutch is open, whereas by applying axially directed pressure to said axially slidable clutch element, said axially slidable ball-bearing ring will be caused to slide and jam said balls against said non-slidable ball bearing ring, whereby said two rings and said balls and said driven clutch element will be carried round by the driving shaft, thus closing the clutch.

1,487,011. OPTICAL INSTRUMENT. WILLIAM H. BROWN, St. Louis, Mo. Filed July 22, 1922. Serial No. 576,800. 8 Claims. (Cl. 33—200.)

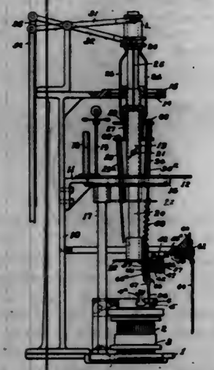
1. An optical instrument comprising a plate, a slide bar secured to said plate and spaced apart therefrom. slides mounted on said bar, means for operating said slides independently and slide frames having a relatively narrow vertical strip secured to said slides.

1,487,012. CALLING ARRANGEMENT FOR SIGNALING. HENRI CHIRBIX, Paris, France. Filed Aug. 29, 1921. Serial No. 496,669. 9 Claims. (Cl. 250—2.)



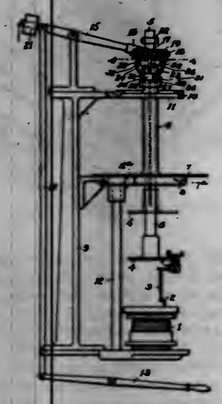
1. A calling arrangement for signaling comprising two normally isochronous pendulums, means actuated by said calling signals for accelerating one of said pendulums and an indicating device actuated by differential movement of said pendulums.

1,487,013. DIAPHRAGM FOR SOUND-RECORDING AND SOUND-REPRODUCING INSTRUMENTS. WILLIAM ERNEST CLIFTON, Nottingham, England, assignor to Cliftophone Limited, London, England. Filed Nov. 12, 1921. Serial No. 514,591. 3 Claims. (Cl. 181—32.)



1. A composite diaphragm of the kind described, comprising an elongated stiffening blade extending lengthwise along a diameter of the diaphragm and enclosed between two sheets of flexible material, one of which constitutes the main diaphragm disc and the other constitutes a cover sheet for the stiffening blade and is shaped to conform to the contour of said blade and to overlap the margins thereof.

1,487,014. FIRST-AID KIT. FRANK R. DAVIS, Scarsdale, N. Y. Filed Mar. 8, 1923. Serial No. 623,639. 3 Claims. (Cl. 206—12.)



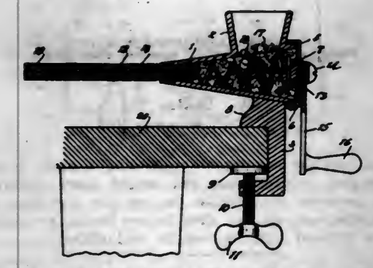
1. First aid for industrial emergency use comprising first aid remedial devices, substantially rectangular containers for the same of substantially equal depth, some of a predetermined unit width and others a multiple of that unit width, said first aid devices varying in character but collectively designed to meet the hazards ordinarily encountered in the special industry for which the kit is intended and being packed according to size and shape, either one or a number in a unit or multiple unit size packet, said packets having quickly releasable closures and bearing on the fronts of the same legends designating the character and articles contained, a carrying case of substantially the same depth as the packets and of a length substantially equal to a multiple of the unit packet width to thereby hold a stack of the unit and multiple unit packets closely confined therein with their front ends all exposed and fully accessible, said case having a cover overlying the entire set of contained packets to thereby hold them confined in stack formation with the closures secured against accidental opening and said cover being held to the case by a readily releasable fastening permitting the cover to be quickly opened and the articles needed for special emergencies to be instantly sighted and used.

1,487,015. STRIPING ATTACHMENT FOR CIRCULAR-KNITTING MACHINES. WILLIAM L. LENGEL, Reading, Pa., assignor to The Nolde & Horst Co., Reading, Pa., a Corporation of Pennsylvania. Filed Mar. 13, 1922. Serial No. 543,142. 20 Claims. (Cl. 66—12.)

6. In a striping attachment for circular knitting machines comprising a thread-carrier finger having a universal-joint suspension point, means for imparting intermittent needle-engaging swings to the free end of said finger comprising a cam having finger-engaging cam surfaces in constant engagement with said finger.

1,487,016. SEATING LOCK FOR KNITTING-MACHINE ATTACHMENTS OR THE LIKE. WILLIAM L. LENGEL, Reading, Pa., assignor to The Nolde & Horst Co., Reading, Pa., a Corporation of Pennsylvania. Filed Apr. 4, 1922. Serial No. 549,584. 8 Claims. (Cl. 66—12.)

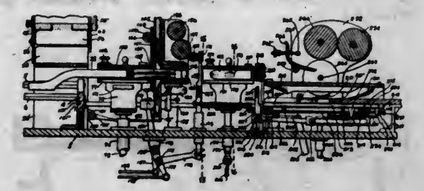
1. In a device of the character described, a fixed part, an axially movable part arranged to seat thereon, a clamping device for locking said movable part when seated, and a relatively movable clamp actuating device carried by one of said parts and operated by the seating and unseating movements.



1,487,017. CURTAIN ROD. BERT HENRY LILJA, Geneseo, Ill. Filed Jan. 11, 1922. Serial No. 528,382. 3 Claims. (Cl. 156—19.)

1. A fixture of the character described comprising a bracket adapted to be secured to a window casing or the like and having an outstanding arm, and a curtain rod comprising two complementary longitudinal sections, one of which comprises a portion pivotally attached at one end to the outstanding arm of the bracket, said portion having a socket in its inner side at a point adjacent to said bracket arm, and a portion merged into the first portion at an obtuse angle to the latter, the other of said rod sections comprising a portion connected with the second portion of the first rod section in axial alinement therewith, a second portion extending from the first portion of the said second rod section at an angle equal to

the angle of divergence of the portions of the first rod section and a third portion extending from the end of the second portion of the second rod section at such an angle as to position said third portion in a vertical plane extending at right angles to the vertical plane of the connected together portions of the two rod sections, and an elongated spring member attached at one end to said bracket arm and engaging at its free end with said socket to releasably hold said curtain rod in the position aforesaid.

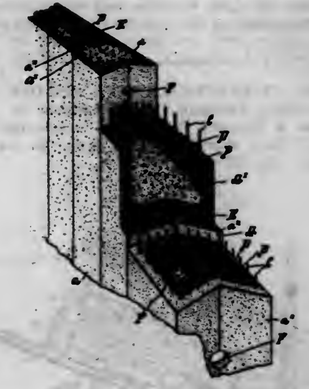


1,487,018. CIGARETTE-MAKING MACHINE. FLORIAN V. LINDSEY, Winnipeg, Manitoba, Canada. Filed Aug. 1, 1922. Serial No. 578,964. 2 Claims. (Cl. 131—5.)

2. In a cigarette making machine, the combination with a cone shaped casing, having a filling opening therein and a cylindrical forming tube secured to and continuous with the small end of the casing, of a cap demountably secured to the large end of the casing and provided centrally with a bearing sleeve, a short shaft rotatably mounted on the sleeve, a handle detachably secured to the outer end of the shaft, and a wire feeding coil contained within the casing and extending into the tube and having the end next the shaft passing through a cross opening provided in the shaft.

1,487,019. WRAPPING MACHINE. JOAQUIN ALEMANY LOPEZ, Habana, Cuba. Filed May 20, 1921. Serial No. 471,137. 11 Claims. (Cl. 93—4.)

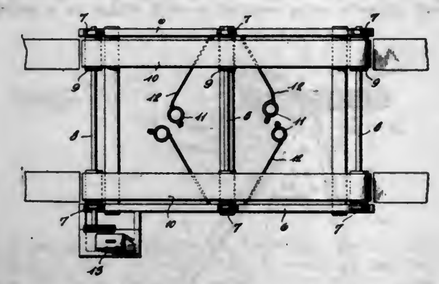
1. In a package wrapping machine, the combination with means for advancing a group of articles in one general direction along a primary level, thence to and along a secondary level, and thence to and along a tertiary level, of primary folding means for initially applying a wrapper to said group while in transit along said secondary level, secondary folding means for partially wrapping said group while in transit from said secondary



level to said tertiary level, and tertiary folding means for completing the wrapping of said group while in transit along said tertiary level.

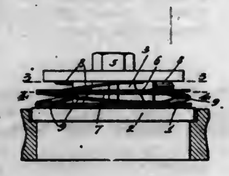
1,487,020. OXIDATION PROCESS. ALWIN MITTASCH, ERNST WILLFROTH, and OTTO BALZ, Ludwigshafen-on-the-Rhine, Germany, assignors to Badische Anilin- & Soda Fabrik, Ludwigshafen-on-the-Rhine, Bavaria, Germany, a Corporation of Germany. Filed Apr. 24, 1922. Serial No. 556,327. 3 Claims. (Cl. 260—138.)

1. The process of oxidizing organic compounds in a gaseous state catalytically with oxygen carrying gases, characterized by the use of a catalyst comprising an oxid of boron.



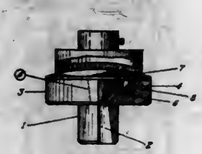
1,487,021. REENFORCED-CONCRETE CONSTRUCTION. LUTHER S. MUNSON, Washington, D. C. Filed Apr. 17, 1920. Serial No. 374,722. 9 Claims. (Cl. 61—53.)

1. A reenforced concrete wall comprising a series of contiguous piles, each formed of a reenforced hollow shell provided with openings registering with the openings of the adjacent pile when in the assembled relation, and with a monolithic concrete mass filling the central portions of adjacent piles and projecting from one pile to another through said openings and forming a concrete bond tying said piles together, the whole forming a substantially monolithic structure.



1,487,022. MEANS FOR STARTING AUTOMOBILE ENGINES. PAUL RABIDEAU, Clifton, Ill. Filed Feb. 5, 1923. Serial No. 616,982. 2 Claims. (Cl. 74—106.)

1. Means for starting an automobile engine comprising a pair of substantially horizontally disposed belts on the opposite ends of which the rear wheels of the automobile whose engine is to be started, and another driving

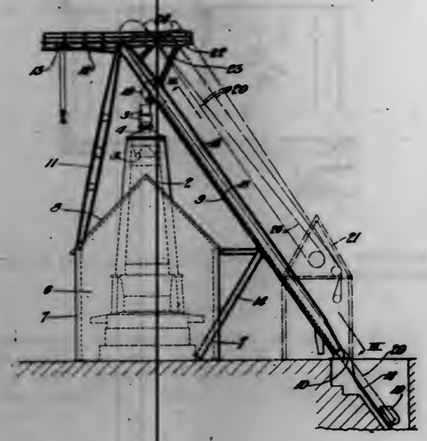


automobile, may be placed, and means to hold the two automobiles on the belts.

1,487,023. VALVE. MICHAEL RIESNER, Cincinnati, Ohio, assignor to Worthington Pump and Machinery Corporation, a Corporation of Virginia. Filed Apr. 13, 1920. Serial No. 373,610. 10 Claims. (Cl. 251—119.)

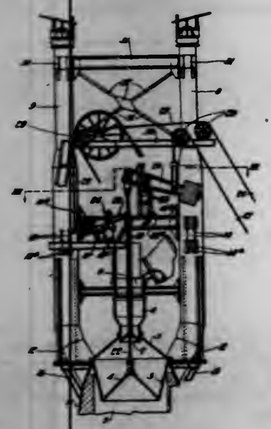
1. The combination with a plate valve, of an abutment, and springs intermediate the abutment and the valve and bearing against the valve at a considerable distance from its center for holding the valve against its seat, some of the springs providing small resistance to the opening movement of the valve and the other springs providing large resistance thereafter.

1,487,024. LENS-GRINDING LAP. ERDIS G. ROBINSON, Columbus, Ohio. Filed Jan. 15, 1920. Serial No. 351,545. 5 Claims. (Cl. 51—209.)



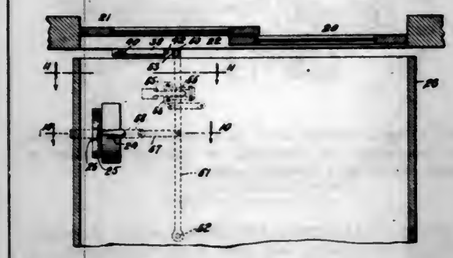
1. A lens grinding lap comprising a body portion, a removable grinding surface element, a centering stud on the base of said element, and an intermediate stud on the base of said element, said body portion having sockets for said studs.

1,487,025. INCLINED FURNACE HOIST. GEORGE H. ROSE, Ben Avon, Pa. Filed Jan. 16, 1923. Serial No. 613,002. 3 Claims. (Cl. 214—19.)



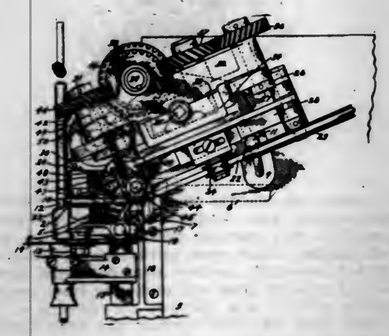
1. The combination with a blast furnace, of an inclined permanent skip hoist or bridge extending upwardly along and over the top of said furnace, said bridge having a cantilever upper end extending beyond the

furnace on a line at right angles to the vertical axis of the furnace forming a crane runway, and suitable upright supports on opposite sides of said furnace, one of said supports being secured to said bridge at a point



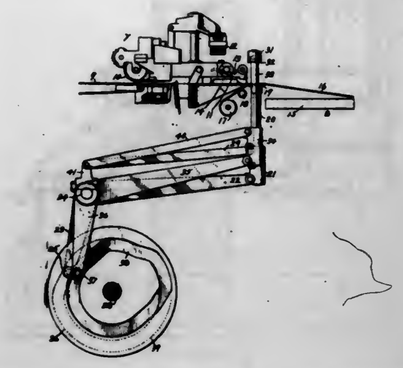
intermediate its ends and the other of said supports being secured to the bridge adjacent its upper end, said supports extending upwardly from bases free of said furnace.

1,487,026. BLAST FURNACE. GEORGE H. ROSE, Ben Avon, Pa., assignor to The American Steel and Wire Company of New Jersey, a Corporation of New Jersey. Filed Jan. 16, 1923. Serial No. 613,003. 4 Claims. (Cl. 266—31.)



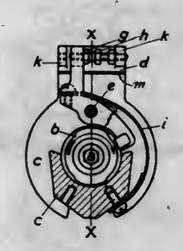
1. The combination with a blast furnace having a plurality of bleeder pipes extending upwardly therefrom, a charging hopper and bell, of girder members arranged transversely of and secured to said bleeder pipes, and means for supporting and operating said bell mounted on said girders.

1,487,027. SAFETY MECHANISM FOR ELEVATOR-SHAFT DOORS. ALBERT J. ROSENTRETER, Boonton, N. J., assignor to Frank E. Hutchins, New York, N. Y., and Edgar Zabriskie, Maplewood, N. J. Filed June 12, 1922. Serial No. 567,748. 14 Claims. (Cl. 187—49.)



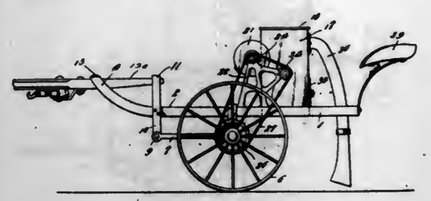
5. Safety mechanism for elevator shaft doors and elevator cars, as in claim 1, in which the locking means on the car comprises a pivoted bar supported horizontally below and from the bottom of the car and carrying on its free end said shoe member, means limiting the movement of said bar, a pivoted weighted dog supported from the bottom of the car and engaging said bar and yieldingly retaining said bar in normal position and returning the same after operation to such position, a vertically movable locking rod to engage said car control mechanism when the same is in neutral position and means intermediate said bar and rod for operating the rod from said bar.

1,487,028. CIGARETTE-MACHINE CUT-OFF. RUPERT E. RUNDELL, Brooklyn, N. Y., assignor to American Machine & Foundry Company, a Corporation of New Jersey. Filed Mar. 24, 1922. Serial No. 546,331. 8 Claims. (Cl. 131—37.)



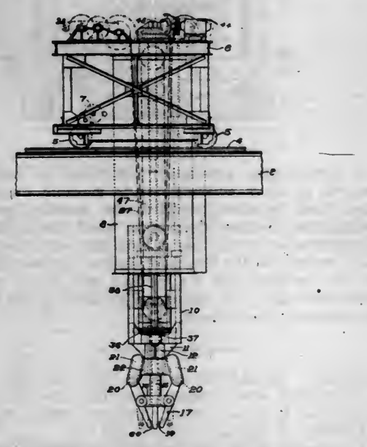
1. In a cigarette cutoff mechanism, the combination with a cigarette rod guide, of a flying frame, a cutoff knife carried by said frame, and means for moving said frame in an orbit oblique to said guide.

1,487,029. CIGAR-BUNCH-ROLLING-MECHANISM CHARGER. RUPERT E. RUNDELL, Brooklyn, N. Y., assignor to International Cigar Machinery Company, a Corporation of New Jersey. Filed Mar. 19, 1923. Serial No. 625,998. 12 Claims. (Cl. 131—39.)



1. In a cigar machine, the combination with long-filler feeding means, of bunch rolling means including a charge rolling element, and means for moving said element to cause it to act as an extension of said feeding means.

1,487,030. INTERRUPTER IN IGNITION APPARATUS FOR INTERNAL-COMBUSTION ENGINES. JACQUES SCHNEIDER and FREDESIC BILLON, Solothurn, and ERNST HURLIMANN, Zuchwil, Switzerland, assignors to the Firm Scintilla, Solothurn, Switzerland. Filed Aug. 22, 1919. Serial No. 319,229. 1 Claim. (Cl. 200—30.)

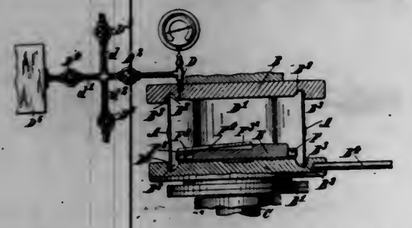


A circuit breaker for the primary winding of a magneto arranged to allow of operation in both directions of rotation, including a main supporting case symmetrical about a vertical plane, a rotary cam adapted to rock a pivoted lever carrying a contact, two symmetrically disposed seatings carried on said main case and insulated therefrom, a second contact adapted to be fitted to either of said seatings at will and coacting with the first mentioned contact in such a manner that the point of contact is in a definite position in the said vertical plane for both directions of rotation, a spring attached at one end to said pivoted lever and at its other end to one of a pair of symmetrical seatings on the main supporting case, and a single pivot on which the said pivoted lever rocks for both directions of rotation of the cam, said pivot being fixed to the main casing in the said vertical plane of symmetry.

1,487,031. BOLL-WEEVIL MACHINE. ENOCH SHADLE, McCrory, Ark. Filed Jan. 2, 1923. Serial No. 610,135. 1 Claim. (Cl. 43—140.)

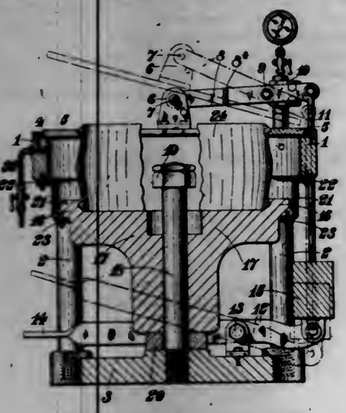
A boll weevil collecting and destroying machine comprising a wheel mounted frame, a receptacle mounted upon the frame, collecting nozzles connected with upper portion of the receptacle, means for exhausting air from the receptacle and located at the side therof opposite the side at which the nozzles communicate with the receptacle, an inclined screen located within the receptacle and disposed between the collecting nozzle and the air exhausting means, a trough located in the lower portion of the receptacle and having synclined side sections and provided between the said side sections with a semi-cylindrical foraminous section, a rotary member journaled above the cylindrical section of the bottom of the trough and having blades adapted to engage the upper surface of the trough and means for rotating said rotary element.

1,487,032. COMBINED SOAKING-PIT, TWISTING AND STRIPPER CRANE. MILO SHUTT, Alliance, Ohio, assignor to The Alliance Machine Company, Alliance, Ohio, a Corporation of Ohio. Filed Feb. 17, 1920. Serial No. 359,249. 11 Claims. (Cl. 22—95.)



1. A crane comprising hoisting means, twisting means, stripping means operable independently of said twisting means, and mechanism for operating any of said means at will, substantially as described.

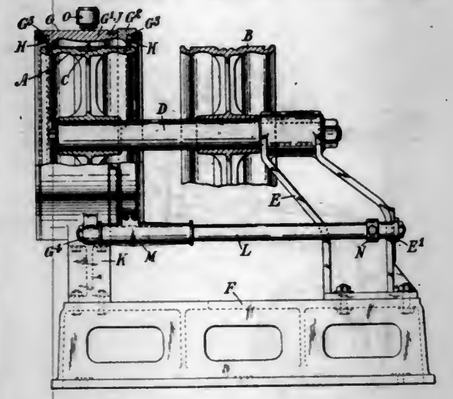
1,487,033. APPARATUS FOR MAKING THE COVERS OF PNEUMATIC TIRES. THOMAS SLOPER, Devizes, England. Filed Feb. 12, 1920. Serial No. 358,216. 21 Claims. (Cl. 154—10.)



1. In tire-shaping apparatus, the combination of two side plates adapted to make fluid-tight joints with the

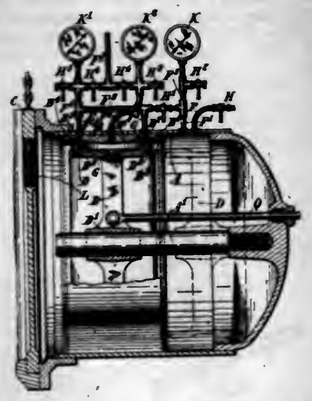
two edges of a flat endless tire band and to form therewith a drum-shaped chamber, which plates are so ar-

ranged as to enable one plate to move towards and away from the other, and means for establishing a fluid pressure within said chamber, substantially as described.



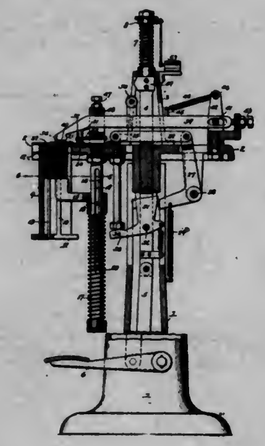
1,487,034. APPLIANCE FOR THE MANUFACTURE OF PNEUMATIC TIRES. THOMAS SLOPER, Devizes, England. Filed June 17, 1921. Serial No. 478,320. 11 Claims. (Cl. 154—10.)

1. Tire-shaping apparatus comprising in combination opposed members whereof one is movable towards and away from the other provided with annular lips for engaging the exterior edges of a "flat" tire-band and so constructed as to provide a fluid-tight chamber between them exterior to the tire-band whereof one wall is formed by the tire-band and the opposed wall has a relatively collapsible part, and means for exhausting the air from the chamber thus formed.



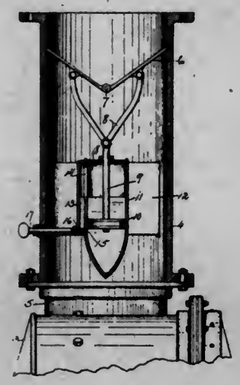
1,487,035. APPARATUS FOR USE IN THE MANUFACTURE OF RUBBER GOODS. THOMAS SLOPER, Devizes, England. Filed Jan. 11, 1923. Serial No. 611,993. 7 Claims. (Cl. 18—2.)

1. Apparatus for manipulating expansible "flat" endless bands comprising in combination a support-member for the band having an annular face whereof the general axial direction is parallel to a throughway axis thereof, a co-operating member divided circumferentially and having an annular face whereof the general axial direction is parallel to a throughway axis thereof, which members are of such diameter that one can slide axially within and out of the other, radially disposed flexible sealing-lips, one at each edge of the co-operating member on opposite sides of the dividing plane, arranged to bear against and seal with the edge-portions of the band on the support, which co-operating member is divided circumferentially between said sealing lips into two parts whereof one is movable towards and away from the other guiding means for guiding the movable part of said co-operating member axially in relation to the other,



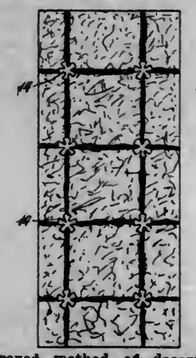
and sealing-means for making a fluid-tight joint between the circumferentially divided parts of the co-operating member, substantially as set forth.

1,487,036. APPARATUS FOR USE IN THE MANUFACTURE OF RUBBER GOODS. THOMAS SLOPER, Devizes, England. Filed Jan. 11, 1923. Serial No. 611,994. 10 Claims. (Cl. 18—2.)



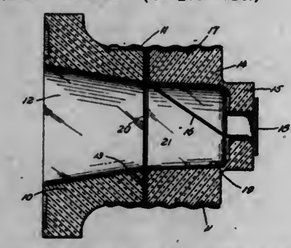
1. In apparatus for manipulating expansible "flat" endless bands, the combination of a support having an annular face for carrying a band, a co-operating member having an annular face arranged to receive the band from said support, two annular sealing lips carried on said member, one at each edge thereof, and arranged to make sealing contact with the edge portions of the band on the said support and thereby form a cavity whereof the said band constitutes a flexible wall, a chamber so disposed in relation to said member, said support and the band on the latter that the annular joint along an edge of the band between the band and its support is exposed to the interior of the chamber, and means for raising the pressure within said chamber above atmospheric pressure so as to force the band away from said support into said cavity, substantially as set forth.

1,487,037. APPARATUS FOR MARKING LAUNDRY. MORRIS T. SOUTHWICK, Hasbrouck Heights, N. J., assignor to Joseph H. Lynch, Asbury Park, N. J. Filed Nov. 27, 1922. Serial No. 603,595. 11 Claims. (Cl. 93—87.)



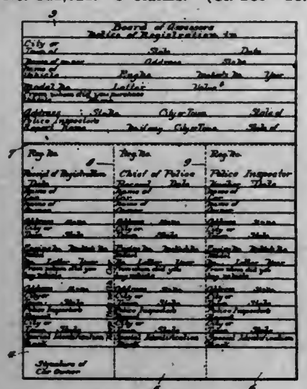
1. In a machine for affixing tags which have a clasp and sliding lock the combination of means for holding the tag with means for closing the clasp and sliding the lock.

1,487,038. DEVICE FOR CONTROLLING VALVE MOVEMENTS IN PRESSURE APPARATUS. IRA H. SPENCER, Hartford, Conn., assignor to The Spencer Turbine Company, West Hartford, Conn., a Corporation of Connecticut. Filed Jan. 5, 1920. Serial No. 349,033. 14 Claims. (Cl. 251—124.)



1. A valve casing, a housing located in said casing in the path of flow of fluid through said casing, a piston within said housing, a piston rod secured to said piston, a valve mounted on a pivot extending transversely to the direction of movement of said piston, means for varying the degree of equalizing movement of the pressure medium to opposite sides of the piston, and a pivotal connection between said rod and valve.

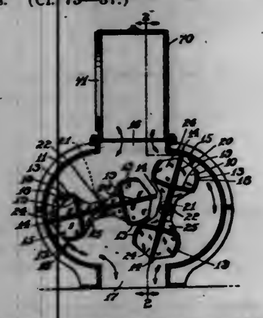
1,487,039. ART OF DECORATING WALLS, ETC. MAX SUHR, West Palm Beach, Fla. Filed June 29, 1923. Serial No. 648,478. 3 Claims. (Cl. 41—26.)



1. The improved method of decorating walls, etc., which consists in applying the decorating material and then forming the desired design thereon by applying the desired color and rolling the same in different directions.

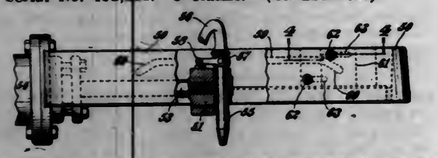
1,487,040. FUSE. JOHN A. THAKE and CHRISTIAN H. TORP, Brooklyn, N. Y. Filed Mar. 25, 1922. Serial No. 546,692. 4 Claims. (Cl. 200—130.)

1. In a renewable fuse plug a recessed body, a removable fuse element container and a partitioning element disposed intermediate said body and forming with said container a relatively restricted air chamber in which the fusible element is enclosed.



1,487,041. MEANS FOR PREVENTING VEHICLE THEFTS AND RECOVERY OF STOLEN VEHICLES. BENJAMIN F. TOZIER, Lynn, Mass. Filed Oct. 28, 1921. Serial No. 511,022. 3 Claims. (Cl. 283—18.)

1. A registration sheet having appropriately designated spaces for the name of the owner of a car and

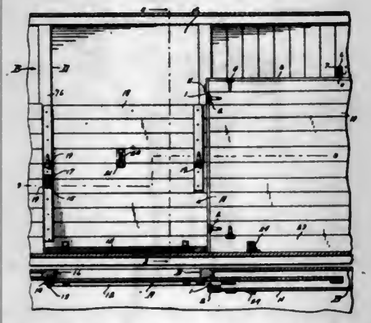


other data concerning said car, a corresponding sheet for the assessors bearing corresponding data, and a sheet for the use of an automobile bureau bearing co-related data, each sheet having an appropriately designated space for the signature of the party by whom the car is inspected, and coupons with data co-related to said sheets.

1,487,042. GAS METER. JOHN T. WILKIN, Connersville, Ind. Filed Aug. 18, 1922. Serial No. 582,660. 23 Claims. (Cl. 73—37.)

1. A gas meter, comprising two rotatable interengaging lobed impellers, a casing in which said impellers are mounted, means whereby said impellers are interconnected to rotate in opposite directions, and registering mechanism operatively connected to an impeller to be operated thereby, each of said impellers comprising skeletons having outwardly opening pockets at the tip ends and at the waist.

1,487,043. WELDING METHOD AND APPARATUS. FLOYD S. YOUTSEY, Collinsville, Ill., EDWARD C. WALKER, St. Louis, Mo., and ASHELEIGH S. MOSES, New York, N. Y. Original application filed Mar. 22, 1916, Serial No. 85,795. Patent No. 1,371,833, dated Mar. 15, 1921. Divided and this application filed Mar. 10, 1921. Serial No. 451,221. 8 Claims. (Cl. 113—59.)

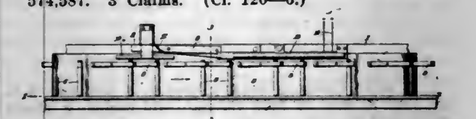


1. The method of welding a seam, comprising, impinging a welding flame upon the material at the seam, traversing the flame along the same while such flame is maintained at a normal intensity, and automatically reducing the flame below normal intensity when it reaches and impinges the material near the end of the seam.

1,487,044. ELLIPSOGRAPH. JOSEPH BARACH, Chicago, Ill. Filed Jan. 3, 1923. Serial No. 611,521. 5 Claims. (Cl. 33—30.)

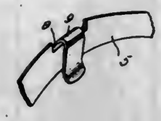
1. An ellipsograph comprising a bar, a flexible scriber-guiding member, a pair of holders for said member adjustably supported by the bar, and a scale bar removably and adjustably supported by the first-mentioned bar to extend transversely and project from one side thereof, said scale bar having means for temporary attachment to its extremity of that portion of the scriber-guiding member which is located between the aforesaid holders.

1,487,045. SLIDING DOOR. JOHN L. BISHOP, Beetown, Wis. Filed Feb. 14, 1923. Serial No. 619,025. 3 Claims. (Cl. 20—31.)



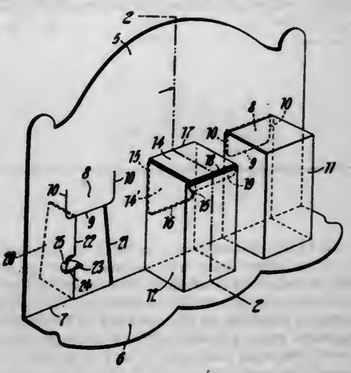
1. In combination with a wall provided with an entrance opening, a housing associated with said wall at one side of and adjacent to the entrance opening, the end of the housing adjacent to the opening being open, a sliding door for said opening, said door being of a length materially in excess of the width of the opening, an end portion of the door being arranged at all times within the housing, said portion of the door being provided with hangers at longitudinally spaced points, a trackway within the housing with which the hangers engage for supporting the door in its entirety for sliding movement into either open or closed position with respect to the entrance opening, said door when closed being entirely confined within the housing, the portion of the door extending across the entrance opening when the door is in closed position comprising a section adapted to swing in a direction away from the wall to open a portion of the entrance opening when the door is in closed position, and means for holding said section against swinging movement.

1,487,046. PROCESS OF RECOVERING VARIOUS SALTS FROM SALINE LIQUORS. GEORGE B. BURNHAM, Borosolvay, Calif. Filed June 16, 1919. Serial No. 304,500. 5 Claims. (Cl. 23—22.)



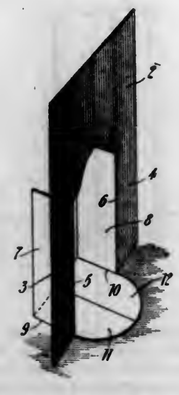
1. The process of recovering borax from aqueous solution containing borax and potassium chloride which consists in cooling the solution to crystallize out potassium chloride, removing the solution from the deposited crystals and exposing the brine to cold weather until borax crystallizes out.

1,487,047. ENVELOPE-CLOSING MACHINE. FRANK CLARKE, Waco, Tex. Filed July 12, 1922. Serial No. 574,587. 3 Claims. (Cl. 120—6.)



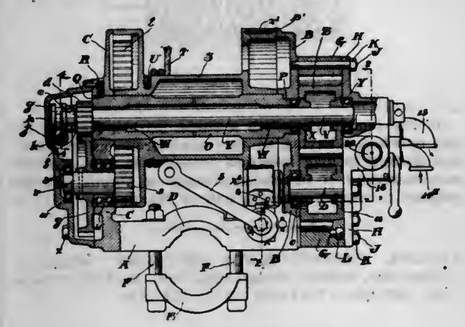
1. In an envelope closing device, a conveyor, pockets formed thereon for receiving the envelopes, a spring strip secured to the conveyor in rear of each pocket and having its forward end provided with a part to enter the pocket so as to press upon the envelope therein, said spring strip moving outwardly away from the conveyor when the same pass over the supporting rollers to facilitate the placing of the envelope in the pocket at the forward roller and for automatically discharging the envelope at the rear roller.

1,487,048. COAT-COLLAR SPRING. JOHN J. DEVLIN, Princeton, N. J. Filed Aug. 30, 1923. Serial No. 660,100. 1 Claim. (Cl. 2—63.)



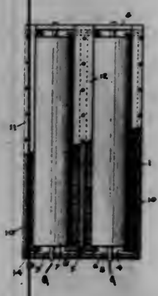
A coat collar spring comprising a strip of metal adapted to be positioned beneath the collar of a coat for holding the latter down and retaining the coat with its edges in adjacent relation, said spring having crossed ends, and means adapted for attachment to the body of the coat beneath the collar thereof and for loosely engaging the central portion of the spring and from which said spring is manually releasable for maintaining the spring against accidental displacement upwardly or from beneath the coat collar, said last named means comprising a downwardly facing U-shaped clip, and the central portion of the spring being provided with an elongated notch in its upper edge engaged by the clip, said notch being greater in length than the width of the clip for permitting limited lateral shifting of the spring relative to said clip.

1,487,049. DISPLAY DEVICE. ADOLPH DIETSCHE, Jr., New York, N. Y., assignor to American Lithographic Company, New York, N. Y., a Corporation of New York. Filed Mar. 7, 1922. Serial No. 541,851. 3 Claims. (Cl. 211—24.)



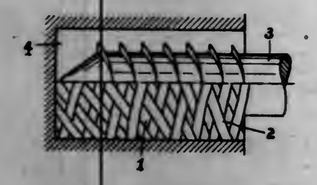
1. In a display device formed unitary from a sheet of material the combination of a wall portion and a base portion, a folding line in said sheet connecting said portions, a downreaching wing formed from said wall, the lower edge of said wing being spaced apart from said folding line, and an easel portion formed from said wall between said wing and folding line and articulated to said wall along a line approximately normal to said folding line, the width of said easel portion being less than the width of said wing.

1,487,050. DISPLAY DEVICE. ADOLPH DIETSCHE, Jr., New York, N. Y., assignor to American Lithographic Company, New York, N. Y., a Corporation of New York. Filed June 28, 1922. Serial No. 571,550. 5 Claims. (Cl. 211—24.)



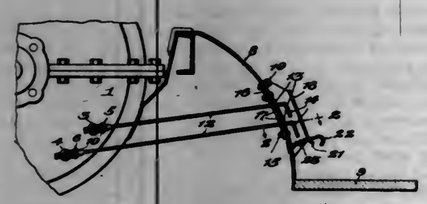
1. In a display device of sheet material the combination of an upstanding wall having opposite downwardly reaching legs, a wing articulated to the inner edge of each of said legs, and a base portion articulated to the bottom edge of each of said wings.

1,487,051. ROTARY-GEAR-MOTOR HOIST. JESSE DITSON, Littleton, Colo., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed July 20, 1921. Serial No. 486,099. 1 Claim. (Cl. 254—187.)



In a hoist, the combination of a base plate, an end frame carried by the base plate, a hollow center bearing supported at one end in said end frame, means for supporting the opposite end of the center bearing, a flanged drum rotatable on said center bearing and having one of its ends closed by said end frame, a motor cylinder secured directly to said end frame, an outer head secured to said cylinder and closing the outer side thereof, a drum driving shaft having bearings in the outer head, end frame and center bearing, means for operatively connecting the drum with said shaft, a motor for operating said shaft comprising a pair of gears, one of said gears mounted on the driving shaft, a relatively short driving shaft having a bearing at one end in the end frame and supported at the outer end in the cylinder head, a gear mounted on said short driving shaft meshing with said first mentioned gear, and a valve in the outer head for controlling the supply and distribution of motive fluid to said motor.

1,487,052. ERASER. DANIEL ENOMOTO, Berkeley, Calif. Filed Sept. 21, 1922. Serial No. 589,509. 2 Claims. (Cl. 15—210.)

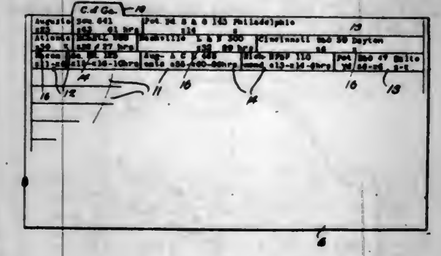


1. An eraser comprising a body member having a recess therein, a cylindrical erasing member rotatable in the recess and a brush within the recess having its bristles contacting with the periphery of said erasing member.

1,487,053. FIXING BLOCKS FOR MASONRY. ADALBERT BÉLA FELDMAR, Berlin, Germany. Filed Feb. 2, 1922. Serial No. 533,698. 3 Claims. (Cl. 72—101.)

1. The combination with a stone, marble, glass or the like foundation having an aperture therein, of an elastic and flexible tubular insertion arranged in said aperture and consisting of interlaced strands of fibrous material adapted to receive a screw, nail or the like.

1,487,054. PROTECTOR FOR OIL COCKS. ROBERT O. FERGUSON, Bristol, Tenn. Filed Nov. 20, 1922. Serial No. 602,198. 7 Claims. (Cl. 137—139.)

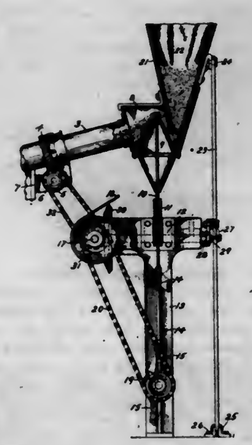


2. In a device of the class described, the combination of a pet cock, a rod extending therefrom through an opening in the fender plate, and a cover hinged to said plate and arranged to enclose and lock the outer end of said rod.

1,487,055. WATER HEATER. WELBORN CLAY GARNER, Seattle, Wash. Filed Dec. 23, 1922. Serial No. 608,743. 7 Claims. (Cl. 219—39.)

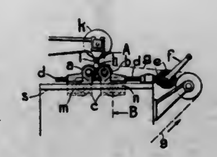
1. A water heater comprising a boiler, a tapered supporting member on the bottom of the boiler, a tapered casing supported from the supporting member being spaced therefrom by an air space, and a heating element within the casing.

1,487,056. MEANS FOR APPORTIONING LIABILITY. JAMES D. GILL, Baltimore, Md. Filed Apr. 23, 1923. Serial No. 634,029. 5 Claims. (Cl. 283—32.)



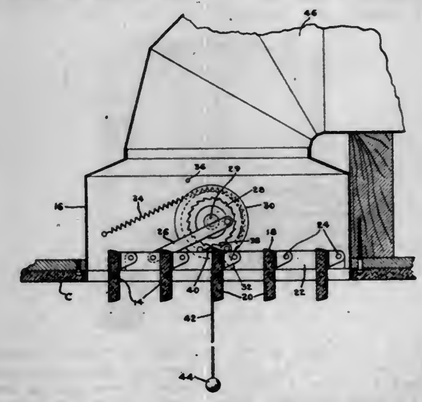
1. In an index system for a railroad of destination, a plurality of members each having means for identifying a railroad of origin, one member being provided for each railroad of origin, each member containing the designation of an ultimate junction on the railroad of destination, an initial junction point on each railroad of origin being displayed on the member belonging to said railroad of origin, there being designations on each member indicating the route between said initial junction point and the ultimate junction point on said member and the distance between the junction points.

1,487,057. BONDING MATERIAL. ELWOOD GOSSETT, Winnipeg, Manitoba, Canada. Filed Feb. 9, 1922. Serial No. 535,387. 4 Claims. (Cl. 106—24.)



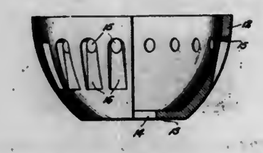
1. The herein described bonding material consisting of bentonite, sulphate of copper and powdered iron rust mixed in water, to which is added a solution of salt water.

1,487,058. TOBACCO FEED. GEORGE W. GWINN, Brooklyn, N. Y., assignor, by mesne assignments, to American Machine & Foundry Company, a Corporation of New Jersey. Filed Aug. 13, 1921. Serial No. 492,208. 21 Claims. (Cl. 83—44.)



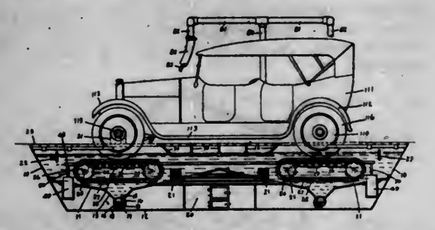
1. In a tobacco feed, the combination with a source of tobacco supply, of a delivery chute leading therefrom, and means acting on the tobacco in said source to toss it into said chute.

1,487,059. WINDING MACHINE FOR THE MANUFACTURE OF INSULATING TUBES, HOLLOW INSULATING CYLINDERS, AND THE LIKE. EMIL HAEFELY, Basel, Switzerland. Filed Oct. 25, 1919. Serial No. 333,343. 2 Claims. (Cl. 93—81.)



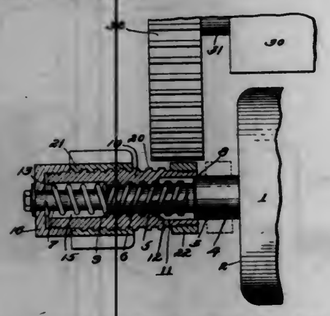
1. A winding machine for the manufacture of insulating tubes, insulating hollow cylinders and the like for electrotechnical purposes from a band of fibrous material supplied with an agglutinant, comprising two freely rotatable and horizontally adjustable heating cylinders, bearing slides for supporting and guiding the same in horizontal direction, a freely supported driven rotary winding mandrel between the said heating cylinders capable of free elevation to wind the band upon it and to frictionally rotate said heating cylinders, a freely rotating heavy pressure cylinder, a freely rotating smaller intermediate pressure cylinder arranged to transmit the pressure of said heavy cylinder onto the winding mandrel, and positively acting common adjusting means connected with said bearing slides to move gradually and simultaneously the heating cylinders apart from each other during the winding operation, substantially as and for the purpose described.

1,487,060. REGISTER FOR HOT-AIR FURNACES. DANIEL HANDELAN, Minneapolis, Minn. Filed Mar. 14, 1922. Serial No. 543,619. 3 Claims. (Cl. 98—89.)



1. A register for hot air furnaces comprising a plurality of louvers having pockets filled with plastic material whereby the register when closed presents a substantially unbroken continuation of the adjacent wall surface.

1,487,061. PUMP-CYLINDER PROTECTOR. LUM M. HEFLIN, Sonora, Tex. Filed Feb. 17, 1923. Serial No. 619,611. 1 Claim. (Cl. 103—202.)

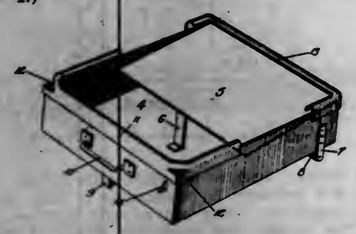


A pump cylinder protector including a protector body engageable with the pump piston rod, said protector being of semi-spherical configuration and provided with an annular series of openings adjacent its upper margin each of which communicates with a water passageway in the outer face of the body, substantially as described.

1,487,062. WASHING MACHINE FOR VEHICLES. JOHN T. HOHL, Indianapolis, Ind. Filed Sept. 9, 1921. Serial No. 499,436. 6 Claims. (Cl. 141—1.)

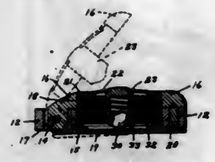
1. A washing machine for automobiles having vehicle wheels and including in combination a tank, movable vehicle supporting means and movably mounted, mechanism for moving said supporting means to immerse the vehicle wheels in the tank, and power means for moving said supporting means to rotate the vehicle wheels within the tank.

1,487,063. ENGINE STARTER. JESSE A. HOLTON, Boston, Mass., assignor, by mesne assignments, to The First National Bank of Boston, trustee, a Corporation. Filed Oct. 26, 1918. Serial No. 259,866. 7 Claims. (Cl. 74—7.)



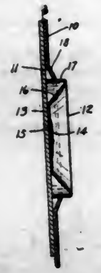
1. In a starting device, the combination with a member to be driven, of a driving member with an exteriorly threaded portion, a sleeve threaded thereon and having an exteriorly threaded portion, and a pinion threaded on said sleeve, the thread on the pinion and the thread on the exteriorly threaded portion of the sleeve being relatively so constructed and arranged as to oppose the vibratory shifting of the pinion into contact with the driven member.

1,487,064. SEWING-MACHINE SHUTTLE. EDGAR D. HUME, Collingswood, N. J., assignor to Summit Thread Company, East Hampton, Conn., a Corporation of Maine. Filed July 28, 1922. Serial No. 578,030. 3 Claims. (Cl. 112—233.)



1. In a sewing machine shuttle, the combination with a body including a side portion, a circular curb, a central post, and means adapted to confine a bobbin on the post and adjustable to and from operative position, of a sleeve adapted to be positioned about the inner end of the post, a disk fitted on the sleeve and free to move longitudinally thereof, a stop detachably engaged with the post between the outer end thereof and said sleeve, and a spring interposed between the disk and side portion of the shuttle body, the stop limiting outward movement of the disk under pressure of the spring and the sleeve at the inner end of the post providing an abutment limiting inward movement of the stop.

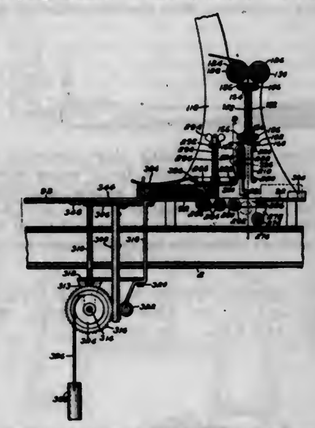
1,487,065. REFRIGERATOR DRIP PAN. GEORGE FALCONER IRONS, Regina, Saskatchewan, Canada. Filed July 6, 1922. Serial No. 573,138. 4 Claims. (Cl. 220—1.)



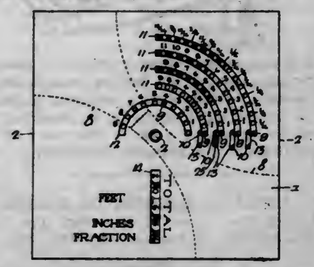
1. A liquid container comprising a casing having an inclined top extending between the side walls from a position intermediate of the length of the casing to one end wall thereof, said casing having discharge orifices in the vicinity of the other end wall, a roller journalled under the bottom of the casing in the vicinity of one end and means for supporting the other end of the casing so that the bottom is substantially horizontal.

1,487,066. SEWING-MACHINE SHUTTLE. HENRY G. JOHNSON, East Hampton, Conn., assignor to Summit Thread Company, East Hampton, Conn., a Corporation of Maine. Filed June 21, 1922. Serial No. 569,888. 2 Claims. (Cl. 112—233.)

1. A shuttle having a bobbin chamber, a frictional element at one end of the chamber, a pressure-supporting element at the opposite end of the chamber, a bobbin engaging post having a bore closed at one end and open at the opposite end, said open end being contracted, a disk fixed to the closed end of the post and bearing on said frictional element, a spring within the post seated on the closed end thereof, and a ball yieldingly held by said spring against the contracted end of the bore, a portion of the ball normally projecting from the post and being adapted to roll on said supporting element.



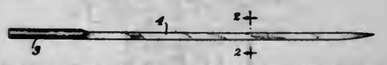
1,487,067. ATTACHING BUTTON. RANDALL H. JONES, Indianapolis, Ind. Filed Apr. 12, 1923. Serial No. 631,528. 3 Claims. (Cl. 40—20.)



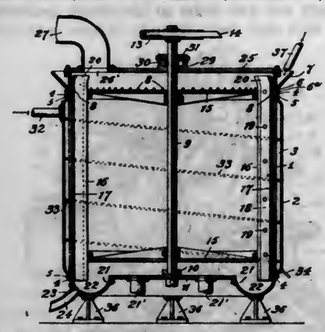
1. The combination with an object, of a plate having an aperture therein to which plate said object is to be secured, said aperture being surrounded by an inwardly extending bent portion for providing an engaging and securing edge, a securing button having a central portion secured to said object, an outwardly flared skirt portion formed integral therewith, and a peripheral flange portion turned inwardly from the outer periphery of said skirt portion, said flange portion being of substantially the same diameter as said aperture for causing a close fit therewith and of such depth as to permit of frictional engagement and be securely held in fixed position by the surrounding and engaging edge of the bent portion of said plate.

1,487,068. SLICING OR CUTTING MACHINE. FREDERICK XENOPHON KUHN, Brookline, Mass., assignor to Mojonnier Bros. Co., a Corporation of Illinois. Filed May 10, 1920. Serial No. 380,194. 21 Claims. (Cl. 93—2.)

1. In a machine of the class described, in combination, wrapping means comprising a paper supply; means to feed paper from said paper supply; cutter means spaced from said paper feeding means to sever a section of paper from the paper fed by said feeding means; actuating means for said cutter means; guiding means to guide the paper from said feeding means to said cutter means; paper clamping means; actuating means therefor; guiding means for the paper intermediate said cutter means and said clamping means; and means to wrap a severed section of the paper about a piece of the material to be wrapped.

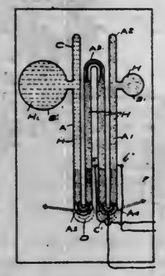


1,487,069. ADDING MACHINE. JOHN L. LANDENBERGER, Philadelphia, Pa. Filed Mar. 14, 1921, Serial No. 452,379. Renewed July 12, 1922. Serial No. 574,544. 8 Claims. (Cl. 235—78.)



1. In a machine of the type specified, a plurality of superimposed discs diminishing in diameter toward the top, each of said discs having a series of apertures in that portion extending beyond the edge of the overlying disc, and each of said discs overlying the bottom disc having a series of recesses at the edge corresponding with its said apertures.

1,487,070. IMPALING PIN FOR MACHINES FOR REMOVING CIGAR BUNCHES FROM MOLDS. JAMES W. LEARY, Brooklyn, N. Y., assignor to International Cigar Machinery Company, New York, N. Y., a Corporation of New Jersey. Filed Oct. 20, 1921. Serial No. 508,964. 4 Claims. (Cl. 131—9.)

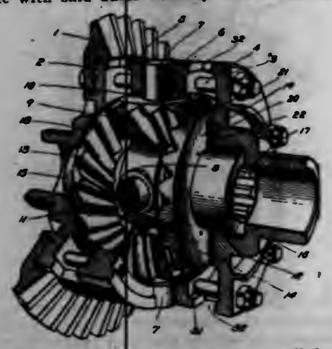


3. An impaling pin for machines for removing cigar bunches from molds said pin having a round supporting section and an effective section which is triangular in cross-section and adapted to lift the bunch from the mold by the engagement with the bunch of one of the flat surfaces of said pin, the edges of the triangular section of said pin being coincident with the periphery of its round section.

1,487,071. MACHINE FOR TREATING MATERIALS. MAY C. MABEE, Toledo, Ohio. Filed Sept. 11, 1915. Serial No. 50,224. 4 Claims. (Cl. 159—1.)

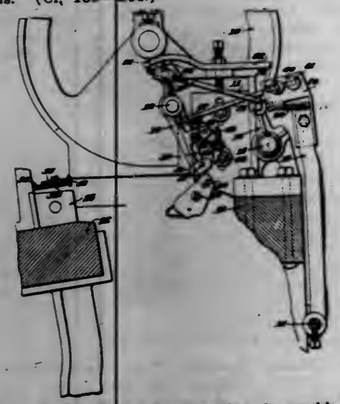
1. In an apparatus for treating liquids or substances containing liquid the combination of a substantially vertically disposed cylindrical container, means for heating the wall of the container, said container having at one end adjacent the periphery thereof an inlet and an outlet adjacent the opposite end, means co-operating with said surface whereby the material to be treated from its point of introduction to its discharge is permitted to move circumferentially and longitudinally of the container while maintained in film or layer formation adjacent the inner surface of said wall of the container, and said container having an opening in opposite ends thereof for the free escape of vapors and gases from the central space within the film or layer.

1,487,072. AUTOMATIC THERMOMETRIC REGULATOR. ROBERT MACLAREN, Culross, Scotland. Filed Dec. 23, 1921. Serial No. 524,553. 2 Claims. (Cl. 200—141.)



1. An automatic regulator of the class described comprising a double U-shaped tube and having a bulb or sphere forming part of one of the U-shaped tubes, the other U-shaped tube being also provided with a small sphere or bulb branching therefrom the extreme ends of both being sealed, terminals mounted in the lower ends of one of the U-shaped tubes the switch ends of the tubes being filled with mercury, the remaining space in the leg of the tube together with large sphere being filled with glycerine or other suitable fluid, while the remainder of each set, and axle-engaging means carried by the refilled with nitrogen or other inert gas.

1,487,073. DIFFERENTIAL GEARING. ANDOR T. NOGRADY, Wyandotte, Mich., assignor to Nogrady Differential Company, Wichita, Kans., a Corporation of West Virginia. Filed Mar. 17, 1921. Serial No. 453,050. 6 Claims. (Cl. 74—99.)



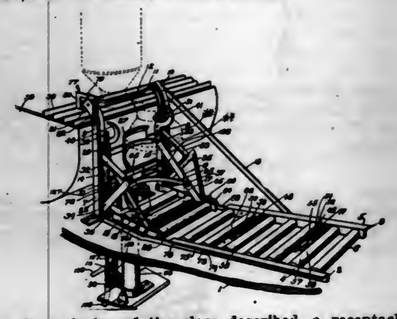
1. In a differential gearing, a driving member including a housing, pinion gears mounted in the housing, cooperating driven gears within the housing and meshing

with the pinion gears, the driven gears and the housing having sets of co-operating clutch faces, there being lubricating ducts between the driven gears and the housing for each set, and ports in the driven gears to communicate with said ducts whereby relative movement be-

tween the driving gears and driven gears will force lubricating material through the ports and into the ducts to supply lubricant between the co-operating clutch faces of each set, and axle-engaging means carried by the respective driven gears.

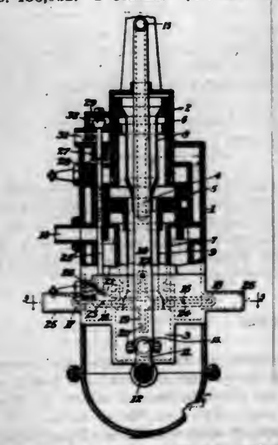
1,487,074. THREAD-PARTING MECHANISM FOR WEFT-REPLENISHING LOOMS. JONAS NORTHROP, Hopedale, Mass., assignor to Hopedale Manufacturing Company, Milford, Mass., a Corporation of Massachusetts. Filed Feb. 25, 1919. Serial No. 279,096. 12 Claims. (Cl. 139—264.)

1. A weft replenishing loom having, in combination, a bobbin changing mechanism, a lay, a shuttle feeler having a thread parting mechanism mounted thereon provided with a cutting knife having provision to be opened to engage the filling thread by the bobbin changing mechanism when replenishment is indicated independently of movement of the shuttle feeler, an actuating device mounted on the lay for actuating the thread parting mechanism to cause the knife to sever and to hold the filling thread.



1,487,075. FALSE-TOOTH CLEANER. HENRY H. OLSON and JENNIE E. STEVENS, Ben Lomond, Calif. Filed Aug. 18, 1923. Serial No. 658,139. 1 Claim. (Cl. 132—90.)

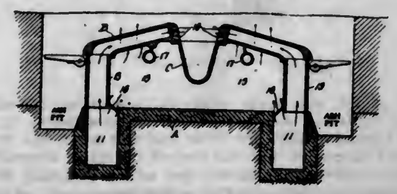
A false tooth cleaner comprising a handle; a plurality of bristles secured upon opposite sides of the handle adjacent one end thereof, the bristles upon one side being short and stiff and the bristles upon the opposite side being relatively long and flexible for cleaning the outer and inner sides respectively of a plate of false teeth; a cleaning element pivotally mounted upon the opposite end of the handle, said element having a blunt scoop shaped end adapted to clean the concavities of the plate;



and a sharp pointed cleaning blade pivotally mounted adjacent the cleaning element for cleaning between the teeth of the plate, the cleaning element and blade being normally folded into inoperative position within recesses formed within the end of the handle and being independently movable to outwardly extending operative positions.

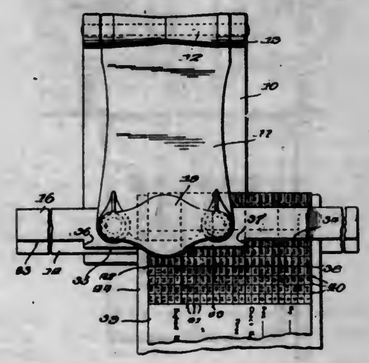
1,487,076. CAN-EMPTYING MACHINE. FRANK PIGLEY, Kansas City, Mo. Filed Apr. 2, 1921. Serial No. 457,859. 17 Claims. (Cl. 214—1.)

1. In a device of the class described, a receptacle-receiving carriage, means for feeding receptacles to said carriage, means for imparting a swinging motion to the carriage to invert the receptacles to dumping position, and means for causing a vertical movement of the carriage in addition to its swinging movement.



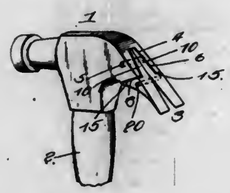
1,487,077. INTERNAL-COMBUSTION ENGINE. THEODORE PRATT, Glen Cove, N. Y. Filed Jan. 10, 1921. Serial No. 436,032. 2 Claims. (Cl. 123—90.)

1. The combination with a cylinder equipped with the usual coacting parts of a connecting rod which extends longitudinally adjacent to the exterior of the cylinder,



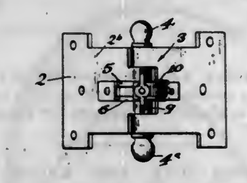
an exposed cross head on the outside of the cylinder arranged to slide transversely of the cylinder, means on the connecting rod which engage with the cross head and reciprocate it during the movements of the connecting rod, a cam like surface on the cross head, an exposed vertically movable rod on the exterior of the cylinder moved by its intermittent engagement with said cam and a valve which controls the admission of the power generating medium to the cylinder actuated by the vertical movements of said rod.

1,487,078. UNDERFEED STOKER FURNACE. JOSEPH H. ROACH, Brookline, Pa.; Walter T. Roach executor of said Joseph H. Roach, deceased. Filed Aug. 20, 1920. Serial No. 404,738. 1 Claim. (Cl. 110—47.)



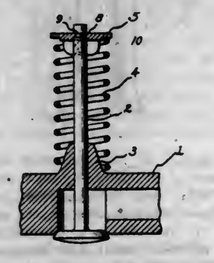
In a furnace a rigid foundation, an elongated retort a low pressure chamber beneath the retort, grates at opposite sides of the retort each comprising spaced hollow grate-bars open at both ends, said grate-bars communicating at one end with the retort, high pressure chambers in the foundation parallel to said retort and open at the top, conduits supported at the outer side of said high pressure chambers and extending nearly across the same whereby passages are provided leading to a low pressure chamber beneath the grates and the retort, said conduits opening at their upper ends into said grate-bars, and pivoted dampers extending parallel to said retort between the adjacent inner walls of the conduits and the high pressure chambers respectively, substantially as set forth.

1,487,079. COMBINED SHEET SEVERING AND FASTENING DEVICE. GEORGE B. STILLWAGON, Redstone Township, Fayette County, Pa. Filed June 26, 1923. Serial No. 647,885. 12 Claims. (Cl. 93—1.)



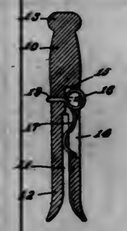
1. In a device of the class described, in combination, opposed members mounted for relative movement in approaching and retreating directions to closed and open positions and adapted in closed position to engage and hold between them a plurality of superposed sheets of paper or the like, paper fastening mechanism carried by said members, and a paper severing edge upon one of said members.

1,487,080. CLAW HAMMER. ROBERT G. THOMPSON, Seattle, Wash., assignor to Charles W. Nelson, King County, Wash. Filed Mar. 10, 1923. Serial No. 624,194. 2 Claims. (Cl. 254—24.)



1. A claw hammer comprising a head formed with a recess having upwardly converging side walls, a pair of claws having tongue extensions, the said extensions together forming a projection adapted to seat in said recess with its relatively outer walls conforming to the shape of the side walls of the recess, a pivot pin passed through the walls of said recess and through said tongues, and a guide pin passing through the claws forwardly of the tongues and permitting said claws to move laterally relative to each other while preventing other relative movement of the claws.

1,487,081. REVERSIBLE LOCK HINGE. FRED B. WALTS, Los Angeles, Calif. Filed Sept. 1, 1922. Serial No. 585,644. 3 Claims. (Cl. 16—140.)

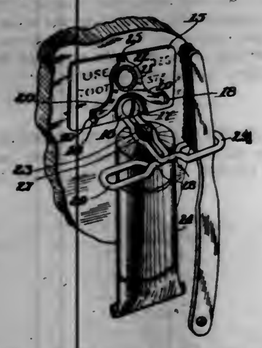


1. An invertible and reversible hinge comprising a pair of pivotally connected plane leaf members, curved, nesting elements respectively carried by the hinge leaves and being arranged concentric to the axis of the hinge, and means cooperating with the said elements for fastening the hinge leaves in adjusted position.

1,487,082. SPRING-RETAINING DEVICE. ROY E. WOLTKAMP, Kansas City, Kans. Filed Jan. 3, 1923. Serial No. 610,480. 2 Claims. (Cl. 251—132.)

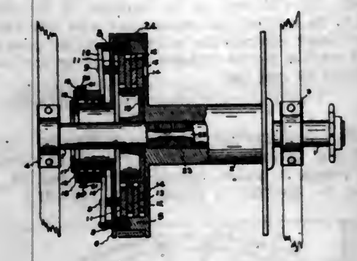
1. A spring retaining device comprising a pair of members hingedly connected together and each member having a semi-circular notch in its inner edge for receiving the valve stem, said notches having semi-annular shoulders for engaging the groove in the stem.

1,487,083. CLOTHESPIN. RALPH H. ZIMMERMANN, Lincoln, Nebr. Filed Feb. 5, 1923. Serial No. 617,004. 4 Claims. (Cl. 24—138.)



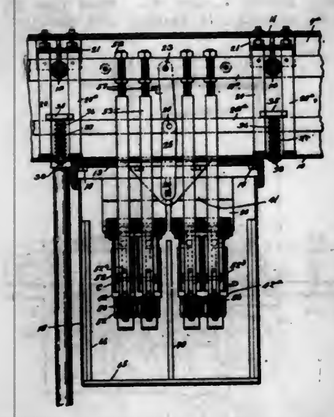
1. A clothes pin comprising a body porvided at one end with a slot defining spaced legs upon opposite sides thereof, one of said legs being longitudinally slotted near its inner end and a combined reinforcing and retaining means encircling the body.

1,487,084. COMBINATION RACK AND BED. ROBERT L. ADAMS, Los Angeles, Calif., assignor to (Mrs.) M. J. Beebe, San Bernardino, Calif. Filed Mar. 29, 1923. Serial No. 628,443. 2 Claims. (Cl. 5—119.)



1. In combination, a cot frame and means for securing said frame to a running board, said securing means being provided with a plurality of sockets for alternative use.

1,487,085. PASTE-TUBE AND BRUSH HOLDER. ROBERT K. BLACKSHEAR, Corsicana, Tex. Filed July 27, 1923. Serial No. 654,197. 4 Claims. (Cl. 248—20.)

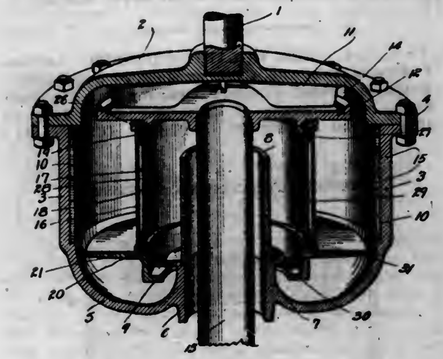


1. A holding device of the character described comprising a plate having an outwardly bent portion through which a screw head may be extended, outstruck ears formed in the plate, arms pivoted on the ears, a closure member carried by the arms, a bracket comprising a single length of resilient metal bent between its ends to form a loop which is disposed beneath the outwardly bent portion so as to be engaged by said screw, jaws extending at an angle from the loop and normally urged to clamping position, and extensions on the jaws overlapping and projecting in opposite directions, said extensions being bent to provide loops for the purpose described.

1,487,086. CLUTCH AND BRAKE COMBINED. WILLIAM LESLIE BRUNER, Wichita Falls, Tex. Filed Nov. 17, 1922. Serial No. 601,566. 1 Claim. (Cl. 192—17.)

A clutch and brake combined, comprising a hollow shaft capped at each end and having holes therein to oil the bearing between the drum and said shaft, the drum having flanges on each end thereof the clutch comprising four or more disks, having two or more of said disks attached to a driving collar, which forms a part of said hollow shaft, and two or more of said disks attached to a clutch housing, which forms a part of said drum, a coil spring, a compressing collar, three or more clutch fingers each having a pin attached thereto, which make contact with the said disks, a spring retaining nut to hold said coil spring in lace, a clutch operating lever to operate said clutch, and the attachments thereto, a brake comprising a brake band surrounding the said clutch housing with one end anchored to a frame by any suitable means, and the other end attached to a brake arm, said brake arm being attached to a clutch and brake lever by means of a rod.

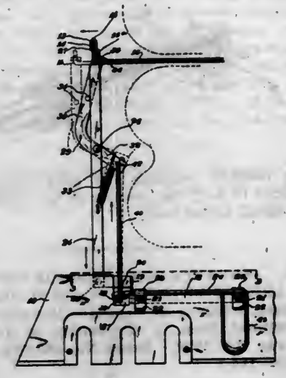
1,487,087. ELECTRIC SWITCH. GEORGE A. BURNHAM, Saugus, Mass., assignor to Sears B. Condit, Jr., Brookline, Mass. Filed June 17, 1918. Serial No. 240,317. 7 Claims. (Cl. 200—150.)



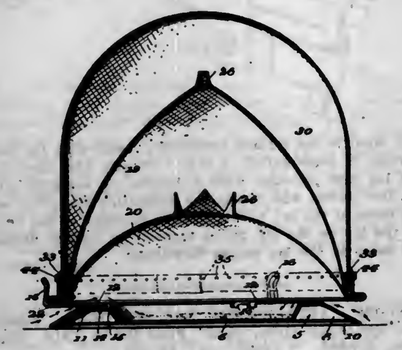
1. In an electric switch, stationary switch members immersed in a bath of oil, a plurality of independent movable switch members arranged to conjointly conduct current between said switch members, and means which admits of the independent adjustment of said movable members from without said bath of oil.

1,487,088. PHONOGRAPH-RECORD HOLDER AND ALBUM. CHARLES C. CASEY, Detroit, Mich. Filed June 24, 1921. Serial No. 480,088. 8 Claims. (Cl. 129—20.)

1. A holder of the type described comprising a back board, a cover, stepped pockets between said back board and cover and having lower open ends, and means closing the lower open ends of said pockets.



1,487,089. SEPARATOR. WILLIAM C. COLEMAN, Wichita, Kans. Filed Oct. 8, 1923. Serial No. 667,208. 8 Claims. (Cl. 83—67.)

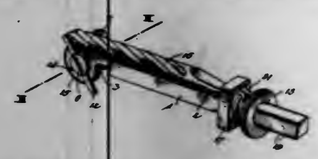


1. A separator including two hollow members, one of which is a rotor and the other a stator, one within the other in spaced relation, a body of mercury in the rotor, means for introducing material to one of the members, means for discharging material from one member to the other member and means for returning some of the material to the first member.

1,487,090. ACCELERATOR. JAMES B. COLLINS, Tulsa, Okla. Filed Feb. 3, 1923. Serial No. 616,726. 7 Claims. (Cl. 74—39.)

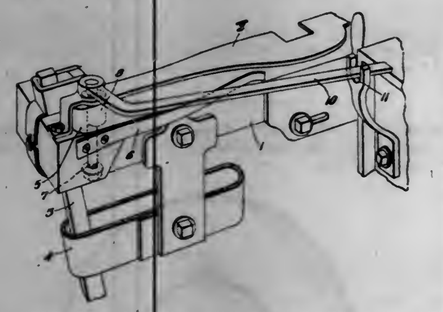
1. In combination with a throttle rod having a throttle arm adapted at its free end for engagement with a throttle link, of a support arranged in spaced relation to the throttle arm, a rigid member pivoted at one end to the support and having its opposite end engaged with the throttle link receiving end of the throttle arm to be shifted thereby, a lever pivoted to the member adjacent the last named end thereof and adapted for the reception of the throttle link, means limiting the pivotal movement of the lever in one direction, means connecting the lever and member urging the lever in said direction, a depressible foot pedal, and a connection between the lever and foot pedal shifting the lever against the action of said means when the foot pedal is depressed.

1,487,091. FLYTRAP. FRED DAY, Alcester, S. Dak. Filed Feb. 16, 1922. Serial No. 536,969. 6 Claims. (Cl. 43—118.)



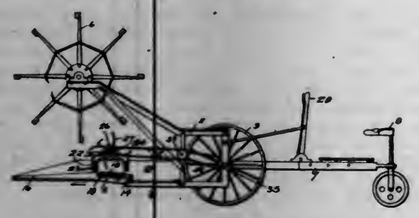
1. A trap comprising a bait receiving pan, a plurality of radially extending arms carried thereby, a base member of annular formation mounted on said arms and having upper and lower sides arranged in spaced relation, inner and outer trapping sections having their lower portions arranged between said upper and lower sides, the lower side of said base being provided with projections engaging the lower portions of said trapping sections, the lower side of said base being extended inwardly for a substantial distance beyond the upper side of the base, thereby to define an annular baffle.

1,487,092. GAUGE. EDWARD R. DINGEL, Detroit, Mich. Filed Dec. 13, 1922. Serial No. 606,591. 1 Claim. (Cl. 33—201.)



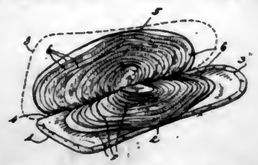
A gauge comprising a shank having a gauge face, said shank having an opening therethrough near one end, a rotatable member mounted for rotation in said opening, said member having a head at one end engaging one face of the shank and having its other end threaded, a nut on the threaded end of said member whereby the rotatable member may be held in any desired position

of angular adjustment, said head having a channel formed therein, a gauge member longitudinally slidable within said channel, and a spring-pressed pin in said



rotatable member engaging the gauge member within said channel to hold the member at any desired position of longitudinal adjustment.

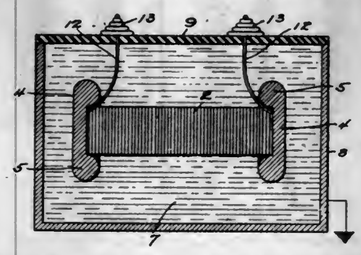
1,487,093. SHUTTLE-BOX TENSION-CONTROLLING MECHANISM FOR LOOMS. CLARE H. DRAPER, Hopedale Mass., assignor to Hopedale Manufacturing Company, Milford, Mass., a Corporation of Massachusetts. Filed Aug. 23, 1922. Serial No. 583,782. 3 Claims. (Cl. 139—185.)



1. Shuttle box tension controlling mechanism for looms having, in combination, a lay, a shuttle box carried by the lay and provided with a binder, an eccentric pivot for the binder, and means for oscillating the pivot with the beats of the lay to increase the pressure of the binder on the lay as the lay moves rearwardly, and to decrease the same as the lay moves forwardly.

1,487,094. ATTACHMENT FOR HEADERS. FRANCIS A. ENGASSER, Helm, Calif. Filed Oct. 2, 1919. Serial No. 327,981. 1 Claim. (Cl. 56—58.)

In an apparatus of the character described means for cutting stalks, means for directing said stalks toward said cutting means, a reel having a plurality of longitudinal blades of curved cross-section arranged above the cutting means for preventing engagement of the lower portions of the stalks with the cutting means and for sweeping the upper ends of the stalks into the cutting means, means for rotating the reel and means for vertically and horizontally adjusting said reel, comprising vertically adjustable U-bars, and bearings for said reel horizontally adjustable on said U-bars.



1,487,095. ARCH SUPPORT. JAMES A. FOSTER, Detroit, Mich. Filed Aug. 17, 1922. Serial No. 582,387. 2 Claims. (Cl. 36—71.)

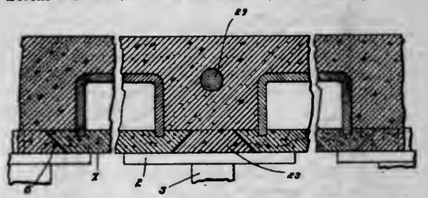
1. An arch support for shoes and the like comprising a top ply and a bottom ply, said plies having an outline conforming substantially to the interior shape of the shank portion of a shoe and extending into the heel portion and forwardly to a line beyond and adjacent to the metatarso-phalangeal joint of the human foot, and a padding between said plies comprising a plurality of leaves, arranged in superposed relation and of different areas and outlines, said leaves being arranged in pairs with one leaf of each pair integral with the other leaf of the pair at one edge, said leaves of each pair being superposed by folding along their integral connecting edge portions with the outer of said plurality of superposed leaves embracing inner leaves, the folded portions connecting the leaves of each pair forming a thickened edge portion for the padding to support the inner longitudinal arch of the foot, and means extending along the line of fold of the several pairs of leaves for securing the pairs of leaves together.

2. An arch support as characterized in claim 1 and wherein said means for securing the several pairs of leaves together comprises a line of stitching extending along the fold of the several pairs of leaves and through said leaves at the longitudinal center line of said fold.

1,487,096. ELECTRICAL CONDENSER. LEONARD F. FULLER, Palo Alto, Calif., assignor, by mesne assignments, to Federal Telegraph Company, San Francisco, Calif., a Corporation of California. Filed June 16, 1919. Serial No. 304,599. 3 Claims. (Cl. 250—41.)

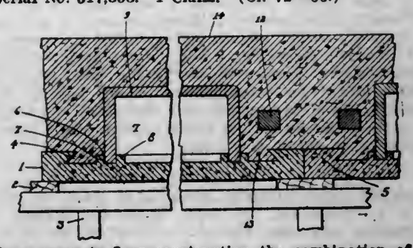
1. In an electrical condenser having a pair of terminal plates, a metallic shield having a surface engaging substantially the entire free surface of one of the terminal plates, said shield having smooth and rounded surfaces only.

1,487,097. DOUBLE PACKER FOR LINERS. THOMAS H. GALLAGHER, Crafton, Pa., assignor to Twin Packer Oil and Gas Company, Pittsburgh, Pa. Filed Feb. 18, 1922. Serial No. 537,500. 3 Claims. (Cl. 166—11.)



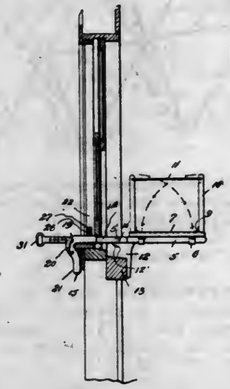
1. In packing means, a plurality of liner sections, packers connecting said sections and having threaded connection with the lower ends of the respective sections, collars threaded on the upper ends of the respective sections and each provided with an inner annular flange cut to provide recesses, each of the packers including a tubular member slidable through said flange, and a collar threaded on the tubular member beneath the flange and having projections adapted for engagement

into said recesses, the connections between the packers and the lower ends of the liner sections and between the collars and the upper ends of the liner sections and the tubular members being similarly threaded, the uppermost packer being adapted at its upper end for reception of



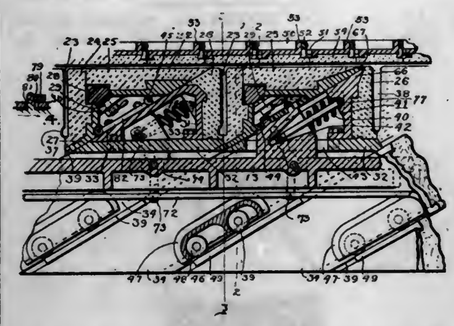
a member threaded oppositely to said connections for lowering the liner and associated parts into a well and disconnecting said oppositely threaded member without loosening any of the threaded connections of the liner and packers.

1,487,098. CONCRETE FLOOR CONSTRUCTION. MAX S. GOLDSMITH, Cincinnati, Ohio. Filed Nov. 23, 1921. Serial No. 517,351. 4 Claims. (Cl. 72—66.)



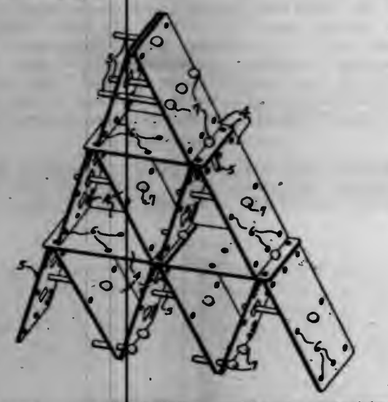
1. In a concrete floor construction the combination of a series of ceiling plates having slots along their ends, the slots having undercut walls, terminating upon the upper and lower faces of the plates, the slots of adjacent plates communicating, domes adapted to lie upon the upper faces of the plates, means on the upper faces of the plates adapted to position the domes and for precluding spreading of the domes, and concrete surrounding the domes and filling the slots.

1,487,099. CONCRETE FLOOR CONSTRUCTION. MAX S. GOLDSMITH, Cincinnati, Ohio. Filed Nov. 23, 1921. Serial No. 517,353. 1 Claim. (Cl. 72—66.)



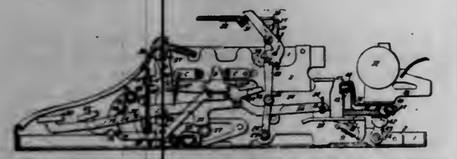
In a concrete floor construction the combination of a series of ceiling plates having their ends and sides in abutment upon one another and having depressions in their top whereby substantial edges are formed on the plates and a relatively thin intermediate plate portion is provided, the edges being undercut and the abutting edges of adjacent plates together forming a dove-tailed key, the plates being provided with grooves intermediate the undercut edges for receiving the bottom edges of domes and for precluding lateral displacement and spreading of the domes, domes having their bottom edges seated in the grooves therefor provided, and concrete surrounding the domes, covering the tops of the plates and extending between the domes and the undercut edges.

1,487,100. WINDOW SCAFFOLD. HARLEY C. HIGHMILLER, Springfield, Ohio. Filed June 13, 1923. Serial No. 645,052. 4 Claims. (Cl. 304—26.)



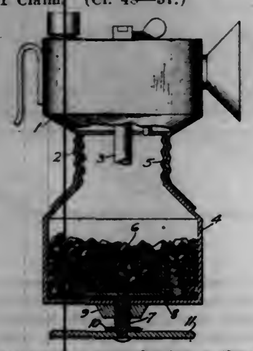
1. In a window scaffold, a pair of spaced platform supporting arms having cooperating clamping members upon the inner ends thereof for attaching the device to the sill of the window frame, socketed members attachable to the sides of the window frame, and an extensible retaining bar having its ends formed to engage the sockets of said socketed members for being retained in a position extending across and resting upon the upper edges of said platform supporting bars for maintaining the clamping members against upward displacement from the window sill.

1,487,101. PERMANENT MOLD. MYRON F. HILL, New York, N. Y. Filed Feb. 28, 1918, Serial No. 219,562. Renewed Mar. 29, 1921. Serial No. 456,693. 12 Claims. (Cl. 22—129.)



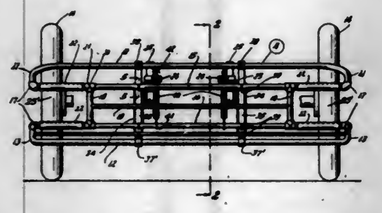
3. In a mold, metal frame members containing refractory lining having molding surfaces rendered non-adhesive to molten steel, said mold having rib-forming cavities for the casting and containing collapsible members to allow for contraction between said rib members.

1,487,102. GAME OR TOY FOR BUILDING CARD HOUSES. HARRIETTE E. HODGSON, New York, N. Y. Filed May 24, 1922. Serial No. 563,248. 1 Claim. (Cl. 46—55.)



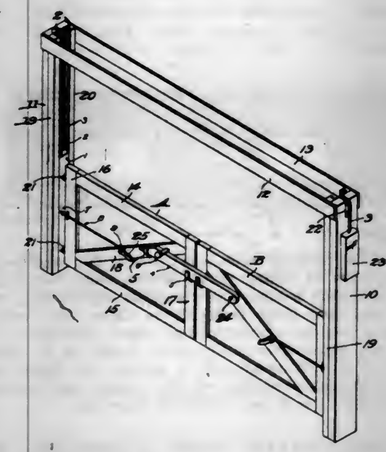
A game or toy for building card-houses comprising a pack of cards provided with specially located perforations and a set of pegs adapted for insertion in said perforations whereby to pin and brace the cards together in spaced relation in various structures.

1,487,103. TYPEWRITING MACHINE. JOSEPH B. HOLDEN, Syracuse, N. Y., assignor to Remington Typewriter Company, Ilion, N. Y., a Corporation of New York. Filed Jan. 29, 1923. Serial No. 615,474. 8 Claims. (Cl. 197—186.)



1. In a typewriting or like machine, the combination of case shift mechanism including a locking lever for locking the shiftable part in shifted position and having an engaging member at one side of its fulcrum and a key at the other; a collapsible part of the machine; and a releasing lever operative on said locking lever at the key carrying side thereof and actuated by a movement of said collapsible part to collapsed position to release the locking lever from locked position.

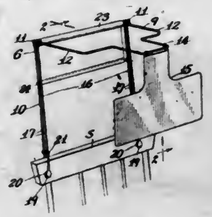
1,487,104. GAS GENERATOR. GUSTAVE HOLMES, Stockett, Mont. Filed Feb. 13, 1922. Serial No. 536,372. 1 Claim. (Cl. 48—57.)



In a gas generator, a cup having a threaded perforation in its base, a screw disposed in the said perforation, a fork carried by said screw and disposed within said cup, a nut upon said screw, and a handle for actuating said screw whereby said fork is rotated and raised and lowered relative to the cup base.

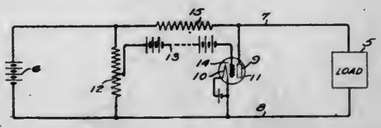
1,487,105. BUMPER. GORO KAWASAKI, Chicago, Ill. Filed Oct. 5, 1923. Serial No. 666,809. 11 Claims. (Cl. 293—44.)

2. A device of the class described, in combination with the chassis of a vehicle, a movable bumper adapted to be supported forwardly of the chassis, means affording attachment of the bumper to the chassis, and flexible members having operative connection to the bumper adapted to resist movement of the bumper in one direction.



1,487,106. STOCK AND DRIVE GATE. MATHEW S. KELLY, St. Paul, Minn. Filed Apr. 27, 1921. Serial No. 465,066. 1 Claim. (Cl. 39—81.)

A gate closure comprising a gate post, a pair of oppositely facing grooved guideways secured to said post, a tongued upright slidable between said guideways, a gate hingedly connected to said upright, said post being formed with a recess at its upper end, a pulley positioned within said recess extending beyond said post on both sides thereof, a cord passing over said pulley and secured at one end to said upright and a counter weight secured to the other end of said cord.

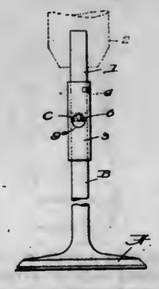


1,487,107. FAN DEVICE. WILLIAM H. KENT, Brooklyn, N. Y. Filed Feb. 12, 1923. Serial No. 618,604. 3 Claims. (Cl. 230—7.)

1. A fan device of the class described comprising a rod, a sleeve mounted on said rod and of less longitudinal dimensions than said rod, a substantially U-shaped frame member the side members of which are mounted on said rod outwardly of said sleeve, a fan element movably mounted in connection with said frame, and two

pairs of parallel rods mounted in connection with the ends of said first named rod and the free ends of which are provided with enlarged heads.

1,487,108. REGULATING SYSTEM. WILLIAM A. KNOOP, East Northport, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed July 31, 1922. Serial No. 578,568. 9 Claims. (Cl. 171—312.)

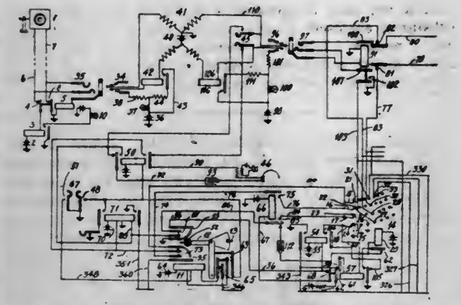


1. In combination, a source of voltage subject to variations, a load circuit, and means for supplying said load circuit with a constant voltage, said means comprising an electric discharge device having an anode, a cathode and a control electrode, said load circuit being connected across said anode and cathode, means responsive to variations in a characteristic of said source for producing variations in the potential of said control electrode and a resistance connected in series with said source, said anode and said cathode.

1,487,109. STORAGE-BATTERY ELECTROLYTE. THOMAS F. LACY, Sioux City, Iowa. Filed Feb. 1, 1923. Serial No. 616,402. 4 Claims. (Cl. 204—29.)

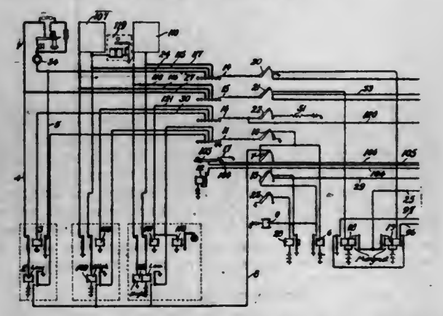
1. A storage battery electrolyte comprising sulphuric acid, sodium sulphate and lead sulphate.

1,487,110. VALVE-STEM TRIMMER. JOHN LILLYQUIST, Chicago, Ill. Filed Mar. 1, 1922. Serial No. 540,352. 1 Claim. (Cl. 29—103.)



A tool for the purpose indicated comprising a shank formed at one end with a cutting edge perpendicular to its axis and substantially radial with respect thereto, together with a guide sleeve enclosing said cutting edge and bored transversely to form two openings at opposite sides of the sleeve respectively with their common axis slightly oblique to the cutting edge of the shank.

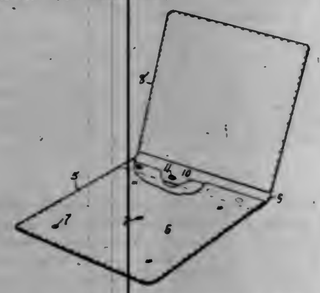
1,487,111. ELECTROLYTIC TIN. CLARENCE P. LINVILLE, Elizabeth, N. J., assignor to American Smelting and Refining Company, New York, N. Y., a Corporation of New Jersey. Filed Dec. 30, 1920. Serial No. 434,118. 8 Claims. (Cl. 204—17.)



1. An electrolyte for the deposition of tin free from lead, comprising an electrolytic solution of tin in hydrofluosilicic acid containing sulphuric acid in an amount sufficient to react with the lead present to form an insoluble lead salt and to provide an excess of free sulphuric acid and an agent capable of reacting with said excess of sulphuric acid to form free hydrochloric acid.

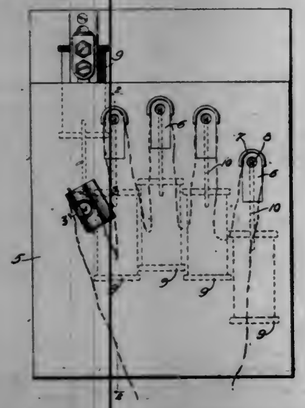
1,487,112. TELEPHONE-EXCHANGE SYSTEM. GEORGE ALBEN E. LUNDELL, Chicago, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 14, 1919. Serial No. 337,942. 15 Claims. (Cl. 179—27.)

1. In a telephone exchange system, a plurality of trunks, an operator's telephone set, automatic selecting mechanism adapted to connect said operator's set to an idle trunk, and a variably operable device for indicating the designation of said trunk.



1,487,113. MACHINE-SWITCHING TELEPHONE SYSTEM. ALBEN E. LUNDELL, New York, N. Y., assignor to Western Electric Company, Incorporated, a Corporation of New York. Filed Dec. 18, 1920. Serial No. 431,558. 8 Claims. (Cl. 179—9.)

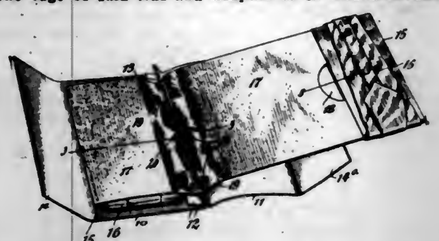
1. In a telephone exchange system, calling subscribers' lines equipped for various classes of service, called subscribers' lines, an automatic switch for interconnecting calling and called subscribers' lines, a registering device, means to operate said registering device to record the



class of service to which the calling line is entitled, charging means, and automatic means to govern the operation of said charging means in accordance with the setting of said registering device.

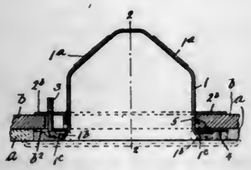
1,487,114. HOT PACK. WILLIAM H. MCINTYRE, Chicago, Ill. Filed April 10, 1922. Serial No. 551,424. 4 Claims. (Cl. 126—263.)

1. A hot pack comprising a pouch; a heat generating substance enclosed in the pouch; and a container having a pocket adapted to receive the pouch and having also a jacket detachably secured to the pocket and adapted to completely envelop the pocket.



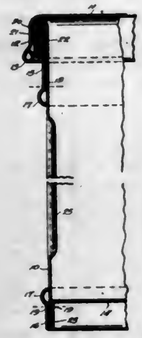
1,487,115. INTELLIGENCE SYSTEM. JAMES L. MCQUARRIE, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 15, 1921. Serial No. 500,771. 9 Claims. (Cl. 250—1.)

1. A device for communicating intelligence to a person who is both blind and deaf comprising a group of electrical circuits, light sensitive means in each of said circuits for producing current impulses, means for rendering said means effective in predetermined combinations in accordance with the desired characters, and translating means individual to said light sensitive means for communicating to such person through the sense of touch, impressions representative of said characters.



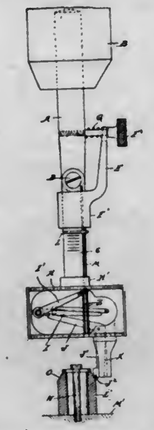
1,487,116. TIE HOLDER. JOSEPH D. MAHER, Orange, N. J. Filed Sept. 28, 1921. Serial No. 503,710. 5 Claims. (Cl. 206—7.)

1. A tie holder comprising a comparatively stiff supporting leaf upon which the tie is adapted to be wound, and a flexible retaining member attached at one end to one edge of said leaf and adapted to be wound around



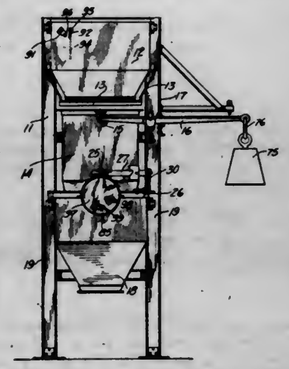
said leaf and said tie in a direction at right angles to the direction in which the tie is wound around said leaf.

1,487,117. OUTLET BOX. JOHN J. MERRILL, Ipswich, Mass., assignor, by mesne assignments, to Electric Outlet Company, Inc., New York, N. Y., a Corporation of New York. Filed Apr. 12, 1922. Serial No. 552,020. 5 Claims. (Cl. 247—15.)



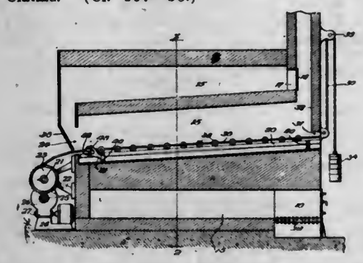
1. In an electrical installation outlet for a lath and plaster wall having an opening, a clamp comprising an inner and an outer collar adapted to engage the opposite sides of the laths about the opening and having connecting means for holding the same in clamping engagement therewith, a box adapted to be inserted in said collars, means carried with the outer collar for positioning the box with its outer end approximately flush with the plaster surface and means for attaching the box to said outer collar.

1,487,118. CONTAINER OR CAN. ARTHUR MILLER, Columbus, Ohio, assignor to Solar-Sturges Mfg. Co., a Corporation of Illinois. Filed Jan. 28, 1921. Serial No. 440,659. 1 Claim. (Cl. 220—66.)



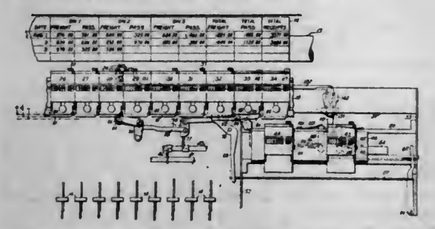
A container, comprising a body portion, and a bottom portion having an inner annular down-turned flange extending into an outer upturned flange between which the lower edge of said body portion is disposed, said outer flange terminating in an out-bent bead, the free edge of which contacts with said body portion, said outer flange being permanently attached to said body portion, as by spot-welding, at the junction of said bead with said outer flange, the opposite edge of said bead being unattached to the can body.

1,487,119. INDICATOR. CHARLES A. NEWITT, Detroit, Mich. Filed Dec. 20, 1920. Serial No. 432,025. 6 Claims. (Cl. 33—172.)



1. An indicator tool comprising a shank for engagement with a revoluble spindle in axial alignment therewith, an indicator ring surrounding and movable longitudinally of said shank, a housing mounted on said shank and extending transversely thereof in symmetrical relation thereto, a guide projecting from said housing and offset from the axis of the spindle, a multiplying lever system within said housing, a movable contact member engaging said offset guide and having an actuating connection to said multiplying levers, and a member extending longitudinally of said spindle and connecting said indicator ring with said multiplying levers.

1,487,120. AUTOMATIC SCALE INDICATOR. ARTHUR PARSONS, Pasadena, Calif. Filed Oct. 24, 1921. Serial No. 509,992. 11 Claims. (Cl. 265—58.)

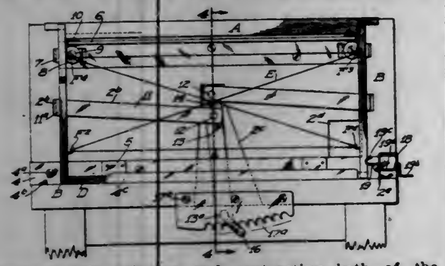


1. In combination with the balance elements of a scale; an indicator arm; a member, mounted upon one of the balance elements of said scale, adapted to engage said indicator arm near the end of the forward movement of said balance element, and to carry said indicator rearwardly as the said balance element makes its return movement; means for sensibly indicating the position of said indicator arm; and means for disengaging said member from said indicator arm when said balance element has returned to its initial position.

1,487,121. BAKER'S OVEN. WILLIAM F. PETERSEN, Chicago, Ill. Filed June 3, 1922. Serial No. 565,705. 2 Claims. (Cl. 107—56.)

2. A baker's oven comprising a baking chamber having longitudinal channels between its sidewalls and floor, a flexible hearth movable into and out of said chamber, tracks in said channels upon which said hearth rests, links whose upper ends are pivotally connected to said tracks and whose lower ends are permanently fulcrumed independently of the tracks, bifurcated lugs projecting from the forwardmost of said links, pins projecting from the forwardmost of said links, for each track the bifurcation nearest the front of the chamber being shorter than the other, and pins projecting laterally from the hearth near the front end thereof that engage the longer bifurcation when moved rearward and the shorter bifurcation when moved near, and rock said tracks downwards and upwards.

1,487,122. CALCULATING MACHINE. ARTHUR F. POOLE, Kenilworth, Ill., assignor to Remington Accounting Machine Corporation, New York, N. Y., a Corporation of New York. Filed Aug. 15, 1921. Serial No. 492,396. 21 Claims. (Cl. 235—59.)

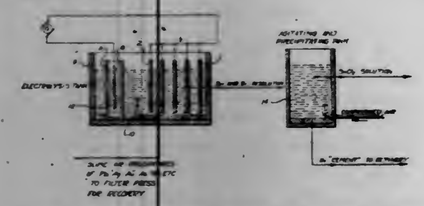


1. In a calculating machine, the combination with a carriage which travels through a series of calculating zones, and a plurality of totalizers each capable of computing in a plurality of said zones, of clearance proof mechanism for said totalizers, and means controlled by said carriage for bringing said mechanism into action for one of said totalizers at one point of carriage travel and for another totalizer at another point of carriage travel.

1,487,123. APPARATUS TO FACILITATE THE MAKING OF HONEY FRAMES. FREDRICK J. SEVERIN, San Diego, Calif. Filed Mar. 8, 1922. Serial No. 542,184. 9 Claims. (Cl. 144—288.)

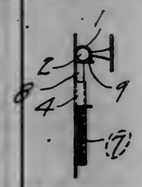
1. A honey frame assembling apparatus including a table member, an upright member secured at a right angle thereto, a positioning member secured to said table member at the base of said upright member, adjustable guide

and retaining means secured at the upper part of the front face of said upright member, and means for



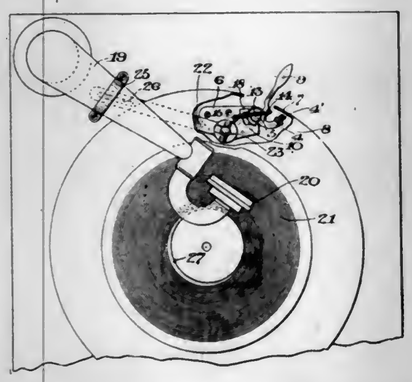
simultaneously gripping and contracting both of the normally vertical members of a honey frame supported by said guide and retaining means.

1,487,124. ELECTROLYTIC PROCESS. JAMES ROBERT STACK, Perth Amboy, N. J., assignor to American Smelting and Refining Company, New York, N. Y., a Corporation of New Jersey. Filed Dec. 30, 1920, Serial No. 434,114. Renewed Jan. 14, 1924. 29 Claims. (Cl. 204—57.)



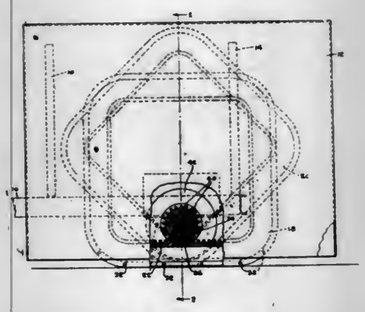
1. In the electrolytic refining of impure tin containing lead, the process of preventing contamination of the tin deposited from the impure tin anode upon the cathode, which consists in employing as the electrolyte a solution of tin in sulphonic acid and a protective agent sufficient to convert the lead contained in the dissolving tin anode into a compound insoluble in the electrolyte.

1,487,125. PROCESS OF RECOVERING TIN. JAMES ROBERT STACK, Perth Amboy, N. J. Filed Jan. 4, 1922, Serial No. 526,871. Renewed Jan. 14, 1924. 11 Claims. (Cl. 204—17.)



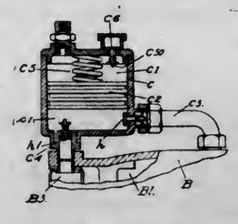
1. The process of refining impure tin bullion to recover the contained metals, which consists in subjecting the bullion as anode to an electrolytic current of appropriate voltage and amperage in an electrolyte capable of holding tin and bismuth in solution and depositing substantially all of the other contained metals as slimes or precipitates, and then separating the tin from the bismuth and other metals by precipitating the bismuth and retaining the tin in solution.

1,487,126. COLLAR BUTTON AND TIE ADJUSTER. ANCEL B. STUBBS, Alliance, Ohio. Filed Oct. 25, 1923. Serial No. 670,646. 1 Claim. (Cl. 24—59.)



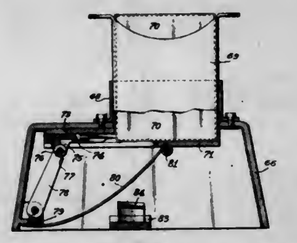
A device of the kind described, comprising a button claw adapted to engage the collar button; a hollow stem depending from the button claw; a coil spring seated in the hollow stem; and a pressure pin seated in the hollow stem upon the spring, the pin having a button engaging tab at its upper end.

1,487,127. STOP FOR SOUND-REPRODUCING MACHINES. OTTO F. STUPPAN, Milwaukee, Wis., assignor to Columbia Graphophone Manufacturing Company, Bridgeport, Conn., a Corporation of Delaware. Filed Dec. 30, 1921. Serial No. 526,005. 11 Claims. (Cl. 192—122.)



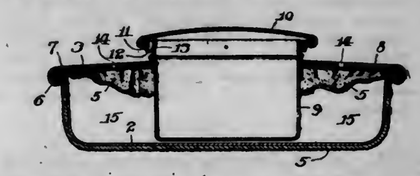
1. In a sound-reproducing machine, the combination of a record with an eccentric terminal groove producing a backward swing of the tone-arm when the playing of the record has ceased, a brake member, a latch for holding said member in inoperative position, an abutment on said member adapted to move said latch for operatively positioning the same with relation to said member on the movement of the brake member to inoperative position, and means movable with said tone arm and operatively connected to the latch to release the same on a backward swing of the tone-arm.

1,487,128. TRACTOR MACHINE. CHARLES W. WERDENHOFF, Minneapolis, Minn. Filed Dec. 26, 1922. Serial No. 608,915. 3 Claims. (Cl. 305—6.)



1. The combination with the frame and axle of a vehicle, of two pinions secured to the axle, a casing associated with the frame, two endless ground engaging rack members within said casing and with which said pinions mesh respectively and upon which said pinions travel to give a partial rotation in alternation with each other, and means for maintaining said pinions in mesh with said rack members.

1,487,129. VACUUM-PRODUCING MEANS FOR FUEL-FEED DEVICES. LEONARD H. WHEELER, Chicago, Ill., assignor to Stewart-Warner Speedometer Corporation, Chicago, Ill., a Corporation of Virginia. Filed June 12, 1922. Serial No. 567,571. 3 Claims. (Cl. 158—36.)



3. In combination with an internal combustion engine and a vacuum fuel feeding device for supplying the carbureter from a low source, a suction pump which is suction operated, having its chamber at one side of the reciprocating element connected for intake with the vacuum chamber and for discharge with the service chamber of the vacuum fuel feed device; the chamber at the other side of the reciprocating element being connected for suction with the intake manifold of the engine and provided with a valve-controlled atmosphere inlet whose valve is normally seated, and is opened by the suction stroke of the reciprocating element at the limit of said stroke.

1,487,130. PACKAGE-SEVERING DEVICE. BURRITT F. WITHERELL, Detroit, Mich. Filed Nov. 25, 1921. Serial No. 517,815. 12 Claims. (Cl. 131—59.)

1. A device of the type described comprising a movable package support; a knife carried thereby and adapted to slit said package, a set of knives, and means supporting said package support so that it may be shifted to cause the package to be further slitted by said set of knives.

1,487,131. COMBINED PHONOGRAPH RECORD CLEANER AND NEEDLE HOLDER. JULIUS ABRAHAMS, Millbourne, Pa. Filed July 30, 1923. Serial No. 654,535. 3 Claims. (Cl. 206—1.)

1. The combination of a hollow body member, a cover member closing the same and having an opening therein through which needles may be inserted into the body member, and loose fabric within the body member to prevent needles from accidentally passing outwardly through said opening.

1,487,132. TIN SINTER AND METHOD OF PRODUCING SAME. HARRY H. ALEXANDER, Westfield, N. J., assignor to American Smelting and Refining Company, New York, N. Y., a Corporation of New Jersey. Filed Oct. 25, 1920. Serial No. 419,473. 13 Claims. (Cl. 75—17.)

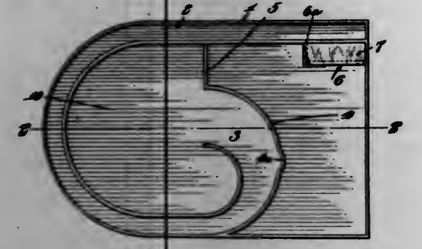
1. In the art of producing tin sinter from tin concentrates and like tin containing material which may also contain certain foreign elements such as sulphur, arsenic and antimony, the process which consists in finely dividing the material, roasting the same to partially remove some of the foreign elements, combining the roasted material with a binder and carbonaceous matter together with a reagent capable of combining with the remaining sulphur, moistening the mixture and sintering the moist mixture.

1,487,133. PROCESS OF FORMING IRON-TIN ALLOY. HARRY H. ALEXANDER, Westfield, N. J., assignor to American Smelting and Refining Company, New York, N. Y., a Corporation of New Jersey. Filed Oct. 25, 1920. Serial No. 419,474. 8 Claims. (Cl. 75—17.)

1. In the art of preparing a charge of material for use in a blast furnace in the formation of a tin-iron alloy, the process which consists in mixing tin slag with limestone, sintering the mixture, and mixing the sintered mixture with a carbonaceous fuel and with a flux.

1,487,134. PROCESS OF RECOVERING TIN. HARRY H. ALEXANDER, Westfield, N. J., assignor to American Smelting and Refining Company, New York, N. Y., a Corporation of New Jersey. Filed Oct. 25, 1920. Serial No. 419,475. 6 Claims. (Cl. 75—18.)

1. In the art of extracting metallic tin from tin containing material, the process which consists in sintering a charge of the tin containing materials with a fuel, mixing the sintered product with a silicious flux, limestone and a tin-iron alloy and subjecting the mixture to the action of a blast furnace.



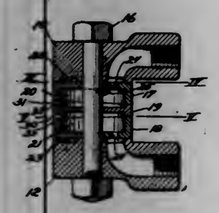
1,487,135. RECOVERING OCCLUDED TIN. HARRY H. ALEXANDER, Westfield, N. J., assignor to American Smelting and Refining Company, New York, N. Y., a Corporation of New Jersey. Filed Oct. 25, 1920. Serial No. 419,476. 3 Claims. (Cl. 75—17.)

1. The process of recovering metallic tin from the slag produced in the blast furnace smelting of stanniferous ores containing iron, which consists in supplying the molten slag to a settling furnace, stirring the mass, adding a reducing agent thereto while maintaining the same in a molten condition whereby to reduce the tin and promote the formation of an iron tin alloy, and then separating said alloy from the slag.

1,487,136. ELECTROLYTIC REFINING OF TIN. HARRY H. ALEXANDER, Westfield, N. J., assignor to American Smelting and Refining Company, New York, N. Y., a Corporation of New Jersey. Filed Dec. 30, 1920, Serial No. 434,124. Renewed Oct. 26, 1923. 8 Claims. (Cl. 204—57.)

1. In the electrolytic refining of impure tin containing lead, the method of refining tin which consists in passing an electric current of suitable voltage and amperage from the impure tin as an anode to a cathode through an electrolyte which is a solvent of tin and lead and protecting the electrolyte from contamination by lead, by incorporating with the electrolyte an agent which will combine with the lead to form an insoluble compound, said agent being present in an amount materially in excess of the amount necessary to unite with all the lead present in the electrolyte.

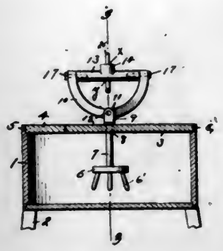
1,487,137. GAME BOARD. JOHN APOSTOLSKI, Detroit, Mich. Filed May 31, 1922. Serial No. 564,822. 2 Claims. (Cl. 46—61.)



1. A game board having a helical track arranged thereon and extended to form a field, the inner end of said track being enlarged and opening into the field and provided in its outer wall on the inner face with a recess forming a deflector for diverting the course of the balls passing over the track, and balls for passage over the track.

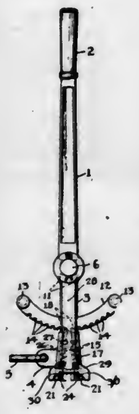
1,487,138. METHOD OF DETECTING THE DIRECTION OF UNDERWATER VIBRATIONS. GEORGE F. ATWOOD, Newark, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed June 24, 1919. Serial No. 306,461. 7 Claims. (Cl. 181—0.5.)

1. The method of detecting the direction of underwater vibrations which consists in towing a submersible device equipped with a detector, decreasing the speed of the towing vessel, maintaining the towed device under the water and on an even keel independent of the strain on the towing cable, and noting the response of the detector.



1,487,139. OIL BURNER. WARD T. BARKER, Kansas City, Mo. Filed Aug. 29, 1921. Serial No. 496,376. 6 Claims. (Cl. 158—75.)

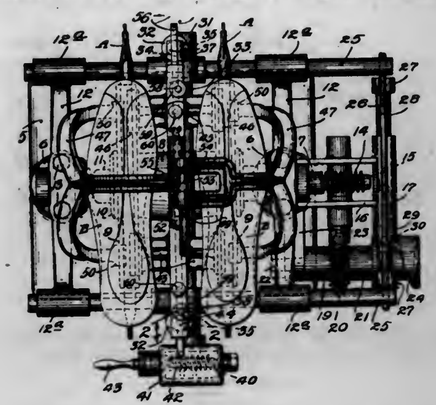
1. An oil burner comprising oil and steam inlet connections, and relatively rotatable coaxial elements providing separate adjacent outlet ports in communication, respectively, with said oil and steam inlet connection, said ports comprising slots extending angularly with respect to the axis of said rotatable elements.



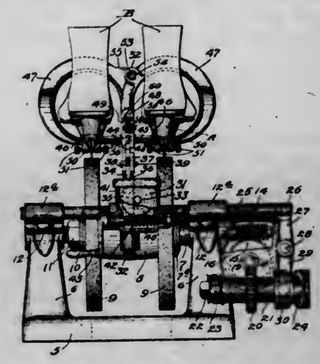
1,487,140. WASHING MACHINE. MATHEW J. BEAVER, Loyal, Wis. Filed Sept. 18, 1920. Serial No. 411,040. 1 Claim. (Cl. 74—14.)

1. In a driving mechanism for a washing machine comprising a vertically disposed rotatable and reciprocatory work shaft, a substantially semi-circular yoke pivoted at its center to the upper end of said work shaft, a cross bar pivoted to the terminals of said yoke, and a sleeve carried by the central portion of said cross bar, an operating shaft disposed at right angles to the work shaft,

means for operating the operating shaft, and an elongated inclined crank arm formed on the operating shaft and disposed at an angle of substantially 45 degrees to the longitudinal axis of said operating shaft and slidably mounted in said sleeve.

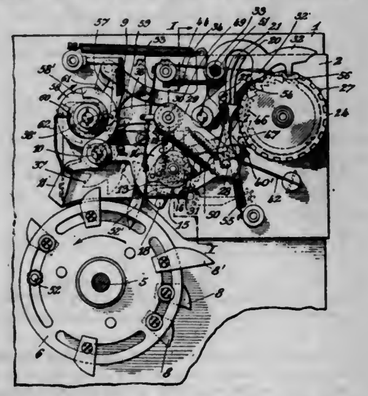


1,487,141. LEVER. JOHN A. BERGREN, Lake Park, Minn., assignor to Carl E. Youngberg, Seattle, Wash. Filed Oct. 23, 1920. Serial No. 418,973. 9 Claims. (Cl. 74—39.)

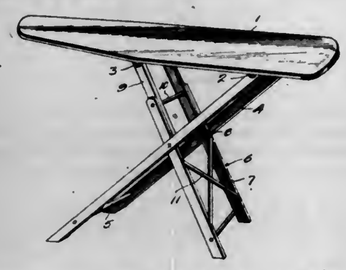


1. A self-unlocking lever, comprising an operating arm, a load arm fulcrumed coaxially therewith, said arms having a lost-motion connection whereby the operating arm has initial free movement and thereafter urges the load arm, means including a longitudinally movable plunger for locking the load arm, and means on the operating arm whereby the initial movement thereof in the desired direction moves said plunger and unlocks the load arm to permit movement thereof by continued movement of the operating arm.

1,487,142. SKATE-GRINDING MACHINE. VITUS A. BOKER, Minneapolis, Minn. Filed Apr. 5, 1922. Serial No. 549,787. 17 Claims. (Cl. 51—100.)



1. In a skate grinding machine, the combination with a grinding wheel, of a guideway extended parallel to the plane of said grinding wheel, and a skate holder movable on said guideway above said grinding wheel and operating to direct the skate blade against the upper portion of said grinding wheel, said skate holder being held against lateral shifting movement and angular movement



in a horizontal plane but free for vertical movement and displacement and adapted to be moved endwise by hand operations.

1,487,143. WORKMAN'S TIME RECORDER. JULIUS BRENDLE, Zurich, Switzerland. Filed Aug. 1, 1921. Serial No. 488,895. 13 Claims. (Cl. 234—43.)

1. In a workmen's time recorder having an operating train of gears, time type wheels and ratchet driving mechanism therefor, in combination with a stop wheel mechanically driven to render one of the type wheels inoperative at the expiration of a normal working day; a character indicating over-time alternately brought into operative position at the expiration of said normal working day while maintaining the operation of the remaining type wheels.

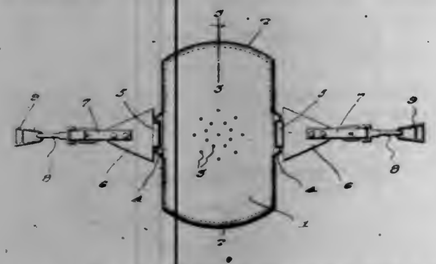
1,487,144. IRONING BOARD. HUGH L. CALLAWAY, Waukesha, Wis. Filed Apr. 3, 1923. Serial No. 629,648. 3 Claims. (Cl. 68—10.)

1. In combination, an ironing board, a frame pivoted to the ironing board, a second frame including two sections, one of said sections pivoted to the ironing board, the other of said sections pivoted intermediate its ends to an intermediate portion of the first frame and at its ends to an intermediate portion of the first section, and means whereby the sections of the second frame may be held in alignment with each other for holding the frames in an extended position and said frames being foldable against the bottom face of the ironing board.

1,487,145. PROCESS OF RECOVERING VALUES FROM NICKEL AND COBALT-NICKEL ORES. MARTINUS HENDRICUS CARON, The Hague, Netherlands, assignor to Clevenger & Caron, Boston, Mass., a Firm. Filed May 25, 1923. Serial No. 641,506. 6 Claims. (Cl. 75—66.)

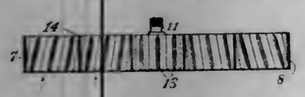
1. Process of recovering values from nickel and cobalt and nickel-cobalt ores which comprises subjecting the ore to a preparatory reducing roast, cooling the reduced ore under non-oxidizing conditions, extracting values from the reduced and cooled ore by treatment with an ammonium salt solution, and precipitating the values from the ammonium salt solution by distilling volatile ammonium compounds therefrom.

1,487,146. SIDE ARCH BRICK. EDWARD M. CARROLL, Sanford, Fla. Filed Mar. 22, 1923. Serial No. 626,902. 4 Claims. (Cl. 110—87.)



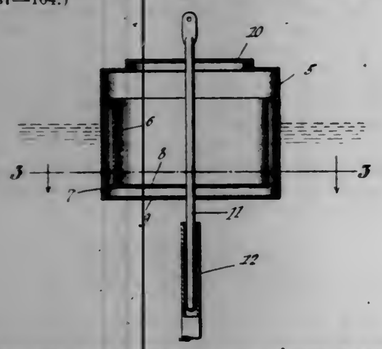
1. A side brick for locomotive arches, curved throughout its upper surface and curved substantially throughout its lower surface, the brick provided with a depending flange on one side, which flange is at right angles to the body of the brick, the outer surface of this flange being flat to form a relatively wide contacting area, and this flange provided with a depression to receive a supporting means, and the opposite side of the brick being undercut to form a supporting ledge.

1,487,147. NOSE GUARD FOR DRAFT ANIMALS. FRANCIS A. COUGHLIN, Burnstad, N. Dak. Filed Feb. 28, 1923. Serial No. 621,902. 1 Claim. (Cl. 54—80.)



A nose guard for draft animals comprising a body rectangular in shape and slightly rounded inwardly both longitudinally and transversely, said body being provided

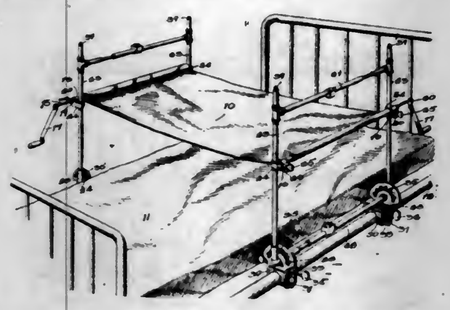
with rolled edges, oppositely disposed upturned slotted extensions on the side edges of the body, triangular



shaped wings having barrels received in said slots to secure the wings in hinged relation to the body and attaching straps connected to said wings opposite said barrels.

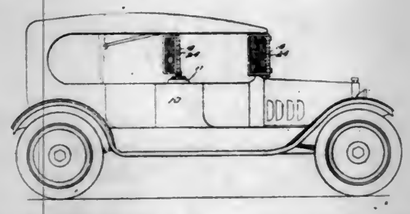
1,487,148. LIQUID-COOLING RADIATOR. EDWARD T. CURRAN, Detroit, Mich. Filed Oct. 21, 1919. Serial No. 332,281. 9 Claims. (Cl. 257—130.)

1. In a liquid cooler, a reservoir for the warmed liquid and a reservoir for the cooled liquid, passageways to connect said reservoirs in liquid circulation, comprising tubes shaped to form air passages of polygonal shape in cross section and certain of the tubes extending from the front to the rear of the radiator at an acute angle with the front of the radiator for the purpose specified.



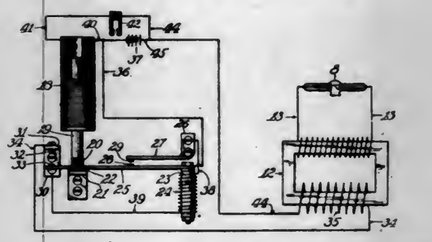
1,487,149. FLOAT. LOREN CUTLER, Springfield, Ill. Filed Jan. 7, 1924. Serial No. 684,838. 1 Claim. (Cl. 137—104.)

In a float, a body portion, a wall disposed within the body portion and arranged in spaced relation therewith, the upper end of the wall being bent laterally and having connection with the inner surface of the body portion to provide an outer chamber and an inner chamber, and a guide rod having connection with the body portion.



1,487,150. SLING ATTACHMENT FOR HOSPITAL BEDS. HIXSON CLEOVAS DEAKINS, Chattanooga, Tenn. Filed Nov. 17, 1922. Serial No. 601,613. 5 Claims. (Cl. 5—88.)

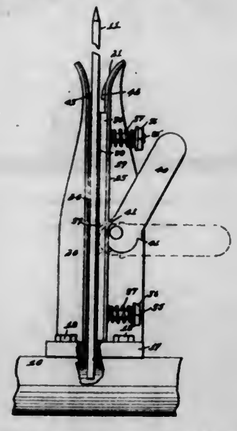
5. A bed sling and rest including a pair of winding shafts, a flexible supporting web whose ends are around the shafts, and supports in connection with which said shafts are journaled and with respect to which said



shafts are endwise tiltable whereby the sheet may be held in inclined positions as well as in a horizontal plane.

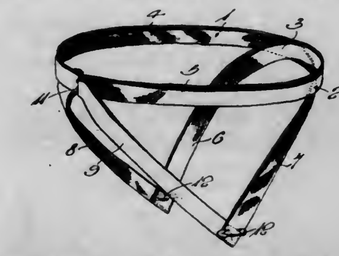
1,487,151. WINDSHIELD DEVICE FOR AUTOMOBILES. ALVIN M. DIXON, Des Moines, Iowa. Filed Jan. 3, 1921. Serial No. 434,573. 1 Claim. (Cl. 296—84.)

In a wind shield device, a frame composed of tubular members, slots in said tubular members, a screen mounted in said frame, binder strips on the edges of said screen, the binder strips being received within the tubular members, and the screen extending through the slots therein, said binder strips being of slightly greater thickness than the slots, whereby the binder strips may be forced through the slots and thereafter be securely held in place, said binder strips forming a rigid frame enclosing the screen.



1,487,152. AUTOMATIC ELECTRICAL CIRCUIT CONTROLLER. EDWIN L. EDWARDS, Indianapolis, Ind., assignor to Edwards X-Ray Corporation, Indianapolis, Ind., a Corporation of Indiana. Filed Apr. 15, 1920. Serial No. 374,191. 3 Claims. (Cl. 171—229.)

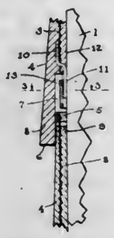
1. An automatic electrical circuit controller including a resistance coil, an elastic supported switch finger in connection with the resistance coil, a supported connector having a contact-point, a circuit connecting the resistance coil with the connector, a circuit in connection with the contact-point, a supported switch arm to be elastically



pressed to the switch finger and farther to the contact-point, a feed-wire leading to the switch arm, and a solenoid having an armature arranged to control the switch arm.

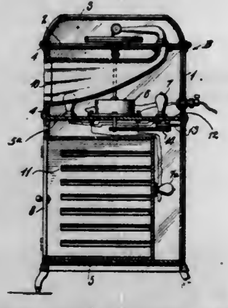
1,487,153. LAUNDRY-PIN RELEASER. JOHN EVANS, Salt Lake City, Utah. Filed Apr. 10, 1923. Serial No. 631,102. 11 Claims. (Cl. 40—19.5.)

1. A pin releasing device comprising an assorting bar designed to receive a series of safety pins and to enter between the safety pin body members and point members, two pin engaging members arranged on opposite sides of the bar, one being so positioned as to engage the bodies of the safety pins on the bar and the other to engage the pin point members thereof, and means for moving one of the pin engaging members toward and from the other for releasing the pin points from their keepers.



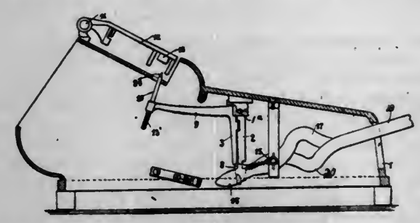
1,487,154. CATAMENIAL BELT. ALBERTINE DELORIS FILIATRAULT, Spokane, Wash. Filed Apr. 3, 1922. Serial No. 549,033. 2 Claims. (Cl. 128—291.)

1. A catamenial bandage support formed of connected strips providing a waist encircling portion and depending protector engaging members positioned beneath the forward and rear portions of the waist encircling portion, the portions of the strips forming the waist encircling portion being permanently connected at one side and releasably connected at the other side.



1,487,155. BUILDING CONSTRUCTION. EDWARD FINK, Wauwatosa, Wis., assignor to Compo-Tile Manufacturing Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed June 9, 1922. Serial No. 567,135. 4 Claims. (Cl. 72—20.)

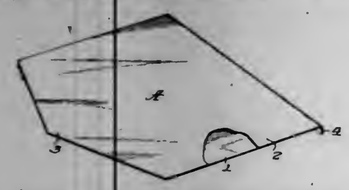
1. A composition board for building construction comprising a fire and waterproof cementitious body portion having a reinforcing member incorporated therein, said body portion having opposed flat faces and being tapered to provide a relatively thin edge, and a relatively thick edge disposed opposite thereto, said thick edge being re-



cessed to receive the thin edge of an adjacent board, the parts being so proportioned that said thin edge will occupy only a portion of said recess.

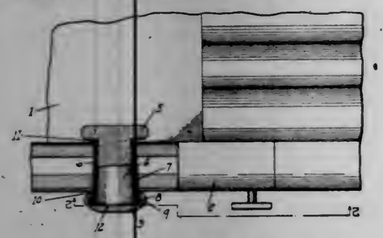
1,487,156. PHONOGRAPH CABINET. EARL H. FOLEY, Norfolk, Va. Filed June 6, 1921. Serial No. 475,281. 7 Claims. (Cl. 240—2.)

1. A cabinet for sound reproducing machines comprising a frame having a hinged top, a source of light carried within the frame, translucent inclosing members carried by the frame for diffusing light from the source enclosed therewithin, and a translucent horn arranged within the cabinet and extending through one of the translucent enclosing members.



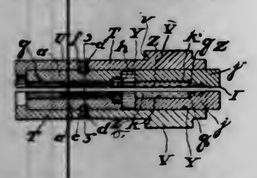
1,487,157. CALCULATING MACHINE. MAX FRENZ, Lichtenberg, near Berlin, Germany. Filed Oct. 27, 1922. Serial No. 597,385. 5 Claims. (Cl. 235—63.)

4. In a calculating machine the combination with a pivoted and slidable platen carrying the calculating mechanism, of a main rocking lever pivoted at its upper end to the machine frame and movable at right angles to the said platen, two lugs at either end of the said lever, an auxiliary rocking lever carried by the said main lever and hinged between the said lugs of same, a spring at each side of the main lever pressing against the auxiliary lever to normally prevent pivotal movement of the latter, an offset arm to the auxiliary lever carrying an adjustable pointer at its end, a pin projecting from each side of the



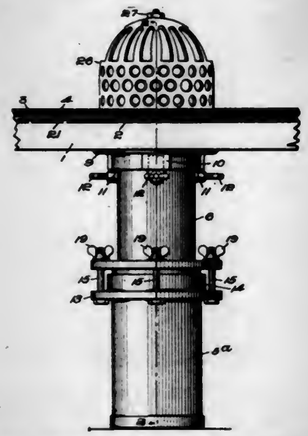
auxiliary lever, two manually operated levers crossing each other at about their centres, each cooperating with one of the pins projecting from the auxiliary lever to first rock and then shift the platen to the left when the left hand side lever is depressed and to the right when the right hand side lever is depressed.

1,487,158. PRINTING-PRESS TYMPAN. GEORGE W. GOULD, Chicago, Ill. Filed Aug. 19, 1922. Serial No. 582,870. 6 Claims. (Cl. 154—54.5.)



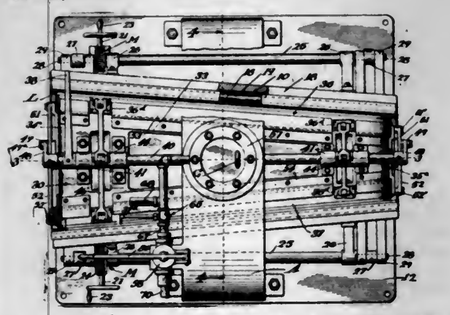
1. A tympan for printing presses, consisting of a laminated sheet made up of a sheet of material possessing relatively great tensile strength and a sheet of vegetable parchment paper forming the exposed surface of the tympan.

1,487,159. AUTOMOBILE IDENTIFIER. HENRY P. HEEREN, Toledo, Ohio. Filed July 30, 1923. Serial No. 654,526. 5 Claims. (Cl. 40—22.)



1. In an automobile identifier, a pair of telescoping members extending through the supporting wall of the automobile and having flanges located around the outer ends of the members for engaging opposite sides of the wall, a cementing material contained between the members for securing the members together, one of the members having a closed end and formed of glass and an identifying means located within the said end of the glass member.

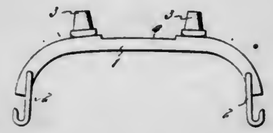
1,487,160. DIE FOR DRILL-SHARPENING MACHINES. ALFRED A. HENTZELL, Littleton, Colo., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed June 30, 1922. Serial No. 571,882. 2 Claims. (Cl. 76—95.)



1. In a drill sharpener, a pair of relatively movable jaws, die holder guides fitted over the opposing surfaces of said jaws, holding dies in said guides, said guides and holding dies having cooperative flanges to retain the holding dies in the guides, a pair of die bushings in said holding dies, a pair of plunger dies slidable in said holding dies, longitudinal ribs to retain said bushings and plunger dies within said holding dies, and locking pins adapted to pass through said holding dies to hold the bushings in a fixed position with relation to said holding dies.

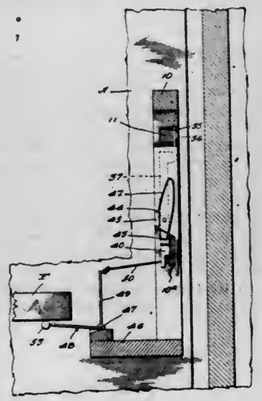
1,487,161. ROOF CONNECTION. CHARLES L. HOLT, Lawrence, Mass., assignor to Holt Roof Connection Company, Lawrence, Mass., a Corporation of Massachusetts. Filed Mar. 13, 1923. Serial No. 624,846. 9 Claims. (Cl. 182—31.)

1. A roof connection comprising a roof pipe section, a channeled roof fitting thereon to prevent downward movement of the pipe, a loose fitting roof locking collar also thereon to engage the under side of the roof to prevent upward movement of the pipe, a flashing member overlying the roof fitting and pipe end, a gravel stop member with a rib on its under side, and means secured to the pipe section and bearing on the gravel stop for forcing the flashing into the roof fitting channel.



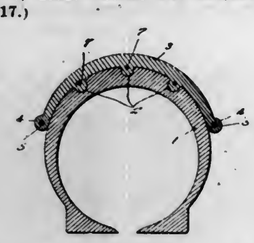
1,487,162. PUTTY MOLDING AND TRIMMING MACHINE. ARTHUR HUGHES, Los Angeles, Calif. Filed Aug. 25, 1922. Serial No. 584,295. 6 Claims. (Cl. 69—8.)

1. A putty molding and trimming machine comprising a matrix having an inner surface curved in cross section throughout its length and curved in longitudinal section similar to that of the calf of a leg, clamping means for holding a strip of leather clear of the sides and bottom, a head adapted to be moved into and from said matrix and having a surface on its under side substantially of the same shape as the inner surface of the matrix, and means for operating said head, and a trimming mechanism mounted on said head.



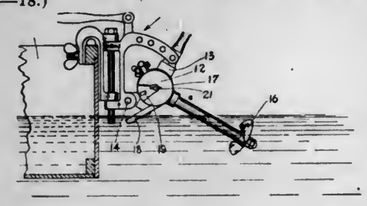
6. In a putty molding and trimming machine, the combination of a trimming mechanism and a presser head, said trimming mechanism consisting of a shaft mounted on said head, a series of rocker arms and links adapted to move duplex trimming blades in opposite directions to effect a complete trimming of a strip of leather in one action, the said mechanism being manually operable after the head has passed into the mould, said mechanism including a single manually operable lever.

1,487,163. ANTISKID DEVICE. WILLIAM D. INGRAHAM, North Adams, Mass. Filed May 26, 1923. Serial No. 641,661. 1 Claim. (Cl. 152—14.)



A device of the class described comprising a curved bar for engaging the tread part of a tire, a recess formed at the center of the outer face of said bar, a threaded socket in the bar on each side of the recess, calks having threaded parts for engaging the sockets, a staple threaded through a hole in the bar at each end thereof and having its ends bent into hook-shape for engaging the side chains of a non-skid device.

1,487,164. MANDOLIN ATTACHMENT FOR PLAYER PIANOS. ORESTE ISTA, New York, N. Y. Filed Oct. 13, 1922. Serial No. 594,299. 6 Claims. (Cl. 84—8.)



2. The combination with the motor, hammer mechanism and wippens of a player piano, of a mandolin attachment, comprising a supporting frame, a stationary bar forming a part thereof, a reciprocatory bar movably mounted in said frame, means driven by the motor of the player piano mechanism for driving said reciprocatory bar, a plurality of housings pivoted at their upper and lower ends upon said reciprocatory bar and rigid bar respectively, picks movably mounted within said housings, and means engageable by the wippens of the hammer mechanism for projecting said picks into position to pluck the strings, consisting of trips of angular formation connected at one end with the associated pick and having its other end disposed in the path of movement of the wippen.

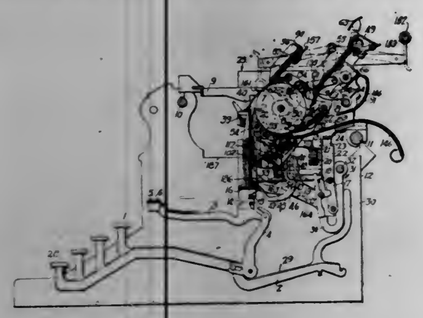
1,487,165. TIRE. ELMER C. JACOBSON, Roy, Wash. Filed Oct. 7, 1922. Serial No. 593,026. 1 Claim. (Cl. 152—17.)

A tire of the class described comprising a shoe having circumferentially extending grooves in its tread portion, and a tread member of trough shape in cross section having circumferentially extending ribs on its inner face for engaging the grooves in the shoe, said tread member having portions extending laterally beyond said ribs, said portions at their outer edges provided with beads, and said ribs and beads having reinforcing wires therein to prevent the said member from expanding and permitting the ribs to move relatively to the said circumferentially extending grooves.

1,487,166. COOLING SYSTEM FOR COMBUSTION ENGINES. EDWIN T. KERSHAW, Denver, Colo. Filed Oct. 17, 1923. Serial No. 669,133. 6 Claims. (Cl. 115—18.)

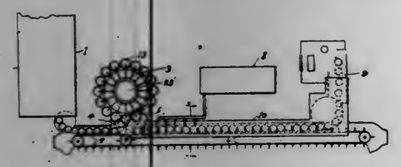
1. In combination with an outboard motor adapted to be swung about a horizontal pivot, of a scoop for conducting water to the engine cylinder, a casing surrounding the cylinder and in connection with the scoop.

1,487,167. WASHING DEVICE. JOHN KUMAGAWA, Los Angeles, Calif. Filed Feb. 24, 1923. Serial No. 620,990. 3 Claims. (Cl. 15—128.)



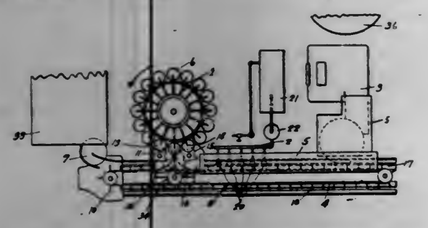
1. A fountain washing device comprising a tubular conduit adapted for connection with a hose, a pipe member connected with said conduit and provided with perforations, a pair of swabs, and clamping means for holding said swabs upon said pipe member, said pipe member being formed with longitudinal pressed in portions located between the series of holes for receiving the swabs and the clamping means therefor.

1,487,168. TYPEWRITING MACHINE. ALFRED G. F. KUROWSKI, Brooklyn, N. Y., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Nov. 12, 1919, Serial No. 337,394. Renewed Oct. 29, 1921. Serial No. 511,455. 46 Claims. (Cl. 197—127.)



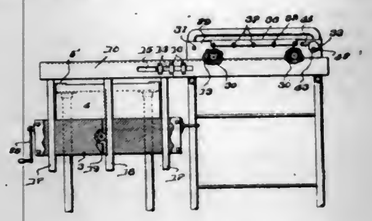
1. In a front-strike typewriting machine, the combination with a traveling carriage, of a paper-apron extend-

ing upwardly in front, a platen adapted to be withdrawn rearwardly from said apron, so that a stiff work-sheet resting on the front of the apron and on the rear portion



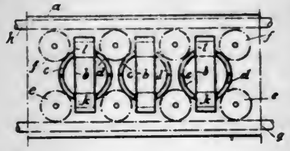
of the apron is about tangent to the platen, and wing-scales adjacent the front of the platen in its forward position and having bent-over tops substantially even with the stiff work-sheet when so tangent to the platen.

1,487,169. STERILIZATION OF ORGANIC MATERIAL. FRANCIS H. LANDRUM and ALBERT N. CRAMER, Columbus, Ohio, assignors to The Wedoit Company, Columbus, Ohio. Filed Feb. 21, 1917. Serial No. 149,987. 3 Claims. (Cl. 99—8.)



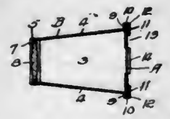
1. Sterilizing apparatus comprising means for passing organic material in an open vessel through sterilizing apparatus, means for applying a sterile liquid to such vessel, means for applying a sterile cover to such vessel, and an overhead cover plate for protecting such vessel in its passage from said sterilizing apparatus to said last means.

1,487,170. APPARATUS FOR STERILIZING FRUITS AND VEGETABLES AND SIMILAR PRODUCTS. FRANCIS H. LANDRUM and ALBERT N. CRAMER, Columbus, Ohio, assignors to The Wedoit Company, Columbus, Ohio. Filed Feb. 21, 1917. Serial No. 149,989. 2 Claims. (Cl. 99—8.)



1. Sterilizing apparatus comprising means for protecting the open end of vessels containing sterile material, said means constructed to carry condensed vapors rising from the material away from the open end of the vessels.

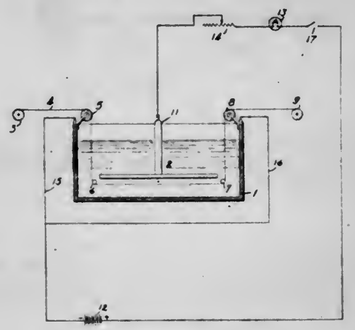
1,487,171. INVALID CARRIER. JOSEPH F. LA VIGNE, Laurel, Miss. Filed Apr. 18, 1923. Serial No. 632,975. 6 Claims. (Cl. 5—81.)



1. In a device for the purpose set forth, the combination with a roller table, of shouldered blocks secured to the ends thereof, a grooved track supported on the shoulders of the block, a collapsible stretcher frame having its end members provided with rollers received in the grooves of the tracks, and means for raising or lowering the tracks and stretcher frame on the roller table.

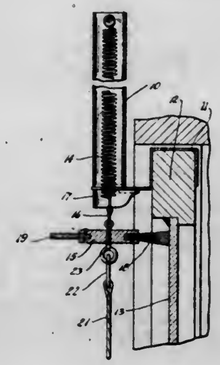
1,487,172. LATHE FOR RIBBON LOOMS. GUSTAV LÜDORF, Barmen, Germany, assignor to the Firm of: Gustav Lüdorf & Sohn, G. m. b. H., Barmen, Germany. Filed Mar. 25, 1922. Serial No. 546,894. 1 Claim. (Cl. 139—23.)

In a loom lathe for making hollow ribbon, double-ply ribbon, and the like, in combination, passageways for the warps, two shuttles for each passageway adapted to work simultaneously in a circular path and in a continuous direction and to pass alternately and successively through the upper and lower layer of the web, a set of toothed wheels in gear with said shuttles, a reciprocating rack adapted to be raised for its active engagement with said toothed wheels and to be lowered for disengagement from the latter during its return to its initial position, an up and down movable toothed rack adapted when raised to arrest said toothed wheels and thus said shuttles during the return way of the reciprocating toothed rack to its initial position, and means to effect said alternate movement of said toothed racks, substantially as set forth.



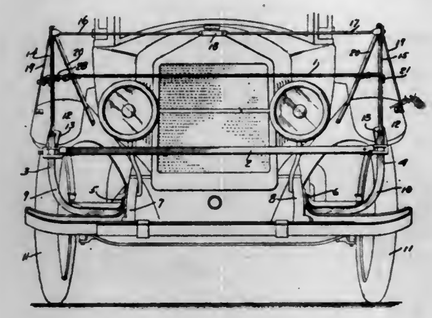
1,487,173. FILM-SCOPE TOY. JOSEPH A. MANION, St. Louis, Mo., assignor to Zdenko A. Shubert, New Orleans, La. Filed Jan. 27, 1920. Serial No. 354,515. 1 Claim. (Cl. 88—1.)

A film scope toy comprising a hollow body having a top plate, a bottom plate and two converging side walls to form a single unobstructed sight opening at the large end of the hollow body, a single lens positioned in the small end of the hollow body, a pair of opposed vertically



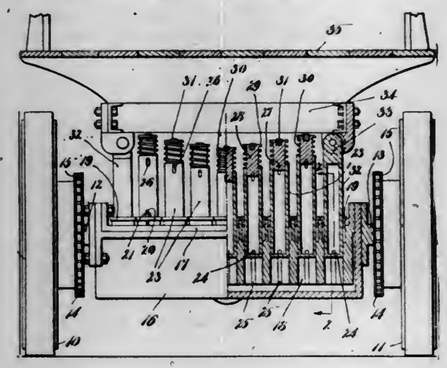
disposed ways formed by lipped terminations of said converging side walls at the unobstructed sight opening end thereof for receiving the side edges of a section of motion picture film placed in front of the sight opening and a narrow centrally disposed film stop integral with the bottom plate and directed forwardly from the sight opening edge thereof.

1,487,174. ELECTROLYTIC DEPOSITION OF THORIUM. JOHN WESLEY MARDEN, East Orange, and JOHN EDWARD CONLEY and THOMAS PHILIP THOMAS, Bloomfield, N. J., assignors to Westinghouse Lamp Company, a Corporation of Pennsylvania. Filed July 31, 1922. Serial No. 578,813. 37 Claims. (Cl. 204—1.)

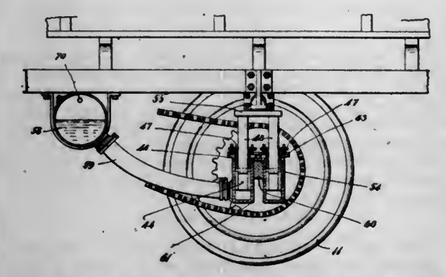


1. The method of forming thorium metal comprising preparing a solution thereof and depositing thorium therefrom electrolytically.

1,487,175. WINDOW-CLEANING DEVICE. SAM MITZENMACHER, Sr., and SAM MITZENMACHER, Jr., Chicago, Ill. Filed Aug. 31, 1922. Serial No. 585,576. 5 Claims. (Cl. 15—251.)



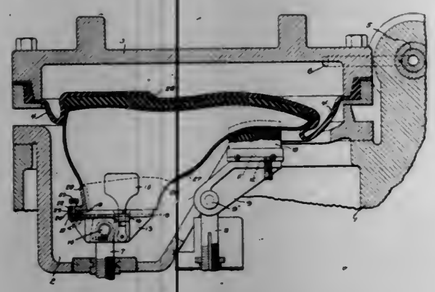
1. A window cleaning device provided with a housing having means thereon for detachably clasping a window sash rail, reversible cleaning means including bristles on one side and a rubber strip on the opposite side for washing and drying the window, means in said housing connected with said cleaning means for moving said cleaning means along the window in one direction, and flexible means for operating the device manually from the inside of the window in the opposite direction.



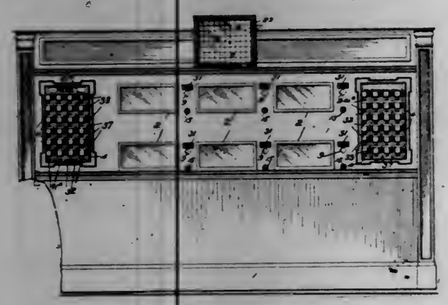
1,487,176. COLLISION SCREEN. WALTER J. MOORE, New York, N. Y. Filed Oct. 6, 1921, Serial No. 505,835. Renewed May 23, 1922. Serial No. 563,124. 20 Claims. (Cl. 293—54.)

1. A collision screen for automobiles which comprises a frame rigidly connected to the automobile at the front portion thereof and a plurality of collision straps disposed substantially horizontally on said frame, said straps disposed definitely with relation to the radiator and the lamps of the automobile and means adjustably connecting the straps to the frames.

1,487,177. VARIABLE LOAD-SUPPORTING AND SHOCK-ABSORBING DEVICE. OSCAR O. NYGAARD, Saugus, Mass. Filed Jan. 13, 1921. Serial No. 437,049. 41 Claims. (Cl. 267—34.)



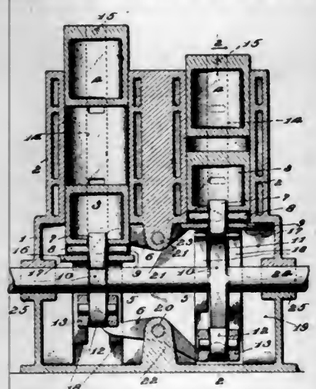
1. In a device of the class described, the combination of a pair of members spaced apart from but associated with and movable toward and from each other, a fluid holding tank, means for placing the contents of said tank under pressure, a plurality of means in said tank



for yieldingly supporting one of said members on the other, and a plurality of other yielding supporting means in said tank brought into operation to assist said first supporting means as the pair of members approach each other.

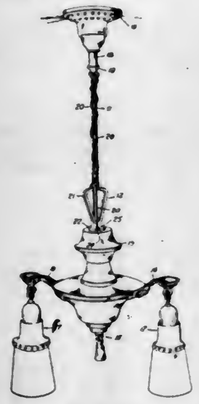
1,487,178. LAST-POSITIONING DEVICE. HERBERT R. POLLEYS, New Haven, Conn., assignor to L. Candee & Company, a Corporation of Connecticut. Filed Feb. 11, 1922. Serial No. 535,789. 10 Claims. (Cl. 12—126.)

1. A last positioning device comprising a rest with which the top of the last may engage, spring pressed retaining means for the sides of the last pivoted to said rest, and a stop for one end of the last adjacent said retaining means and adjustable longitudinally of said rest.



1,487,179. SYSTEM OF FOOD SERVICE. EDWIN P. PRATT, New York, N. Y. Filed Dec. 15, 1920. Serial No. 430,828. 12 Claims. (Cl. 186—1.)

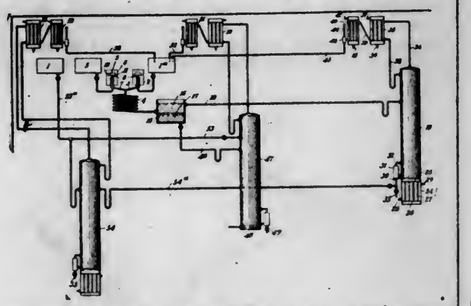
1. A system of food service embodying food-delivery means, duplicate checks identifiable with a single order of food, one of which is delivered at the front of said food delivery means and the other at the rear thereof and annunciator mechanism operable from the rear of said delivery means and arranged to announce at the front thereof that the order of food corresponding to the duplicate checks has been delivered to said food-delivery means.



1,487,180. INTERNAL-COMBUSTION ENGINE. CHARLES REINEKE, New York, N. Y. Filed Oct. 1, 1920. Serial No. 414,049. 6 Claims. (Cl. 74—14.)

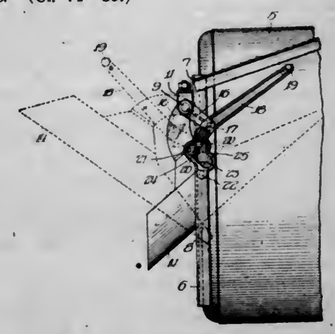
1. An internal combustion engine including a plurality of cylinders, a pair of opposed pistons arranged in each cylinder, a power shaft arranged beyond the portions of the bores of the cylinders in which the pistons move, cams arranged on said shaft, and oppositely arranged rollers connected to each pair of pistons and engaging

each of said cams, said rollers being arranged in offset relation relatively to the axis of the cylinder with which they are associated.



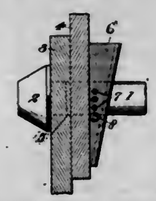
1,487,181. LIGHTING FIXTURE. FRANK H. ROBINSON, Bayonne, N. J., assignor to National Metal Spinning & Stamping Co., New York, N. Y., a Corporation of New York. Filed Oct. 31, 1922. Serial No. 598,075. 3 Claims. (Cl. 240—78.)

1. A supporting loop for lighting fixtures, comprising a loop portion and an integral annular end member, said end member being provided with a stepped bottom surface to project into said lighting fixtures and longitudinally disposed open channels on opposite sides thereof, said channels being of a depth projecting beyond the stepped surface, whereby direct communication is established between the outside of the annular member and the interior of the fixture.



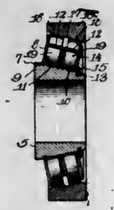
1,487,182. APPARATUS FOR OBTAINING ALCOHOL. WORTH H. RODEBUSH, Berkeley, Calif., assignor to U. S. Industrial Alcohol Co., a Corporation of West Virginia. Filed Apr. 14, 1921. Serial No. 461,303. 9 Claims. (Cl. 195—15.)

1. An apparatus for producing absolute alcohol comprising a combination of three column stills, a supply pipe for delivering liquid to the first still, a pipe from the third still to the first, a pipe from near the top of the second still leading to the first still, a condenser for each still, a liquid mixing device, a separating chamber



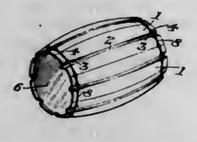
connected thereto, a pipe from near the top of the third still to the separating chamber, a pipe from the separating chamber to the second still.

1,487,183. LEVER CONSTRUCTION. ADOLPH W. RYBECK, Milwaukee, Wis., assignor to The T. L. Smith Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Jan. 19, 1923. Serial No. 613,625. 9 Claims. (Cl. 74—39.)



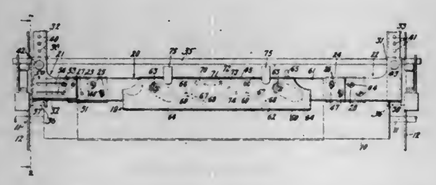
1. Shaft rocking means comprising an arm keyed to the shaft, a lever pivotally connected at a point intermediate its ends, to the end of the shaft arm, a thrust member carried by one end of said lever and a bearing adapted to receive the thrust member.

1,487,184. BOLTING-UP DEVICE AND TEMPORARY FASTENER. AUGUST SAUNIER, San Francisco, Calif., assignor of one-half to Edmund Nelson, Oakland, Calif. Filed Feb. 12, 1921. Serial No. 444,354. 3 Claims. (Cl. 85—8.)



1. A bolting up device and temporary fastener for structural parts, comprising in combination a head and shank, said shank having a registering lateral slot, a double key, each of a wedge shape, connected together by a back plate, said back plate having a longitudinal slot adapted to engage said lateral slot and means to hold said key in position upon said shank.

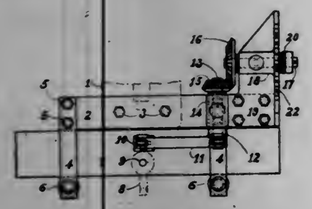
1,487,185. ROLLER BEARING. FREDERICK GEORGE SEIFARTH, Chicago, Ill., assignor of one-half to James G. Wilson, Chicago, Ill. Filed July 14, 1923. Serial No. 651,614. 2 Claims. Cl. 64—62.)



1. An anti-friction bearing comprising inner and outer bearing members, a plurality of groups of disks, the disks of each group arranged in series and interposed between said members, and annular retainers arranged back to back between the respective groups of disks and having lateral elements projecting in opposite directions to space the disks in the respective series, one of said bearing members having convex faces to contact separately with a portion of the periphery of each disk and the other bearing member having a straight face to contact with all of the periphery of each disk.

1,487,186. BARREL STAVE. HERBERT J. SMITH, Kearny, N. J., assignor to American Fibre Cooperage Company Inc., Dover, Del., a Corporation of Delaware. Filed Dec. 19, 1921. Serial No. 523,306. 5 Claims. (Cl. 229—67.)

1. A barrel stave comprising a blank of paper-board having a continuous intermediate longitudinal groove therein increasing in depth and width from the center toward each end of the blank.



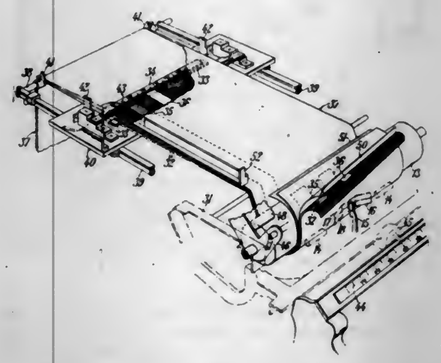
1,487,187. TYPEWRITING MACHINE. JESSE A. B. SMITH, Stamford, Conn., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Mar. 3, 1921, Serial No. 449,467. Renewed Dec. 21, 1922. 17 Claims. (Cl. 197—127.)

1. In a front-strike typewriting machine, the combination with a platen, of a collating table at the delivery side of the platen, means to detain said collating table at different heights above the printing line, said heights differing by line-space intervals in accordance with the depths of the headings on different sets of work-sheets above a line in which typing is to be effected when a work-sheet is inserted, a leading-edge gage associated with said collating table to be moved therewith, means for detaining said leading-edge gage at different line-

space positions with reference to said collating table, so that, after the table has been positioned for gaging work-sheets of one set and a work-sheet of that set has been inserted, the leading-edge gage may be moved upwardly to other line-space positions to gage the work-sheet for new lines without changing the adjustment of the collating table, and a side gage adjustable relatively to the collating table and transversely of the machine.

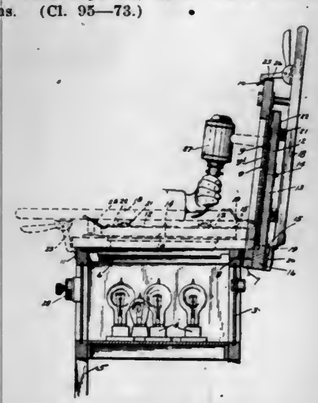
1,487,188. ADJUSTABLE TRACTOR HITCH. HARRY T. TERAY, Butler, Pa., assignor of one-half to Edgar C. Huselton, Butler, Pa. Filed Mar. 22, 1921, Serial No. 454,559. Renewed Aug. 29, 1923. 5 Claims. (Cl. 280—33.10.)

1. An adjustable tractor hitch comprising in combination, a member for attachment to the tractor and provided with horizontal lateral guiding means, a transversely sliding member having parallel front and rear guiding faces mounted in said guiding means and provided with means for connection thereto of a plow or other implement, actuating means attached to the said sliding member for shifting the same in opposite directions, the points of attachment to the sliding member of said means for connection and said actuating means being disposed relatively to each other whereby to render the sliding member reversible face for face.



1,487,189. CLIPPER. LEO J. WAHL, Sterling, Ill. Filed July 6, 1920. Serial No. 394,055. 25 Claims. (Cl. 30—1.)

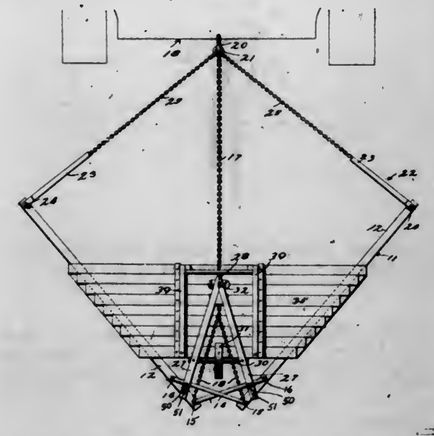
1. In a clipper the combination of a case, a clipper blade carried thereby, a movable clipper blade co-operating with the first mentioned blade, an electro-magnetic clipper blade driving mechanism, and a yielding driving connection between the clipper blade driving mechanism and the movable clipper blade for driving the blade and holding it to its seat.



1,487,190. TYPEWRITING MACHINE. JOHN WALDHEIM, Elizabeth, N. J., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Jan. 27, 1920. Serial No. 354,475. 4 Claims. (Cl. 197—126.)

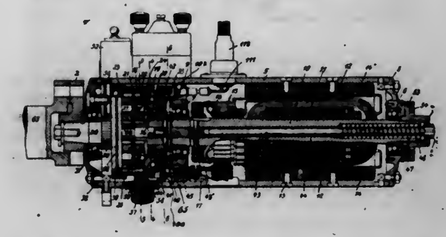
1. In a typewriting machine, the combination with a letter-feeding revolvible platen, a letter scale therefor, and means for feeding superposed plies of web around the platen, of a carbon-sheet carrier in rear of the platen and movable backwardly away from the platen to shift interposed carbon sheets along the web, said carbon-carrier comprising a carbon-holding bar and a clip extending along the bar, both a full-width carbon-sheet and narrow columnar or zone carbon-strips superposed upon the carbon-sheet and all secured by their bottom edges by means of said clip, whereby to advance said sheet and strips bottom ends first along said web, and means comprising a strip-positioning scale on said carbon-carrier

auxiliary to said platen scale and marked in accordance therewith but distant from the printing field of the typewriter for locating the zone strips by their bottom ends laterally relatively to said platen scale, preparatory to covering up the strips and scale by the work-sheet, whereby predetermined zones or columns, the position of which is determined by the use of said platen scale, may be typed in contrasting colors upon certain plies of web.



1,487,191. PHOTOGRAPHIC-PRINTING MACHINE. JOHN M. WELCH, Minneapolis, Minn., assignor to Pako Corporation, Minneapolis, Minn., a Corporation of Delaware. Filed Sept. 10, 1921. Serial No. 499,663. 3 Claims. (Cl. 95—73.)

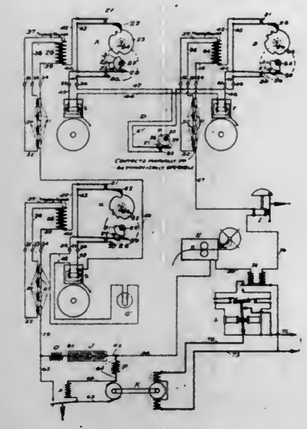
2. The combination with a lamp house, of a printing head frame having a transparent plate and hinged to said lamp house, a presser board located above and hinged for movements in respect to said head frame, a presser lever hinged above said presser board, yielding means interposed between said presser lever and presser board and operative to clamp a negative and print between said board and the transparent plate of said presser head, and means for locking said presser lever to said head frame, whereby said head frame, presser board and presser lever may be moved together, with the print and negative clamped as stated.



WITHDRAWN

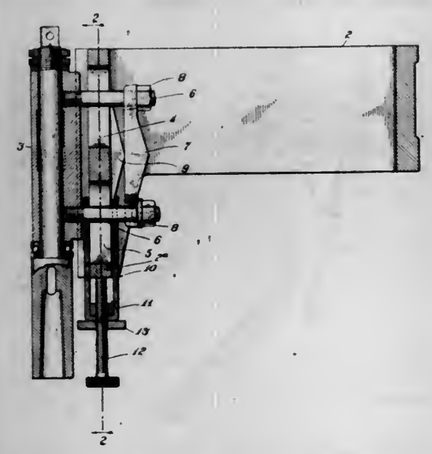
1,487,192. ROAD DRAG. [illegible] WICKENS, Avon, [illegible]. Filed [illegible], 1920. Serial No. 424,897. 7 Claims. (Cl. 37—170.)

1. In a road drag, the combination with a pair of forwardly divergent rearwardly convergent side members; of crossed rigid connections each pivotally connected at its opposite ends to the respective side members at points adjacent to the rearward ends of the latter.



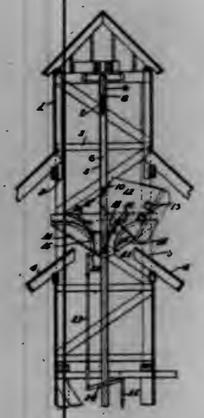
1,487,193. STARTER FOR INTERNAL-COMBUSTION ENGINES. ARPAD BARENYI, Berlin-Lichterfelde, Germany. Filed Jan. 13, 1923. Serial No. 612,544. 3 Claims. (Cl. 290—22.)

1. In an internal-combustion engine, and in combination with an engine shaft, a motor-dynamo having an extensible and retractable two-part shaft, one of said shaft-parts carrying the armature of the motor-dynamo, the other shaft-part carrying a make-and-break device for the armature windings, means for effecting relative shifting of the shaft parts, and power-transmission means connecting the dynamo-motor shaft with the engine shaft and adapted to transmit rotation of the extended motor-dynamo shaft to the engine shaft at undiminished speed, to transmit rotation of the retracted motor-dynamo shaft to the engine shaft at diminished speed, and to transmit rotation of the engine shaft to the motor-dynamo shaft at undiminished speed.



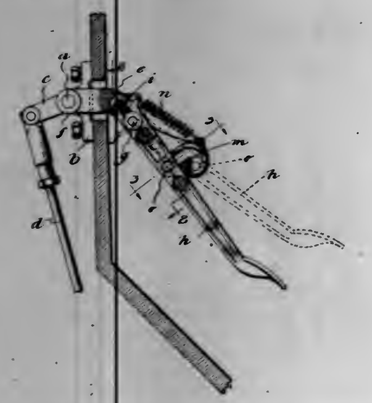
1,487,194. SIGNALING SYSTEM. CLARENCE E. BEACH, Binghamton, N. Y. Filed Oct. 9, 1919. Serial No. 329,603. 18 Claims. (Cl. 177—360.)

16. In a signal transmitter,—a normally wound train, differentially wound electro-magnetic releasing means for said train, normally closed code signaling contacts operable by said train to formulate a predetermined code one or more times, normally closed shunting contacts so controllable by said train in running as to remain closed during initial action thereof to formulate such code one or more times, and to be thereafter held open during



action of said train to formulate said code signal an additional one or more times, and suitable conductors serially connecting one of said magnet windings, the signaling contacts and the shunting contacts.

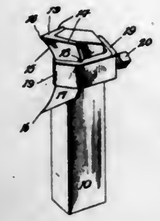
1,487,195. MULTIPLE DRILL. VERE C. BLACKMAN, Fond du Lac, Wis., assignor to The National Automatic Tool Co., Richmond, Ind., a Corporation of Indiana. Filed Mar. 30, 1920. Serial No. 369,944. 4 Claims. (Cl. 77—24.)



1. In spindle supporting apparatus, the combination with an arm, a spindle bearing slidably fitting the end face of the arm, and means for clamping the bearing against the arm; of a vertical adjusting screw located at the inner side of the bearing in the general plane of the same and the arm and engaging a depending portion of the latter and being manipulatable from below, said screw being coactively related to the bearing whereby to assist the clamp in holding the tool to its work besides providing for a fine vertical adjustment of the bearing to the work in hand.

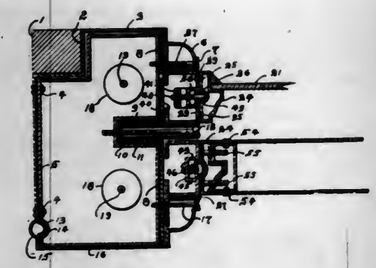
1,487,196. MATERIAL-HANDLING DEVICE. CARL F. BLEDSOE, Chicago, Ill. Filed June 16, 1922. Serial No. 568,698. 5 Claims. (Cl. 214—120.)

1. A material handling device, comprising a housing, a bucket, means for hoisting said bucket, a switch mechanism at a predetermined elevation in said housing for causing automatic dumping of said bucket at said predetermined elevation, and means operable from the base of said housing for positively operating said switch to cause dumping of said bucket in one of a plurality of directions.



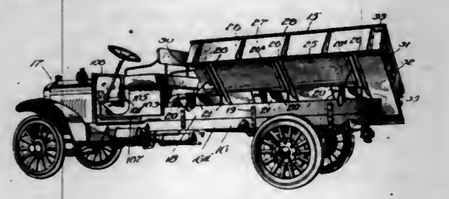
1,487,197. ADJUSTABLE PEDAL. JAMES SCRIPPS BOOTH, Detroit, Mich. Filed June 18, 1923. Serial No. 646,122. 6 Claims. (Cl. 74—81.)

1. In an adjustable pedal, a two-part lever having the two parts provided with an interengagement consisting of a pin and a plurality of notches the pin being engageable in a selected notch to alter the adjustment of the pedal, and means for holding the pin in such selected notch.



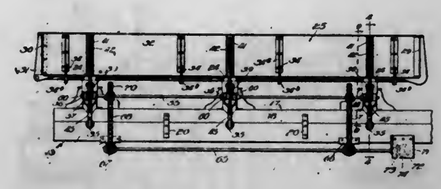
1,487,198. MINING-MACHINE BIT. NEWTON K. BOWMAN, North Lawrence, Ohio. Filed Aug. 17, 1920. Serial No. 404,108. 10 Claims. (Cl. 262—33.)

9. In a mining machine, the combination with a stock, of a reversible tooth having lateral wings, and means engaging the tooth between the ends thereof for rigidly securing the tooth in position on the stock with the



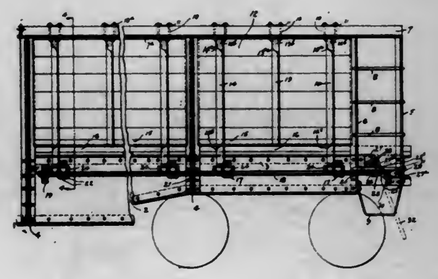
lateral wings bearing firmly against said stock to provide a backing for the working end of the tooth.

1,487,199. WINDOW STRUCTURE. HARRY E. BRADNER, Fremont, Ohio, assignor, by mesne assignments, to The Twin-Plex Reversible Window Company, Inc., Buffalo, N. Y., a Corporation of Delaware. Filed Apr. 11, 1921. Serial No. 460,205. 4 Claims. (Cl. 189—69.)



1. A compound side rail for sash including a primary sash member of closed figure cross-section and provided with a weather strip receiving channel, a hollow cross rail, a corner block fitting into the cross rail terminating therewith and contoured to seat against inner side of the sash member as extending over the end of the cross rail and means for anchoring the block to said member and rail.

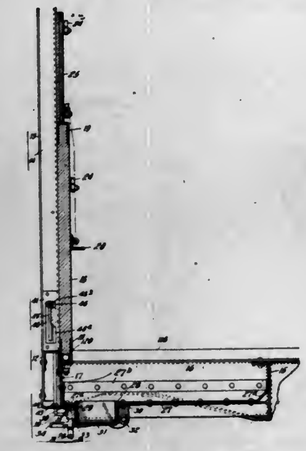
1,487,200. AUTOMATIC DUMP CAR. ANTON BREZOVITZ and ABRAHAM L. HERR, South Bend, Ind. Filed Mar. 17, 1919. Serial No. 283,243. 14 Claims. (Cl. 298—13.)



1. In combination, a frame, a body movable on said frame, a door hinged on said body, an operating lever pivoted on said frame and extending alongside of said door to maintain the same in closed position, said lever having a sliding connection with said door, and means for moving said body toward said lever with respect to said frame, whereby said door is automatically opened.

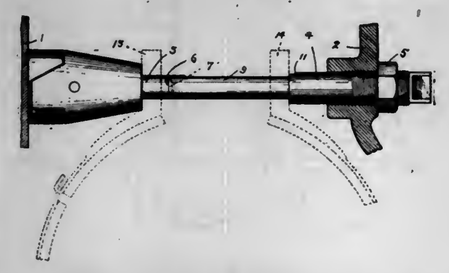
1,487,201. DUMP CAR. ANTON BREZOVITZ and ABRAHAM L. HERR, South Bend, Ind. Filed Apr. 24, 1919. Serial No. 293,340. 15 Claims. (Cl. 298—13.)

1. The combination in a dump car of a supporting frame, a body adapted to move laterally and tilt on said frame, a transmission shaft carried by said frame, means operated by said transmission shaft for moving and tilting said body, means for locking said body in position on said frame, and means operated simultaneously with the starting operation of said moving means for releasing said locking means.



1,487,202. LOAD-DISCHARGING CAR. ARGYLE CAMPBELL, Chicago, Ill., assignor to Enterprise Railway Equipment Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 2, 1922. Serial No. 598,468. 18 Claims. (Cl. 105—258.)

16. In a dump car having a bottom side sill, a side top member, vertical stakes connected respectively to the side sill and top member, and a floor extending outwardly beyond said side sill: the combination with swinging doors hinged to said top member and having extensions projecting downwardly beyond the free edges of the doors, said extensions being deflected inwardly to points beneath the floor of the car when the doors are in closed position; of slotted brackets secured to the side sill; a shaft extended through said stakes; and latch members secured to said shaft and extended upwardly through said slotted brackets and engageable with the door extensions.

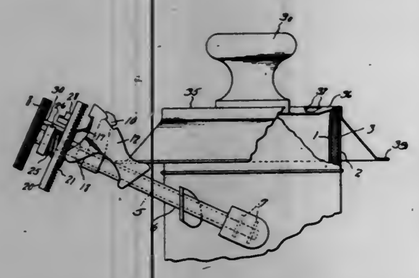


1,487,203. CAR. ARGYLE CAMPBELL, Chicago, Ill., assignor to Enterprise Railway Equipment Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 8, 1922. Serial No. 599,631. 14 Claims. (Cl. 105—239.)

1. In a car for the carrying of grain and the like having a door opening and a displaceable floor section adapted to constitute either a portion of the car floor when in one position, or a door for said opening when in another position; a sub-floor adjacent said door opening adapted to be covered at times by said floor section and spaced an appreciable distance therebelow; a discharge door for said sub-floor, said discharge door being of small

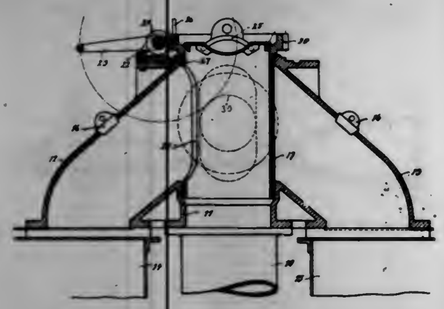
area compared to the area of the sub-floor and located closely adjacent the side of the car; and means for locking said discharge door in closed position.

1,487,204. AUTOMOBILE BAND-BRAKE ATTACHMENT. VICTOR R. CARLSON, Duluth, Minn., assignor of one-half to Anton Hanson, Duluth, Minn. Filed Jan. 16, 1922. Serial No. 529,685. 2 Claims. (Cl. 188—2.)



1. Band adjusting means of the character described comprising a reciprocal separable shaft and longitudinally yieldable means for automatically holding the separable parts of the shaft abutting each other.

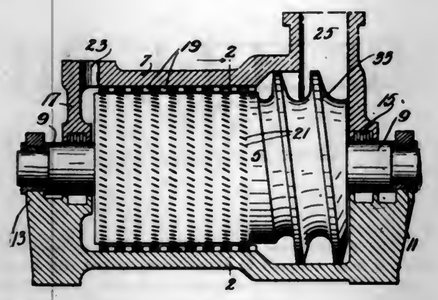
1,487,205. PROCESS FOR THE REMOVAL OF FLUORINE COMPOUNDS FROM PHOSPHORIC ACID. JOHN N. CAROTHERS and ARTHUR B. GERBER, Anniston, Ala., assignors to Federal Phosphorus Company, Birmingham, Ala., a Corporation of Alabama. Filed Jan. 7, 1922. Serial No. 527,686. 7 Claims. (Cl. 23—1.)



1. A process for the elimination of hydrofluoric acid from an aqueous solution of hydrofluoric acid and phosphoric acid, which consists in adding to said solution a silicate, and precipitating a fluorine compound, substantially as described.

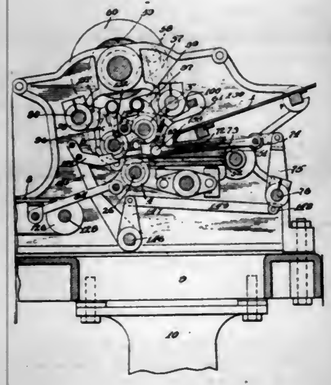
1,487,206. LIQUID-FUEL BURNER. LEE S. CHADWICK, Shaker Heights Village, Ohio, assignor to The Cleveland Metal Products Company, Cleveland, Ohio, a Corporation of Ohio. Filed Feb. 26, 1921. Serial No. 448,110. 10 Claims. (Cl. 67—66.)

1. In combination with a burner involving a wick guide and means for raising the wick, a movable stop for limiting the movement of said means, means for locking said stop against movement, and a device adapted to be placed over the wick guide and serving to arrest movement of the wick in an upward direction above a predetermined point, said device when in such position cooperating with and rendering the locking means ineffective.



1,487,207. GAS VALVE. HEINRICH CLAUSING, Bochum, Germany. Filed Mar. 8, 1922. Serial No. 542,125. 3 Claims. (Cl. 251—95.)

1. A gas valve for gas and coke ovens comprising in combination, a substantially cylindrical valve casing and a hollow cylindrical plug open at the bottom extending from above into said casing in contact with the casing wall, a flange formed around the upper end of said plug being pressed against the upper edge of said valve casing solely by the weight of said plug.

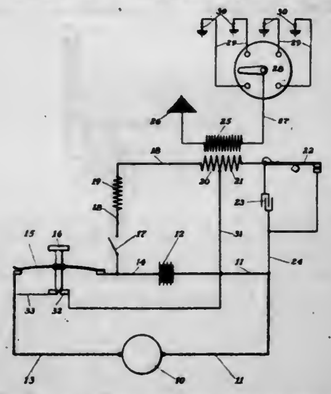


1,487,208. AGITATING AND MIXING DEVICE. GORDON C. COOKE, Paterson, N. J., and JAROSLAV A. MICHAL, Brooklyn, N. Y., assignors to The Turbinator Company, Inc., New York, N. Y., a Corporation of New York. Filed Dec. 13, 1922. Serial No. 606,585. 7 Claims. (Cl. 259—9.)

1. In an agitating and mixing device, a rotor adapted to be driven at high peripheral speed and provided on its periphery with a multiplicity of circumferential rows of radially extending blades, and a casing for the rotor provided on its inner periphery with circumferential rows of blades alternating with the rows of blades on the rotor, said blades on the rotor and on the casing being

set at inclinations to deflect material from row to row through the device and to present cutting edges against which particles of material are projected.

1,487,209. WRAPPING MACHINE. SIMON COOPER, Brooklyn, N. Y., assignor to Ideal Wrapping Machine Company, a Corporation of New York. Filed May 14, 1920. Serial No. 381,453. 21 Claims. (Cl. 93—5.)

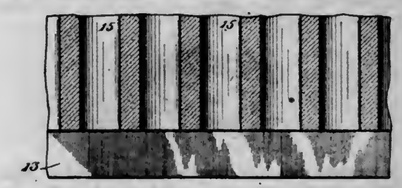


1. The method of wrapping cylindrical articles comprising passing a strip of wrapping material obliquely across the path of movement of such article, cutting the strip parallel to such path of movement, rotating the object to wrap the strip therearound, and whilst the object is still rotating gripping the ends of the wrapping material to cause the latter to be twisted around the ends of the object.

1,487,210. STARTING AND IGNITION SYSTEM. HENRY R. DAVIES, New York, N. Y., assignor to Industrial Research Corporation, Toledo, Ohio, a Corporation of Delaware. Filed Apr. 28, 1919, Serial No. 293,176. Renewed June 25, 1923. 5 Claims. (Cl. 290—38.)

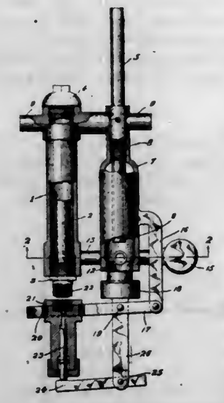
1. In a starting and ignition system for gas engines, a motor for revolving the engine shaft at starting, a battery electrically connected to said motor, an ignition coil comprising two series primary windings of different

resistance wire, said windings being connected to take current from said battery, a starting switch for the



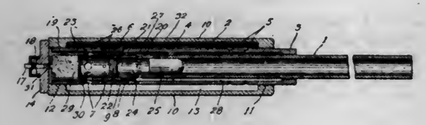
motor circuit, and a shunt also controlled by said switch extending from the juncture of said windings around the winding of greater resistance wire.

1,487,211. SUSPENDERS. JAMES ALEXANDER, Pittsfield, Mass. Filed Dec. 22, 1922. Serial No. 608,479. 2 Claims. (Cl. 241—19.)



1. In combination in suspenders, a pair of shoulder straps having the back ends overlapping one another, a connecting piece overlaying said overlapping ends, having the opposite side edges in parallelism, and being provided with a downwardly directed extension, a single coil spring connected to said extension and extending downwardly therefrom, a socket structure composed of a front wall and a rear wall serving as a housing for said spring and the adjacent portion of said connecting piece, the lower end portion of said socket structure having a tab loop and also being connected to the lower end of said spring, and the upper end portion of said socket structure having the interior side walls that are opposed to said side edges also in parallelism so as to cooperate therewith as guide means under conditions involving telescopic movements of the parts.

1,487,212. SYSTEM OF BUILDING CONSTRUCTION. RALPH L. COBURN, San Francisco, Calif. Filed Oct. 5, 1920. Serial No. 414,863. 3 Claims. (Cl. 25—157.)



1. A method of constructing building walls consisting of casting a permanent vertical wall of unbaked clay, forming said wall with a series of vertically extending passageways on its interior and a horizontally extending passageway at its base communicating with all of the said vertical passageways, and baking the material of said wall by means of heat applied within the communicating passageway.

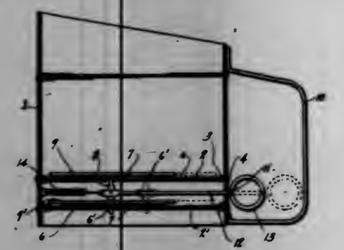
1,487,213. GUN. RICHARD LEE DEZENDORF, Richmond Hill, N. Y. Filed June 30, 1920, Serial No. 392,911. Renewed Sept. 22, 1923. 5 Claims. (Cl. 89—1.)

1. In a gun, the combination of an explosion chamber having a breech-lock and a firing pin, a projectile chamber, a connection between said chambers such that gases can pass from said explosion chamber to said projectile chamber, a trap for liquid in said connection such that liquid therein normally separates said two chambers and means for supplying liquid to said trap independently of said chambers.

1,487,214. FIREARM AND AMMUNITION THEREFOR. RICHARD L. DEZENDORF, Richmond Hill, N. Y. Filed Mar. 18, 1921, Serial No. 453,334. Renewed June 12, 1923. 5 Claims. (Cl. 89—1.)

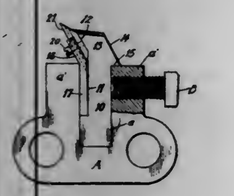
1. The combination of a cartridge casing having a chamber for explosive, a projectile, and a partition between said chamber and projectile and so located as to leave a chamber between it and said projectile, the walls of said chambers being perforated.

2. The combination of a cartridge having a chamber for explosive, a projectile, a partition between said chamber and projectile and so located as to leave a chamber between it and said projectile, the walls of said chambers being perforated, and a firearm having a portion engaging said cartridge between said perforations, and having a tortuous passage around said portion connecting the perforations in said respective walls.



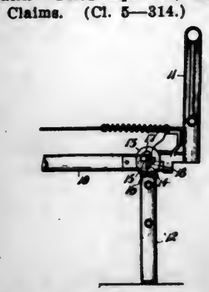
1,487,215. FLOSS CONTAINER AND PASTE EXPRESSOR. RICHARD TOZER DIAL, Columbia, S. C. Filed Nov. 3, 1922. Serial No. 598,797. 3 Claims. (Cl. 221—60.)

2. A dental floss container, provided with a detachable cap having a perforation for the floss, and means for engaging a collapsible tube, said means consisting of a U-shaped bar connected with the tube.



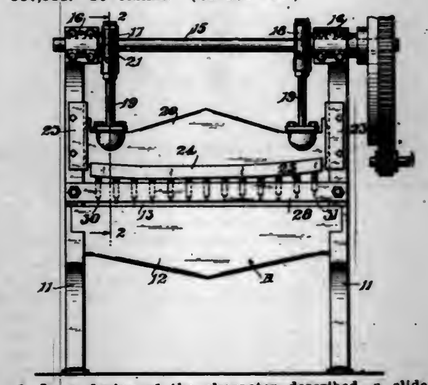
3. A dental floss container, provided with a handle to rotate the same, and means for engaging a collapsible tube.

1,487,216. FLOUR SIFTER. ROY N. DICKEY, Seattle, Wash., assignor, by direct and mesne assignments, to Meets-A-Need Manufacturing Co., a Corporation. Filed May 28, 1923. Serial No. 642,124. 1 Claim. (Cl. 83—60.)



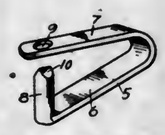
A flour sifter comprising a casing provided with a handle and having an opening in the wall directly within the handle, a plurality of sifting screens in the casing in spaced relation, supporting bars for the screens having longitudinally extending slots therein, agitators mounted above the screens for reciprocal movement thereon, and a shaft extended through said slots and connecting said agitators, a link slidable through said casing opening fixed at its inner end to said agitator connecting shaft, and having an actuating loop at its outer end, and a spring fixed to the casing and to the said link to yieldingly resist its outward movement.

1,487,217. MINING-MACHINE BIT. JAMES F. DILLON, Crown City, Ohio, assignor to Newton K. Bowman, Bowdill, Ohio. Filed Sept. 16, 1920. Serial No. 410,593. 10 Claims. (Cl. 262—33.)



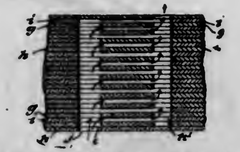
1. A bit for mining machines including a sectional stock, a tooth removably disposed between said sections, and a screw holding the sections in engagement with each other and clamping the tooth in place, said screw passing through the tooth.

1,487,218. FOLDING BED. NAPOLEON B. DOUGLASS, Oakland, Calif. Filed Apr. 27, 1921. Serial No. 464,812. 2 Claims. (Cl. 5—314.)



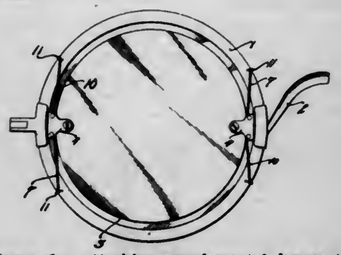
1. A folding bed comprising a frame pivotally mounted at one end for folding movement, a pendant supporting leg at the opposite end of the frame and a hinged connection between the leg and frame comprising a pin elongated in the direction of the axis of the leg and fixed upon one of the hinged members, the other member having vertical and horizontal slots crossing each other, the material at the upper inside corner and the lower outer corner between the cross slots being cut away to allow the pin to turn therein through an arc of approximately 90° when the leg is hanging pendant and the vertical slot being extended slightly at one end to form a pocket or seat for the pin when the frame is resting on the leg whereby to lock the leg against swinging movement.

1,487,219. MULTIPLE PUNCH. EDWARD J. DREIS, San Francisco, Calif. Filed Sept. 11, 1922. Serial No. 587,518. 10 Claims. (Cl. 164—90.)



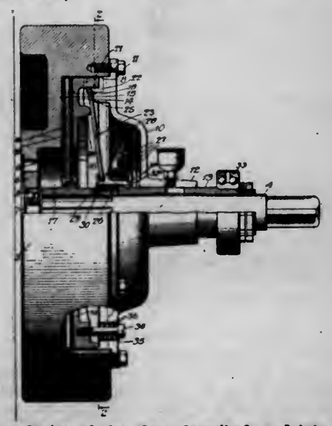
1. In a device of the character described, a slide, a plurality of dies disposed in line formation and carried by said slide, and means for simultaneously imparting vertical reciprocating and endwise rocking movement to said slide whereby to cause said dies to operate in successive order.

1,487,220. EAR TAG. PETER F. ELZI, Denver, Colo. Filed Jan. 16, 1922. Serial No. 529,519. 3 Claims. (Cl. 40—3.)



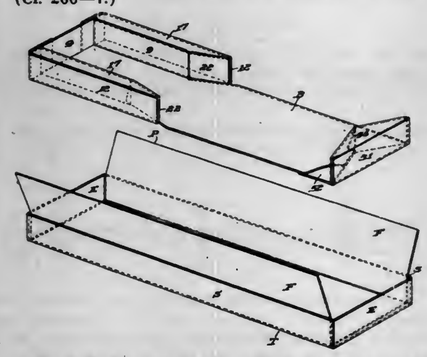
1. A marking tag for animals consisting of a pliable clip having an aperture and a round pin adapted to pass through said aperture, the end of the pin being beveled to a transverse edge for the purpose specified.

1,487,221. DEVICE FOR COOLING ELECTRIC MACHINES. PAUL EHRMANN, Paris, France. Filed Mar. 28, 1921. Serial No. 456,136. 1 Claim. (Cl. 171—252.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



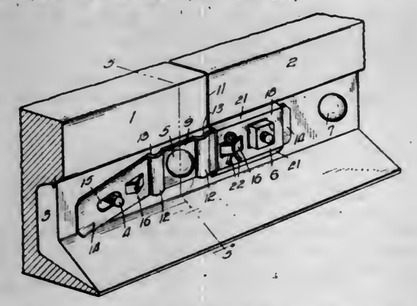
A laminated mass for electric machines, comprising a front plate provided with an air-inlet opening, a back plate provided with an air-outlet opening off-set relative to the said air-inlet opening, a plurality of plates intermediate the said front and the said back plate, each provided with an opening in line with the said air-inlet opening, and an opening in line with the said air-outlet opening, and plates interposed between the said other plates provided with an elongated opening, having its ends in line both with the said air-inlet and the said air-outlet openings of the said front and back plates.

1,487,222. SPECTACLES. THOMAS R. EVANS, Philadelphia, Pa. Filed July 11, 1922. Serial No. 574,319. 6 Claims. (Cl. 2—149.)



1. Means for attaching supplemental lenses to spectacles consisting of clips secured to the supplemental lens, and spring wires having one end coiled and mounted in the clips and the other end adapted to engage a lens rim of the spectacles.

1,487,223. CLUTCH. THOMAS L. FAWICK and PERCY H. BATTEN, Racine, Wis., assignors to Twin Disc Clutch Company, Racine, Wis., a Corporation of Wisconsin. Filed July 28, 1919. Serial No. 313,720. 4 Claims. (Cl. 192—68.)



3. In a device of the class described, a driving and a driven part co-axially arranged, one of said parts having an axially movable clutch member and an axially immovable clutch member and the other of said parts having a friction disc intermediate said movable and immovable clutch members, a series of fulcra on the movable clutch member, corresponding fulcra on the axially immovable clutch member, a series of levers engaging corresponding fulcra on the axially movable and immovable clutch members, said levers having plane surfaces engaging the fulcra and rolling thereon.

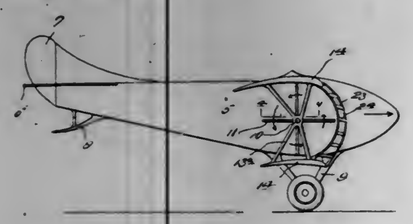
1,487,224. BOX. ROBERT A. FERGE, Pottstown, Pa. Filed Apr. 4, 1922. Serial No. 549,393. 3 Claims. (Cl. 206—7.)

1. A blank adapted to be positioned in a rectangular tray and having a part arranged to form a base and portions adjacent one end thereof so cut and scored that when bent to a predetermined position prior to insertion in the tray a filler will be formed at one end of the base triangular in planary outline and having walls extending substantially normal to the base, said blank for the purpose of forming said filler being provided with scores disposed to define an isosceles triangle with its altitude parallel to the center line of the base but laterally spaced therefrom, similar rectangular portions extending from the sides of the triangle and each defined by cut and scored lines, and a tab in the form of an equilateral triangle extending from one of the longer sides of one of said rectangular portions and adapted when the blank is bent to final position to partially enter beneath the base.

1,487,225. COMBINED NUT LOCK AND BOLT-STRETCH TAKE-UP MEANS. PAUL T. FIEHLER, Maplewood, Mo. Filed June 25, 1923. Serial No. 647,547. 7 Claims. (Cl. 151—54.)

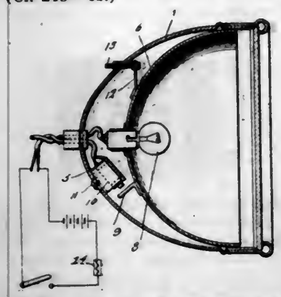
1. A combined nut lock and bolt stretch take up device comprising a non-yieldable bearing plate held in position by means of a bolt, a yieldable nut embracing end section integral with the non-yieldable bearing plate and having an opening for the passage of a second bolt, a lock plate having an opening for the reception of a nut carried by said second bolt to prevent rotation of the nut upon the bolt and means for removably securing said nut lock plate upon said yieldable nut embracing end section.

1,487,226. CAKE CUTTER. CARL A. FRAHM, Canton, Ohio. Filed May 5, 1922. Serial No. 558,650. 15 Claims. (Cl. 107—51.)



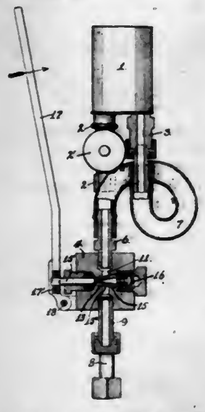
1. In a cake cutter, a cutter carrying bearing head having a constricted neck portion, and a handle having its end walls seated in said constricted neck portion.

1,487,227. RAILWAY-CROSSING SIGNAL. CHARLES E. FRY, Bloomfield, Iowa. Filed Oct. 26, 1923. Serial No. 670,957. 1 Claim. (Cl. 246—295.)



A railway crossing signal including a bell mounted for swinging movement on a post adjacent a crossing, and operating means for swinging the bell located at a point remote from said crossing and having a support adjacent the track, a rock shaft rotatably mounted in said support and extending under one of the rails of said track, a curved ramp formed on the end of the rock shaft adjacent the rail, a laterally extending arm on the other end of said shaft, guide pulleys mounted on said support, a flexible connection between said arm and said bell and extending over said guide pulleys whereby the bell may be actuated in the rocking movement of said arm through the engagement of the wheels of the rail vehicle with said ramp, another guide pulley mounted adjacent the normal plane of the end of said laterally extending arm on the rock shaft, a flexible cable connected with the end of said arm and extending over said last mentioned pulley, a weight mounted on the end of said last mentioned cable for normally rotating said shaft in one direction to position the ramp for engagement with the wheels of the vehicle on said rails, and means for limiting the movement of the arms under the action of the weight.

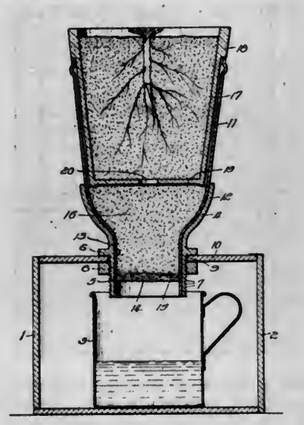
1,487,228. AEROPLANE. EMILIO GARCIA, Bethlehem, Pa. Filed Jan. 23, 1924. Serial No. 688,457. 4 Claims. (Cl. 244—15.)



1. In an aeroplane, a fuselage having transversely and horizontally disposed paddle wheel propellers at opposite sides thereof, pairs of normally superimposed horizontal planes disposed at opposite sides of the fuselage, the planes of each pair being respectively disposed above and below the adjacent propeller, means for mounting said planes upon the fuselage for movement in a circular path concentric with the axis of the propellers, and means for moving said planes.

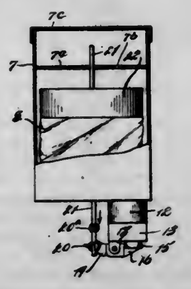
1,487,229. LAMP. FRANCIS LON GARRISON, Connersville, Ind. Filed Feb. 20, 1922. Serial No. 538,099. 1 Claim. (Cl. 245—41.)

A lamp of the character described comprising a casing, a reflector pivotally secured within the casing on diametrically opposite sides thereof, a set screw threadedly secured to the casing and having its respective ends arranged interiorly and exteriorly thereof, a left spring swivelled to the inner end of the set screw and depending therefrom for engaging and holding the reflector in normal position, and means arranged in the casing and carried by the reflector for tilting the latter as and for the purpose specified.



1,487,230. CONTROL DEVICE FOR CUTTING AND WELDING TORCHES. WILLIAM E. GASKIN, Oakland, Calif. Filed Dec. 26, 1922. Serial No. 609,060. 2 Claims. (Cl. 158—27.4.)

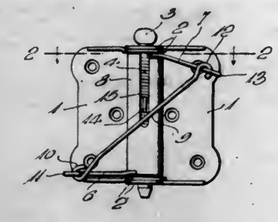
2. A control device for cutting and welding torches comprising a block having through passages; fittings at each end of each passage communicating with the sources of gas supply and with the inlet fittings to the torch; conical taper-bored valves slidably mounted in said block and traversing its through passages, said valves having restricted ports for the passage of a small volume of gas for the pilot light; needle valves seated in the taper-bore of said valves for controlling said restricted ports; springs for holding said taper-bored valves in normally closed position; and a lever pivoted to said block and engaging said taper-bored valves to simultaneously open them.



1,487,231. FLOWERPOT HOLDER. RADY GEORGE, Springfield, Ill. Filed Apr. 17, 1922. Serial No. 553,643. 2 Claims. (Cl. 47—40.)

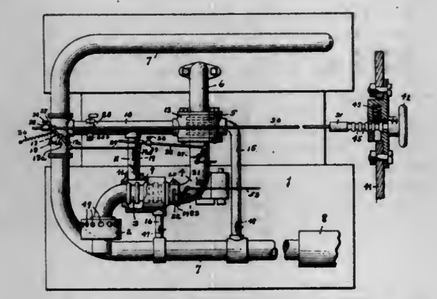
1. In a flower pot holder structure, a hollow base having a door, said base adapted to receive and conceal a removable water drain receptacle, a sleeve fixed to the top wall of the hollow base, a flower pot holder terminating at its lower end in a tubular drain neck having its lower end open, said drain neck passing through the sleeve and extending into the base a short distance above

the water drain receptacle carried therein and a screen disposed within said drain neck near the lower end thereof to act as a floor for moss and sand adapted to be deposited within the drain neck of the flower pot holder.



1,487,232. VOICE FOR DOLLS. ARTHUR A. GERLING, New York, N. Y., and GEORGE A. L. DU VIGNEAU, North Bergen, N. J. Filed Mar. 4, 1922. Serial No. 541,000. 3 Claims. (Cl. 46—46.)

2. In a sound producing device, a reed, a bellows to force air therethrough, said bellows having a movable member, an air chamber containing the reed having an opening, an arm pivotally mounted adjacent said chamber, a valve at one end of the arm to close said opening, said valve being arranged to open by gravity, the opposite end of said arm being yieldable, and means operable by the movable member of the bellows to contact with the yieldable portion of the arm to close said valve at intervals during the passage of air through said reed.



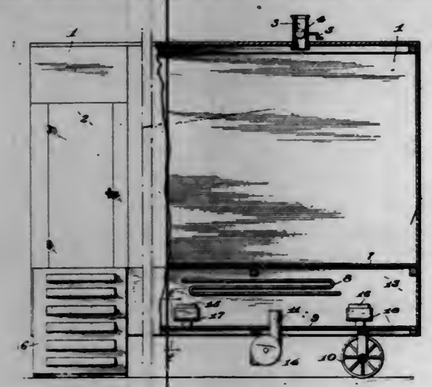
1,487,233. SCREEN-DOOR HINGE. PATRICK JOSEPH GLANCEY, Scranton, Pa. Filed Apr. 2, 1923. Serial No. 629,485. 2 Claims. (Cl. 16—189.)

1. A hinge comprising a pair of leaves having overlapping ears and a removable pintle passing therethrough, a coiled spring surrounding said pintle and having oppositely extending arms at its ends acting on said leaves, and an arm holding member adapted to extend across said spring and designed for connection with said arms

to hold the spring against action when said arms have been moved into angular relation with each other, permitting easy removal of the pintle.

1,487,234. CARBURETOR. WILLIAM S. GUTHRIE, Terrell, Tex., assignor to Marvel Carburetor Company, Flint, Mich., a Corporation of Indiana. Filed Feb. 12, 1921. Serial No. 444,325. 22 Claims. (Cl. 123—122.)

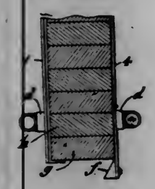
1. In combination with an internal combustion engine, of an intake passage communicating with said engine, a heater for heating said intake passage, means for supplying exhaust gases from the engine to said heater, a throttle for the intake passage, a valve to vary the flow of exhaust gases to said heater, means for jointly operating said throttle and said valve, and additional means for controlling said valve so that the throttle may be operated without imparting movement to said valve.



1,487,235. BATTERY COMPOUND. ALBERT E. HANSON and HOWARD MOE, St. Paul, Minn. Filed Sept. 9, 1922. Serial No. 587,216. 3 Claims. (Cl. 204—38.)

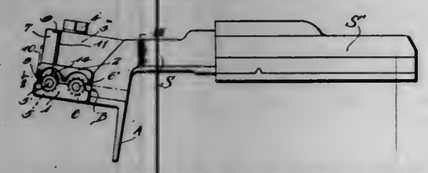
1. A battery compound made in dry or solid form adapted to be dissolved in liquid when used in a battery, said dry compound comprising Epsom salts, powdered alum, glycerine, hydrate of potash and ammonium sulphate.

1,487,236. CYANIDE BOX. PARLEY FREEMAN HARRIS, Nashville, Tenn. Filed Dec. 23, 1922. Serial No. 608,685. 3 Claims. (Cl. 167—3.)



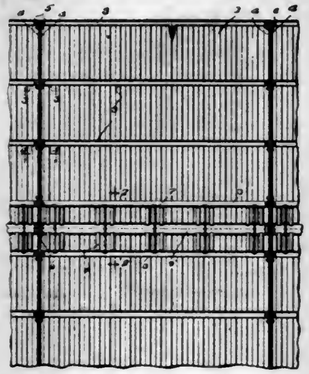
1. In an apparatus for treating articles with hydrocyanic acid gas, the combination of an air tight enclosure; a vent for said enclosure; a valve controlling said vent; a support for said articles in said chamber; an air tight door for entering said enclosure; air tight means

for introducing a cyanide solution from the outside into said enclosure; heating means for raising the tempera-



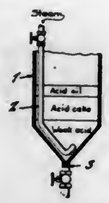
ture of said enclosure; and means for blowing fresh air through said enclosure after the cyaniding operation has been completed.

1,487,237. HEEL-BLANK SEPARATOR. NATE HATTENBACH, Columbus, Ohio, assignor to Brockton Heel Company, Inc., Brockton, Mass., a Corporation of Massachusetts. Filed Sept. 20, 1919, Serial No. 325,201. Renewed Feb. 1, 1924. 5 Claims. (Cl. 12—42.)



4. A chute in which heels are confined in a column and from which they are propelled by steps, said chute having opposite sides separable one from the other against yielding resistance, and one of said sides projecting beyond the termination of the other at the outlet end and having an inclined displacing element facing toward the other side, arranged and adapted to displace the emerging endmost heel laterally with respect to the superposed pile of heels.

1,487,238. THREAD-CUTTING ATTACHMENT FOR LOOM TEMPLES. HENRY JOHN HEDLER, Occum, Conn. Filed Nov. 9, 1922. Serial No. 599,843. 5 Claims. (Cl. 139—302.)

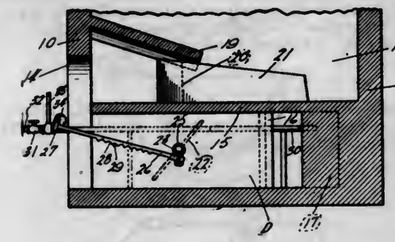


1. The combination with a loom temple including a box and a temple roller, of thread engaging means actuated by said roller, a blade carrying frame, loosely connected at its lower end to said thread engaging means and its upper end removably secured to said box, and a cutting blade mounted on and co-acting with said carrying frame to cut the threads.

1,487,239. FORM. RICHARD M. HENDRICKSON, Havre, Mont. Filed May 21, 1923. Serial No. 640,474. 4 Claims. (Cl. 25—131.)

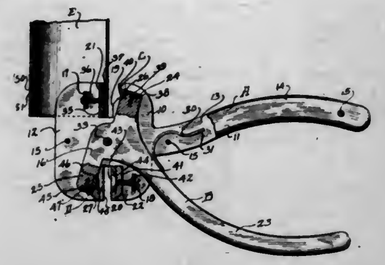
1. A form of the class described comprising vertical sheets of corrugated metal, horizontal sheets of flat metal fastened to the corrugated sheets, angle irons fastened to the outer faces of the corrugated sheets, and angle irons at the vertical edges of the sheets with the flanges fastened to the flat sheets.

1,487,240. PROCESS OF TREATING ACID SLUDGE. EMERSON C. HIGGINS, Jr., Tulsa, and OSSINO C. SMITH, Sand Springs, Okla., assignors of one-half to Cosden & Company, Tulsa, Okla., a Corporation of Delaware. Filed Sept. 24, 1920. Serial No. 412,613. 6 Claims. (Cl. 196—28.)



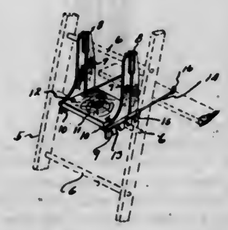
1. In the art of converting acid sludge obtained from the treatment of petroleum products with sulphuric acid into liquid fuel, the process of rendering acid cake derived from said acid sludge soluble in hydrocarbon oil, consisting in treating a mixture of acid cake and hydrocarbon oil with an alkali, and agitating the resultant mixture with steam, whereby a homogeneous liquid fuel is obtained, substantially as described.

1,487,241. LIQUID OR GASEOUS FUEL BURNING FURNACE. ORVILLE L. M. HOOVER, Dallas, Tex., assignor of one-half to M. D. Hoover, Dallas, Tex. Filed Jan. 22, 1923. Serial No. 614,152. 2 Claims. (Cl. 158—1.)



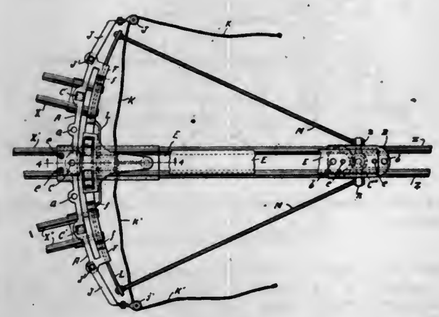
1. In a furnace of the character described, a housing divided into superposed pre-heating and combustion chambers having communicating openings at their forward ends at each side thereof, the bottom of the combustion chamber forming the top of the pre-heating chamber, the front wall of the housing having an air admitting opening communicating with the pre-heating chamber, longitudinal baffle walls in the pre-heating chamber forming air circulating flues, said flues communicating at their rear ends and the outermost flues connecting with the combustion chamber, draft controlling dampers arranged

in the outside flues, means for operating the dampers, transverse baffles in the combustion chamber, a longitudinal throat extending rearwardly from the baffles,



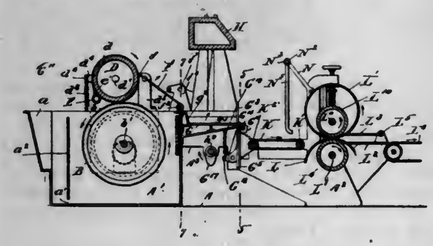
and an arch at the front end of the combustion chambers covering the baffles and the communicating openings between the chambers, the throat extending beyond the arch.

1,487,242. PUNCH. JAMES B. HOWLE, Richmond, Va. Filed June 30, 1922. Serial No. 571,908. 6 Claims. (Cl. 164—109.)



1. A single tool for forming slots and tongues in sheet metal pipes comprising a pair of companion members, each of said members including a head, means pivotally connecting the heads together, oppositely disposed outwardly extending jaws formed on each side of each head, and cooperating dies including adjustable anvils, and cutting and punching devices carried by the opposite faces of said jaws.

1,487,243. COMBINED LADDER STEP AND SCAFFOLD SUPPORT. EDWARD C. JACKSON, Detroit, Mich. Filed May 9, 1923. Serial No. 637,744. 3 Claims. (Cl. 304—34.)

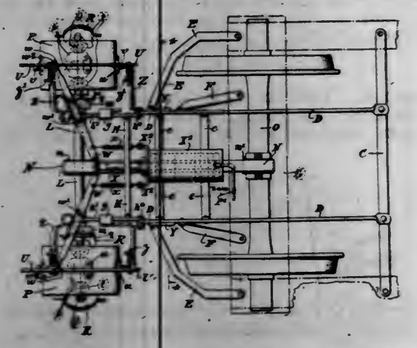


1. In combination with a ladder having a plurality of rungs, a platform step provided with end pieces adapted at opposite ends to be releasably engaged between a pair of rungs to secure this step in position on one side of the ladder, said platform step provided with arms which project on the opposite side of the ladder from the platform step and are adapted to serve as supports for an auxiliary platform.

1,487,244. SWITCH FOR OVERHEAD TWO-RAIL TRACKS. NIC KRUMP, Chicago, Ill. Filed July 14, 1922. Serial No. 574,880. 4 Claims. (Cl. 104—103.)

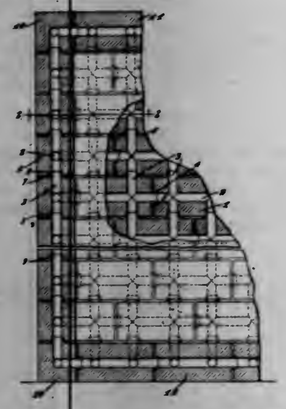
1. In a switch for overhead two rail tracks, bases, adapted to be suspended, a metal strip attached to said bases and arranged to hold them in spaced relation, rails on said switch corresponding in length with the spaced relation of said bases, a curved track on one of said subpended bases, provided with depressions in spaced relation, a carriage, rollers on said carriage arranged to travel on said track, said rollers in spaced relation corresponding with said depressions in said track, means to move said carriage on said tracks, and said carriage provided with a curved member to obtain a recess adapted to permit a trolley wheel to pass therethrough on to or from said switch rails.

1,487,245. WET PRESS. ELIE W. LABOMBARDE, Nashua, N. H. Filed Feb. 16, 1920. Serial No. 358,981. 45 Claims. (Cl. 92—61.)



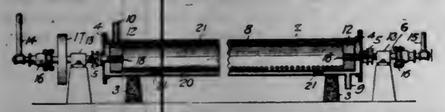
1. A machine of the character described comprising positive pressing mechanism; means to deliver portions of the material separated from each other to said mechanism, said mechanism acting upon each portion while such portion is stationary with relation to the direction of the delivery to said mechanism; and means to deliver the material from said mechanism.

1,487,246. WEED CUTTER FOR RAILWAYS. BEN H. LAMMONS, San Antonio, Tex. Filed Dec. 3, 1923. Serial No. 678,272. 8 Claims. (Cl. 104—279.)



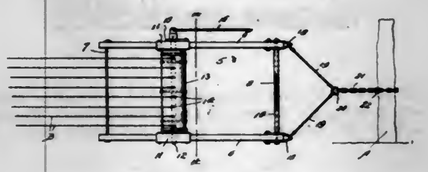
2. A weed cutter for railways comprising a pair of diagonally arranged cutters adapted to operate near op-

posite sides of a rail, a driven shaft, gearing connecting the driven shaft with the cutters, and means for lower-



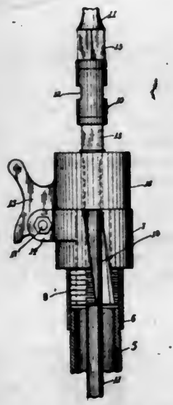
ing and raising the cutters into and out of operating position.

1,487,247. BRICK. JOHNSON LANE, San Antonio, Tex., assignor of one-third to George H. Collins, Harris County, Tex. Filed Jan. 24, 1921. Serial No. 439,508. 2 Claims. (Cl. 72—38.)



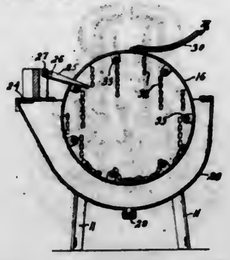
1. A brick provided with intersecting passages extended entirely through the brick at right angles to each other, there being a recess in the brick at one end of each passage, and a thimble projecting from the brick at the other end of each passage, each thimble being longer than the depth of the corresponding recess, the thimbles and recesses being so shaped that each thimble on one brick may be received in the corresponding recess of an adjoining brick.

1,487,248. HEAT INTERCHANGER. GROVER B. LANTZ, Colton, Calif. Filed July 21, 1920. Serial No. 397,930. 3 Claims. (Cl. 257—89.)



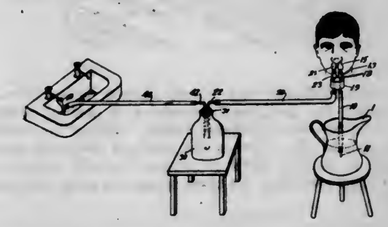
3. In apparatus of the character described, an elongate vessel adapted to receive and discharge a cooling fluid and having stuffing boxes at its ends, a tubular container in said vessel having exteriorly of its ends, axially alined, hollow, open-ended gudgeons for the admission and discharge of material, separated by the space within the container, and supported in the boxes for rotation of the same, relatively stationary inlet and outlet pipes in fluid-tight connection with the gudgeons, an abrasive medium loose in the container to prevent by the rotary movement thereof incrustation of its inner surface, and means for the rotation of the container.

1,487,249. WIRE STRETCHER. WILLIAM H. LATIMER, Denver, Colo. Filed May 26, 1923. Serial No. 641,531. 1 Claim. (Cl. 254—163.)



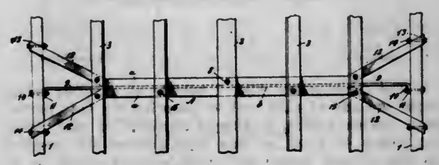
In a wire stretcher of the class described, a frame comprising a pair of spaced parallel bar members joined together at their opposite ends, metallic strips upon said bars and having openings therein in alinement with openings in said bars, a shaft journaled within said openings, a drum keyed to said shaft and provided with laterally projecting, spaced pins adapted for receiving the ends of wire strands to be stretched, means for anchoring said frame to a stationary member and means for rotating said shaft and consequently said drum for winding the wire strands thereon.

1,487,250. SUCKER-ROD CATCH. OTTO J. LIERMAN, near Redondo Beach, Calif. Filed Jan. 18, 1923. Serial No. 613,559. 2 Claims. (Cl. 24—243.)



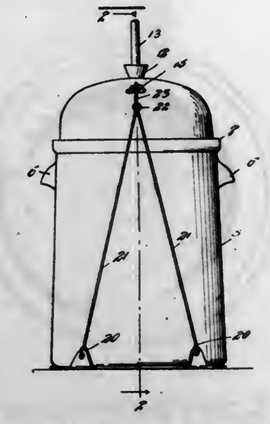
2. A sucker-rod catch comprising a lower member having a bore extending therethrough, said member having a reduced lower end externally threaded and a slot extending to the bore; an upper member hingedly connected to the lower member said upper member having a slot extending beyond the bore of the lower member when positioned for use, the slot in the upper member being of less width than the coupling member of the sucker-rod and the bore of the lower member being of a size to permit the sucker-rod couplings to pass therethrough.

1,487,251. WASHING MACHINE. ASBURY LINCICOME, Pershing, Okla. Filed Oct. 7, 1922. Serial No. 593,149. 3 Claims. (Cl. 68—18.)



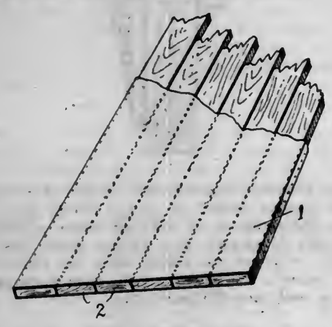
1. In a washing machine including a frame and a pan, a tub rotatably mounted within the frame and pan, and a plurality of lengths of chain secured at one end within the tub and acting to beat clothes disposed therein.

1,487,252. MEDICAL APPLIANCE. JOHN M. LORE, New York, N. Y., assignor to Lillian Langel, New York, N. Y. Filed May 11, 1921. Serial No. 468,608. 4 Claims. (Cl. 128—276.)



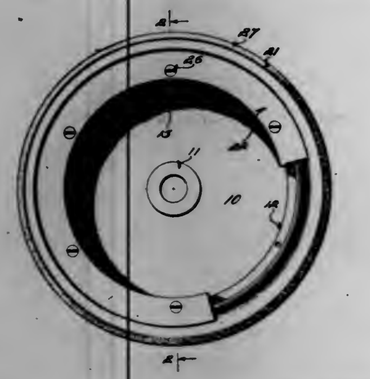
4. In an irrigating device for a cavity, means for closing the cavity and having two disconnected ducts therein opening into the cavity at spaced points, a suction creating device connected to one of the ducts for creating a partial vacuum in the cavity, and a reservoir for an irrigating fluid connected to the other duct whereby the suction in the one duct will cause a movement of the irrigating fluid from the reservoir through the cavity without an internal pressure on the walls of the cavity which is greater than atmospheric pressure.

1,487,253. CARLINE. JAMES J. MCCARTHY, Chicago, Ill. Filed Nov. 5, 1919. Serial No. 335,889. 9 Claims. (Cl. 108—5.6.)



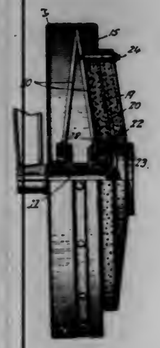
1. A carline for freight car roofs and the like, consisting of a single steel bar of T-section, split at the ends along its depending flange, said flange being maintained as a bracing bar in the vertical plane of the body of the carline, and the separated side flanges being inclined away from said bracing bar to diagonal positions and adapted for connection with the roof frame at widely separated points at both sides of said plane.

1,487,254. CHURN LID. MARION C. MCFARLAND, Comanche, Okla. Filed Jan. 22, 1923. Serial No. 614,118. 1 Claim. (Cl. 220—69.)



In combination with a churn body, means for retaining a cover in position thereon comprising a base plate adapted to serve as a support for the body and provided at its edges with upstanding lugs adapted to extend along the side surface of the body, a dome-shaped lid for the body, staples mounted upon the exterior surface of the lid at the opposite sides of the center thereof, and approximately at the shoulder portion of the dome configuration of the lid, rods pivotally secured at their lower ends to the lugs and arranged in pairs, the members of which converge toward each other at their upper ends, the members of the pairs of rods being brought together and having their upper ends provided with registering eyes and resilient hooks having their shanks threaded through the registering eyes of the respective pairs of rods, the bill ends of the hooks being engageable over the staples to hold the edge of the lid in close confinement with the upper edge of the body.

1,487,255. MANUFACTURE OF FIREPROOF AND WATERPROOF WOODEN BUILDING PLATES. NINO MAGELSSEN, Christiania, Norway. Filed Nov. 29, 1922. Serial No. 604,118. 4 Claims. (Cl. 20—91.)



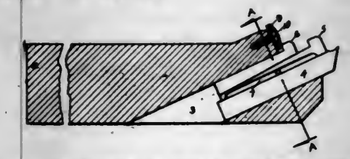
1. A process of manufacturing fireproof and waterproof woden plates or sections, consisting in placing wooden boards loosely side by side and interconnecting them by applying to the plate thus loosely formed a hardening mass, having as its principal ingredients waterglass and asbestos, and pressing said mass against said plate of boards so as to coat the same with a thin layer of the mass.

1,487,256. PNEUMATIC ABRADING CUSHION. ARTHUR WILLIAM MALE, Milwaukee, Wis. Filed Dec. 12, 1922. Serial No. 606,480. 3 Claims. (Cl. 51—192.)

1. In a pneumatic polishing wheel, the combination of a rigid cylindrical member, means for securing said member to a shaft, an inner tube about said member, a casing about said inner tube, means securing said casing to said member, said casing being adapted to carry a sleeve, the edges of said casing overhanging said cylindrical member to provide freely yieldable edges.

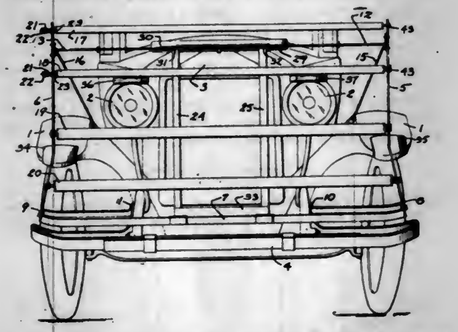
1,487,257. TRACTION VARYING MEANS FOR TRACTORS. WARREN M. MANSFIELD, Moline, Ill., assignor, by mesne assignments, to Moline Plow Company, Incorporated, Moline, Ill., a Corporation of Virginia. Filed Aug. 12, 1920. Serial No. 402,951. 11 Claims. (Cl. 301—41.)

10. An article of manufacture comprising a reinforced concrete traction weight for tractor wheels having openings for the reception of bolts by means of which the weight may be secured to a tractor wheel, and a hub arranged to center the weight upon the tractor wheel and to center a succeeding weight when more than one weight is used upon the same wheel.



1,487,258. LOCK FOR AUTOMOBILE TIRE CHAINS. JOSEPH R. W. MENGER and WILLIAM L. GASS, New York, N. Y.; said Gass assignor to said Menger. Filed Mar. 29, 1922. Serial No. 547,913. 13 Claims. (Cl. 70—108.)

1. A lock comprising a cylindrical body portion having a longitudinal bore and openings for the hasp extending into said body portion at right angles to said bore, a hasp the ends of which extend into said openings and

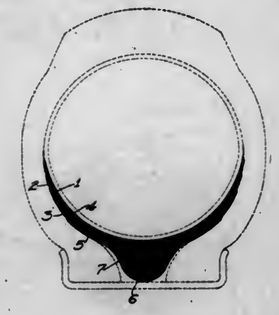


forming two separated loops, one of which is always closed and one of which may be opened when the lock is in its unlocked and open condition.

1,487,259. TOOL HOLDER. ANTHONY J. MOGLICH, Oakland, Calif. Filed Mar. 20, 1922. Serial No. 545,055. 9 Claims. (Cl. 29—96.)

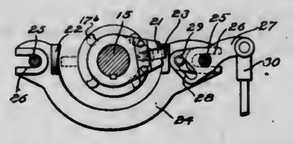
1. A longitudinally and parallel slotted rectangular-bar tool holder for machines comprising a pair of wedges and a cutter, one of said wedges adapted to receive blows to hold the cutter in the slot and the other wedge adapted to receive blows to release the said cutter, the said wedges receiving the blows from the same direction.

1,487,260. COLLISION SCREEN. WALTER J. MOORE, New York, N. Y. Filed Apr. 24, 1922. Serial No. 556,225. 36 Claims. (Cl. 293—54.)



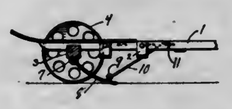
1. The combination with a vehicle of a safety device across the end of said vehicle comprising a seat portion for a person struck, a bumper forward of said device and means in front of said seat portion, for breaking the fall of said person before he becomes seated in the device.

1,487,261. PNEUMATIC-TIRE FLAP. LUTHER OPPENHEIMER, El Cajon, Calif. Filed Aug. 16, 1922. Serial No. 582,259. 5 Claims. (Cl. 152—20.)



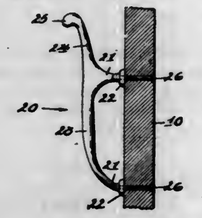
5. A tire flap, including a tire flap portion consisting of a series of rubberized fabric members moulded together, the normally outer members being respectively

narrower in width than the adjacent inner members and a bead portion consisting of a bead filler, a filler bead



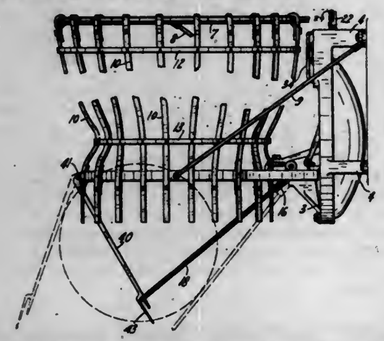
positioning member and a rubberized fabric supporting member securing said bead filler and said filler positioning member to said flap portion.

1,487,262. STOP MECHANISM OF EMBOSSING AND LIKE MACHINES. WALTER P. OSGOOD, Malden, Mass., assignor to Boston Machine Works Company, Lynn, Mass., a Corporation of Massachusetts. Filed July 24, 1918. Serial No. 246,499. 3 Claims. (Cl. 192—25.)



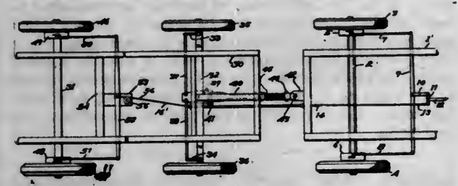
1. Apparatus of the kind described, comprising power driving means, driven operative means, a clutch interposed between said driving means and driven means, and a stop motion for controlling said clutch having a manual governing device, said stop motion embodying spaced apart members with means for moving the same into and out of operative position with respect to said clutch, means for normally holding one of said members in operative position with the other of said members in inoperative position, said manual governing device having connections for moving the first named member to inoperative position, and the last named member to operative position, the last named member being located to engage the clutch to cause said driven means to stop midway of its cycle of movement, and the first named member being located so as to permit a full operative cycle of movement of said driven means.

1,487,263. WAREHOUSE TRUCK. JAMES EDWARD PULLIAM, New York, N. Y. Filed June 17, 1921. Serial No. 478,360. 1 Claim. (Cl. 188—23.)



In combination a truck mounted on wheels, a beam hingedly attached to the truck, a rod attached to the beam, and a plurality of eye bolts arranged on the truck in spaced relation to each other so as to be engaged by the rod for regulating the angle at which the beam is disposed in relation to the truck.

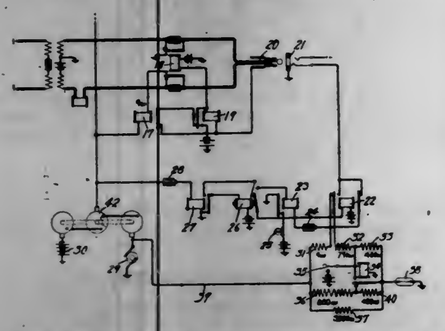
1,487,264. HANDLE FOR DOORS. JOSEPH R. RAYMER, St. Paul, Minn. Filed Dec. 19, 1921. Serial No. 523,261. 2 Claims. (Cl. 16—125.)



1. A pull for a door comprising a bracket adapted to be secured to a door and a hook-like projection off-set from the door and formed on said bracket to be engaged by the forearm to open the door.

1,487,265. BASKET-BALL-GOAL INDICATOR. ALLYN R. REESE, Denver, Colo. Filed June 21, 1922. Serial No. 569,896. 9 Claims. (Cl. 116—67.)

7. In a basket ball goal, the combination with a basket, of a counterweighted lever adapted to be moved by a ball passing through the basket, an alarm element, a lifter pivotally connected with the lever, and having a pair of fingers at its upper end, a hammer element adapted to be raised by the engagement of one of said fingers during upward movement of the lifter, a spring-catch adapted to move automatically into the path of the hammer element to obstruct its downward movement, and means co-operating with the other finger during downward movement of the lifter, to retract the catch by lateral motion of the lifter and thereby release the hammer element.



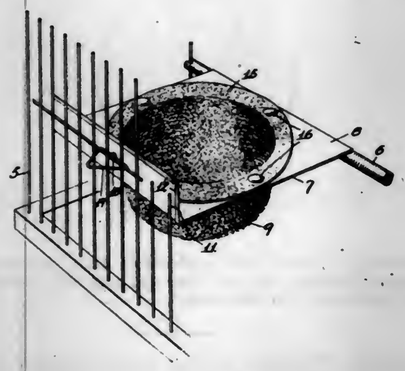
1,487,266. TRAILER BRAKE. PAUL T. REGAN, Oakland, Calif., assignor to Anderson-Endebrock Company, Inc., a Corporation of California. Filed Oct. 25, 1921. Serial No. 510,261. 3 Claims. (Cl. 188—3.)

1. An apparatus of the class described comprising the combination with a truck of brakes therefor, brake operating mechanism, a brake operating and equalising lever, flexible means on the truck to connect the trailer thereto, a trailer, brakes therefor, a cable for operating said

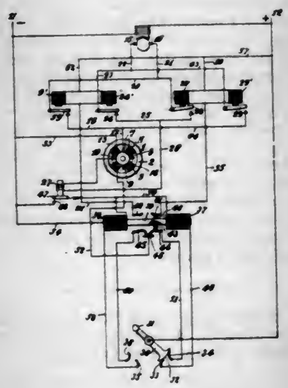
brakes and extended to and connected with the equalizing lever on the truck, and a detachable flexible tube enclosing said cable between fixed points on the trailer and on the truck.

1,487,267. TESTING SYSTEM. JOHN B. RETALLACK, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed May 4, 1921. Serial No. 466,824. 10 Claims. (Cl. 175—183.)

2. In a testing circuit, the combination of a relay to be tested, a resistance network composed of a plurality of multiple paths said relay being normally connected in one of said paths, a resistance with a positive temperature co-efficient of resistance connected in circuit with said network to maintain a constant current therein, and means for making the resistance of the path in which the relay is normally connected equal successively to the normal resistance of each of the other paths and means for maintaining the resistance of the network at its normal value after each change in the resistance of the relay circuit.



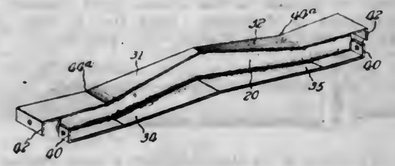
1,487,268. BIRD NEST. WILLIAM ROHRBACH, Glendale, N. Y. Filed Jan. 3, 1923. Serial No. 610,408. 3 Claims. (Cl. 119—45.)



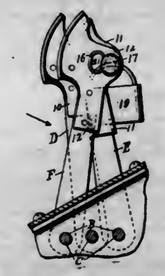
3. A nest of the class described comprising a frame having a substantially circular aperture, a fibrous body mounted in connection with said frame and extending into said aperture and fashioned to substantially cup-shaped formation to form the nest proper, the periphery of said body being secured to said frame, said fibrous body or the cup-shaped portion thereof being provided centrally with a plurality of small apertures located centrally of the bottom thereof to provide ventilation to the nest, a metal reinforcing strip mounted in connection with one side of the frame, means on said strip for securing said nest in connection with a suitable support, said strip being fashioned to form a flange which extends at an angle to the plane of said frame, and said securing means being rotatably mounted in connection with said strip.

1,487,269. BIRD NEST. WILLIAM ROHRBACH, Glendale, N. Y. Filed Sept. 12, 1923. Serial No. 662,165. 3 Claims. (Cl. 119—45.)

2. A nest of the class described composed of two parts one of said parts being fashioned from sheet metal and being rectangular in form and provided at one side with an upstanding flange portion and centrally thereof with a large aperture and the other part being fashioned from fibrous material to the form of a cup-shaped body adapted to be inserted into the aperture of the first named part and said last named part having a peripheral flange which rests upon the top face of the platform, said platform being provided about the periphery of the aperture therein with spaced apertures, fastening devices passed through the flange of the last named part and said last named apertures for securing the separate parts together, and the flange portion of the first named part being provided with an aperture, and an attaching device rotatably mounted in said last named aperture.

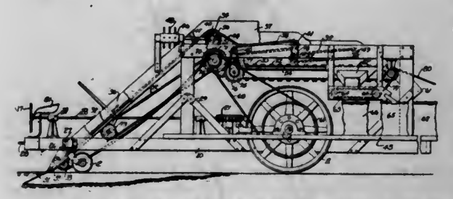


1,487,270. ELEVATOR CONTROL SYSTEM. SAMUEL W. RUSHMORE, Plainfield, N. J. Filed Aug. 25, 1922. Serial No. 584,172. 10 Claims. (Cl. 172—152.)



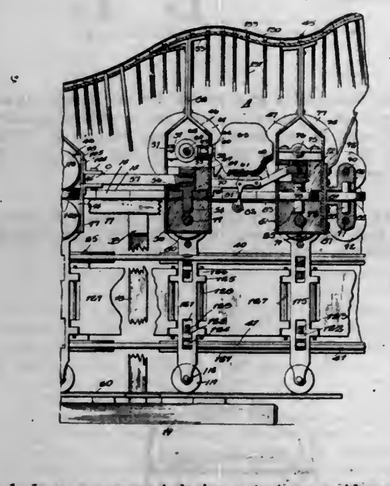
1. An electric power system comprising in combination, a power circuit including a generator having an armature and a field, and an electric motor operated therefrom, a reversing relay for said motor connected to control the generator field, a manual control switch for said reversing relay, and means controlled from said power circuit to prevent reversal of said relay upon operation of said manual switch, until the generator field has been first reduced to a predetermined value, following operation of said manual switch.

1,487,271. CARLINE. THOMAS NATHAN RUSSELL, Chicago, Ill., assignor to Chicago Cleveland Car Roofing Company, Chicago, Ill., a Corporation of Illinois. Original application filed Jan. 26, 1914, Serial No. 814,519. Divided and this application filed May 4, 1914. Serial No. 836,218. Renewed May 16, 1917. Serial No. 169,117. 10 Claims. (Cl. 158—56.)



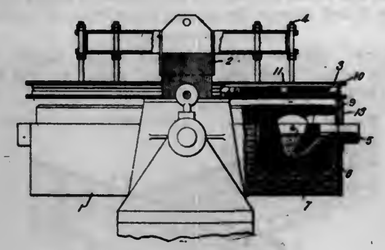
1. A carline having a compression surface and a tension surface of differing contours, the latter having an outer edge lying in a single vertical plane and an obliquely arranged curved web therebetween the upper edge of which lies in a vertical plane parallel to said first-mentioned plane, said compression surface and said tension surface being disposed laterally in opposite directions from said web, and the sum of the width of the parts being substantially the same in cross section throughout the carline.

1,487,272. LOCKING DEVICE FOR AUTOMOBILES. JOHN SAIA, Baltimore, Md. Filed Sept. 6, 1922. Serial No. 586,442. 8 Claims. (Cl. 70—126.)



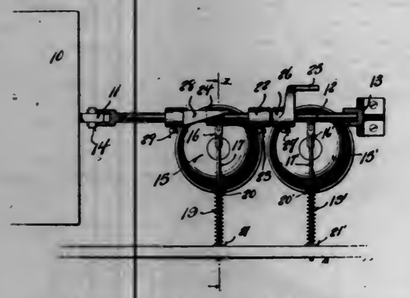
1. The locking device which includes members permanently and rigidly united with pedal-arms of an automobile and each being provided with bolt-receiving apertures, each of the apertures of each of said members being movable into alinement with each aperture of another of these members, and a bolt seatable in the alined apertures, for securing these members in different relative positions, means being provided to lock the bolt against removal from the alined apertures.

1,487,273. POTATO HARVESTER. CHARLEY SANO, Castroville, Calif. Filed Aug. 18, 1920. Serial No. 404,301. 7 Claims. (Cl. 130—32.)



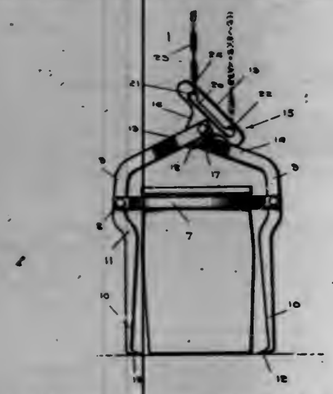
1. In a potato harvester, a wheeled frame, a superstructure thereon including parallel sorting compartments, the intermediate compartment being wider than the side compartments, a moving sorting floor for the compartments comprising spaced slats each having reduced ends, the intermediate wider portions of the slats operating under the intermediate compartment and the reduced end portions of the slats operating under the side compartments, the reduced end portions having transverse slots therein, plates adjustably mounted in said slots whereby to vary the size of the spaces between adjacent reduced ends of the slats, means for lifting potatoes onto the floor of the intermediate compartment, and means for agitating and turning the soil bearing the potatoes so that the potatoes are exposed.

1,487,274. AMUSEMENT DEVICE. REX SCHAFER, Long Beach, Calif. Filed Oct. 5, 1923. Serial No. 666,777. 14 Claims. (Cl. 104—64.)



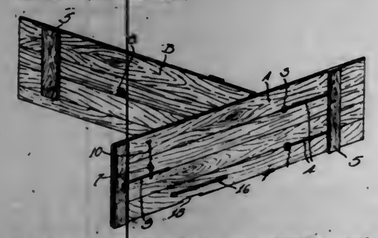
1. In an amusement device, a tortuous guideway, endless cables arranged to travel about the guideway, figures arranged at spaced points on and secured to the cables, each of the figures including a plurality of independent trucks and means for flexibly connecting the trucks together.

1,487,275. ELECTROMETALLURGY. CHARLES A. SCHARSCHU, Pittsfield, Mass., assignor to General Electric Company, a Corporation of New York. Filed Dec. 27, 1920. Serial No. 433,147. 5 Claims. (Cl. 204—64.)



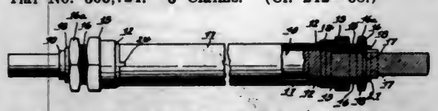
1. The method of refining metal containing slag particles which consists in subjecting said metal in a molten state to a periodically varying magnetic field adapted to cause said slag particles to rise to and remain on the surface and thereupon separating the metal and slag while preventing re-admixture thereof.

1,487,276. TIME-CONTROLLED SWITCH MECHANISM. OSCAR SCHWENGEL, Port Washington, Wis. Filed July 22, 1922. Serial No. 576,694. 3 Claims. (Cl. 200—38.)



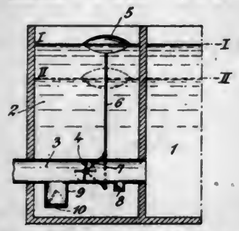
1. The combination of a switch for controlling bright lights, a clock, a rotatable shaft, and a wipe adjustable longitudinally of said shaft, said wipe varying in width whereby the period of operation of said wipe on said switch may be varied.

1,487,277. AUTOMATIC GRAPPLE. WILLIAM A. SHINNER, Belle Plaine, Iowa. Filed Mar. 10, 1923. Serial No. 624,144. 18 Claims. (Cl. 294—112.)



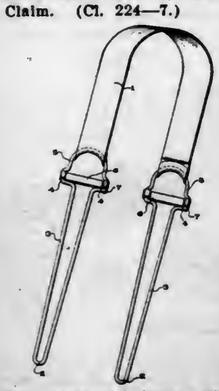
1. A grapple comprising object holding means movable to open and closed positions for releasing and holding an object, a single suspension element for said means, and means operated by the successive lifting movements of said element for opening and closing said means.

1,487,278. GRAIN DOOR. EDGAR CLARK SHORT, St. Paul, Minn. Filed Dec. 4, 1922. Serial No. 604,817. 5 Claims. (Cl. 20—30.)



1. A grain door comprising two normally overlapping sections, hinges for positively connecting the end of one of said sections with the other section, means for shifting the hinged connection so as to adjust the effective length of the overlapped sections to fit car door frames of different sizes, and means for locking the sections in parallelism in any of the adjusted positions.

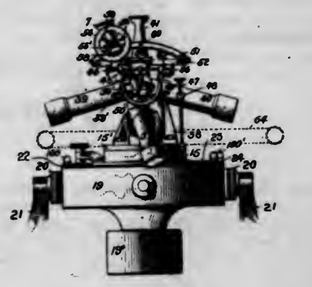
1,487,279. WINDING SHAFT FOR PAPER MACHINES. CLARENCE ARTHUR SILVIS, Grand Rapids, Minn., assignor of one-half to The Itasca Paper Company, a Corporation of Minnesota. Filed Dec. 8, 1922. Serial No. 605,724. 6 Claims. (Cl. 242—68.)



1. In a device of the class described, a shaft adapted to support the core of a roll, means arranged on said shaft to engage said core, thrust means removably held in a groove in said shaft, and means abutting against said thrust means and adapted to be manipulated to hold said engaging means in contact with said core.

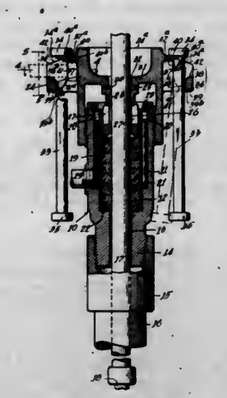
1,487,280. APPARATUS FOR REGULATING THE ADMISSION AND DISCHARGE IN WATER TANKS AND OTHER RECEPTACLES. CHRISTIAN SKAARNÆS, Drammen, Norway, assignor to Aktieselskabet Drammens Armaturfabrik, Drammen, Norway. Filed Nov. 2, 1922. Serial No. 598,675. 1 Claim. (Cl. 37—68.)

Apparatus for regulating the admission and discharge of water tanks and the like, comprising a reservoir, a supply and discharge conduit connected to the reservoir, a float chamber having restricted permanent connection with the reservoir, a control valve in the conduit, a float in the float chamber and connected to the control valve to operate the same upon a change of water level in the float chamber, a duct connecting the conduit and the float chamber, and a valve in said duct operable upon reduction of pressure in the conduit to open said duct.



1,487,281. GAME CARRIER. LOUIS ANDREW SOLLEDER, Beaumont, Tex. Filed Dec. 8, 1922. Serial No. 605,709. 1 Claim. (Cl. 224—7.)

A game carrier constructed from a strand of spring wire which is centrally rounded and extended to provide outwardly inclined arms, said arms having their ends



formed with opposed outwardly directed U-shaped portions, and said U-shaped portions terminating in an arch, a locking bar hingedly secured to one of the U-shaped portions and having a hooked end to engage with the opposite U-shaped portion when pressure is exerted upon the arms of the holder to force the same toward each other.

1,487,282. FIRE-CONTROL SYSTEM. ELMER A. SPERRY, Brooklyn, N. Y., assignor to The Sperry Gyroscope Company, Brooklyn, N. Y., a Corporation of New York. Filed Jan. 3, 1920. Serial No. 349,345. 23 Claims. (Cl. 33—46.)

1. In a fire control system, a movable reference member, a transit instrument movable with relation to said member, and means comprising a gyroscope and a level for maintaining a point on said member in a predetermined relation to the vertical.

1,487,283. ADJUSTABLE STUFFING BOX. EDWARD E. STEVENSON, Los Angeles, Calif., assignor to D. & B. Pump and Supply Company, Los Angeles, Calif., a Corporation of California. Filed Jan. 25, 1922. Serial No. 531,679. 5 Claims. (Cl. 74—33.)

1. Handle means for rotating a rotatable member; said means comprising a bracket on said member having a slot; said slot being radial and enlarged at its inner end; a handle axially movable in said slot from an inoperative position substantially axially parallel to said rotatable member to an operative position at substantially right angles thereto; enlarged ends on said handle to prevent its removal from said slot; said slot having a wall extending across the bottom of its radial portion, and a wall extending across the top of its enlarged portion, the former to support the handle and the latter to engage an enlarged end, when the handle is in its operative position; the slot except at its enlarged portion being of a width substantially equal to thickness of the handle, and the width of the enlarged portion of the slot being substantially equal to the thickness of the enlarged handle end, so that the slot walls form lateral abutments against which the handle bears.

1,487,284. TYPEWRITING MACHINE. BURNHAM C. STICKNEY, Elizabeth, N. J., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Sept. 27, 1920. Serial No. 413,035. 15 Claims. (Cl. 197—128.)

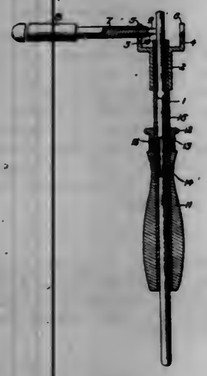
1. In a condensed record typewriting machine in which a single general record-sheet is detained in the machine while typing a succession of individual sheets or bills which are successively withdrawn and others inserted, in combination, a rotative platen, line-spacing mechanism therefor, normally effective releasable sheet-feeding means co-operative with the platen to line-feed all the work-sheets when the platen is line-spaced, a normally ineffective gripping device engageable with the record-sheet to hold the same stationary independently of the individual work-sheet when the sheet-feeding means are released, and a single manually-operable device for successively at a single stroke first operating the line-spacing mechanism to line-feed all the work-sheets and then rendering the gripping device effective to hold the record-sheet and also releasing the individual typed work-sheet entirely from the platen.

1,487,285. TREATMENT OF ZINC SULPHIDE ORES. EDWARD A. TAYLOR and GLENN A. KEEP, Cleveland, Ohio, assignors to The Grasselli Chemical Company, Cleveland, Ohio, a Corporation of Ohio. Filed Jan. 9, 1920. Serial No. 350,392. 6 Claims. (Cl. 75—18.)

1. The method of separating zinc sulphide from complex zinc sulphide-containing ores, which consist in treating comminuted complex ore with hot sulphuric acid in amount not less than the amount chemically equivalent to the zinc content of the core.

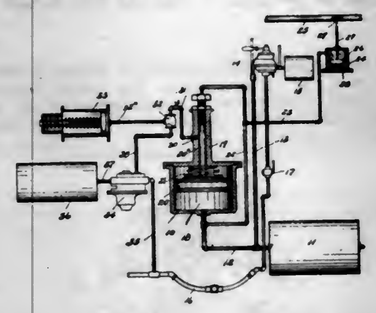
1,487,286. INDUCTION DYNAMO-ELECTRIC MACHINE. HENRY W. TAYLOR, Rugby, England, assignor to General Electric Company, a Corporation of New York. Filed Feb. 15, 1922. Serial No. 536,774. 4 Claims. (Cl. 172—120.)

3. A winding for a dynamo electric machine of the type in which the equivalent resistance of the winding increases with the frequency, having two or more composite conductors in a slot, each composite conductor con-



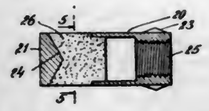
sisting of two or more sections separated from each other by a magnetisable medium together with connections at the ends of the winding so that each composite conductor carries the same current.

1,487,287. COMBINED HOLDER AND COMB CLEANER. OTIS O. TERHUNE, Gering, Nebr. Filed Aug. 1, 1923. Serial No. 655,080. 2 Claims. (Cl. 132—27.)



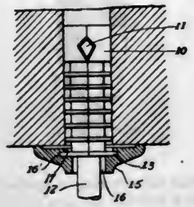
1. A device of the class described comprising a support, a pocket formed thereon and a bundle of thread-like material connected with the lower end of the support and depending therefrom to form a comb cleaner.

1,487,288. DEVICE FOR TREATING GLASS. SIGURD THRONSEN, Chicago, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 19, 1919. Serial No. 324,887. 3 Claims. (Cl. 49—2.)



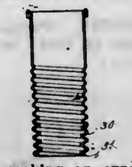
3. A device for inserting wires into rods comprising a wire-inserting tool having end apertures in which the wires of predetermined length may be inserted and held, a tubular holder, a supporting bracket at the upper end thereof, adapted to receive said tool, a reciprocating plunger within said holder upon which a rod is adapted to rest and having a portion of reduced diameter intermediate its length, a pin extending inwardly from the holder and adapted to engage the shoulders formed by the reduced diameter of the plunger to limit the movement thereof and thereby determine the position of the rod with respect to the bracket support.

1,487,289. SAFETY LOCK VALVE. JOHN A. TIFFIN, Bay City, Mich., assignor, by direct and mesne assignments, to Detroit Automatic Engineering Co., Detroit, Mich. Filed May 17, 1920. Serial No. 381,944. 5 Claims. (Cl. 303—63.)



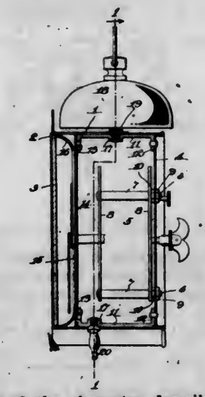
1. Means for automatically locking the throttle mechanism of a locomotive, comprising means released upon partial failure of the air supply for locking the throttle shaft, and means actuated by said partial failure of the air supply to automatically apply the brakes to the train.

1,487,290. BOLT ANCHOR. CHARLES C. TOMKINSON, Plainfield, N. J., assignor to John Edward Ogden, Mountainville, N. Y. Filed Aug. 11, 1921. Serial No. 491,333. 23 Claims. (Cl. 85—2.4.)



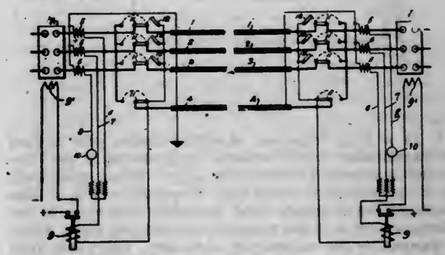
1. An anchor comprising a one piece expansion shield of relatively hard metal and having expansible elements and an expanding element consisting of a mass of relatively soft metal positioned within said shield and substantially filling the space between said expansible elements.

1,487,291. EXPANSION SHIELD WITH INTERLOCKING CAP. CHARLES C. TOMKINSON, Plainfield, N. J., assignor to J. Edward Ogden, Mountainville, N. Y. Filed Feb. 23, 1921. Serial No. 447,292. 7 Claims. (Cl. 85—2.4.)



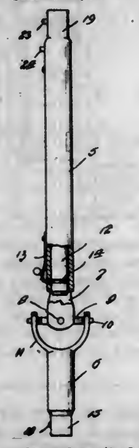
1. The combination with an expansion member and a cap member having a bore through which an expanding element may be entered into the expansion member, of means for effecting interlocking engagement between the members comprising radially extending projections on one of said members and a socket in the other of said members, locking engagement being effected by relative rotation of said members on a common axis.

1,487,292. EXPANSION SHIELD. CHARLES C. TOMKINSON, Plainfield, N. J., assignor to J. Edward Ogden, Mountainville, N. Y. Filed Jan. 23, 1922. Serial No. 531,198. 31 Claims. (Cl. 85—2.4.)



1. The process of making an expansion shield which consists of forming a sheet metal blank with a pair of connected, oppositely extending members and having a transverse slit therebetween, and folding the members on an axis coinciding with the slit into a tubular shield.

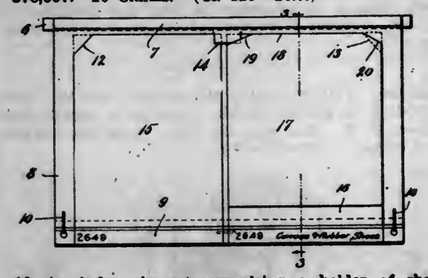
1,487,293. CLOCK. HOWARD J. TREGANZA, Brooklyn, N. Y., assignor to Ansonia Clock Co., Brooklyn, N. Y., a Corporation of Connecticut. Filed Sept. 9, 1922. Serial No. 587,078. 4 Claims. (Cl. 58—53.)



1. A device of the character described, comprising a casing, a member adapted to fit within the casing and form a closure therefor, an operating mechanism supported entirely by the member, a plurality of arms each secured at one end thereof to the member and extending into the casing, a dial plate secured to the opposite ends of the arms, the said mechanism being located between the member and dial plate whereby the member, mechanism and dial plate may, as a whole be removed from the casing.

1,487,294. DISTRIBUTION SYSTEM. HENRY TRENCHAM, Ruislip, England, assignor to General Electric Company, a Corporation of New York. Filed Aug. 23, 1921. Serial No. 494,636. 5 Claims. (Cl. 175—294.)

1. A power transmitting system comprising n plus one cables of which n cables are required for normal operation, a pilot circuit comprising the spare cable, means responsive to an electrical condition of the power system connected in said pilot circuit, and switching means arranged to be operated to interchange said spare cable and any one of the other cables.

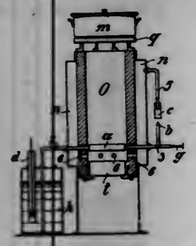


1,487,295. SOCKET WRENCH. WILLIAM JENNINGS TROWBRIDGE, Chester, Tex. Filed June 11, 1923. Serial No. 644,631. 1 Claim. (Cl. 81—177.)

In a wrench of the class described, a shank portion comprising a pair of hollow sections, one of said sections adapted to have positioned thereon socket elements, the other of said sections adapted to have secured thereto a desirable form of operating handle, a universal joint connection between said sections, a rod positioned within one of said sections, means for maintaining said rod in said section, said rod adapted for engagement between both of said sections for providing a rigid connection between the sections

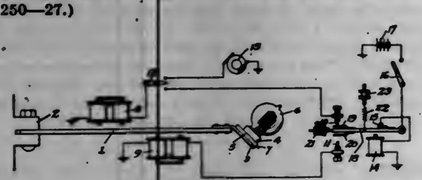
---

1,487,296. INDEX. CHARLES W. UNDERWOOD, North Providence, R. I., assignor to James H. Rand, North Tonawanda, N. Y. Filed Apr. 23, 1920. Serial No. 376,007. 10 Claims. (Cl. 129—16.7.)



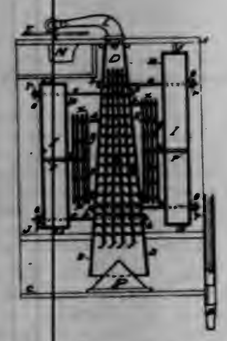
10. An index element comprising a holder of sheet material having upper retaining means and lower retaining means the latter consisting of a sheath at the lower edge of the holder, and a recording card or sheet folded to form a rear leaf and a front leaf, the rear leaf being held by the retaining means leaving the front leaf free to swing on its fold.

1,487,297. HEATING APPLIANCE. OTTOKAR UBRASCH, Vienna, Austria. Filed Feb. 8, 1922. Serial No. 533,946. 4 Claims. (Cl. 110—31.)



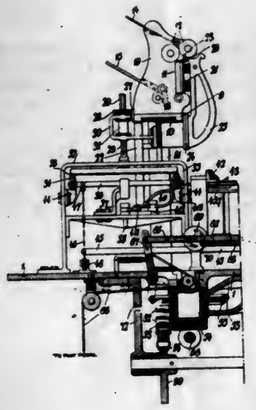
4. A cooking stove adapted to create and burn artificial gas comprising a hollow column adapted to contain the fuel from which the gas is created, a closed vessel

provided with means for producing air pressure therein, a steam generator extending into said column and adapted to be heated by the fire within said column, means for conveying water from the water vessel to said steam generator, a chamber arranged adjacent to said column and adapted to be heated by the fire within said column, a pipe connected to said chamber and having its outer



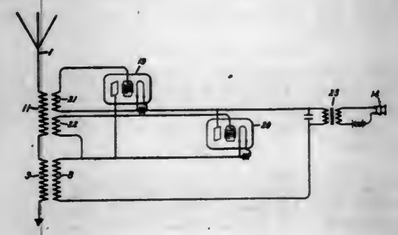
end open to the atmosphere, a steam nozzle connected to the steam generator and arranged to direct steam into the open end of said pipe, a port placing said chamber in communication with the interior of said column, and a cooking vessel support associated with said column and arranged to contact with the gas created in said column, whereby said gas may be burnt beneath said support.

1,487,298. METHOD OF AND APPARATUS FOR VIBRATION. HARALD J. VENNES, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 5, 1919. Serial No. 321,907. 9 Claims. (Cl. 250—27.)



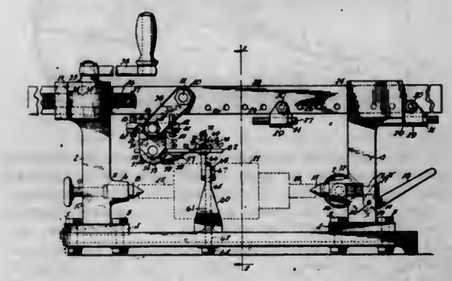
1. The method of testing the rigidity of fixed electrodes of a vacuum tube having input and output circuits which consists in vibrating the tube and producing in the output circuit indications of the effect of the vibration.

1,487,299. PHONOGRAPH OR OTHER SOUND PRODUCER OR REPRODUCER. IGNATIUS J. VETTER, New York, N. Y. Filed May 29, 1922. Serial No. 564,645. 12 Claims. (Cl. 181—27.)



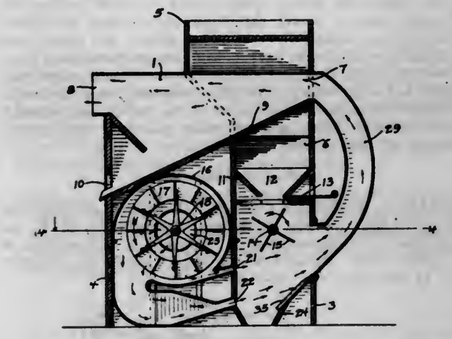
1. In a sound reproducer, the combination with a horn, of sound boards provided with sound posts and a resonator vibrationally connected with the horn by said sound posts engaging the horn and the resonator respectively.

1,487,300. TYPEWRITER. THOMAS WALTON, London, England. Filed Sept. 27, 1923. Serial No. 665,189. 32 Claims. (Cl. 197—1.)



1. A typewriter comprising a removable arcuate tray or holder having types thereon, means for rotating said tray or holder about a centre and mechanically operated means for removing any required type from the tray and conveying the same to the printing position, substantially as described.

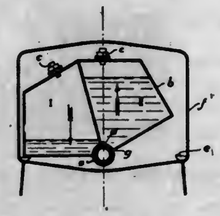
1,487,301. SIGNALING SYSTEM. WILLIAM C. WHITE, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Jan. 31, 1919, Serial No. 274,288. Renewed Aug. 14, 1923. 30 Claims. (Cl. 179—171.)



1. In a high frequency signaling system the method of transmission which consists in producing a low frequency alternating modulating signal wave, generating to the exclusion of other high frequency waves, a high frequency wave which when produced will vary in accordance with said low frequency modulating wave, which is damped by the modulating wave only, and which falls to zero when the amplitude of the modulating signal wave becomes zero and in transmitting said high frequency wave.

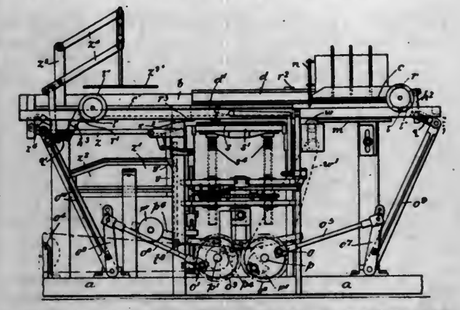
1,487,302. MACHINE FOR PLACING WEDGES IN ARMATURE SLOTS. LE ROY FLOREN WILLIS, St. Louis, Mo. Filed July 22, 1921. Serial No. 486,842. 11 Claims. (Cl. 29—84.)

1. A device of the character described comprising a reciprocable member and means carried thereby for engaging an armature to shear a strip of a desired width from a wider piece of material placed between said means and the armature.



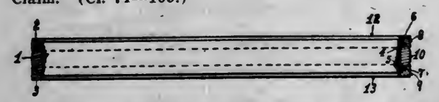
1,487,303. DEVICE FOR CLEANING AND COOLING GRAIN. JACOB WOLLMANN, Freeman, S. Dak. Filed June 28, 1922. Serial No. 571,479. 10 Claims. (Cl. 130—17.)

1. A grain cleaner and cooler adapted to be disposed in the receiving chute of a grain elevator having in combination, a comparatively narrow casing, a hopper disposed above the same having a delivery channel extending along one side of said casing, said casing having an opening in said side through which said channel delivers, a hopper for said casing below said opening extending across said casing, a rotary grain distributer below said hopper, and means for directing a blast of air through the grain below said distributer.



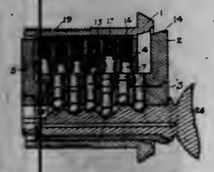
1,487,304. AUTOMATIC ACTING APPARATUS FOR MEASURING DEFINITE QUANTITIES OF LIQUIDS. HERMANN WYDLER, Berne, Switzerland, assignor to Sauser S. A. Fabrique de Vis de Précision, Soleure, Switzerland. Filed Aug. 9, 1921. Serial No. 490,981. 3 Claims. (Cl. 249—03.)

1. An apparatus for automatically measuring definite quantities of liquids including a shaft having inlet and outlet bores and lateral openings communicating therewith, a tank formed with a partition to provide liquid tight chambers and also formed with a nave for oscillatory movement on the shaft, the nave being also provided with inlet and outlet openings for communicating with each of the chambers and coacting with the openings in the shaft so that when one of the chambers is being filled the other is being emptied, the alternate filling and emptying of the chamber effecting an oscillation of the tank, the nave being also provided with additional openings adjacent the partition and a pressure



operated locking device mounted in the shaft for alternate association with the last mentioned openings for alternately maintaining the chamber in a filling position until completely filled, substantially as and for the purposes set forth.

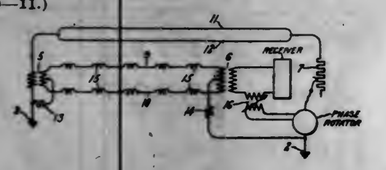
1,487,305. BOOKBINDING MACHINE. GEORGE WILLIAM YOUNG, London, England. Filed Mar. 26, 1923. Serial No. 627,925. 11 Claims. (Cl. 270—51.)



1. In a machine for fixing covers to magazines, pamphlets, catalogues, booklets and the like, the combination with glueing apparatus and means for supporting a pile of covers, of oppositely reciprocating carriages mounted for horizontal traveling, one of said carriages being adapted and arranged to grip a book and convey it back downwards over said glueing apparatus into engagement with the top cover of a pile of covers on said supporting means, and the other carriage being arranged to grip the book from the first carriage and convey it forward with a cover attached for further treatment.

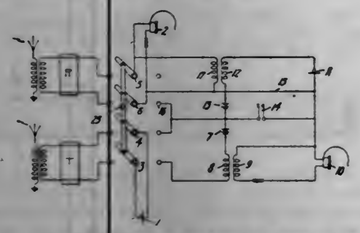
1,487,306. PISTON RING. JOSEPH A. BARRIER, Oakland, Calif. Filed July 19, 1920. Serial No. 397,464. 1 Claim. (Cl. 74—109.)

In a resilient split packing ring, the combination of a major intermediate ring member and two minor side ring members, all of said members having cylinder bearing surfaces of substantially the same width, the said major, intermediate ring member having its opposite sides bevelled from the inner, upper and lower edges uninterruptedly to the cylinder bearing surface thereof and each of the said minor side ring members having their inner surfaces beveled from a point substantially distant from the cylinder bearing surfaces thereof and said bevels continuing uninterruptedly to the upper and lower edges respectively thereof.



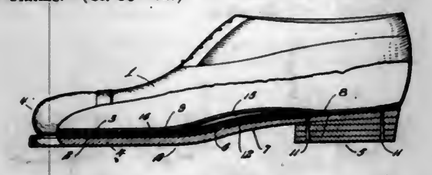
1,487,307. LOCK. FRANK ELLISON BEST, Seattle, Wash., assignor to Frank E. Best, Inc., Seattle, Wash., a Corporation of Washington. Filed Apr. 24, 1919. Serial No. 292,365. 9 Claims. (Cl. 70—47.)

1. A pin tumbler lock comprising a case, a face element on said case, a core contained in said case, key operable means for releasably retaining said core in said case, a face provided on said core which forms with the face element of the case, the face of the lock.



3. In a pin tumbler lock, a core rider having a plurality of barrels therein for pin tumblers and having grooves in its opposite side faces, individual capping devices for the barrels comprising plates adapted to overlie the rider and to close the ends of the barrels, and having downwardly and inwardly turned end portions seated yieldably within said grooves.

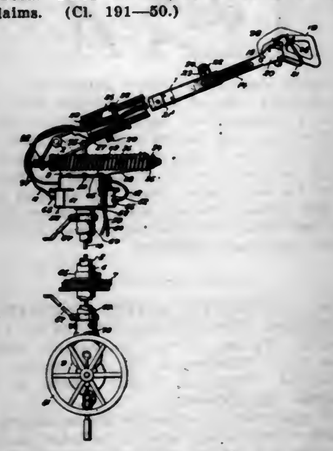
1,487,308. RADIO RECEIVING SYSTEM. HAROLD H. BEVERAGE, Riverhead, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Jan. 20, 1921. Serial No. 438,552. 20 Claims. (Cl. 250—11.)



1. A receiving system for radio signals comprising a long horizontal unidirectional receiving antenna, a transmission line for conveying signaling currents from a selected point in said antenna to a distant receiving station, and means for eliminating in the receiving apparatus the effect of currents received upon the transmission line due to the exposure of said line to the effect of ether waves.

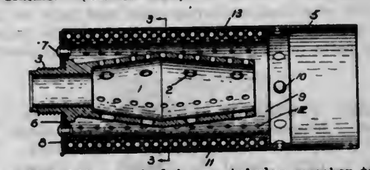
1,487,309. AIRPLANE SIGNALING APPARATUS. WILLIAM T. BOOTH, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Apr. 25, 1919. Serial No. 292,655. 2 Claims. (Cl. 179—2.)

1. An airplane signaling apparatus including a radio transmitter and a radio receiver, an aviator's signaling set connected to said transmitter and said receiver, a second aviator's signaling set, means independent of said radio transmitter for connecting said second signaling set to said first named signaling set whereby the operator of said second set may call the operator of said first set at will.



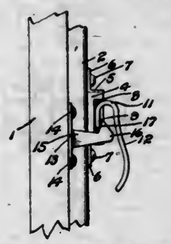
1,487,310. SHOE. ALPHIDA J. BOUTHILLIER, Cranston, R. I. Filed Jan. 29, 1923. Serial No. 615,650. 8 Claims. (Cl. 36—71.)

1. In a shoe, the combination of the welt, the heel, an innersole attached as usual to the heel and to the welt from the ball to the toe, an additional half innersole underneath said innersole extending from the heel to the ball, attached to the welt from the heel to the ball, said innersoles thus forming between them a pocket extending transversely the width of the shoe accessible from either side of the shank, and filling means in said pocket.



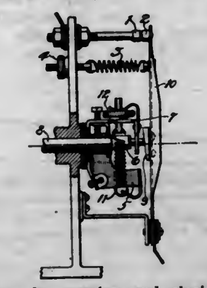
8. In a shoe, the combination of the welt, the heel, an innersole connected to the heel and to the welt from the ball to the toe by stitching extending along the outside edge of said innersole from one side of the ball around the toe to the other side of the ball, an additional half innersole underneath said innersole extending from the front edge of the heel to the ball, connected to said welt by two sets of stitchings, one set extending along the outside edge of said innersole from the front edge of the heel to the ball, the other set extending similarly along the inside edge thereof, said innersoles thus forming between them a pocket extending transversely the width of the shoe accessible from either side of the shank, and filling means in said pocket, said means comprising separate thin, flat filler members provided with a straight edge and a curved edge, said filler members being gradually tapered from the straight edge to the curved edge thereof, the straight edges thereof being placed in the outside edges of said pocket.

1,487,311. CURRENT COLLECTOR FOR ELECTRIC VEHICLES. GEORGE W. BOWER, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Nov. 18, 1921. Serial No. 516,094. 12 Claims. (Cl. 191—50.)



1. The combination with a pivoted trolley pole, of yielding pressure means tending to turn said pole on its pivot, manually driven power means for moving said pole in opposition to said yielding pressure means, and means for connecting and disconnecting said power means with and from said trolley pole.

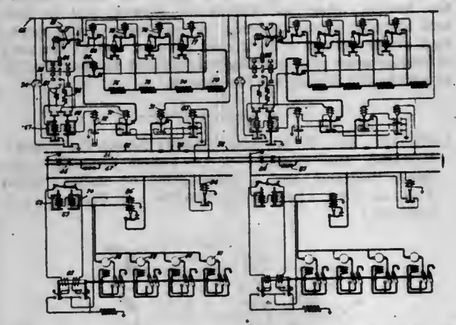
1,487,312. FLASH HIDER. WILLIAM R. BULL, Springfield, Mass. Filed Oct. 31, 1922. Serial No. 598,205. 3 Claims. (Cl. 89—42.)



3. A flash hider, embodying, a tubular member tapered toward each end attachable to a discharge orifice for confining escaping gases and directing the same and a medium carried on said member and in the path of the escaping gases.

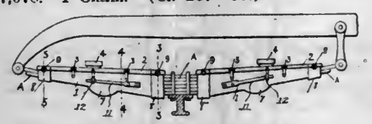
1,487,313. LATCH CONSTRUCTION. ELVAH O. BULMAN, Grand Rapids, Mich. Filed Mar. 29, 1921. Serial No. 456,531. 3 Claims. (Cl. 292—238.)

1. In combination, a door and a casing therefor, a strike on the casing, a latch lever pivotally mounted at one end on the door, said lever at its free end being formed with an upwardly projecting substantially U-shaped portion, the outer free leg of which is extended downwardly and formed into a handle which covers said strike when the door is in closed position.



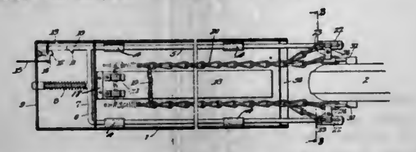
1,487,314. SPEED REGULATOR. MERLE P. CHAPLIN, White Plains, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 19, 1921. Serial No. 523,602. 7 Claims. (Cl. 200—31.)

3. A regulator for opening and closing an electrical circuit comprising means mounted on a rotatable shaft and responsive to centrifugal force, and a plurality of means for varying the force required to render said centrifugally actuated means responsive, at least one of said means being capable of adjustment while the regulator is functioning.



1,487,315. SELECTIVE CONTROL SYSTEM. CHARLES B. CONNELY, New Orleans, La., assignor to General Electric Company, a Corporation of New York. Filed Mar. 25, 1922. Serial No. 546,776. 13 Claims. (Cl. 104—149.)

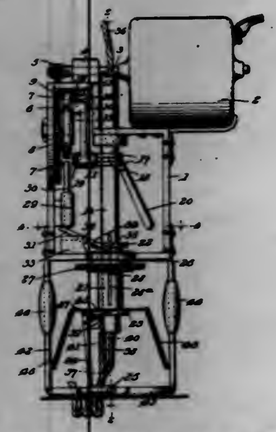
1. The combination in a selective control system of a supply conductor, a switch member, means operated responsively to one value of current through the supply conductor for operating the said switch member to select one portion of a plurality of paths for the current from the supply conductor, and means operated



responsively to another value of current through the supply conductor and the first means for operating the said switch member to select another portion of the said paths for the current from the supply conductor.

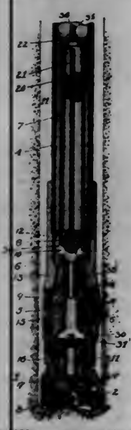
1,487,316. SPRING OILER. EARL E. CRONENWETH, Wilkinsburg, Pa. Filed Mar. 27, 1922. Serial No. 547,078. 1 Claim. (Cl. 267—37.)

A spring oiler of the class described comprising a trough shaped member, a detachable cover therefor, a filling opening in the cover, packing strips at the ends of the member, yoke shaped members of spring material engaging the ends of the trough shaped member for compressing the packing strips, spring means for holding the yoke shaped members in place, a lining of absorbent material for the trough shaped member, an off set portion formed in the bottom of said member providing an oil reservoir, a keeper laterally disposed from the cover and a spring latch bar rigidly secured to the trough shaped member and having engagement with the keeper so as to allow the trough shaped member and cover respectively to give with the vibrations of the spring.



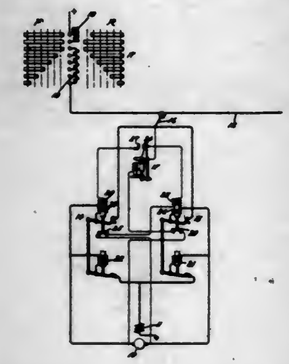
1,487,317. AUTOMATIC TIRE-CHAIN APPLIER. EARL E. CRONENWETH, Wilkinsburg, Pa. Filed Mar. 31, 1922. Serial No. 548,440. 3 Claims. (Cl. 152—14.)

2. The combination with an automobile, of housings supported forward of the drive wheels of the automobile, a centrally folded anti-skid chain in each housing, means in the housings spacing the leads of the chains, clips on said means engaging the chains, spring influenced means arranged for slidable movement through the housings, turnable means on said spring influenced means having right angle fingers to engage the end links of the leads of the chains to arrange the respective end links vertically and horizontally adjacent to the sides of the wheels when the said spring influenced means projects the chains through the housings,



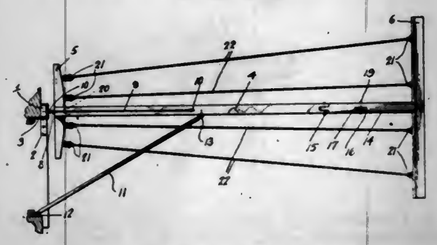
means latching the spring influenced means in the housings, releasing means for said latching means, means on the sides of the wheels to engage the said horizontally disposed links to draw the chains around the treads of the wheels, when the wheels are turned, and to turn said turnable means to bring the end links of the second lead of the chains to horizontal position and in the path of engagement with said last mentioned means whereby to secure the chains on the wheels.

1,487,318. RUG BUILDER. HARVEY JAMES DE FOREST, Portland, Me., assignor to De Forest Products Company, Portland, Me., a Corporation of Maine. Filed Aug. 4, 1922. Serial No. 579,694. 5 Claims. (Cl. 112—80.)



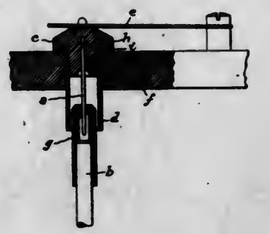
1. A device of the type described including a frame adapted to rest upon and move over the goods being worked, freely rotatable needle carrying mechanism carried by said frame and means also carried by said frame for reciprocating said mechanism.

1,487,319. DEEP-WELL-DRILLING APPARATUS. OSWALD DUDA, Houston, Tex., assignor to Clarence E. Reed, Houston, Tex. Filed Mar. 7, 1922. Serial No. 541,818. 11 Claims. (Cl. 255—71.)



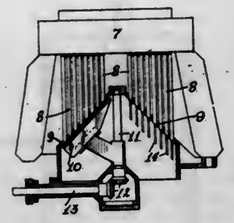
1. A deep well drilling apparatus comprising a drill stem, a drill bit, a lubricant holding chamber, a plunger therein, a rotary member carried by the drill bit and rotated by contact with the earth as the apparatus is rotated, a pump operated by said rotary member, said pump taking its supply from the fluid outside the drill stem and delivering said fluid into the lubricant chamber above the plunger to force the lubricant to the parts to be lubricated, substantially as described.

1,487,320. SYSTEM OF SELECTIVE CONTROL. JOHN EATON, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Jan. 4, 1922. Serial No. 526,983. 27 Claims. (Cl. 104—149.)



19. The combination in a system of control of a supply conductor, means operated responsively to the potential of said conductor for controlling the selection of the desired portion of a plurality of paths to be established from said conductor, switch mechanism controlled by the said means for establishing the portion of said paths selected, and electroresponsive means energized responsively to the current in the selected portion of the paths for holding the said switch mechanism closed.

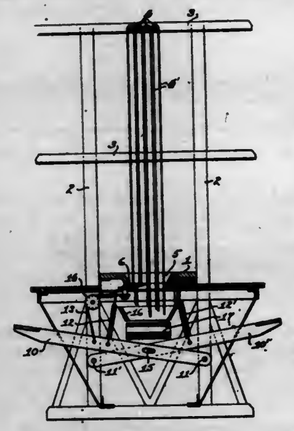
1,487,321. CLOTHES HANGER. FRED J. ELIE, Ogdensburg, N. Y., assignor of one-half to John McFarrell, Cardinal, Ontario, Canada. Filed Feb. 7, 1923. Serial No. 617,554. 1 Claim. (Cl. 68—34.)



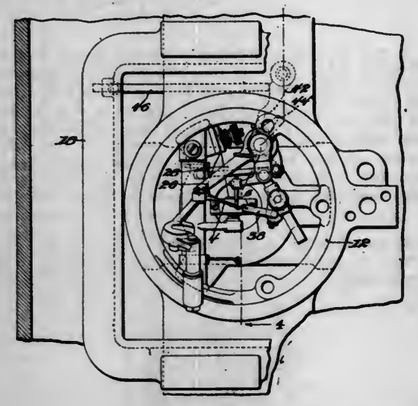
A clothes hanger of the class described comprising a post, brackets supporting the same from a part of a building, an arm extending outwardly from the post, an arm rigidly depending from the inner end of the outwardly extending arm, an extension arm pivotally connected to the forward end of the outwardly extending arm, cross pieces on the arms carried by the outwardly extending arm, pulleys on the cross pieces, clothes lines trained over the pulleys, a tension bar secured to the outwardly extending arm and passing through the extension arm thereof, and adjustable locking means between the tension bar and extension arm of the outwardly extending arm of the post.

1,487,322. GUIDE BEARING. EVAN EVANS, Berlin, Germany, assignor to General Electric Company, a Corporation of New York. Filed Oct. 16, 1922. Serial No. 594,924. 3 Claims. (Cl. 64—24.)

1. A guide bearing for shafts comprising a bearing support provided with an opening, a cylinder provided with a flange at one end removably supported in said opening with the flange abutting against said support and with the other end of the cylinder extending through and beyond said support, a needle holder provided with a flange at one end removably supported in said cylinder with its flange abutting against the flange of the cylinder, a needle secured in said holder and a shaft provided with a bearing recess in an end thereof into which said needle extends beyond said support and within said cylinder.



1,487,323. CUTTER FOR ANGLE SHORT-CUT PASTE. MARK E. FONTANA, San Francisco, Calif. Filed May 16, 1922. Serial No. 561,464. 1 Claim. (Cl. 107—14.)



A cutter for the described purpose comprising a hollow conical plate with an open base, the sloping sides of said plate being perforated; means for guiding paste strings to and through said perforated sides from without inwardly; and a revoluble inclined cutter mounted within said plate and operated upon the inner surface of its sides to trim the inwardly projecting paste strings on an angle.

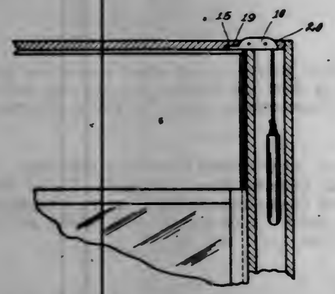
1,487,324. MACARONI TRIMMER. MARK E. FONTANA, San Francisco, Calif. Filed May 16, 1922. Serial No. 561,465. 2 Claims. (Cl. 107—21.)

2. A macaroni trimmer comprising a table having an apertured top and a superstructure adapted to suspend the macaroni with its extremities hanging through said apertured top; a sliding knife mounted under and adapted to traverse the apertured top of the table to trim said pendent macaroni extremities; a pair of parallel spring controlled links pivotally connected with said knife and table; a spring controlled operating lever pivoted to one side of the table and projecting from its other side; a cable connection from said lever to operate the knife; and a second spring controlled operating lever pivoted to said other side of the table and projecting from the opposite side the two levers being slidably connected to operate in unison therewith.

1,487,325. BUTTONHOLE-SEWING MACHINE. JOSEPH FOSSA, Danvers, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Apr. 9, 1920. Serial No. 372,458. 9 Claims. (Cl. 112—242.)

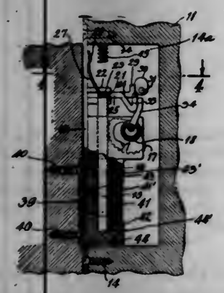
1. A buttonhole sewing machine having, in combination, upper and under thread mechanism, including an under-thread tension located under the work and means for pulling thread through the tension and giving it up at the completion of the sewing to be drawn forward in spacing the work.

1,487,326. CONVEYER. CLAUD E. FULLER, New York, N. Y. Filed Dec. 20, 1922. Serial No. 608,058. 2 Claims. (Cl. 198—34.)



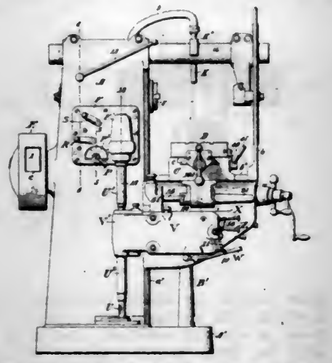
1. In an improved conveyer, the combination of a pair of spaced frame members, a plurality of anti-friction rollers on each side of the frame and the anti-friction rollers on each side being in alinement with each other, a trough secured to the outer side of each of the frame

members, an idler endless conveyer chain mounted for sliding movement in said trough and having the upper surface of the idler chain below the upper portions of the anti-friction rollers, article carrier means adapted to



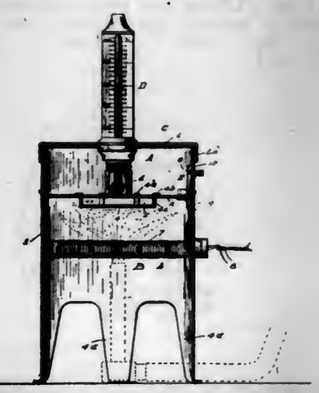
roll on said anti-friction rollers and out of engagement with the idler conveyer chains, and means on said idler conveyer chains adapted to be engaged by the article carrier means to move the idler endless conveyer chains forward step by step.

1,487,327. PULLEY. ABSALOM GARLAND, Oakland, Calif. Filed Dec. 19, 1921. Serial No. 523,601. 1 Claim. (Cl. 16—213.)



A sash balance comprising a housing having a flange extending from the lower wall thereof with a screw hole therein adapted to screw said housing to the sash casing, two rollers journalled in spaced relation in said housing, the lower wall of said housing having rope holes in the ends thereof and an additional opening in the middle thereof whereby a rope may be readily passed through one rope hole and over the rollers and out of the other rope hole.

1,487,328. LOCK. MAX GOLDEN, New York, N. Y. Filed Nov. 3, 1922. Serial No. 598,795. 6 Claims. (Cl. 292—150.)

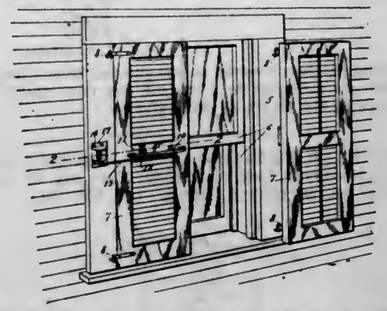


1. A lock comprising a movable portion and a wedge-shaped keeper, said movable portion having a wedge-shaped opening for receiving said keeper, a lock bolt for retaining said portions in engagement, and means for reciprocating said lock bolt in said keeper.

1,487,329. SIMPLIFIED UNIVERSAL MILLING MACHINE. ROBERT T. HAZELTON, Cincinnati, Ohio, assignor to The Cincinnati Milling Machine Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Nov. 8, 1919. Serial No. 336,664. 9 Claims. (Cl. 90—21.)

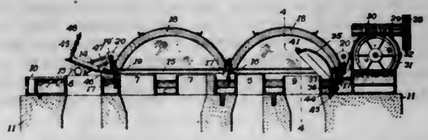
1. A machine tool organization combining a stationary frame-element; a shiftable frame-element; a transmission shaft journaled on the one element and in translatable relation with the other element; and a telescopic casing enclosing said shaft.

1,487,330. DENTAL OR OTHER FURNACE OR OVEN. GEORGE M. HOLLENBACK, Lewistown, Mont. Filed June 29, 1918. Serial No. 242,521. 1 Claim. (Cl. 126—39.)



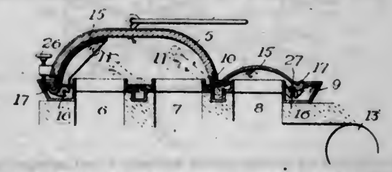
In a dental oven, the combination with a chambered work-holding member, of means supporting said member in elevation, a closure for said member, and means for applying heat to said member; there being a flat heat distributing plate pendent from the base of said work-holding member and interposed between the source of heat and base of the work-holding member; said oven likewise being provided with a thermometer mounted upon said closure and having its heat sensitive element within the chamber of the work-holding member and in contact with the base thereof whereby the temperature within the chambered work-holding member is denoted exteriorly of the oven.

1,487,331. MECHANISM FOR OPERATING SHUTTERS. CHARLES A. HUSSER, Torrington, Conn. Filed Mar. 10, 1922. Serial No. 542,523. 1 Claim. (Cl. 268—14.)



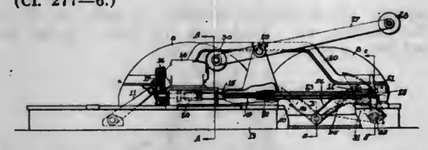
The combination with a swinging shutter for a window structure, of a device for manipulating said shutter through the wall of a building, said device comprising a

guiding member on said shutter, a housing, a swinging arm having its ends upturned, one of said upturned ends being engaged in said guiding member and the other upturned end being located within said housing and having a gear secured thereto, an operating shaft passing through said wall, the outer end of said shaft having a gear adapted to mesh with the gear on said swinging arm, the inner end of said shaft having an intermediate



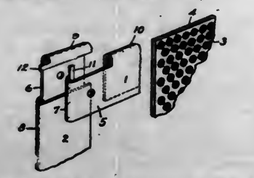
squared section and a threaded extremity, an adjustable stop screwed on said threaded extremity, a stationary notched disk surrounding said shaft, and a sleeve slidable on the squared section of said shaft, said sleeve having notches adapted to mesh with the notches on said disk to lock the shaft in any desired adjusted position, and a spring located between said sleeve and said stop to hold said sleeve in locked position.

1,487,332. REVERSING APPARATUS FOR HEATING FURNACES. GEORGE H. ISLEY, Worcester, Mass., assignor to Morgan Construction Company, Worcester, Mass., a Corporation of Massachusetts. Filed Dec. 26, 1918. Serial No. 268,391. 23 Claims. (Cl. 277—6.)



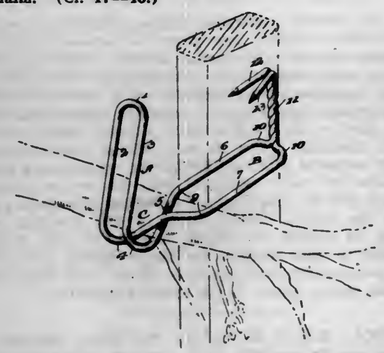
1. The combination with a regenerative furnace, of reversing apparatus therefor constituted by two movable devices, each device, in one position, controlling the flow to said furnace of both air and gas and in the other position, controlling the flow from said furnace of products of combustion.

1,487,333. METHOD OF AND APPARATUS FOR PRODUCING THE REVERSAL OF REGENERATIVE FURNACES. GEORGE H. ISLEY, Worcester, Mass., assignor to Morgan Construction Company, Worcester, Mass., a Corporation of Massachusetts. Filed Mar. 31, 1920. Serial No. 370,186. 20 Claims. (Cl. 277—6.)



1. The herein described method of reversing a regenerative furnace, which consists in discontinuing the gas supply to one gas regenerator passage while simultaneously connecting said gas regenerator passage to the associated air regenerator passage on the same side of the furnace, and afterwards connecting both of said regenerator passages to the stack, simultaneously with the connection of the opposite gas and air regenerator passages to the gas and air supply.

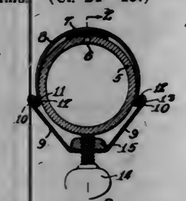
1,487,334. REVERSING APPARATUS FOR REGENERATIVE FURNACES. GEORGE H. ISLEY, Worcester, Mass., assignor to Morgan Construction Company, Worcester, Mass., a Corporation of Massachusetts. Filed Aug. 2, 1922. Serial No. 579,215. 10 Claims. (Cl. 277—6.)



1. In apparatus of the class described, the combination with a set of furnace flues, of a shiftable reversing member cooperating therewith, an end closure for one of said flues, and a common actuating device engaging said member and said closure separately to move them in sequence.

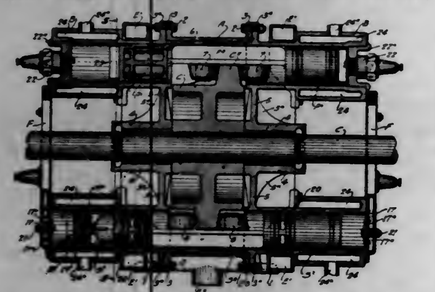
1,487,335. SCREEN. HUGO JAEGER, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Sept. 29, 1921. Serial No. 504,134. 14 Claims. (Cl. 156—14.)

5. A frame member for a screen comprising a U-shaped member having at each end one of its sides and the curved portion cut away and the end of the remaining said portion bent to form a curved portion extending at an angle to the curved portion of the U-shaped member.



1,487,336. LIMB SUPPORT. BERTHOLD H. KAMP, Sauger, Calif. Filed Nov. 1, 1922. Serial No. 598,374. 1 Claim. (Cl. 47—48.)

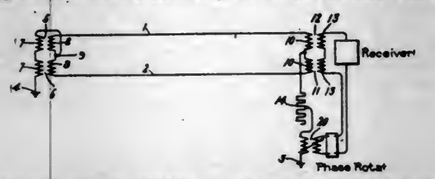
A limb support adapted to be mounted on a pole and formed of a single strand of steel wire bent intermediate its ends into a loop, with the legs of the loop bent at an angle to provide a limb engaging member, the legs of the loop beyond the angular portion crossing each other



and extended in parallel relation, with the legs beyond the parallel portion being bent inwardly and upwardly at an angle for a portion of their lengths the bent up portions being intimately twisted, the free ends of the legs being bent inwardly and provided with sharp points forming barbs adapted to penetrate the pole, with the parallel portions of the legs embracing the pole in clamping relation, the barbs and the clamping parallel portions cooperating to maintain the limb support in position on the pole, the inwardly bent portions and twisted portion of the legs adapted to engage the pole to relieve strain on the barbs.

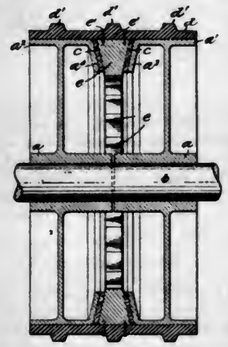
1,487,337. PIPE-REPAIR CLAMP. SAMUEL M. KASS, Philadelphia, Pa. Filed Aug. 13, 1921. Serial No. 491,961. 2 Claims. (Cl. 24—19.)

1. In a pipe repair clamp, two clamp members united by clincher joints and together surrounding the pipe, in combination with a screw and nut for tightening the clamp, the nut being located inside of one of the members.



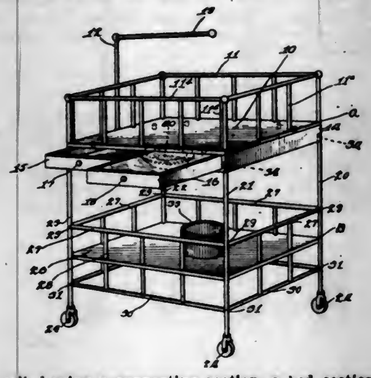
1,487,338. TWO-CYCLE INTERNAL-COMBUSTION ENGINE. JOHN KELLEY, St. Louis, Mo. Filed Jan. 10, 1921. Serial No. 436,131. 6 Claims. (Cl. 123—58.)

1. An internal combustion engine, comprising a rotatable driving member, two groups of opposed cylinders arranged around said driving member in parallel relation to same made up of a plurality of units, each of which comprises a power cylinder and a suction cylinder, reciprocating pistons in said cylinders, devices that connect together the longitudinally aligned pistons of opposed cylinders, a cam on said driving member operatively connected with said devices for reciprocating same, an automatic valve associated with the suction cylinder of each unit for admitting a combustible mixture to same when the piston therein moves in one direction, and means for causing the charge admitted to said suction cylinder to pass through the piston therein and enter the co-operating power cylinder of the unit when said suction piston moves in the opposite direction.



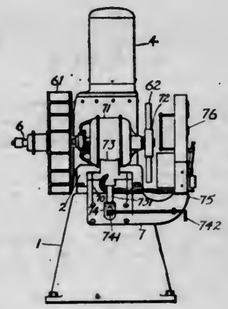
1,487,339. RADIO SIGNALING SYSTEM. EDWARD W. KELLOGG, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Jan. 20, 1921. Serial No. 438,544. 43 Claims. (Cl. 250—20.)

1. A receiving system for radio signals comprising a long horizontal receiving antenna and means for utilizing said antenna as a transmission line for conveying signaling currents from a selected point in said antenna where



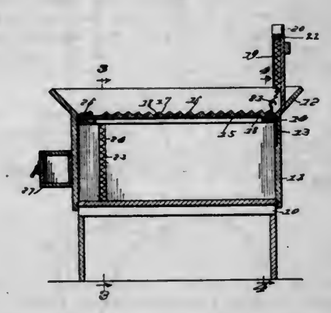
signaling currents received on the antenna from a desired station are strongest to a distant receiving station located along the length of said antenna.

1,487,340. TRACK-LAYING MOTOR VEHICLE. NICHOLAS KROUPSKY, New York, N. Y. Filed Aug. 31, 1921. Serial No. 497,086. 2 Claims. (Cl. 305—10.)



1. In a track laying motor vehicle drive wheels having the periphery thereof provided with inwardly extending proximate inclined flanges, separate friction means for driving purposes supported on the proximate faces of said flanges and a track passing over said wheel and provided on its inner face with a series of independent incompressible spaced blocks adapted to be engaged in driving relation with said driving means on said flanges.

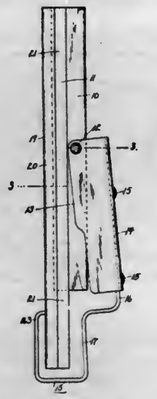
1,487,341. CHILD'S COMBINATION CRIB AND BED. MARY LOUISE LANGE, Chicago, Ill. Filed June 25, 1920. Serial No. 391,784. 1 Claim. (Cl. 5—2.)



A crib having a supporting section, a bed section having a base and detachably supported by the supporting section, a rail surrounding the bed section, a portion of said rail being removable, and drawers carried by said base and adjacent the removable portion of the rail.

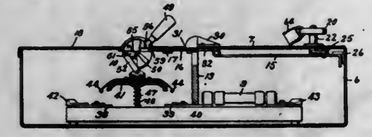
1,487,342. ELECTRIC GENERATING APPARATUS. JOSEPH O. W. LAVALLÉE, Montreal, Quebec, Canada, assignor to Caron Brothers Incorporated, Montreal, Canada. Original application filed Oct. 31, 1921, Serial No. 511,893. Divided and this application filed Dec. 26, 1922. Serial No. 609,088. 5 Claims. (Cl. 290—1.)

1. In a power plant the combination of a prime mover, a rectangular base thereto, a bracket seat on the side of the base, with a bracket adapted to be attached to the bracket seat in accurate adjustment, an electric generator and a switch board supported on the bracket and means to couple the prime mover to the generator.



1,487,343. WASHING APPARATUS. EDWARD K. LEESON, Gastonia, N. C. Filed Jan. 25, 1922. Serial No. 531,789. 3 Claims. (Cl. 68—29.)

1. In a washing apparatus, a tub, a perforated washboard, means for yieldingly supporting the washboard in an approximately horizontal position free of the bottom of the tub, and an antifriction means carried by the washboard adapted to engage the stationary part of the wall of the tub during the washing operation.

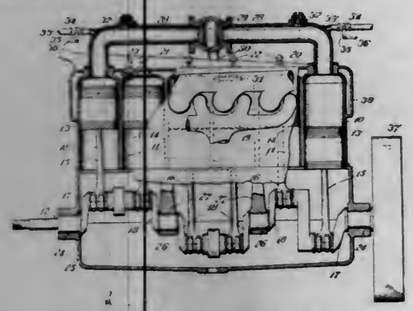


1,487,344. WINDSHIELD CLEANER. EDWARD F. LUKENS, West Haven, Conn., assignor to The New England Tube Stamping Company, Inc., West Haven, Conn., a Corporation. Filed July 21, 1922. Serial No. 576,510. 2 Claims. (Cl. 15—252.)

1. In a wind-shield cleaner, the combination of a resilient holder, consisting of a single strip of spring-metal bent to form substantially parallel inner and outer arms; wiper-carrying members permanently mounted upon the respective arms of the said holder, one of the said members being pivoted to its arm and one member carrying a single thick strip of felt, and the other wiper-member carrying two flexible, rubber wiper-strips, spaced apart

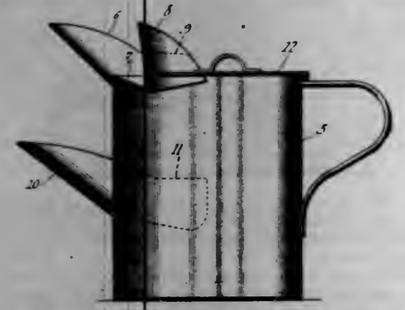
to receive the said strip of felt between them, and a web between the strips forming a stop-abutment therefor when the device is not in use.

1,487,345. ELECTRICAL APPARATUS. AXEL W. LUNDSTROM, New York, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Apr. 9, 1919. Serial No. 288,800. 9 Claims. (Cl. 200—50.)



2. The combination of an electrical device, an enclosing case for said device, a door to said case adjacent said device, a manually operated switch in said case, a manually operated latch for securing said door in closed position, said latch and said switch operating entirely independently and each incapable of effecting operation of the other, and a part movable with said latch into the path of travel of a part moving with said switch when said latch is retracted to prevent movement of said switch so long as the door is open or unlatched.

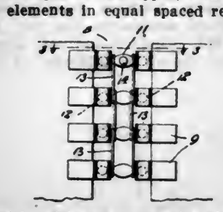
1,487,346. SAW CYLINDER. ALEXANDER S. MACKENZIE, Houston, Tex., assignor to The Garner Gin Company, Inc., Houston, Tex., a Corporation of Texas. Filed Aug. 30, 1921. Serial No. 496,848. 21 Claims. (Cl. 19—97.)



1. A toothed cylinder for separating fibers having a rotary relatively elongated axially positioned supporting element, and a series of sets of independent toothed saw segments each normally lying in a plane slightly inclined in the same direction with respect to the planes normally transverse to the axis of the cylinder.

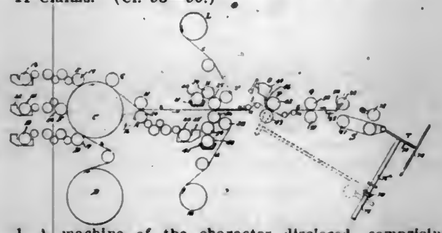
1,487,347. ENGINE. EDWARD H. MARTIN, Los Angeles, Calif. Filed Sept. 20, 1922. Serial No. 589,317. 9 Claims. (Cl. 123—109.)

1. An engine comprising a crank shaft, a plurality of driving cylinders, associated braking cylinders, pistons for said driving and braking cylinders, connecting rods between said pistons and the cranks on said shaft, and a valve controlled communicating passage between said braking cylinders whereby the extent of braking action may be varied.



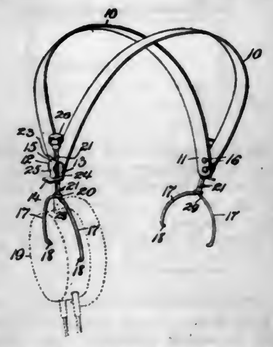
1,487,348. EGG SEPARATOR. OSCAR WILLIAM MOESLEIN, Harrisburg, Pa. Filed Dec. 5, 1922. Serial No. 605,041. 1 Claim. (Cl. 146—2.)

In a device of the class described, a body portion, a lip formed at the upper end of the body portion, and extending outwardly therefrom, a flange extending downwardly and inwardly from the upper edge of the body portion at a point adjacent to the lip, an upwardly extended lip formed integral with the inner edge of the flange, the first mentioned lip having curved walls formed at its ends and being secured to the second mentioned lip, a lip secured to the outer surface of the body portion at a point intermediate its ends and directly below the first mentioned lip, the first mentioned lip extending to a point beyond the outer edge of the first mentioned lip and a cover adapted to rest on the upper edge of the body portion and engage the second mentioned lip to retain material in the body portion while the body portion is being tipped forwardly.



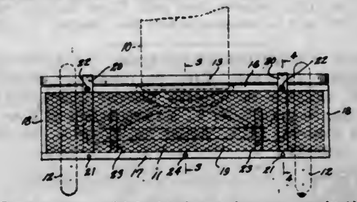
1,487,349. SHOE FASTENER. ANTHONY E. MONGELLUZZO, Barnesboro, Pa. Filed Apr. 27, 1923. Serial No. 634,928. 1 Claim. (Cl. 24—207.)

A quick detachable shoe fastener including a plurality of pairs of plates secured to the opposite edges of the opening in the shoe upper in spaced relation, the plates at one side of the opening being in opposite corresponding relation with the plates at the other side of the opening, all of said plates being formed with sockets beyond the edges of the upper, a plurality of fasteners having the ends formed for cooperation with corresponding sockets on the opposite edges of the upper, and means securing the fastening elements in equal spaced relation with the



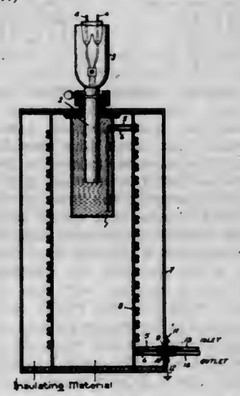
plates and positioned between opposite plates in fastened relation adapted for moving all of said fastening elements into or out of fastening cooperation with said plates simultaneously.

1,487,350. TAG MAKING AND PRINTING MACHINE. CARL A. MONSON and HARRY GEARING, Los Angeles, Calif., assignors, by mesne assignments, to Hadley Tag & Machine Co., Los Angeles, Calif., a Corporation of California. Filed Feb. 14, 1920. Serial No. 358,746. 11 Claims. (Cl. 93—90.)



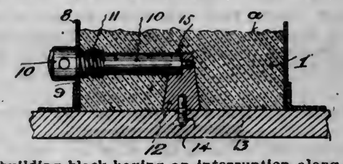
1. A machine of the character disclosed, comprising means for feeding tag stock, means for applying reinforcement material thereto at spaced points, means for puncturing the tag stock through the spaced reinforcement material, means for trimming the tag stock, and means for severing the tag stock into separate tag formations; means likewise being provided for applying eyelets to the tag stock at the reinforced portion thereof.

1,487,351. HEADPIECE FOR TELEPHONES. ADOLPH MONTAN, West Orange, N. J., assignor to Eastern Tool & Manufacturing Company, Bloomfield, N. J. Filed May 27, 1922. Serial No. 564,017. 3 Claims. (Cl. 119—156.)



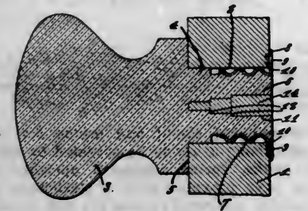
1. A head piece for telephones comprising an overhead support, a clip secured to the end of the support, said clip being formed from a single sheet of metal bent to form a bottom flange and an overhead loop, both perforated, and a stem passing through the perforations, the end of the loop being disposed so as to engage the side of the stem to hold it by friction against the edge of the perforations.

1,487,352. AUTO LIFE GUARD. JOHN H. NELSON, Bridgeport, Conn. Filed Oct. 10, 1923. Serial No. 667,643. 7 Claims. (Cl. 293—54.)



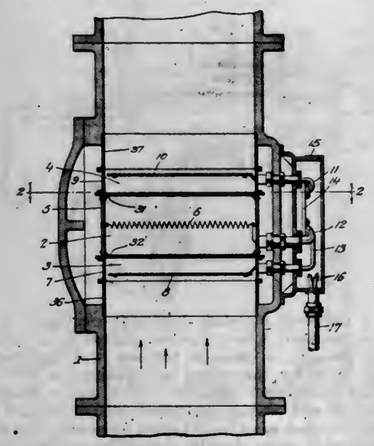
1. In a motor vehicle having a bumper projecting forwardly of the wheels thereof, a guard suspended from the bumper and extending downwardly therefrom, a bowed spring connected to the guard at a distance beneath the bumper, and means for connecting the spring to the vehicle.

1,487,353. ELECTRON-DISCHARGE APPARATUS. HENRY J. NOLTE, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Sept. 8, 1921. Serial No. 499,261. 6 Claims. (Cl. 250—27.)



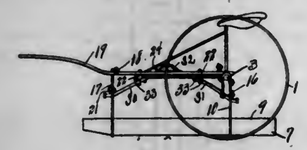
1. The combination with an electron discharge device having an exhausted receptacle a portion of which consists of metal, the metal portion of said receptacle forming one of the electrodes of said device, of a container for a cooling liquid in which the metal portion of said receptacle is adapted to be inserted, and means for providing a circulation of the cooling liquid in said container comprising inlet and outlet pipes of insulating material, said pipes being of such length that the columns of cooling liquid contained therein are adapted to effectively insulate the container and the portion of the receptacle within said container from an apparatus by which a circulation of cooling liquid through said pipes may be maintained.

1,487,354. MEANS FOR GROUTING MASONRY. JOHN F. O'ROURKE, New York, N. Y. Filed Aug. 28, 1919. Serial No. 320,345. 2 Claims. (Cl. 72—101.)



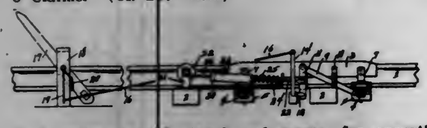
2. A building block having an interruption along a face and provided with a passage for grout having outlet openings through said face on opposite sides of the interruption, said passage having an inlet in another face.

1,487,355. DRAWER KNOB. CHARLES G. OVERMYER, Hartford City, Ind. Filed June 2, 1921. Serial No. 474,499. 5 Claims. (Cl. 16—121.)



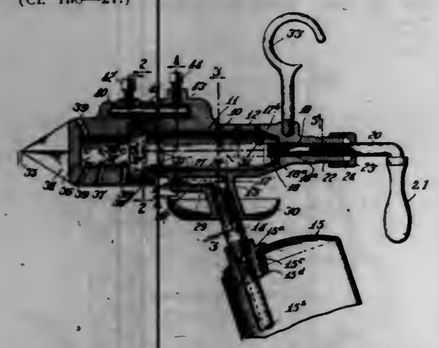
3. A knob of the class described provided in its inner end with a bore; and reflecting material in the bore.

1,487,356. FLUID METER. HORACE N. PACKARD, Milwaukee, Wis., assignor to The Cutler-Hammer M'f'g Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Apr. 13, 1918. Serial No. 228,398. 7 Claims. (Cl. 73—167.)



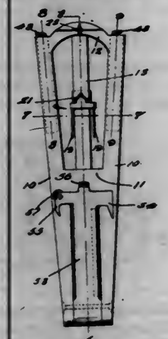
1. In a fluid meter the combination with measuring means including a fluid passage and a meter element to substantially conform with the shape and size of said passage but having a clearance with the walls of such passage, of means located within said passage to reduce the cross section of the stream of fluid passing said element.

1,487,357. BOLL-WEEVIL-CATCHING MACHINE. SAM PAVILLARD, Decatur, Tex. Filed Jan. 25, 1923. Serial No. 614,896. 5 Claims. (Cl. 43—133.)



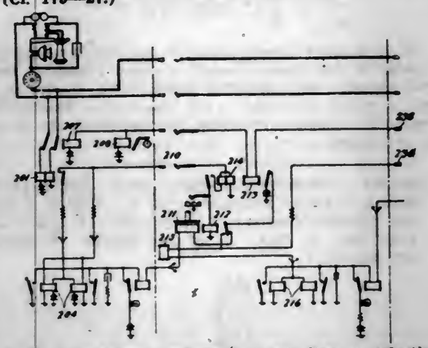
1. An insect gathering machine comprising a wheeled truck provided with an axle and a frame, a transverse bar mounted slidably on said frame, gathering pans suspended from said bar and slidably mounted on said axle, and means for shaking insects and boils and squares into said pans during the moving of said truck.

1,487,358. TRAIN-ACTUATED SIGNAL FOR ROAD AND STREET CROSSINGS. SAM PAVILLARD, Decatur, Tex. Filed Nov. 30, 1923. Serial No. 677,682. 5 Claims. (Cl. 246—293.)



1. A train-actuated signal and means for operating the same comprising a bar to be actuated by the wheels of passing trains, spring supported uprights carrying said bar, a lever provided with a stationary fulcrum, a strap pivotally connected to said bar and to said lever, a crank-shaft having cranks on the ends thereof, a link bar pivotally connected to said lever and to one of the said cranks, and a pull rod connected to the other crank and operatively connected to said signal.

1,487,359. TORCH. JOHN PETERSON, Maywood, Ill. Filed June 24, 1921. Serial No. 480,017. 8 Claims. (Cl. 158—27.)

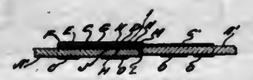


1. A device of the class described, comprising a combustion chamber, a fuel chamber adapted to contain fuel under pressure, a passage between said chambers, a needle valve for controlling said passage at its outlet into said combustion chamber, and a pocket formed in the bed of said passage positioned adjacent to said combustion chamber so as to be heated therefrom, and adapted to collect liquid fuel in a pool beneath the stream of vaporized fuel flowing through said passage.

1,487,360. COMBINATION TOOL. STANLEY J. PHILLIPS, Mayfield, Pa. Filed Jan. 29, 1923. Serial No. 615,677. 5 Claims. (Cl. 7—16.)

1. A device of the character described, comprising a frame having upper and lower open portions, a bar arranged centrally in the upper portion and constituting a support for a sliding tool-carrying member, a pivoted tool-carrying member arranged in the lower portion, angularly disposed extensions projecting from the pivoted tool-carrying member, and said frame having recesses to receive said extensions when the member is folded.

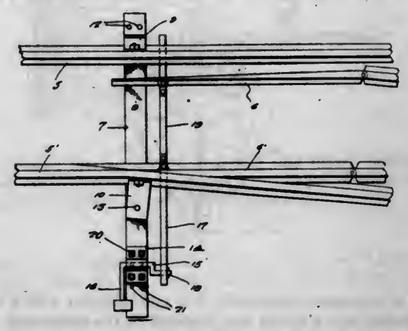
1,487,361. MACHINE-SWITCHING TELEPHONE-EXCHANGE SYSTEM. LIPA POLINKOWSKY, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Feb. 24, 1919. Serial No. 278,575. 16 Claims. (Cl. 179—27.)



1. In a telephone system, a trunk line, a selective switch in which said trunk terminates, a controlling mechanism including a plurality of registers, a control circuit including said trunk line extending from said mechanism to the selective switch, a second selective switch, means controlled by one of said registers over said circuit for operating the first selective switch to extend said trunk line too said second switch, means for associating the control circuit with another of said registers, means operated when said first switch reaches a certain stage in its operation for delaying the association of said second register with the control circuit, means operated when the first switch reaches a further stage in its operation for rendering said delaying means ineffective, and means operated when the second register becomes associated with the control circuit for completing said control circuit to said second switch.

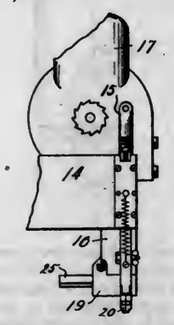
1,487,362. DRYING APPARATUS. OTIS D. RICE, Winthrop, Mass. Filed Mar. 15, 1922. Serial No. 543,937. 8 Claims. (Cl. 34—48.)

1. In a drying apparatus of the type having a drying chamber, means to cause the drying medium to circulate therein through a closed circuit, and means to maintain vacuum conditions in said chamber, the combination with a drying chamber having an inlet passage leading thereto, of means to feed web material into the chamber through said passage, and means to reduce progressively the pressure from the outer to the inner end of the passage.



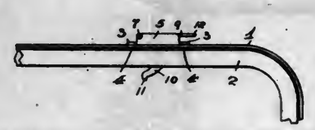
1,487,363. LOCK FOR CARTONS. WERNER F. ROTHERMUND, Brooklyn, N. Y., assignor to Thompson & Norris Company, Brooklyn, N. Y. Filed Jan. 6, 1922. Serial No. 527,527. 2 Claims. (Cl. 229—4.)

1. A lock of the character described comprising a member comprising spaced plates one of which has resilient portions extending into the space between said plates,



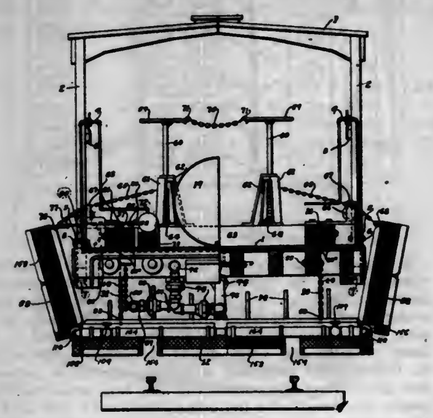
a second member having slots therein adapted to advance between said spaced plates, said slots being adapted to be engaged by said resilient portions.

1,487,364. TIEBAR AND SLIDE PLATE FOR RAILROAD TRACKS. JOHN W. SCHMIDT, Millstone, Ky. Filed Nov. 8, 1923. Serial No. 673,524. 2 Claims. (Cl. 246—453.)



1. A combined tie bar and slide plate device comprising a bar to extend across and beneath the main rails of a railroad track and having its portion between said main rails upwardly offset to form a slide surface for switch rails and to provide depressed seats at the ends of said offset portion for confining the main rails against inward relative lateral movement, clamp plates secured to the bar at the outer sides of the main rails and to the webs of the main rails, said bar having an extension at one side of the track, a bearing secured upon said extension, and switch point throwing mechanism including a rock shaft journalled upon said extension beneath said bearing plate.

1,487,365. RIVET-SETTING MACHINE. EDWIN B. STIMPSON, Brooklyn, N. Y., assignor to Edwin B. Stimpson Company, Brooklyn, N. Y. Filed July 11, 1921. Serial No. 483,705. 4 Claims. (Cl. 218—2.1.)



3. A detachable unitary nose-piece for the purpose described, having a raceway section comprising a longitudinal groove with a shelf on each side thereof, one of the shelves being longer than the other shelf and the floor of the groove, the nose-piece having a longitudinal T-slot therein out of alinement with the groove before mentioned, and a T-slot extending transversely of the nose-piece between said first mentioned groove and said second mentioned groove, the end of the shorter shelf and of the floor of the first named groove being in the line of extension of the transverse T-slot.

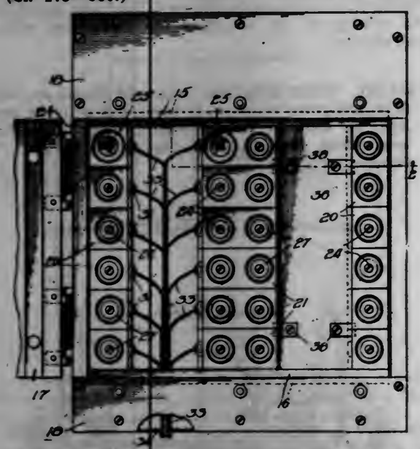
1,487,366. BAG-FRAME FASTENER. HUGO TUECKMANTEL, Irvington, N. J., assignor to The R. Neumann Hardware Co., a Corporation of New Jersey. Filed Apr. 21, 1922. Serial No. 555,922. 8 Claims. (Cl. 292—228.)

1. A bag-frame fastener comprising a base-plate adapted to be secured to a frame-section of a bag-frame, said base-plate being provided with a longitudinally extending opening, marginal flanges extending upwardly from and longitudinally with said base-plate so as to provide an open-ended member, a manipulating lever providing a cover-plate pivotally disposed between said flanges, and locking means connected with said lever and movable in the opening of the base-plate for engagement with a frame-section.

1,487,367. WEED BURNER. HARRY M. WILLIAMS, Little Rock, and JOHN W. DEAN, deceased, late of Little Rock, Ark., by Ruth L. Dean, administratrix, Little Rock, Ark. Filed June 28, 1919. Serial No. 307,471. 12 Claims. (Cl. 299—31.)

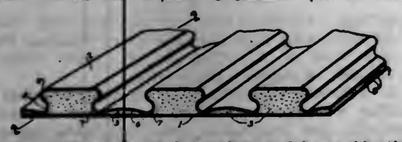
1. A device of the class described comprising a car, a burner arranged beneath said car and comprising a central body portion, side wings hingedly connected thereto, means on said body portion and said wings for projecting jets of heated fluid downwardly therefrom, power means for raising and lowering said burner bodily, and manually operable means for raising and lowering the burner, substantially as described.

1,487,368. PROPELLING APPARATUS FOR WATER SPORTS AND FOR LIFE-SAVING. CHARLES BERKA, New York, N. Y. Filed Jan. 31, 1924. Serial No. 689,598. 6 Claims. (Cl. 9—18.)



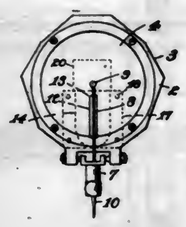
6. A buoyant apparatus of the character described comprising elongated longitudinal spaced apart pontoons, a normally open rectangular transverse frame connecting the same, pivoted resistance wings secured between the sides of said frame and adapted when folded to close the passage through said frame and when thrust forwardly

against the water to open and clear said passage, and a handle bar to be grasped by a user of the apparatus for



alternately thrusting the apparatus forwardly and drawing himself toward the apparatus, whereby the user is enabled to propel himself through the water.

1,487,369. PANEL BOARD. GUSTAVE W. BERTHOLD, Chicago, Ill. Filed Jan. 2, 1917, Serial No. 140,144. Renewed Sept. 1, 1922. Serial No. 585,833. 31 Claims. (Cl. 175—300.)



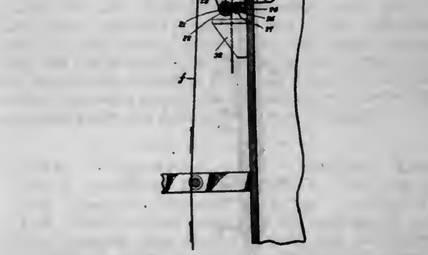
5. A panel board having, in combination, an insulating board, a pair of power busbars of opposite polarity mounted thereon, two rows of individual fuse plug sockets, each row mounted directly upon one of said bars, each socket comprising an insulating base shaped to fit down over the bar, screw means for securing the socket to the bar and providing electrical connection between one terminal of the socket and the bar, wire-attaching means associated with the other terminal of each socket, the sockets of each row abutting close together and completely covering the bars, the transversely opposite sockets on the bars constituting pairs of which the wire-attaching devices face each other, and the rows of sockets providing a channel for the wires, and a lid cooperating with the rows of sockets for closing the top of said channel.

1,487,370. PLASTER LATH. CHARLES R. BIRDSEY, Hinsdale, Ill., assignor to United States Gypsum Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 25, 1920. Serial No. 405,924. 8 Claims. (Cl. 72—124.)

1. In a lath of the kind described and in combination, a cover sheet, a corrugated sheet arranged thereover with a plaster body arranged therebetween, the corrugated sheet substantially contacting with the first sheet at each side of the bottom of the corrugations whereby the two sheets substantially form a series of hinges at different points, with a body of plaster between the hinge points.

1,487,371. REPRODUCER FOR PHONOGRAPHS. CORA E. BROWN, White Plains, N. Y. Filed Mar. 6, 1923. Serial No. 623,088. 1 Claim. (Cl. 274—35.)

A reproducer comprising a frame provided with a diaphragm and a stylus arm attached to the diaphragm, the frame having a rear plate provided with a comparatively narrow radial slot that extends from the margin inwardly and a connecting tube secured to the rear plate with its bore communicating with said slot.

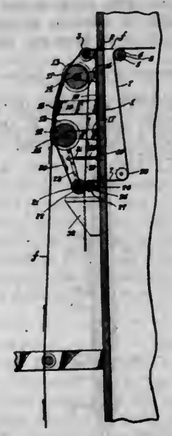


1,487,372. MAIL BOX. RAY COBEL, Newark, Ohio. Filed Mar. 31, 1923. Serial No. 629,059. 4 Claims. (Cl. 232—40.)

1. In combination, a supporting member, a cylindrical receptacle mounted upon the support for partial rotation in either direction and having a longitudinal slot, said receptacle being normally disposed to position the slot in confronting relation to the support, means for turning the receptacle, and means to limit the turning movement of the receptacle in one direction as and for the purpose specified.

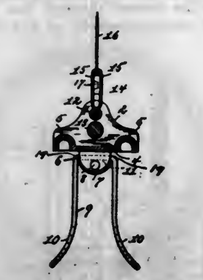
1,487,373. POWER-TRANSMITTING MECHANISM. GERALD DRAKIN, Antwerp, Belgium, assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed May 2, 1922. Serial No. 557,818. 12 Claims. (Cl. 192—4.)

1. In a driving mechanism, a rotatable driving member, a rotatable driven member normally disengaged from said driving member, means for intermittently flexing one of said members into driving engagement with the other,



and means for frictionally engaging said driven member upon its release from said driving member operable to stop the rotation of said driven member.

1,487,374. HAIR-DYEING COMB. VERA DE BASSINI, New York, N. Y. Filed Oct. 25, 1923. Serial No. 670,663. 17 Claims. (Cl. 132—18.)



1. A hair dyeing comb provided intermediate the base of the teeth and the back edge of the comb with a longitudinal slot, and an absorbent pad extending through the slot and projecting an appreciable distance beyond the sides of the comb.

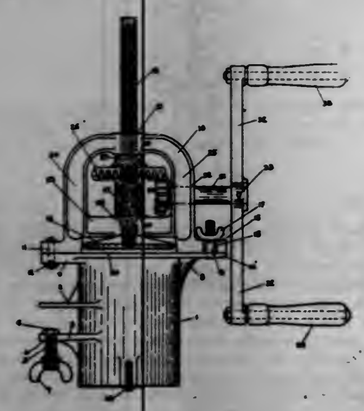
1,487,375. WIPING ATTACHMENT FOR FILM-DRYING APPARATUS. CAMILLE HENRI FUCHS, New York, N. Y. Filed Apr. 12, 1922. Serial No. 551,878. 8 Claims. (Cl. 34—48.)

1. A mechanical wiping attachment for film drying machines comprising an endless drying belt supported to engage the film, means for driving the drying belt with a relative movement between the belt and film and means operative continuously to remove excess moisture from the belt.

1,487,376. RAZOR-STROPPING DEVICE. FRANK A. FULLER, Newark, N. J. Filed Mar. 6, 1919. Serial No. 280,982. 1 Claim. (Cl. 51—153.)

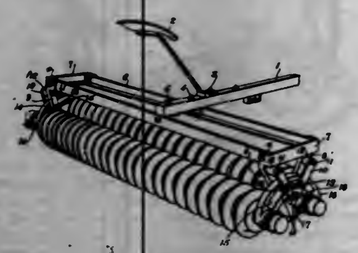
A razor stropping device comprising a frame made from a single piece of suitable sheet material adapted to slide longitudinally of a strop, said frame comprising a body portion and two oposite side portions parallel each to each, said body portion being provided with an upwardly struck strengthening rib or bead at each edge and a pair of integral downwardly extending apertured lugs, a handle made from a single piece of suitable sheet material, said handle comprising two opposite side portions parallel each to each and connected by an upper cross-piece having backwardly struck ears lapped by said lugs and pivotally connected to said lugs so that the said upper cross-piece of the handle engages with the under part of the body portion of the frame for limiting the movement of the frame.

1,487,377. COLLAPSIBLE STOVE AND STAND. ARTHUR C. GAYNOR, Stratford, Conn., assignor to S. Sternau & Co. Inc., a Corporation of New York. Filed Jan. 19, 1923. Serial No. 613,603. 10 Claims. (Cl. 126—229.)



9. A device of the type described which comprises a base plate having openings at opposite ends thereof and an elongated slot between said openings, each of said openings being provided with a pintle, standards hinged one on each of said pintles, said standards having an opening, a pintle in the opening of one of said standards, a stay rod having one end hinged to said pintle and having a depending tongue sliding in said elongated slot and an upright guide on the sliding end of said stay rod adapted to rest against a can placed against the opposite standard to hold said standards in upright position.

1,487,378. MACHINE FOR MAKING NOODLES, MACARONI, AND SPAGHETTI. NICOLA D. GIGLIOTTI, Lorain, Ohio. Filed Dec. 16, 1921. Serial No. 522,775. 1 Claim. (Cl. 107—14.)



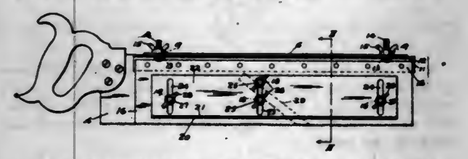
In a household machine for making noodles, macaroni, spaghetti and the like, the combination with a cylinder of a piston reciprocable therein, an apertured die-plate at one end of the cylinder, motion reducing gear mechanism to effect reciprocation of the piston, a bracket clamp secured to a side of the cylinder to clamp the

cylinder to a supporting board, a horizontal rotatable shaft adapted when rotated to drive said mechanism against the resistance of dough paced in the cylinder and pressed by the piston through the die-plate apertures, a pair of cranks secured to the shaft to rotate

it, handles therefor disposed on opposite sides of the shaft, said handles being simultaneously manually revoluble about the shaft to reciprocate the piston, the stresses incidental to such operation being thereby substantially balanced without placing undue strain upon said clamp and board connection.

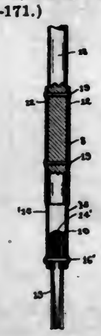
1,487,379. AGRICULTURAL IMPLEMENT. RICHARD H. GRIFFITH, Bellevue, Ohio, assignor to The Ohio Cultivator Company, Bellevue, Ohio, a Corporation of Ohio. Filed Apr. 18, 1921. Serial No. 462,091. 18 Claims. (Cl. 55—77.)

1. In a device of the character described, a main frame, a floating frame, and means for maintaining the weight of the main frame equally distributed on both ends of the floating frame, said means including connections between the frames for allowing the floating frame to move relatively to the main frame while maintaining the center of weight of the main frame substantially in vertical lines above the points midway between the ends of the floating frame.



1,487,380. CONTROL-LEVER SILENCER. VERNON J. HARRIS, Detroit, Mich. Filed Mar. 24, 1921. Serial No. 455,354. 5 Claims. (Cl. 74—39.)

1. In a motor vehicle, in combination, a change speed gear control lever, a fulcrum supporting said lever intermediate the ends thereof for universal movement, change speed gear mechanism so positioned as to be engaged by said lever below said fulcrum, a spring bearing member

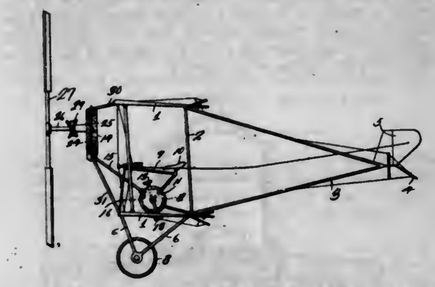


adapted to be engaged by said lever above said fulcrum when in a determined gear shift position to limit the vibration of said lever.

1,487,381. ADJUSTABLE GROOVING DEVICE. ARTHUR J. HELMS, Portland, Oreg., assignor of one-half to Edward J. Vennewitz, Portland, Oreg. Filed Dec. 9, 1922. Serial No. 605,990. 8 Claims. (Cl. 145—31.)

1. In a grooving device, the combination of, two saws of common type, having rigid angled plates on their backs, one free member of which plates is superimposed upon the opposing free member, an angled guide plate positioned alongside one of said saws, and means in and upon said saws, plates and guide to adjust and secure the saws apart, with their teeth in parallel longitudinal planes, and the guide in position to engage the surface of material when said saws have cut the same to a predetermined depth.

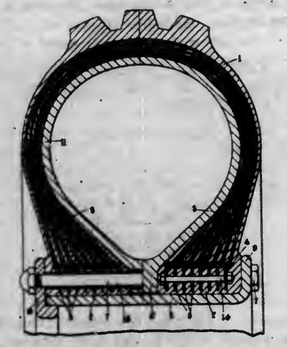
1,487,382. BROOM AND METHOD OF MAKING SAME. AUGUST H. HENNING and OSCAR E. QUAST, Milwaukee, Wis. Filed Apr. 3, 1922. Serial No. 549,126. 5 Claims. (Cl. 15—171.)



1. A method of making a broom which consists in providing a piece of sheet metal having a medial body portion with longitudinally extending end tongues and transversely extending complementary socket portions, placing

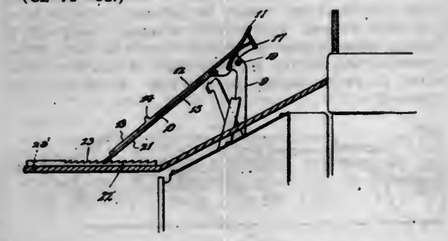
medial portions of fibers transversely of the body portion and then bending the end tongues toward each other and over the fibers and then bending the body portion and the tongues medially longitudinally, and the fibers transversely, to clamp the fibers medially of their length, and then bending portions of the body part on each side of the longitudinal bend upwardly toward each other to form a socket.

5. A broom, comprising a head formed of sheet metal having a U-shaped medial body portion and inwardly projecting tongues of U-shape in cross section, said body portion having side parts which extend upwardly from its lower edges and are connected together at the edges and bulged outwardly to form a socket, a handle extending into said socket and connected thereto, said body portion also having end clips which interlock to connect the end portions of the body together, fibers clamped medially of their length between the U-shaped body portion and the U-shaped tongues, and means extending through and connecting medial parts of the body portion together.



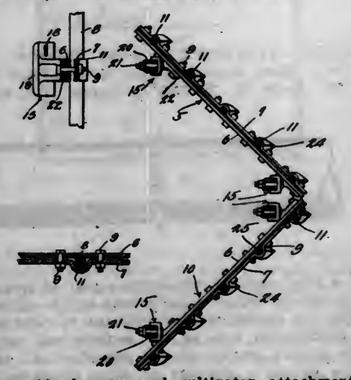
1,487,383. FLYING MACHINE. FRANK L. HEYDON, Ponca, Nebr. Filed Oct. 6, 1921. Serial No. 505,959. 1 Claim. (Cl. 244—14.)

A flying machine comprising a frame, an operator's seat disposed on said frame, a main drive gear disposed below said operator's seat, pedals carried by said drive gear whereby the operator may rotate the same with his feet, a pair of propellers mounted on shafts and disposed adjacent the forward end of the frame, one of said propeller shafts being rotatably mounted in the other propeller shaft and having its inner end extending beyond the inner end of the other shaft, bevelled gears in opposed positions carried by said shafts and spaced from each other, said bevelled gears and shafts being carried by a frame supported casing, a bevelled gear disposed between said shaft carried bevelled gears and meshing therewith, a downwardly extending shaft carried by the last named bevelled gear, a bevelled gear carried by the lower end of the last named shaft, an angularly disposed downwardly and rearwardly extending drive shaft, a bevelled gear carried by the upper end of said last named shaft, an idle gear connecting the last-named bevelled gear and the bevelled gear carried by the lower end of the downwardly extending shaft and a bevelled gear carried by the lower end of the downwardly and rearwardly extending shaft and meshing with the drive gear.



1,487,384. PNEUMATIC TIRE. ALEXANDER ALBERT HOLLE, Paddington, London, England. Filed Mar. 14, 1923. Serial No. 625,097. 3 Claims. (Cl. 152—13.)

2. A pneumatic tire comprising an arch-shaped cover having enlarged edges shaped to form feet the reinforcing fabric of which consists of a plurality of layers of cord wound over the arch of the cover and around anchorages in the feet of the cover, a plurality of hoops each made up of a series of segments said hoops being located side by side in each of the feet of the cover and adapted to form anchorages for the loops of the cords forming the reinforcing fabric, a rim comprising a flat main part having a fixed flange at one edge and a detachable flange at the other edge, an air tube having a radial flange on its inner circumference, and a plurality of transverse bolts passing through the flanges of the rim,



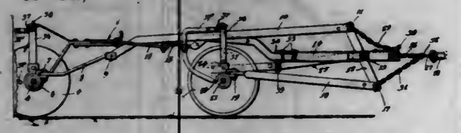
the feet of the arch-shaped cover and the radial flange of the air tube said bolts being also employed to connect together the segments of each of the hoops in the feet of the cover.

1,487,385. PEDAL LATCH FOR MOTOR VEHICLES. HEBER HOY, Parkersburg, W. Va., assignor of five-eighths to Ideal Sales Company, Parkersburg, W. Va. Filed Mar. 8, 1923. Serial No. 623,740. 6 Claims. (Cl. 74—81.)

1. A pedal latch for motor vehicles including a foot plate, yieldable means for pivotally connecting said plate with the pedal, and means to cooperate with the foot plate locking the pedal when rocked forwardly.

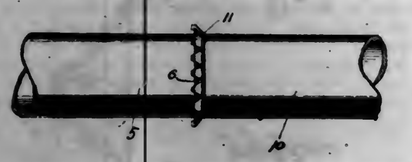
1,487,386. HARROW ATTACHMENT. JOHNSTON W. HUDSON, Humboldt, Tenn. Filed July 23, 1923. Serial No. 653,249. 2 Claims. (Cl. 97—5.)

1. In a side harrow and cultivator attachment including two gang frame bars, connectors carried by said bars for uniting said bars to the shanks of a cultivator,



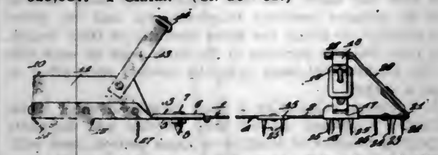
said connectors each comprising a longitudinally slotted shank engaging plate having side flanges with an arm extending at an oblique angle from said plate and longitudinally slotted for adjustable connection with said gang frame bars.

1,487,387. FASTENER. ELEANOR A. HUELBUTT, Parrish, Wis. Filed Feb. 27, 1923. Serial No. 621,621. 3 Claims. (Cl. 24—226.)



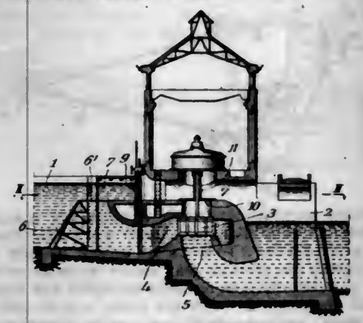
3. A fastener of the class described having a first member and a second member, the first member being provided with a slot and a passage leading therefrom to an edge of the first member, the second member having a neck and a fastening head disposed at an angle thereto, said passage being of less width than the neck to necessitate edgewise passage of the neck therethrough and subsequent turning of the neck in the slot during the process of fastening the members together.

1,487,388. DISK CULTIVATOR. FRANCIS J. JOHNSON, Los Angeles, Calif.; Susie M. Johnson, administratrix of said Francis J. Johnson, deceased, assignor, by mesne assignments, to Moline Plow Company, Incorporated, Moline, Ill., a Corporation of Virginia. Filed Dec. 3, 1918. Serial No. 265,089. 9 Claims. (Cl. 55—83.)



1. A tandem disk harrow adapted to be drawn by a draft device such as a tractor or the like, having a front pair of gangs, a rear pair of gangs, draft connections between the pairs of gangs, and means independent of the draft connections between the gangs for utilizing the draft power to positively shift the inner ends of the gangs of one pair and the inner ends of the gangs of the other pair relatively in opposite directions both into and out of working position.

1,487,389. STOVEPIPE-LOCKING DEVICE. JEFFERSON D. KING, Hendersonville, N. C. Filed Sept. 12, 1922. Serial No. 587,755. 2 Claims. (Cl. 285—186.)

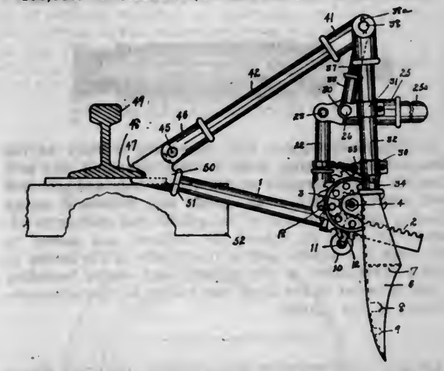


1. A pipe coupling comprising a pair of pipe sections, one section having an annular bead struck out therefrom defining an abrupt shoulder disposed at right angles to the longitudinal axis of the sections and an inclined guide surface leading to the shoulder, and the other section having a plurality of right angularly disposed tongues for engagement with the abrupt shoulder of the bead.

1,487,390. SHOE-SOLE PROTECTOR. JOHN W. KING, Cabarton, Idaho. Filed Mar. 14, 1923. Serial No. 625,037. 1 Claim. (Cl. 36—63.)

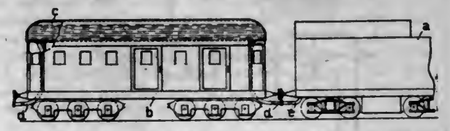
A shoe protector comprising a metal sole, a heel encircling strap, a plate carried by the front end of said strap and, provided along its side edges with inturned flanges, another plate hingedly connected with the rear end of said sole and mounted to slide in said flanges, said plates having a plurality of longitudinally spaced registering apertures, fastening elements extending through said apertures to connect the plates in adjusted position, and means for holding the protector in engagement with the foot of the wearer.

1,487,391. HYDRAULIC POWER PLANT. RENÉ KÖCHLIN, Basel, Switzerland, assignor of one-half to the Firm of Locher & Company, Zurich, Switzerland. Filed Mar. 31, 1921. Serial No. 457,448. 5 Claims. (Cl. 61—19.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



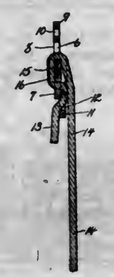
3. A water power plant comprising an upper water canal, a lower water canal, a conduit connecting said canals, a rake for said conduit, a turbine inserted in said conduit, a normally closed branch conduit connecting said canals and passing over the turbine, a sluice gate controlling said branch conduit whereby said branch conduit may be opened at will.

1,487,392. DENTAL IMPRESSION TRAY. PEYTON ALEXANDER LEE, Coushatta, La. Filed Aug. 8, 1923. Serial No. 656,322. 3 Claims. (Cl. 32—6.)



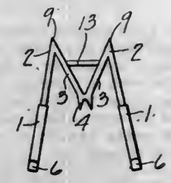
1. A dental impression tray including a pair of endwise adjoining side members of channel form having at their adjoining ends offset shanks in laterally abutting relation and forming a handle for the complete tray, each of said shanks forming a handle for its respective side section when detached, and means to connect the shanks to one another including alining elements consisting of slots across the shank ends, and a lug pivoted in one shank and shiftable into and out of said slots whereby the side sections may be detached and reassembled in the same relation existing before their separation.

1,487,393. TRACK-LINING JACK. CHARLES E. LINDSAY, Albany, N. Y. Filed June 3, 1921. Serial No. 474,663. 4 Claims. (Cl. 254—43.)



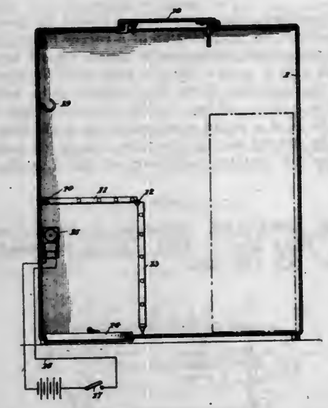
1. In a track lining jack, a head socket having an opening for engaging the base of a rail, a gear rack connected with said head socket, a gear in mesh with said rack, ratchet wheels mounted to turn with said gear, drive pins engaging the teeth of said ratchet wheels, and means for actuating said drive pins, whereby to actuate the several parts for moving a rail.

1,487,394. RAILWAY CAR. RUDOLF LORENZ, Essen, Germany, assignor to Fried. Krupp Aktiengesellschaft, Essen-on-the-Ruhr, Germany. Filed Aug. 9, 1922. Serial No. 580,742. 1 Claim. (Cl. 105—236.)



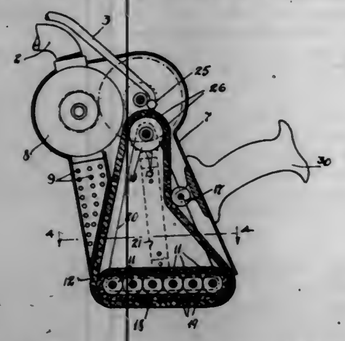
In a railway car having a roof, an auxiliary supply tank for locomotive feed and cooling water disposed directly beneath the roof, and a junction conduit at either end of said car and communicating with said tank, whereby said tank is adapted to be connected to a main locomotive supply line through either of said junction conduits.

1,487,395. SLIDE BUCKLE. JULIUS MALTBY, Waterbury, Conn., assignor to Waterbury Buckle Co., Waterbury, Conn., a Corporation. Filed Nov. 5, 1923. Serial No. 672,769. 1 Claim. (Cl. 24—194.)



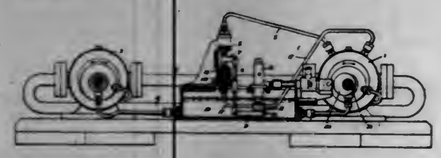
As a new article of manufacture, a slide-buckle comprising a sheet-metal buckle-frame and a sheet-metal slide having sliding movement thereupon, the said frame being formed with the suspension-slot located at its upper end for the reception of the strap by means of which the buckle is fastened to a garment, with a webbing-opening located directly below the said slot, with a gripping-bar forming the lower boundary of the said opening, with side-bars flanking the ends of the said opening and with an anchoring-slot located below the said gripping-bar, and the said slide being narrower than the width of the said opening and bent at its respective ends to loosely embrace the side-bars of the frame, whereby, by passing the end of the strap from rear to front, through the webbing-opening over the upper edge of the said slide, then down in front of the same and from front to rear through the webbing-opening between the lower edge of the slide and the said gripping-bar and then from rear to front through the said anchoring-slot, the tendency of the webbing to slip when tension upon it is entirely or measurably removed, is neutralized.

1,487,396. COLLAR AND TIE SUPPORT. JACK MAYE, Johnson City, N. Y. Filed Dec. 15, 1922. Serial No. 607,075. 1 Claim. (Cl. 2—91.)



A collar and tie support, comprising an M-shaped structure adapted for insertion within the collar flaps, the lower ends of the outer stems embodying collar engaging means, and the lower juncture of the inner stems embodying means for engaging the collar button, the said outer stems being made sectional and slidingly mounted together.

1,487,397. DEVICE TO PREVENT ROBBERIES. JOHN MITTNACHT, Jr., Cato, Wis. Filed Dec. 13, 1922. Serial No. 606,720. 1 Claim. (Cl. 20—1.01.)

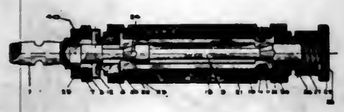


In a bank protecting device, comprising a casing, gun ports formed in the walls of said casing, means for closing said gun ports, a trap door provided in the bottom of said casing, an alarm positioned within the casing and connected to an outside source of current and operated by a switch positioned at a predetermined place within the bank and a folding ladder supported by the inner walls of the casing and so positioned that a guard within the casing may climb to the top of said casing to have an unobstructed view of the interior of the bank.

1,487,398. PORTABLE RUBBING MACHINE. ROBERT A. MOORE, Detroit, Mich. Filed Apr. 11, 1918. Serial No. 228,018. 4 Claims. (Cl. 51—170.)

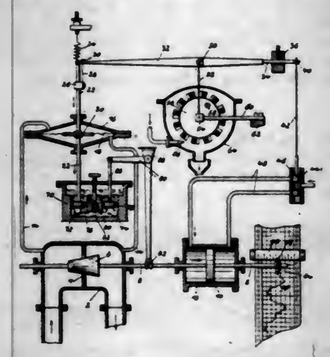
1. In a portable hand rubbing machine of the character described, the combination of a frame, a belt and a motor for driving the same operatively mounted thereon, said belt being provided with a plurality of normally closed slots adapted to be opened in their travel through the machine and adapted to receive surfacing material therein when opened, and means adapted to feed surfacing material to such slots in said belt.

1,487,399. LIQUID-TRANSMISSION SYSTEM. HARRY C. PHILLIPS, Gloucester, England. Filed June 11, 1923. Serial No. 644,688. 5 Claims. (Cl. 60—53.)



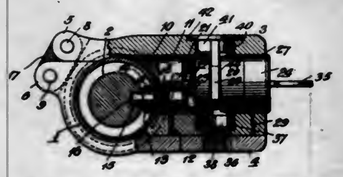
2. In apparatus for transmitting power by means of a liquid medium, the combination of a rotary power unit and a rotary motor unit connected in closed circuit by an outflow main and a return main, a reciprocating piston subject to the pressure from the outflow main and a reciprocating piston subject to the pressure from the return main, and a pump communicating with said return main, said pistons having operative means for controlling said pump for enabling a delivery of liquid to the return main.

1,487,400. ASH PAN. GUSTAVE O. POPE, Cleveland, Ohio. Filed Dec. 1, 1922. Serial No. 604,307. 2 Claims. (Cl. 126—243.)



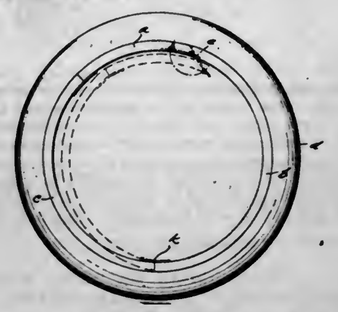
1. In an ash-pan, a hinged door provided at its free end with a latch receiving bracket, a rocker bar at the bottom of said pan terminating at one end in a handle and at the other in a latch member engaging said latch receiving bracket to close the door when moved in one direction, said bracket including means cooperating with said latch member for positively opening the door by a reverse movement of said latch member through said rocker bar.

1,487,401. CYLINDER HONE OR LAPPING TOOL. THEODORE RESTEL, Cleveland, Ohio. Filed May 12, 1923. Serial No. 638,517. 3 Claims. (Cl. 51—206.)



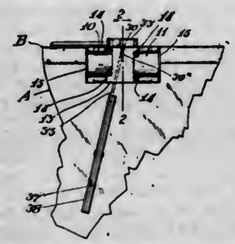
1. A cylinder lapping tool comprising a stock having slots, radially movable stone holders extending into said slots, an axially movable spindle in the body and provided with conical heads bearing against said holders, a spring pressing against the end of the spindle and tending to advance the same to expand the holders, and means to push back the spindle against the tension of the spring to permit contraction of the holders, said means including a cam mounted on the stock and having an operative connection to the spindle.

1,487,402. FLUID-FLOW-MEASURING DEVICE. ERICH ROUCKA, Blansko, Czechoslovakia. Filed Sept. 30, 1922. Serial No. 591,500. 7 Claims. (Cl. 73—167.)



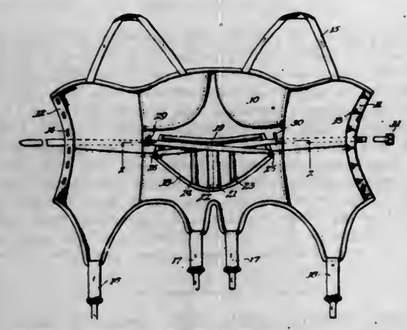
1. A fluid flow measuring device, comprising a fluid flow resisting means, means sensitive to a fluid condition caused by the flow of fluid through said flow resisting means, means to cooperate with said sensitive means to maintain balance in the device, governor mechanism for said second-mentioned means and actuated by said first-mentioned means, and means for producing slight relative motion of the relatively movable slidably cooperating parts of the device independently of the controlling movements to reduce friction therebetween.

1,487,403. MOTOR-VEHICLE LOCK. ERNEST SIEGEL, New York, N. Y., assignor to Auto Kontrol Lock Corporation, a Corporation of New York. Filed May 10, 1922. Serial No. 559,713. 7 Claims. (Cl. 70—90.)



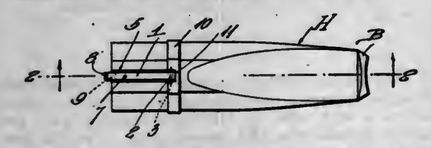
1. A lock for motor vehicles having a steering column housing and a steering rod in said housing, comprising a clamp adapted to embrace and be clamped to said housing, a locking member carried by the clamp and movable through an aperture in the portion of the housing embraced by the clamp into and out of locking engagement with the steering rod, a locking device carried within the clamp and operable from the exterior thereof, a helical cam of resilient material, an interponent rotated by said locking device and mounting said cam in a position to engage and yieldingly stress the locking member in one direction, and a spring device for shifting the locking member in the opposite direction when released by said cam.

1,487,404. DEMOUNTABLE RIM. GEORGE SIFKOVITZ, Pontiac, Mich., assignor to The Quick Change Auto Rim Company, Detroit, Mich., a Corporation of Michigan. Filed Oct. 16, 1920. Serial No. 417,339. 4 Claims. (Cl. 301—33.)



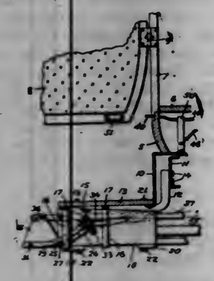
4. A demountable rim split into segments, means for connecting the segments at one end comprising a coupling piece formed with coupling head portions, said coupling piece being seated within sockets in the ends of said rim sections and having beveled edges cooperating with oppositely beveled edges of the walls of the sockets and lying flush with the inner and outer surface of said segments, a resilient member connected to the coupling piece and lying beneath the inner surface of the rim segments, and a link connecting the other end of said sections pivotally connected thereto.

1,487,405. SUCTION MOTOR FOR WINDSHIELD CLEANERS. STEPHEN G. SKINNER, Wilmette, Ill., assignor, by mesne assignments, to The Folberth Auto Specialty Company, Cleveland, Ohio, a Corporation of Ohio. Filed Oct. 24, 1921. Serial No. 509,850. 5 Claims. (Cl. 121—164.)



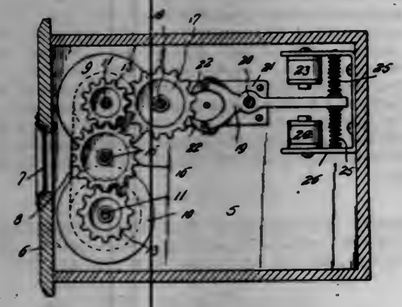
1. A motor of the class described, comprising a housing, a piston structure adapted to reciprocate therein, said piston structure comprising a pair of separated but rigidly connected pistons, an opening in said housing at a point between said pistons, a detachable plate normally closing said opening, a snap-over mechanism mounted on said plate and insertable and removable therewith, said snap-over mechanism comprising slow and fast motion arms, and a spring for actuating the fast motion arm when the slow motion arm passes center in moving from one to the other of the extremities of its movement, a main suction port in said plate, a pair of secondary suction ports in said plate on opposite sides of the primary suction port, means for connecting the primary suction port with a source of suction, passages in said plate communicating with said secondary suction ports, and conduits affording communication between said passages and the interior of the housing at opposite ends of the piston structure, a suction port controlling device carried by the quick motion arm of the snap-over mechanism, said controlling device comprising an end recess which at all times overlies the primary suction port, and which alternately overlies the secondary suction ports as the aforesaid quick motion arm operates, spring means acting between the quick motion arm and the controlling device, and at all times holding the recessed end of the latter in sliding engagement with said plate, and means on the piston structure for operating the slow motion arm of the snap-over mechanism.

1,487,406. COMBINATION GARMENT. WILLIAM H. SOMERS, New York, N. Y. Filed Sept. 7, 1922. Serial No. 586,690. 3 Claims. (Cl. 2—73.)



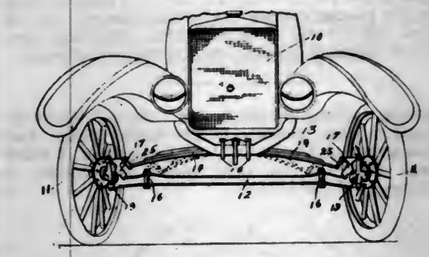
1. An article of the class described comprising in combination a garment of flexible inelastic material adapted to extend continuously around the body of the wearer with two openings through it at approximately the waist line laterally spaced from a central vertical line on opposite sides and means for detachably connecting the vertical edges of said garment, an abdominal supporter secured to the inner face of said garment by a vertical line of stitching centrally of the garment and supporter and flexible straps secured to the outer ends of said supporter adapted to pass around the body of the wearer and out through the openings in said garment and to be detachably connected together under the desired tension.

1,487,407. ATTACHMENT FOR CIGAR HOLDERS. FRANK W. THOMAS, Quincy, Ill. Filed Oct. 3, 1921. Serial No. 504,854. 3 Claims. (Cl. 131—10.)



2. The combination with a cigar holder having a cigar receiving socket and a hole extending therethrough and communicating with said socket; of a lever pivotally mounted on the outer face of the holder, the outer end of said lever projecting beyond the adjacent end of the holder and being bent upon itself to provide a curl designed to snap over the adjacent edge of the holder to retain the lever in operative position, and a pointed projection carried by said lever and extending through said opening into said socket to engage the cigar.

1,487,408. COMBINED TOOL BOX AND STEP FOR MOTOR VEHICLES. FREDERICK TICHY, Astoria, and FREDERICK H. WAPPLER, Elmhurst, N. Y., assignors to Wappler Electric Company, Inc., Long Island City, N. Y., a Corporation of New York. Filed Sept. 8, 1922. Serial No. 586,830. 8 Claims. (Cl. 280—166.)



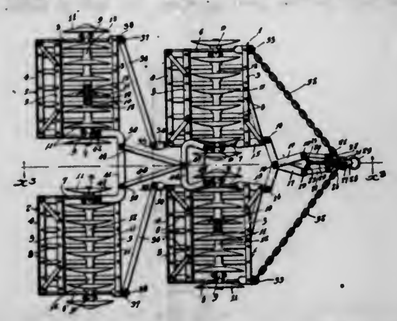
1. In a device of the character described the combination, with a vehicle body provided with a running board and with a door so mounted as to permit of being opened and closed, of supporting members carried by said vehicle body and located underneath the running board, a tool box mounted upon said supporting members and located below said running board, a step supported by said running board and disposed adjacent said tool box, said step being mounted to move and having two normal positions, in one of which the step serves as a barrier to prevent access to the tool box, and connections from said step to said door for enabling movement of the door to shift the step from one of said normal positions to the other.

1,487,409. STATION INDICATOR. JOSEPH W. WALLIN, Beloit, Wis. Filed July 11, 1923. Serial No. 650,778. 3 Claims. (Cl. 40—55.)

1. In a station indicator, a pair of superimposed reels having the ends of a web attached thereto, gears in fixed relation to said reels, an idler gear meshing with and disposed between the first named gears, a fourth gear meshing with the upper reel gear and disposed rearwardly thereof, a lever pivoted between its ends rearwardly of the fourth gear and having a bifurcated forward end provided with oppositely acting spring-pressed pivoted pawls operatively related with the teeth of the fourth gear whereby movement of the lever in one direction will effect travel of the web in one direction and movement of the lever in an opposite direction will cause a reverse movement of the web, and means associated with the rear end of the lever for effecting its movement.

1,487,410. BRACKET FOR VEHICLE SPRINGS. EDGAR I. WASHBURN, Worthington, Ohio. Filed Sept. 8, 1921. Serial No. 499,323. 5 Claims. (Cl. 267—54.)

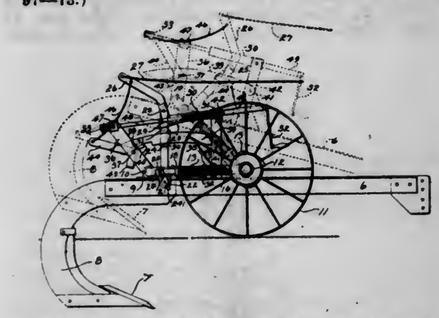
1. The combination with a front axle of a vehicle provided with yokes formed on its extremities and a spring secured to the vehicle, of brackets, each bracket surrounding one of said yokes, lips formed on said brackets, lugs formed on the lower ends of said brackets for engaging said axle, means for causing said bracket to engage said yoke and bearings formed in said brackets whereby the ends of said spring may be pivotally suspended thereon.



1,487,411. RING-NOTCHING MACHINE. ROBERT B. WASSON, Cranford, N. J. Filed Aug. 13, 1921. Serial No. 492,014. 17 Claims. (Cl. 82—2.)

1. A machine for circumferentially notching piston rings, comprising a rotary head, a die thereon having an internal seat adapted to receive and engage the outer circumference of the ring, multiple jaw mechanism cooperative with the inner circumference and outer face of the ring, and a cutting tool operative upon the periphery of the ring.

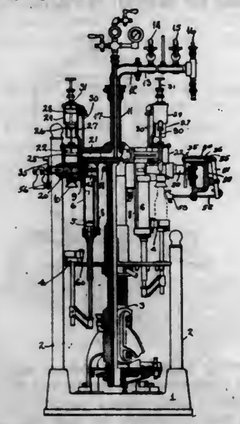
10. The combination with means for holding and rotating a piston ring, of a tool-holder, a tool thereon adapted to cut a circumferential notch in the ring, a spring-pressed yielding blade-holder movable on the tool-holder, and a flexible blade on the blade-holder to bear upon the periphery of the ring at the region of cutting.



1,487,412. CULTIVATOR. DANIEL M. WATTERS, Los Angeles, Calif., assignor to Killefer Manufacturing Company, Los Angeles, Calif., a Corporation of California. Filed June 9, 1919. Serial No. 302,639. 15 Claims. (Cl. 55—83.)

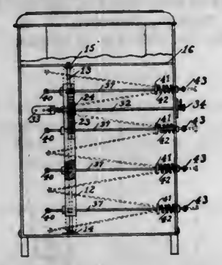
1. A cultivator comprising a front pair of frames, a rear pair of frames, cultivator members carried by each of the frames, a yoke pivoted at its ends to the inner ends of the front frames respectively, a second yoke pivoted at its ends to the inner ends of the rear frames respectively, means pivotally connecting the yokes to each other, means to change the relative positions of

the front frames, and means operative by change of relative positions of the front frames to move the outer ends of the rear frames.



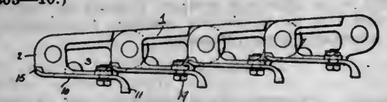
1,487,413. POWER LIFT FOR GROUNDWORKING IMPLEMENTS. DANIEL M. WATTERS, Los Angeles, Calif., assignor to The Killefer Manufacturing Company, Los Angeles, Calif., a Corporation of California. Filed June 14, 1922. Serial No. 568,204. 9 Claims. (Cl. 97—73.)

1. In an implement, the combination of a frame, a crank axle supporting the frame, ground wheels journaled on the axle, ground-working tols supported by the frame, a ratchet wheel operated by one of the ground wheels, an arm mounted on the crank axle, a link having a shoulder, a standard rigid with the frame to which said link is pivoted, means cooperating with the shoulder of the link to hold the arm with the crank axle turned to a predetermined position, means to release the arm at will, means associated with the crank axle for connecting the crank axle at will with the ratchet wheel and having a shoulder, and an abutment on the frame adapted to engage the shoulder when the crank axle is turned to said predetermined position to retract the last named means.



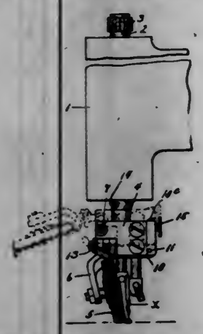
1,487,414. FILLING MACHINE. EDWARD H. WEATHERHEAD, Cleveland, Ohio, assignor to The Bishop-Babcock-Becker Company, Cleveland, Ohio, a Corporation of Ohio. Filed Oct. 13, 1916. Serial No. 125,376. 8 Claims. (Cl. 226—97.)

1. In a syruping machine, the combination of a plurality of radially arranged horizontally disposed rotatable filling arms, each arm being a single member and being provided with separate passages for syrup and syrup discharging fluid pressure, a centrally disposed syrup supply conduit connecting with such syrup supply passages in said arms, a fluid pressure supply conduit disposed centrally within said syrup supply conduit, and connecting with such fluid pressure passages in said arms, a plurality of syrup supply reservoirs connected to said



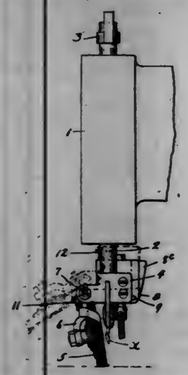
syrup supply conduit, and means for effecting disconnection of each of said syrup supply reservoirs from said syrup supply conduit.

1,487,415. FILING CABINET. JOHN WEISBARTH, Mansfield, Ohio. Filed Mar. 28, 1922. Serial No. 547,363. 7 Claims. (Cl. 211—16.)



6. In a cabinet, a vertically movable frame, a plurality of vertically disposed movable shelves which are adapted to be ejected on a horizontal plane therefrom, a plurality of ejector means mounted on said cabinet which are connected to said vertically movable frame and movable thereby so as to be brought in contact with predetermined shelves, an indicator, means associated with the indicator which is adapted to impart movement to the vertically movable frame, whereby said ejector means are so positioned that a selected shelf can be ejected from its normal position as indicated by the operator of the indicator, as described.

1,487,416. TRACTION ELEMENT FOR TRACTORS. FRED B. WHITLOCK, Cleveland Heights, Ohio. Filed Oct. 1, 1921. Serial No. 504,540. 3 Claims. (Cl. 305—10.)



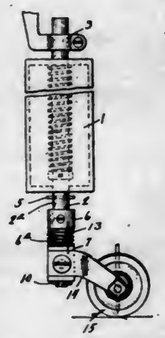
1. In a device of the character described, the combination of a link member provided with an engaging plate thereon, and a traction shoe provided with spaced engaging surfaces angularly related to each other to form a wedge slot adapted to removably engage over said plate on said link.

1,487,417. PRESSER-FOOT-CONTROLLING DEVICE. FRANK F. WITKUS, Newport, N. H. Filed Aug. 11, 1922. Serial No. 581,118. 4 Claims. (Cl. 112—240.)

1. In a sewing machine, a presser bar movable vertically between predetermined limits and having a presser-foot at its lower end, means permitting lateral movement of said foot relatively to said bar between a normal position and an inoperative position at one side of said normal position, means normally acting to retain the foot in said normal position, and means for automatically moving the foot to said inoperative position when the bar is raised to a predetermined extent.

1,487,418. PRESSER-FOOT-CONTROLLING DEVICE. FRANK F. WITKUS, Newport, N. H. Filed Aug. 11, 1922. Serial No. 581,119. 5 Claims. (Cl. 112—240.)

1. In a sewing machine having a presser bar movable vertically between predetermined limits and having a presser foot at its lower end, means permitting lateral movement of said foot, relatively to the bar, between its normal position and an inoperative position at one side of said normal position, means constantly actuated to move said foot from its inoperative to its normal position and means arranged to be actuated by movement of the bar to its uppermost position, to move the foot from its normal to its inoperative position, in opposition to said constantly actuated means.

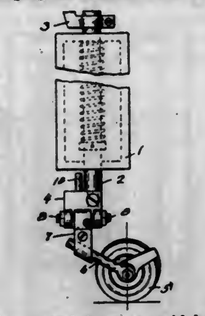


1,487,419. PRESSER-FOOT-CONTROLLING DEVICE. FRANK F. WITKUS, Newport, N. H. Filed Aug. 11, 1922. Serial No. 581,120. 5 Claims. (Cl. 112—240.)

1. In a sewing machine having a vertically movable presser bar, a presser-foot-carrying arm at the lower end of said bar, means for locking said arm against movement relatively to said bar when the arm is in normal position and the bar is lowered, means for automatically unlocking said arm, and swinging the same away from its said normal position when the bar is raised to a

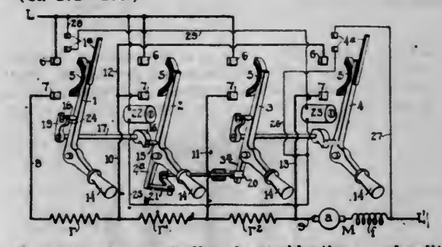
predetermined extent and means for automatically returning the arm to normal position when the bar is lowered.

1,487,420. PRESSER-FOOT-CONTROLLING DEVICE. FRANK F. WITKUS, Newport, N. H. Filed Aug. 11, 1922. Serial No. 581,121. 4 Claims. (Cl. 112—240.)



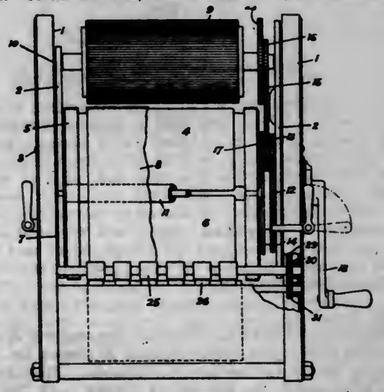
1. In a sewing machine having a vertically movable presser bar, a presser-foot-carrying arm at the lower end of said bar arranged to swing horizontally about the same, a spring normally tending to swing said arm from an operative to an inoperative position, locking means for holding said arm in its operative position, an operating device carried by said bar and arranged for movement longitudinally thereof, to release said locking means, a spring for normally sustaining said device in its uppermost position, and means on said device to hold the same stationary as the bar is lifted whereby said locking means may be released.

1,487,421. PRESSER-FOOT-CONTROLLING DEVICE. FRANK F. WITKUS, Newport, N. H. Filed June 2, 1923. Serial No. 642,977. 5 Claims. (Cl. 112—240.)



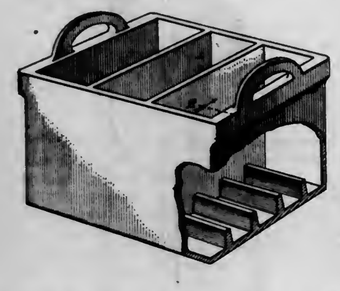
1. In a machine of the character described, a vertically movable support, a presser-foot-carrying arm pivotally mounted on said support and arranged to be swung upwardly to carry the foot from its normal to a laterally

removed position, a locking lever arranged to lock said arm against swinging movement when in normal posi-



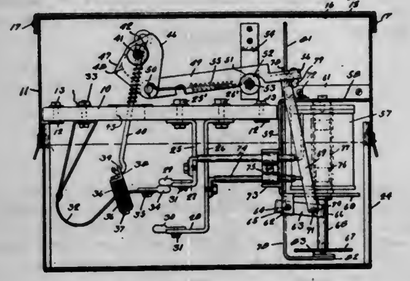
tion, and means arranged to move said lever, when said support is lifted, to unlock said arm and swing the same upwardly.

1,487,422. MOTOR CONTROLLER. CHARLES W. YERGER, Milwaukee, Wis., assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed June 23, 1919. Serial No. 305,965. 14 Claims. (Cl. 172—179.)



2. In a motor controller, in combination, a plurality of manually operable switches to be operated in a definite sequence including opening of certain of said switches following closure of other of said switches and subsequent reclosure of said certain of said switches, and interlocking means for said switches for preventing operation thereof except in said definite sequence.

1,487,423. DUPLICATING APPARATUS. ROBERT CHARLES ADAMS, Lincoln, England. Filed July 3, 1922. Serial No. 572,577. 7 Claims. (Cl. 101—116.)

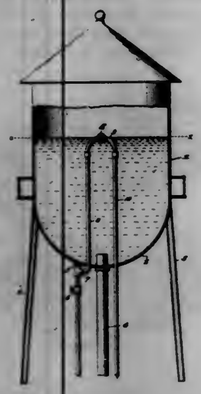


1. Duplicating apparatus comprising, a stationary support, a drum carrier rotatably mounted in said support, a middle drum rotatably mounted on the drum carrier axle, a series of printing drums radially centered about the middle drum and rotatably mounted in the carrier, and inking rollers bearing between the middle drum and the outer printing drums, and an impression roller with which said printing drums selectively engage.

1,487,424. CONTAINER. JOHN M. AHLGREN, Indianapolis, Ind., assignor to Ahlbell Battery Container Corporation, Waukegan, Ill., a Corporation of Illinois. Original application filed Apr. 28, 1922, Serial No. 557,131. Divided and this application filed Mar. 24, 1923. Serial No. 627,424. 2 Claims. (Cl. 206—2.)

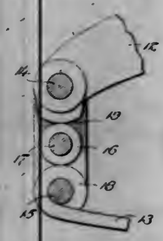
1. A container formed as a one piece box-like structure presenting a continuous upper edge, one wall of said container being thickened to form a reinforcing rib, and a handle member rising from the top of said wall in such a position as to leave an unobstructed shoulder on the inner side of said handle.

1,487,425. ELECTRIC SWITCH. CHESTER D. AINSWORTH, Wollaston, Mass., assignor to Sears B. Condit, Jr., Boston, Mass. Filed Aug. 2, 1918. Serial No. 247,932. 11 Claims. (Cl. 200—106.)



8. In an electric switch, an enclosing casing, switch mechanism disposed therein, an operating shaft extending through said casing, an operating handle secured thereto, a cover partially enclosing said handle and forming a bearing support for said shaft, and integrally formed lugs on said cover arranged to limit the movement of said handle.

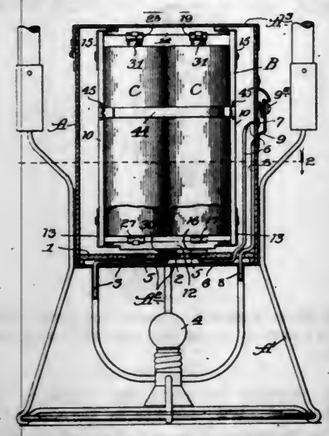
9. In an electric switch, the combination of stationary and movable switch members, operating mechanism including means normally tending to open the switch and means to lock the switch in closed position, and switch-tripping means comprising a spring adapted to be stressed into switch-tripping condition by a movement of the switch to closed position, means to lock the tripping means in such condition, said operating and tripping mechanism arranged to admit of manual movement of the switch from closed position independent of the



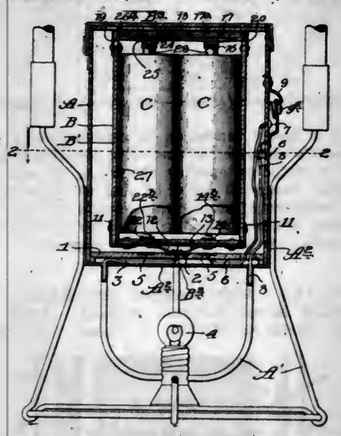
tripping mechanism, and electrically controlled means to release the lock on the spring to admit of its forcible release of the lock on the switch to cause the switch to open.

1,487,426. TANK. SEARLE E. ANDREWS, Washington, D. C. Filed Dec. 7, 1922. Serial No. 605,444. 6 Claims. (Cl. 137—21.)

1. A storage tank for combined sprinkler system and building supply having a capacity in excess of a normal reserve supply of liquid for the sprinkler system, a main discharge connected near the bottom of the tank to supply the sprinkler system, and an auxiliary discharge to supply the building communicating with the tank near the bottom thereof, said auxiliary discharge including means to prevent the operation thereof when the level of the contents of the tank falls to that of the normal reserve supply.



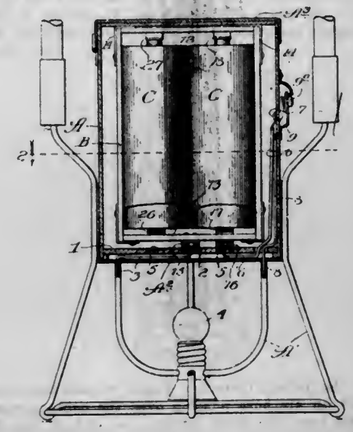
1,487,427. SPRING SHACKLE. DORSEY F. ASBURY, Washington, D. C. Filed Feb. 9, 1922. Serial No. 535,309. 10 Claims. (Cl. 267—54.)



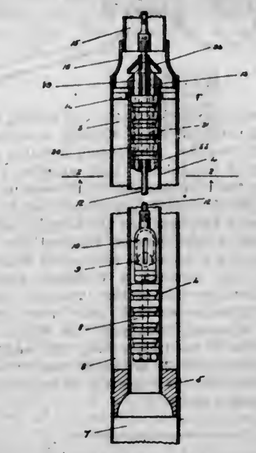
1. The combination with a frame, a supporting spring associated therewith, and a shackle having relatively spaced pivotal connections with the frame and spring, respectively, of an inherently rigid member interposed between the spring and frame acting to transmit the supporting force of the spring to the frame, and to relieve the shackle and said pivotal connections of said supporting force.

1,487,428. BATTERY. WILLIAM BALDERSTON, Madison, Wis., assignor to French Battery & Carbon Co., Madison, Wis., a Corporation of Wisconsin. Filed Aug. 10, 1921. Serial No. 491,268. 6 Claims. (Cl. 204—53.)

1. In combination, a cell-holder equipped with outlet contacts adapted to engage companion contacts of and become automatically connected with an external circuit and equipped also with top and bottom cell-contacts, some of which are electrically connected with said first-named contacts, and dry cells mounted in said holder, said dry cells being automatically established in circuit with the cell-contacts by insertion of the cells.



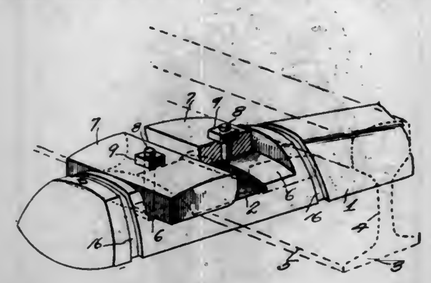
1,487,429. BATTERY. WILLIAM BALDERSTON, Madison, Wis., assignor to French Battery & Carbon Co., Madison, Wis., a Corporation of Wisconsin. Filed Aug. 10, 1921. Serial No. 491,269. 4 Claims. (Cl. 204—53.)



1. In combination, a cell-holder comprising a peripheral wall, a bottom wall and a slidably withdrawable top closure, a pair of external outlet contacts mounted on said bottom wall, pairs of cell-contacts mounted on the inner surface of said bottom wall, pairs of cell-contacts carried by said closure, the members of each pair of cell-contacts being in alinement in the direction of movement of the sliding closure, and electrical connections whereby, when cells are introduced in said holder and the closure moved to the closed position, the cells are automatically established in circuit.

1,487,430. BATTERY. WILLIAM BALDERSTON, Madison, Wis., assignor to French Battery & Carbon Co., Madison, Wis., a Corporation of Wisconsin. Filed Aug. 11, 1921. Serial No. 491,415. 4 Claims. (Cl. 204—53.)

1. In combination, a cell-holder comprising side walls, a back wall, and end walls fixedly joined together, said structure being open at its front side to admit cells one of the end walls being equipped with external outlet contacts, pairs of lower cell-contacts mounted on the inner surface of the bottom wall, the members of each pair being aligned from front to rear of the cell-holder, pairs of upper cell-contacts secured to the inner surface of the upper end wall of the cell-holder, the members being disposed, respectively, above the members of the pairs of lower contacts, and electric connections whereby dry cells introduced into said holder are automatically established in circuit.



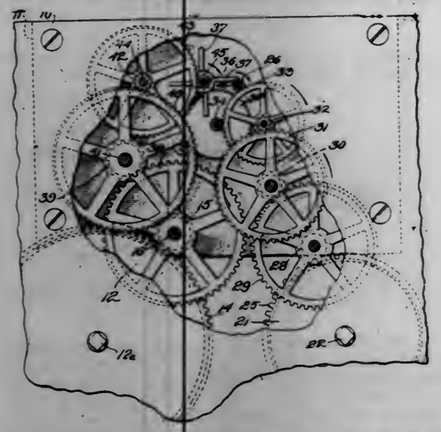
1,487,431. OIL-WELL PUMP. TOM J. BARGER, Oilton, Okla. Filed Dec. 5, 1922. Serial No. 605,055. 3 Claims. (Cl. 103—119.)

1. The combination, with a pump plunger provided with a pump rod, and a pump barrel provided at its upper end with a guide in which the pump rod is slidable; of a sand trap secured around the pump barrel, and a sand deflector provided with a conical upper surface and having a hole in which the pump rod is slidable, said sand deflector being normally supported by the said guide and free to rise with the liquid at each upstroke and operating to guide the sand into the sand trap at each downstroke.

1,487,432. RAIL-SECURING MEANS. JOSEPH S. BEAN, Mill Village, N. H. Filed Feb. 15, 1923. Serial No. 619,160. 1 Claim. (Cl. 238—30.)

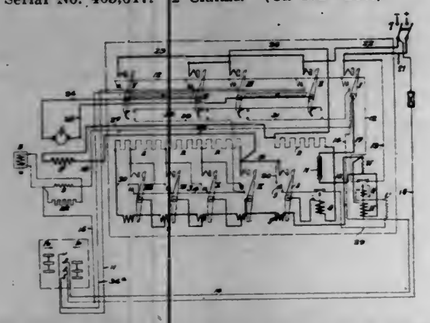
A railroad tie comprising an elongated body member formed from metal, the upper and under sides of the tie being convexed, means for securing a rail to the tie, wheel receiving grooves in the tie and extending transversely of the same at opposite sides of the rail securing means and apertures in the ends of the tie through which vertically disposed rods may be driven for anchoring the tie against longitudinal movement in the road bed.

1,487,433. MEMORANDUM CASE. FREDERICK W. BECKERT, New Haven, Conn. Filed Nov. 15, 1922. Serial No. 601,058. 2 Claims. (Cl. 206—1.)



1. In a box-like, sheet-metal memorandum case, the combination with a case-body having a back, side-walls and bottom, but open at the top and front, of a case-cover comprising a front, side-walls and top but open at the back and bottom, means for pivotally connecting the said cover and case to permit their limited longitudinal movement, and a locking-tongue and locking-lip formed upon the said parts and co-acting to hold the case-body and case-cover in their closed positions.

1,487,434. INTERMITTENTLY-OPERATED ACTUATING MECHANISM. FREDERICK W. BOLD, Chelsea, Mass., assignor to Boston Clock Company, Boston, Mass., a Corporation of Massachusetts. Filed Dec. 31, 1921. Serial No. 526,438. 6 Claims. (Cl. 58—116.)



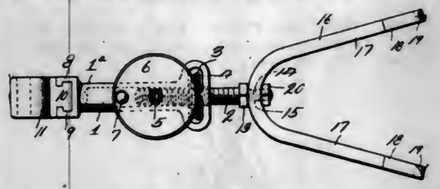
1. An intermittently operated actuating mechanism comprising a time movement; a power train having power-transmitting means independent of the time movement; and a power let-off including a continuously driven smooth surfaced arbor, constituting a member of the time movement, and a member movable by the power train in a plane substantially at right angles with the axis of said arbor, and pressed against the perimeter of the latter,

the said arbor and member being formed to have a limited, practically antifrictional contact with each other, so that

the pressure of the said member against the arbor does not appreciably retard the time movement, said arbor being formed to alternately arrest and release said member.

1,487,435. CONTROL DEVICE FOR ELECTRICALLY-DRIVEN LIFTS, CRANES, WINCHES, AND LIKE APPARATUS FOR DEALING WITH VARIABLE LOADS. VICTOR BREEZE, Brighton, England. Filed Aug. 24, 1920. Serial No. 405,647. 2 Claims. (Cl. 172—288.)

1. In combination, an electric motor having a series field provided with a diverter resistance, an electro-magnetic overload relay switch, an electro-magnetic series field lockout switch having a closing coil, and associated leads whereby the diverting resistance is shunted across the series field coil of the motor when the lockout switch is closed, the coil of the overload relay switch being in series with the lockout switch and when the current therethrough exceeds a certain limit operates to open the circuit through the closing coil of the lockout switch to cut out the diverter resistance.

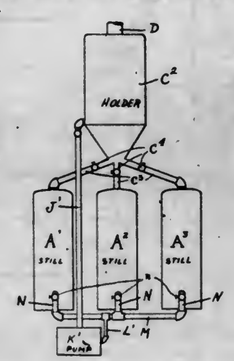


1,487,436. AIR-HOSE PROTECTOR. ANDREW J. BROOKS, St. Joseph, Mo., assignor, by mesne assignments, to Standard Oil Company, Indiana, Chicago, Ill., a Corporation of Indiana. Filed Mar. 30, 1921. Serial No. 456,919. 4 Claims. (Cl. 299—77.)

1. A device of the character described, comprising a housing having an opening therein, a tubular standard within the housing, a weight slidable within the standard, a cable connected at one end to the weight, a pulley block connected to the other end of the cable, a pulley in said block, a pulley block fixedly mounted adjacent the top of the standard, a pulley in said fixedly secured block, over which the cable passes, a pulley block fixed to the stand-

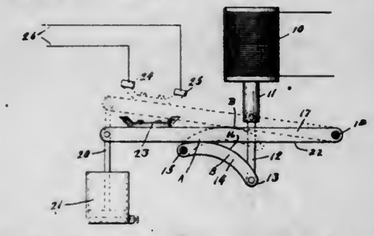
ard near the bottom thereof, a pulley in said last named block, and an air hose passing over the cable-connected pulley and over the fixed pulley, one end of the hose projecting through the opening in the housing.

1,487,437. COMBINED VEHICLE JACK AND TIRE TOOL. LOUIS J. BRUNE, Sr., Algiers, La. Filed May 24, 1923. Serial No. 641,167. 3 Claims. (Cl. 254—100.)



2. A rim expander and contractor comprising a tubular body member, a threaded shaft slidably mounted within the tubular body member, a rotatable bevelled gear carried by one side of the tubular body member, a bevelled gear threaded on the threaded shaft and meshing with the first mentioned bevelled gear, a yoke carried by one end of the body member and in which the bevelled gear on the shaft is disposed, a transversely disposed rim carrying hook member having a dove-tail connection with one end of the tubular body member, a U-shaped member disposed on a reduced portion of the threaded shaft, arms carried by the U-shaped member, said arms terminating in transversely disposed members, rim engaging hooks carried by the ends of the transversely disposed members, the transverse portion of the U-shaped member being provided with a recess for the reception of the reduced portion of the threaded shaft.

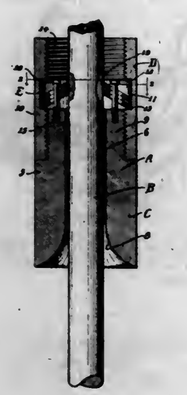
1,487,438. METHOD AND APPARATUS FOR REFINING HYDROCARBONS. CHARLES R. BURKE, Tulsa, Okla., assignor to Louise P. Burke, Tulsa, Okla. Filed Jan. 20, 1922. Serial No. 530,604. 9 Claims. (Cl. 196—25.)



1. In the art of treating hydrocarbon oils, the method which consists in maintaining a body of hydrocarbon liquid in a holder, vaporizing and cracking hydrocarbon oil in a plurality of stills, conducting vapor from the stills through constricted passage ways and discharging it into said hydrocarbon oil in the holder at a point below the surface of the oil therein, permitting the hot vapors

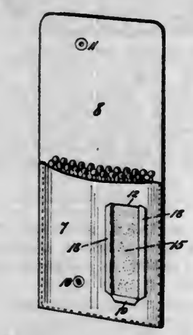
to rise freely in the oil in said holder, thereby heating the last mentioned oil and at the same time condensing high boiling point fractions of the vapor, conducting vapor from the surface of the oil in the holder to a condenser, permitting the heated condensate to flow from the holder into the stills through said constricted passage ways, and leading a portion of the condensate from the holder to any of the stills without conveying the same through said passage ways.

2. In an apparatus for refining hydrocarbons, a plurality of stills, a holder, a narrow passage way connecting each still to the holder and adapted to convey vapor from the still with which it is associated to the holder and to permit condensate from the holder to return to the still, a condenser operatively connected with said holder, and conveying means for conducting a portion of the condensate from the holder to any of the stills without passing the same through said passage ways.



1,487,439. TIME-LIMIT DEVICE. GEORGE A. BURNHAM, Saugus, Mass., assignor to Sears B. Condit, jr., Brookline, Mass. Filed Nov. 22, 1918. Serial No. 263,775. 2 Claims. (Cl. 200—96.)

2. A time limit device comprising a solenoid, a movable member controlled thereby, a lever movable by said movable member having a cam surface, a retardation element, a movable member controlled thereby, a lever having a cam surface associated with said movable member, the cam surfaces of said levers contacting for the transmission of a movement of the movable member of said solenoid to the member of the retardation device, and said cam surfaces providing the solenoid an initially great advantage over the retardation element and a subsequent lesser advantage during the operation of the device.

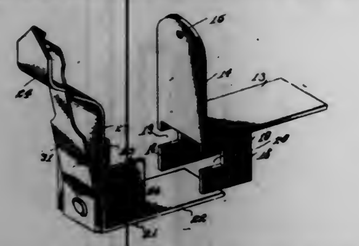


1,487,440. FISHING TOOL. ALDEN J. BUTTS, Eaton Rapids, Mich. Filed Apr. 17, 1922. Serial No. 553,311. 4 Claims. (Cl. 254—114.)

1. A fishing tool comprising a lower guide section having a longitudinally extending bore for receiving the device to be recovered, an upper gripping section carried by the guiding section and having a chamber intermediate its length, the chamber being open at its upper end, dogs disposed within the chamber of the gripping section for engaging the device to be recovered, and guide means for

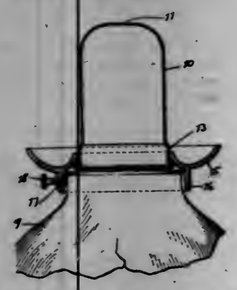
said dogs carried by the upper end of the guide section and extending into said chamber and engaging said dogs, said guide means being insertable and removable through the open upper end of the chamber.

1,487,441. POCKET MATCH POUCH. DAVID E. BURNETT and AUGUST J. KEMMEL, Cincinnati, Ohio. Filed Mar. 12, 1923. Serial No. 624,458. 2 Claims. (Cl. 150—34.)



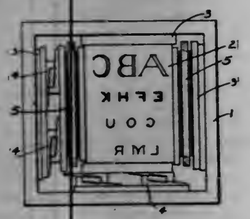
1. A pocket match-pouch comprising a flap-inclosed pocket-member, a metal holder-frame having vertical guide-ways and a lower seating-cavity, a scratch-filler removably-inserted in the said guide-ways of the holder-frame and held from gravitating therethrough by said seating-cavity, and fastening-flaps on the side and lower edges of the holder-frame to secure the device in place in an elongated opening made in the inner-member of the pocket-member.

1,487,442. YARN-SPOOL BEARING. EUGENE F. CLARK, Leaksville, N. C. Filed May 16, 1923. Serial No. 639,435. 4 Claims. (Cl. 139—10.)



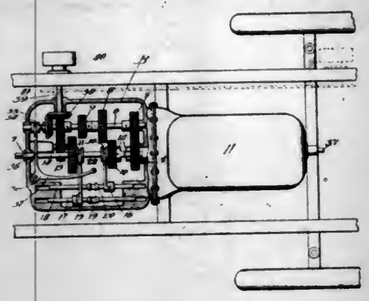
1. A tuft yarn carrier for a loom including a hollow beam, a spool supporting means engaged in an end of the beam, chain engaging means engaged within the beam engaging portion of the spool supporting means, the beam received portion of the spool means having

openings and slots, the beam received portion of the chain means having openings alining with said slots, fastening devices disposed through the beam and the



openings of the spool means, and fastening devices disposed through the beam, the said slots, and the openings of the chain means.

1,487,443. LIGHTING FIXTURE. ABRAHAM COOPER, Brooklyn, N. Y. Filed Mar. 17, 1923. Serial No. 625,845. 4 Claims. (Cl. 240—132.)

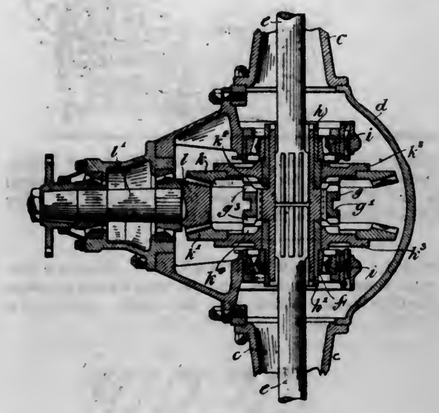


1. In a lighting fixture, a socket shell, a collar carried by the said socket shell in either one of two reversible positions, and means associated with the collar and adapted to support a lamp shade when the collar is in one of its reversible positions, the socket shell being adapted to receive a ball bulb when the collar is associated therewith in its other reversible position.

1,487,444. ROLLER BEARER FOR PRINTING PRESSES. DANIEL J. DEEGAN, Springfield, Ohio. Filed Feb. 6, 1923. Serial No. 617,306. 3 Claims. (Cl. 101—359.)

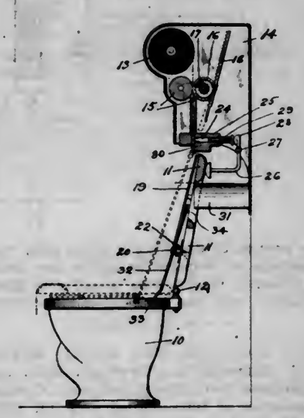
1. In a printing press, the combination with a chase, of type arranged therein, a roller movable over said type to ink the same, feed grippers in said press, and depressible roller bearers adjustably mounted in said chase for engagement by said grippers, said bearers being normally flush with the face of the type to permit the roller to travel over them without smudging the type during the inking operation, and adapted to be depressed below the face of the latter by the feed grippers during the printing operation.

1,487,445. POWER-TAKE-OFF MECHANISM FOR MOTOR VEHICLES. HARRY S. DICKINSON, Moline, Ill., assignor, by mesne assignments, to Moline Plow Company, Incorporated, Moline, Ill., a Corporation of Virginia. Filed Oct. 24, 1919. Serial No. 333,064. 15 Claims. (Cl. 74—58.)



1. In a power-take-off mechanism for motor vehicles, the combination of a motor, a main transmission shaft, a counter-shaft, gears on the respective shafts adapted to establish varying speed ratios, a gear shift lever movable to different positions to vary the speed ratios, connections for varying the gear ratios by movements of the lever, a power-take-off shaft, and means for entraining the power-take-off shaft by movements of the gear shift lever to its positions for varying the gear ratios of the transmission.

1,487,446. TWISTING MACHINE. HENRY DOHERTY, Jr., Clifton, N. J., assignor to Henry Doherty Silk Company, Clifton, N. J., a Corporation of New Jersey. Filed July 18, 1923. Serial No. 652,240. 7 Claims. (Cl. 117—21.)

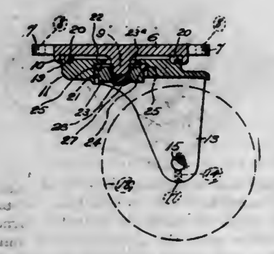


1. In a twisting machine, yarn feeding and guiding means including a rotated feeding roller and a fixed structure located radially outward of the roller and around which and the roller the yarn extends and including a guiding member for the yarn, said structure including a fixed yarn-disrupting ridge extending generally lengthwise of the axis of the roller.

1,487,447. FINAL DRIVE FOR RAILWAY MOTOR CARS. CHARLES F. DRUMM, Jr., New York, N. Y., assignor to International Motor Company, New York, N. Y., a Corporation of New York. Filed Sept. 1, 1921. Serial No. 497,753. 1 Claim. (Cl. 74—59.)

In a final drive for railway motor cars, a motor vehicle construction comprising, in combination, a dead axle forming a housing and supporting the car body, live axle sections on each of which a wheel is mounted, a sleeve keyed to the proximate ends of the live axle sections to connect them to rotate together, bushings rigidly secured to the sleeve, bearings on said bushings, complementary bearings carried with the dead axle, a pair of opposed bevel gears journaled on the bushings, a propeller shaft journaled on the dead axle, a bevel pinion on the end of the propeller shaft and in constant mesh with the opposed bevel gears, a clutch element slidable on the sleeve, co-operating clutch elements on the opposed bevel gears and means to cause the slidable clutch element to selectively engage one of said co-operating clutch elements.

1,487,448. TOILET-SEAT PROTECTOR. JESSE S. DUARTE, Providence, R. I. Filed May 25, 1923. Serial No. 641,412. 5 Claims. (Cl. 4—247.)

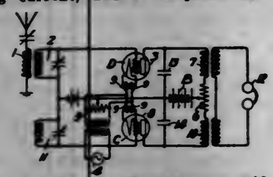


1. The combination with a hinged toilet seat, of means for feeding and cutting a protecting strip of paper and folding it over the front edge of the seat by the moving of the seat from normal to raised position.

1,487,449. EXTRACTION OF FATS AND OILS. CLARENCE FORD EDDY, Waverly, Mass., assignor to Cocoa Products Company of America Incorporated, a Corporation of Delaware. Filed Oct. 8, 1921. Serial No. 506,352. 10 Claims. (Cl. 87—6.)

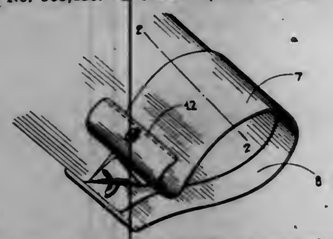
1. The method of extracting fats, oils and the like from finely divided solid material, which comprises suspending the material in a solvent for the fat or oil until extraction is accomplished and thereafter adding an aqueous precipitating agent to the mixture of solid material and solvent in quantity sufficient only to be absorbed by the solid material whereby the extracted solid material settles readily in the solvent without the formation of a separate liquid phase.

1,487,450. TRUCK CASTER. ROBERT A. ENDEBROCK, Cincinnati, Ohio. Filed July 5, 1923. Serial No. 649,698. 3 Claims. (Cl. 16—21.)



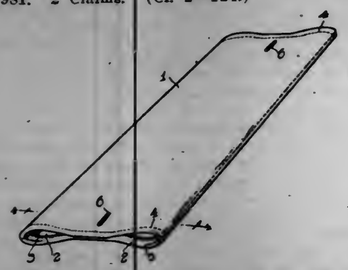
1. A wheel-caster for trucks and the like comprising an upper attaching-member having a plane lower face with a downwardly rimmed or flanged edge, a downwardly-disposed shank or stud projecting from the center of said lower face of the attaching-member and having a threaded lower end, a lower plane-faced carrier-member having an inwardly-flanged central orifice adapted to freely and concentrically accommodate the said shank, a circular ball-race in the upper plane-face of the carrier-member near its outer edge and provided with balls adapted to bear free to roll or turn against the said plane lower face of the attaching-member, a pair of hangers or bracket-bearings extending from the bottom of the said lower carrier-member duly spaced apart and adapted to receive between them the supporting-roller of the caster that is mounted on a transverse shaft or pin that in turn rests in alined holes in the lower ends of the said hangers, a lock-ring having a central threaded opening adapted to engage with the lower threaded end of said shank for interlocking the said upper and lower members of the caster in due relation free to permit the lower member to swivel on the upper member, a circular race-way constructed along the upper periphery of the lock-ring and provided with balls adapted to bear free to roll or turn in the central orifice of the lower carrier-member beneath the inwardly-disposed flange at the upper end thereof, and a removable screw-plug inserted in the lower portion of the threaded opening of the lock-ring for setting and locking the said shank and ring in adjusted as well as locked position, substantially as shown and described.

1,487,451. CIRCUITS FOR ELECTRIC DISCHARGE DEVICES. JOHN F. FARRINGTON, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 16, 1922. Serial No. 594,704. 22 Claims. (Cl. 250—20.)



5. In a receiving circuit for high frequency waves, a thermionic detector for said waves, a receiving indica-

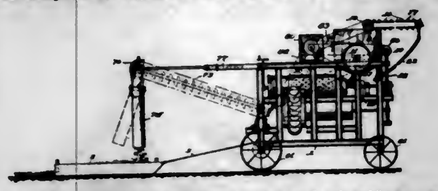
tor, said detector having a cathode adapted to be heated by alternating current, and a compensating discharge



device for compensating for the effect on said indicator of said alternating heating current.

1,487,452. CUFF CONSTRUCTION. ALBERT A. FOURNIER, Ottawa, Ontario, Canada. Filed June 15, 1922. Serial No. 568,430. 1 Claim. (Cl. 2—124.)

As an improved completed article of manufacture, a soft cuff comprising two thicknesses of material the longitudinal edges of which are united to form a flattened tubular member with the sole points of union at such edges of the two pieces disposed at opposite wearing edges of the cuff and entirely concealed within the cuff, whereby the opposite outer faces of the cuff are disconnected from each other adjacent said edges to form a rolled edge, the opposite faces of the cuff at the ends being provided with button holes.

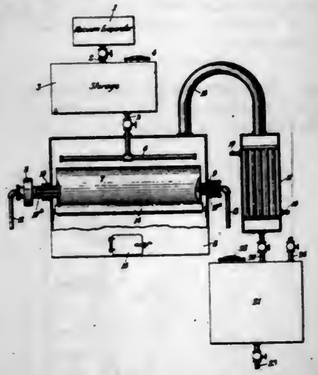


1,487,453. SOFT CUFF. ALBERT A. FOURNIER, Ottawa, Ontario, Canada. Filed Dec. 15, 1923. Serial No. 680,981. 2 Claims. (Cl. 2—124.)

1. A soft cuff formed of two pieces of fabric of substantially equal width, the longitudinal edges of which are stitched together to form a flattened tubular member with the seams at the opposite wearing edges of the cuff and the stitches concealed within the cuff leaving the exposed outer faces adjacent the edges of the cuff free from rolling movement, opposite faces of the cuff at the ends being provided with button holes and stitches connecting said opposite faces to limit the rolling of the edges.

1,487,454. ROAD-BUILDING MACHINE. LINZIE A. GARDINER, Dry Ridge, Ky. Filed Mar. 3, 1922. Serial No. 540,676. 4 Claims. (Cl. 94—44.)

1. A road building machine including a vehicle, a stone crusher mounted thereon, a conveyor extending from the stone crusher to a point beyond the body of the machine, means for permitting vertical adjustment of one end of the conveyor, a screen extending longitudinally of the vehicle and cooperating with said stone crusher and adapted to separate the material into two grades,

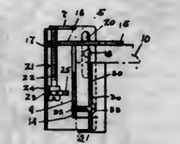


means for raising and lowering one end of said screen, a spreader, means for conveying one grade of material into the spreader, and means for conveying the other grade of material to the side of the road.

1,487,455. FIRE BAR FOR FURNACES. WILLIAM GIBSON, Newport, England, and EDWARD JAMES POCOCK, Cardiff, Wales. Filed Oct. 16, 1922. Serial No. 595,005. 1 Claim. (Cl. 126—167.)

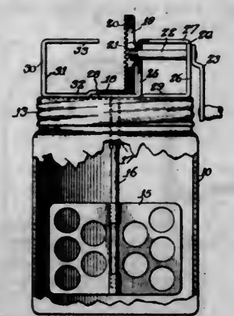
A firebar for boiler furnaces comprising a central web, having a plurality of pockets at the top thereof to project on each side thereof and spaced apart from each other, each pocket having four side walls, two of which are parallel to each other and to the central web and two of which are parallel to each other and arranged diagonally across the central web.

1,487,456. PROCESS OF DISTILLING MATERIALS. MARTIN L. GRIFFIN, Rumford, Me. Filed Mar. 26, 1920. Serial No. 368,884. 2 Claims. (Cl. 203—6.)



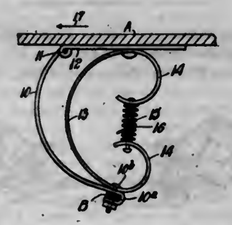
1. The process of distilling a wood pulp waste liquor which consists in evaporating it on the surface of an internally heated, rotary drum in order to distill off the volatile matter, and then condensing said volatile matter.

1,487,457. MOUNTING FOR PANEL BOARDS, ETC. FRED F. HAFEMEISTER, Cleveland, Ohio, assignor to The Cleveland Switchboard Company, Cleveland, Ohio, a Corporation of Ohio. Filed July 14, 1919. Serial No. 310,844. 3 Claims. (Cl. 247—12.)



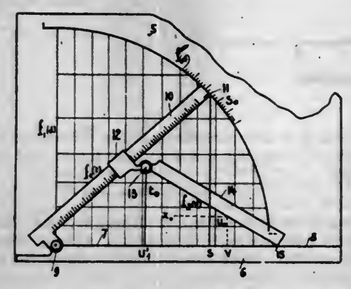
1. A panel board support, comprising a retaining member adapted to be placed adjacent the margin of a board, said retaining member having a slot therein, an angular shaped member movable with respect to said

retaining member, and having guide pins adapted to engage such slots in said retaining member, said angular shaped member being adapted to support said board, a screw rotatably mounted in said retaining member and



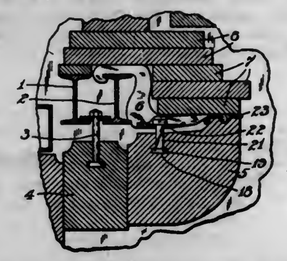
adapted to engage a lug on said angular shaped member and clamping means engaging said angular shaped member adapted to retain side members therebetween, said clamping means having a clip thereon adapted to overlap the corners of said side members.

1,487,458. CHURN. WILLIAM H. HALL, Cicero, Ill., assignor to Kohler Die & Specialty Company, De Kalb, Ill., a Corporation of Illinois. Filed Oct. 25, 1917. Serial No. 198,420. 2 Claims. (Cl. 259—122.)



1. In a churn, the combination with the body thereof, and a cover therefor, of dasher mechanism carried by said cover operating mechanism for said dasher mechanism, and a handle yoke associated with said operating mechanism, said handle yoke including a vertically extending arm and a pair of parallel horizontal arms extending from the ends thereof, the lower of said arms being suitably connected to said churn cover for holding the handle yoke in association therewith, and the upper arm being free.

1,487,459. SPRING SUSPENSION FOR PERAMBULATORS AND OTHER VEHICLES. JOHN HAMPSON, London, England. Filed Apr. 4, 1922. Serial No. 549,532. 2 Claims. (Cl. 267—5.)

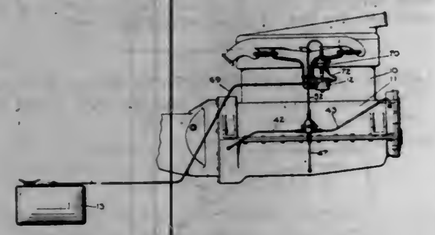


1. Suspension means for the wheels of baby carriages and other wheeled vehicles comprising pairs of rigid arms each arm being pivoted at one end to the body of the vehicle and projecting rearwardly and downwardly, wheel axles connected to each pair of arms at the ends remote from the pivots and flat strip C springs, between the axles and portions of the body in substantially the same horizontal plane as the pivotal connection of the arms with the body, for the purposes set forth.

1,487,460. CALCULATING DEVICE. HALVOR HANSSON, Christiania, Norway. Filed Aug. 31, 1922. Serial No. 585,546. 3 Claims. (Cl. 235—61.)

2. Apparatus for the graphic solution of equations, comprising, a table, a series of parallel straight lines thereon, one of which is the origin of the series, a circular arc thereon graduated to represent angles, the center of said arc, and the origin of the graduations thereon being on the straight line origin, a graduated rule, pivoted at one end at the center of said arc, a fixed rule positioned parallel to the straight line origin, a slide member positioned on, and slidable the length of said graduated rule, said slide pivotally carrying a second graduated rule, one end of which is movable along the fixed rule.

1,487,461. NOSE-BLOCK BRACKET. MAURICE A. HOFFT, Indianapolis, Ind., assignor to The M. A. Hofft Company, Indianapolis, Ind., a Corporation of Indiana. Filed Mar. 26, 1923. Serial No. 627,648. 8 Claims. (Cl. 110—95.)



1. A nose block supporting bracket for furnace arches comprising a pair of spaced-apart arms for receiving and supporting the nose block hanger said arms being constructed on their upper surfaces to receive and support furnace brick and having rearwardly extending hooked arms arranged to fit over and engage a supporting beam of the arch to support said bracket in position.

1,487,462. LIQUID-FEED SYSTEM. ERNEST R. HUNTLEY, Toledo, Ohio, assignor to Industrial Research Corporation, Toledo, Ohio, a Corporation of Delaware. Filed Apr. 26, 1920, Serial No. 376,437. Renewed Aug. 3, 1922. Serial No. 579,473. 6 Claims. (Cl. 103—235.)

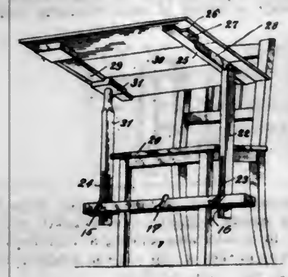
4. In a liquid feed system, means for producing intermittent suction impulses and for restoring approximately atmospheric pressure in the intervals between the suc-

tion impulses, a low level main liquid tank, a high level receptacle, a pumping chamber in communication with

said tank and said receptacle, and a connection between the suction producing means and the top of said pumping chamber.

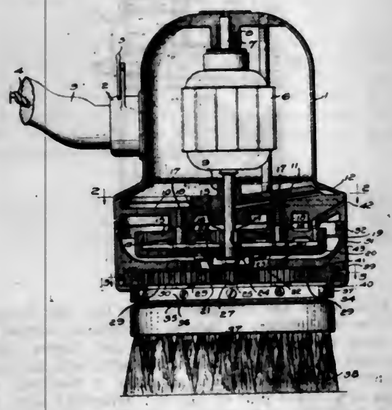
1,487,463. TONGS. EMIL T. KOERNER, Oak Park, Ill., assignor of one-half to Oscar L. Glaser, Oak Park, Chicago, Ill. Filed Aug. 21, 1922. Serial No. 583,690. 2 Claims. (Cl. 63—6.)

1. Tongs having two like members of uniform cross sectional area throughout pivoted together near their longitudinal centers, and having gripping jaws near one end, the ends of said members beyond the jaws turned back and formed into rings, the jaws being corrugated so that the corrugations of one jaw will nest in the corrugations of the other jaw.



1,487,464. POLE TRAILER. JAMES MORRISON, Cincinnati, Ohio, assignor to The Trailmobile Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Mar. 24, 1920. Serial No. 368,265. 2 Claims. (Cl. 280—33.4.)

1. In a device of the character described, a trailer frame, a pole, journals at front and rear of the said frame for slidably mounting the pole, and a member mounted on the forward frame member of the trailer, and adapted to serve as a limit to the forward sliding motion of the pole, said member comprising a collar through which the pole passes, and frame elements connected to the frame of the trailer and said collar, for holding the collar in spaced relation to the trailer frame and a resilient element on the pole to contact with the collar.



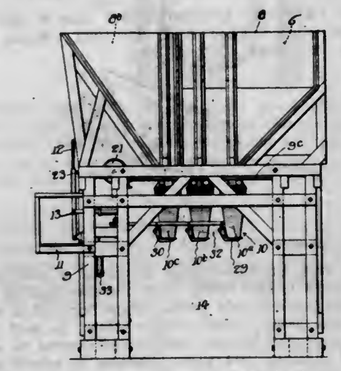
1,487,465. PUPIL DESK. JOSEF MÜLLER, Konstanz, Germany. Filed Aug. 31, 1921. Serial No. 497,451. 3 Claims. (Cl. 155—128.)

1. In a pupil-desk, a table, two supports for holding the same, two bars adapted to extend across the two front legs of a chair, a fastening in the middle of the bars for drawing the bars to each other, and means on the outer

ends of the bars outside of the legs of the chair for clamping the ends of the bars on the legs of the chair and securing the supports to the bars.

1,487,466. ROTARY BRUSH. ALBERT L. NORRIS, Jacksonville, Fla. Filed Oct. 13, 1921. Serial No. 507,422. 6 Claims. (Cl. 15—28.)

1. A brush comprising a casing, a motor arranged therein, a motor shaft driven by said motor, said motor shaft projecting from said casing, a pinion mounted on said motor shaft, a series of planetary gears meshing with said pinion, a connecting plate secured to a portion of said series of gears, a pinion secured thereto, a brush head rotatably mounted on said casing adjacent said pinion, and gearing meshing with said pinion and adapted to rotate said brush and head.

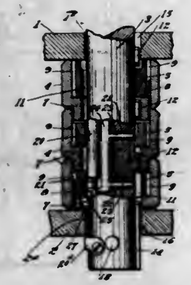


1,487,467. AUTOMATIC SKID PLACER. CHARLES D. OLAND and GEORGE MAIN, Centralia, Ill. Filed May 28, 1923. Serial No. 642,005. 8 Claims. (Cl. 104—257.)

1. An automatic skid placer including carriers disposed for movement toward and away from the rails of a railway, means for moving the carriers into and out of skid

placing position, and means actuated by the moving means for releasing the moving means at the completion of its skid placing movement to return to normal position and restore the carriers to inoperative position.

1,487,468. APPARATUS FOR MEASURING MATERIALS IN CONCRETE CONSTRUCTION. HERMAN D. PALMER and JOHN W. BUHEL, Hartford, Wis., assignors to The Kissel Motor Car Company, Hartford, Wis., a Corporation of Wisconsin. Original application filed Dec. 5, 1921, Serial No. 519,896. Divided and this application filed Nov. 26, 1923. Serial No. 677,044. 11 Claims. (Cl. 221—144.)



1. In an apparatus of the character described, the combination with a hopper, valve means for closing the lower or discharge end of the hopper comprising a door, a shaft upon which said door is fixed, and means normally holding said door in its closed position comprising a trip bar, an arm fast upon said shaft and connected with said bar, and a releasable device for limiting the movement of said bar in a direction to open said door comprising a rock shaft, a stop member carried by said shaft, a second stop member carried by said bar, spring means normally moving the first stop member into the path of movement of the second stop member, means for limiting the rocking movement of said rock shaft by said spring means, and means for moving said rock shaft in the opposite direction to carry the first stop member out of the path of movement of the second stop member.

6. In an apparatus of the charact r described, the combination of a plurality of hoppers; a door for closing the lower end of each of said hoppers, a plurality of parallel shafts carrying said doors, an arm rigid with each of said shafts, a bar connecting said arms together, and means for limiting movement of said bar in one direction whereby to hold said doors in closed position, said arms being of sectional construction to permit of the adjustment of the doors with respect to each other.

9. In an apparatus of the character described, the combination of a plurality of hoppers arranged in a plurality of rows, a door closing the lower end of each hopper, a plurality of parallel shafts each carrying the doors of the plurality of hoppers, an arm rigid with each of said shafts, a bar to which the upper ends of said arms are connected, and a releasable stop device operable to limit the movement of said bar in one direction whereby to support the doors in their closed position.

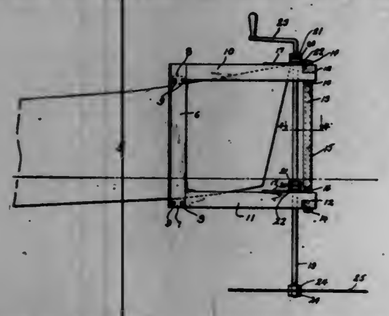
11. In an apparatus of the character described, the combination of a plurality of hoppers, a door for closing the lower end of each of said hoppers, separate means connecting the doors of the hoppers in groups or sets, the doors in each set being operable in unison, means normally tending to move the doors of each set into their closed positions, and a releasable device adapted to lock all of the doors in their closed positions, the doors of one set being operable independently of the doors of the other set.

1,487,469. PERMUTATION LOCK. JOHN PFEIFER, Springfield, Ohio, assignor to The Springfield Auto Lock Company, Springfield, Ohio, a Corporation of Ohio. Filed Dec. 5, 1921. Serial No. 520,098. 12 Claims. (Cl. 70—53.)

1. In a permutation locking mechanism, a non-rotatable locking member movable in the direction of its length, locking devices for said member, said member having more or less inherent loose motion, when locked with relation to said locking devices, and means for confining the loose play of said locking member, when in its locked position, within limits which will prevent the locking devices from being contacted thereby, for the purpose specified.

1,487,470. ADJUSTABLE RETAINER. HARRY E. PHILIPS, New York, N. Y., assignor to Barron G. Collier, Incorporated, a Corporation of New York. Filed Apr. 26, 1923. Serial No. 634,871. 6 Claims. (Cl. 40—12.)

1. In a retaining device for card frames, in combination, a spring strip, an adjustment plate adapted to receive one end of said spring strip, and means cooperating with said adjustment plate to adjust the effective length of said spring strip, said means having positive locking engagement with said adjusting plate when in operative position.



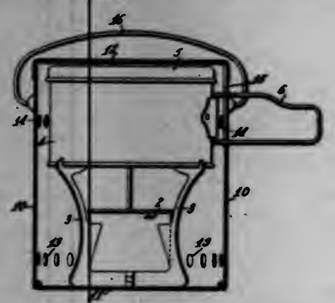
1,487,471. WEATHERPROOF COATING MEDIUM. RUDOLF PLÖNNIS, Wilmersdorf, near Berlin, Germany. Filed Nov. 3, 1920. Serial No. 421,527. 5 Claims. (Cl. 134—45.)

5. The herein described composition of matter which comprises 100 parts by weight of potassium water glass, about 3 parts of caustic alkali, about 5 parts of calcium carbonate, and about 5 parts of tar oil, and which is adapted for use as a paint or coating for floors and walls.

1,487,472. WEED CUTTER. LOUIS H. RATHKE, Milwaukee, Wis. Filed Sept. 7, 1920. Serial No. 408,524. 3 Claims. (Cl. 56—8.)

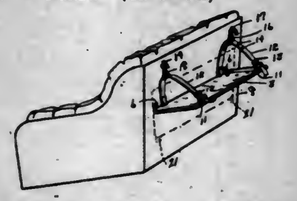
3. In a device for cutting weeds and the like under water comprising a substantially V-shaped frame adapted to be readily detachably secured externally of the bow

of a boat; a vertical shaft rotatably and slidably journalled in said frame adjacent its apex; collars carried by said shaft for controlling the vertical position thereof



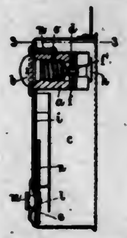
relative to said frame; a substantially rigid V-shaped weed guard carried by the apex of said frame in advance of said shaft; and a cutting disc carried by the lower end of said shaft.

1,487,473. OPTICAL APPARATUS. WILLIAM P. REAVES, Greensboro, N. C. Filed Dec. 6, 1922. Serial No. 605,213. 7 Claims. (Cl. 88—29.)



1. A device of the class described which comprises a box containing a mirror and having openings in front of said mirror through which the light rays from the objective may pass to the mirror and from the mirror to the observer's eye respectively, a closure for each of said openings mounted on the box and movable into a plurality of positions, in one of which positions it serves to close the opening in said box and in another position to act as a guard to prevent lateral light rays from striking the eye of the observer, said closures being connected together for simultaneous operation.

1,487,474. CASING FOR SMALL COOKING STOVES. HENRY JAMES RHODES, Vancouver, British Columbia, Canada. Filed Sept. 20, 1921. Serial No. 502,049. 1 Claim. (Cl. 126—38.)

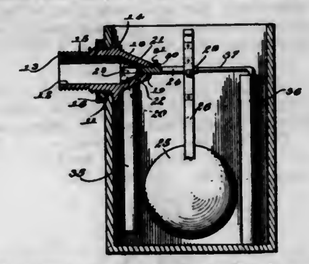


A protective shield for a heating device, comprising the combination with the fuel holder and its stand, and a cooking vessel on the stand having hinged handles adapted to be folded against the vessel or projected at right angles thereto, said casing having provisions adjacent the lower part for admitting air for combustion and adjacent the upper part providing escape for the products of combustion and also having a vertical slot extending to the top of the casing into which the handle of the cooking vessel may be passed and through which it may be projected when said handle is extended at right angles to the cooking vessel, and a cover removably fitting the casing, the internal diameter of the casing being sufficiently greater than the external diameter of the vessel to allow the handles of the cooking vessel to be folded against the cooking vessel and the cooking vessel inserted into the casing if desired.

1,487,475. CRIB FOR AUTOMOBILES. IKE W. RIBYAT, Syracuse, N. Y. Filed Sept. 27, 1922. Serial No. 590,772. 2 Claims. (Cl. 5—94.)

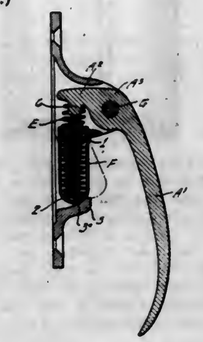
1. In a crib for automobiles, a frame, a removable fabric attached to said frame, glove fastener buttons for holding said fabric to said frame, straps fastened to said frame, hooks having open ends, whereby to hold the frame in suspended manner, said straps secured to said frame and engaging said hooks, whereby to attach said frame to said hooks, one of said hooks having a tooth adapted to engage one of said straps, whereby to aid in holding the frame in horizontal position and means attached to said fabric to aid in holding the frame in vertical position.

1,487,476. ELECTRIC POCKET AND NIGHT LAMP. PAUL ROMBACH, Karlsruhe, Germany. Filed Apr. 19, 1922. Serial No. 555,652. 3 Claims. (Cl. 240—8.5.)



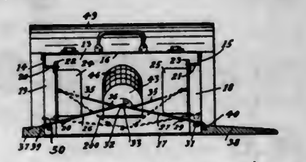
1. An electric pocket lamp comprising a casing, a cylinder provided in the front of the casing and at right angles thereto, a socket slidably disposed within said cylinder and a bulb mounted in said socket, whereby the bulb and socket may be depressed into said cylinder, means within the lamp casing for retaining the bulb and socket in their depressed position, manually operated means disposed on the outside of the casing to release said retaining means, spring means for raising said socket and bulb from their depressed position and holding them in their raised position, and means for causing the circuit to be closed when the bulb is in its raised position and broken when it is depressed.

1,487,477. VALVE. LORNE PRINGLE ROSS, San Jose, Costa Rica. Filed Nov. 23, 1922. Serial No. 602,888. 1 Claim. (Cl. 137—104.)



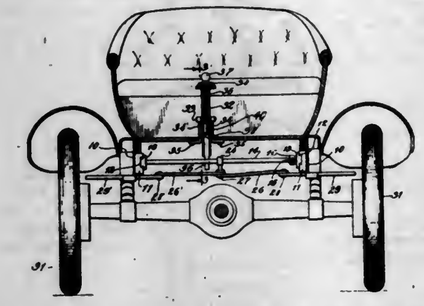
In a float control valve mechanism, a nipple adapted to be coupled with the water supply system or the like, said nipple having a valve casing integrally formed therewith,

said valve casing communicating with the nipple and being provided with a valve seat and with an outlet port in said valve seat, a valve operating on said seat, said valve having a stem projecting exteriorly of the valve casing, a float having an arm provided with a series of



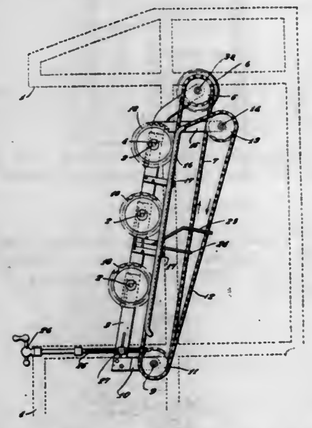
openings adapted to be selectively fitted on said valve stem, means for clamping the arm in adjusted position on the valve stem, and cooperating means between the arms and the valve casing for limiting the downward movement of the float.

1,487,478. REFRIGERATOR LOCK. ADOLPH RUBIN, St. Louis, Mo., assignor to Sieber Products Manufacturing Company, St. Louis, Mo., a Corporation of Missouri. Filed Nov. 17, 1922. Serial No. 601,504. 12 Claims. (Cl. 292—242.)



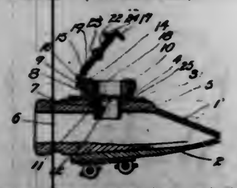
4. A lock of the character referred to, comprising a retaining device, a member that carries said device, an actuating spring for said device, and a removable spring housing on said member that holds said spring in operative relationship with said retaining device.

1,487,479. ANIMAL TRAP. HERMAN SANDER, Fargo, N. Dak. Filed Feb. 19, 1921. Serial No. 446,255. 7 Claims. (Cl. 43—76.)



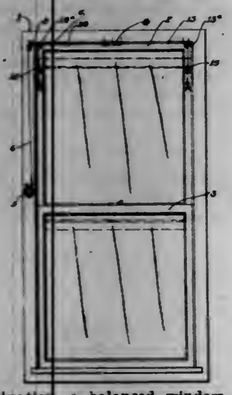
1. A trap comprising an enclosure having an opening therein, a closure member for said opening falling short of the bottom of said opening, an inclined operating floor member positioned below said closure member, a ramp leading up to said operating floor member and a rearwardly positioned extension on said operating member for over-lapping said ramp to form a smooth passageway into the trap.

1,487,480. AUTOMOBILE LOCK. KARL SCHERER, New York, N. Y. Filed Aug. 11, 1921. Serial No. 491,324. 2 Claims. (Cl. 188—31.)



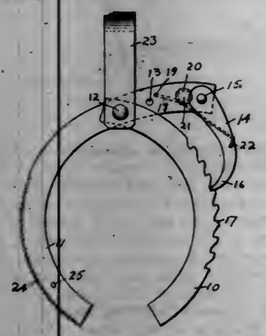
1. A locking device for automobiles and like vehicles, comprising a vehicle frame, locking members adapted to engage the wheels of the vehicle, means for moving said locking members in and out of engagement with said wheels, said means comprising guideways on the frame, a member slidable in said guideways, a rock shaft operably connected to said member, a rod also connected to said member, and link connections between said rod and said locking members whereby the operation of said slide member operates said link connections to urge said locking members into and out of engagement with the wheels of the vehicle.

1,487,481. BROILING APPARATUS. MAX SCHEY, Brooklyn, N. Y. Filed Jan. 19, 1922. Serial No. 530,241. 7 Claims. (Cl. 126—41.)



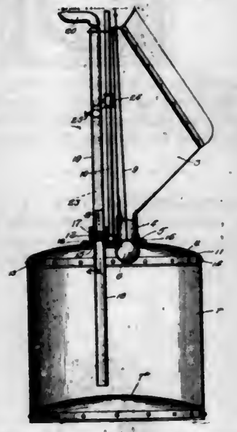
1. A broiling apparatus embodying a plurality of rotatable spits adapted to support broils, a drip pan associated with each spit and adapted to contain a pool of grease, a ladle carried by each spit offcenter and adapted by rotation of the spit to be periodically submerged in the grease of the associated drip pan, a pair of drive members operable in opposite directions and a driven member associated with each spit and adapted to be brought into engagement with either of the drive members for the purpose of effecting rotation of such spit in either one direction or the other, whereby rotation of the spit in one direction will result in basting of the broil supported on the spit, whereas rotation of the spit in the opposite direction will be accomplished without concurrent basting of the broil.

1,487,482. TONE MODIFIER. FREDERICK E. SHANE, Kansas City, Mo. Filed Feb. 3, 1922. Serial No. 533,755. 3 Claims. (Cl. 84—385.)



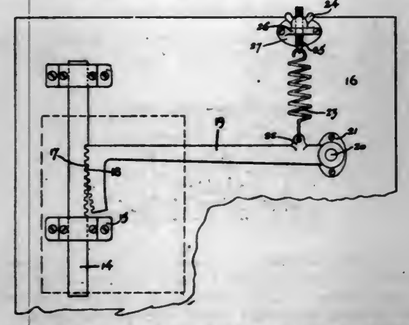
3. A mouthpiece for musical instruments including a vibratory reed as part of the mouthpiece, said mouthpiece having a transverse opening therein, and a diaphragm closing the opening, the diaphragm producing a discordant sound combining with the natural tone produced by the reed of the mouthpiece.

1,487,483. AUTOMATIC APPARATUS FOR WINDOW AND COORDINATED OPERATION. RICHARD SHIPPEN, South Orange, N. J. Filed Feb. 21, 1922. Serial No. 538,397. 7 Claims. (Cl. 161—1.)



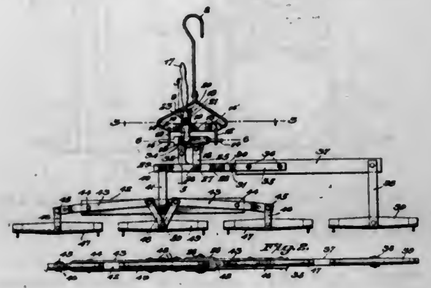
1. In combination, a balanced window sash, a motor for raising the same, and a time-control release for said motor.

1,487,484. MINCED-HAM AND SAUSAGE BLADDER HOLDER. WALTER SIERAKOWSKI, Lansing, Mich. Filed Sept. 23, 1922. Serial No. 590,123. 1 Claim. (Cl. 294—118.)



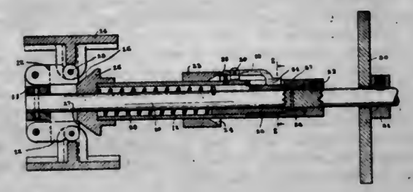
A holder of the class described, comprising flat gripping members connected for pivotal movement and together presenting a rounded adjustable gripping edge, a hanging member carried by the pivotal support of the gripping members, one of said members being extended beyond the pivotal support in a direction opposite its gripping edge and terminally provided with a pawl, the other of said members being formed on the edge remote from its gripping edge with a series of teeth with which said pawl cooperates, the pawl acting to automatically lock the gripping members in gripping relation to each other as the gripping area therebetween is reduced.

1,487,485. SAND-LIFTING APPARATUS. BARTON S. SNOW, Batavia, Ill., assignor to T. W. Snow Construction Co., Chicago, Ill., a Corporation of Illinois. Filed Apr. 17, 1922, Serial No. 554,330. Renewed Feb. 1, 1924. 1 Claim. (Cl. 302—53.)



In material-lifting apparatus, the combination of a tank for the material to be lifted, a conduit opening into said tank and through which the material is elevated, means for subjecting the material in the tank to fluid pressure for forcing it through said conduit, and a second conduit for fluid pressure, said second conduit opening through the wall of said first-named conduit above the end thereof opening into said tank, in a plane substantially at right angles to said first-named conduit and throughout the circumference of the latter.

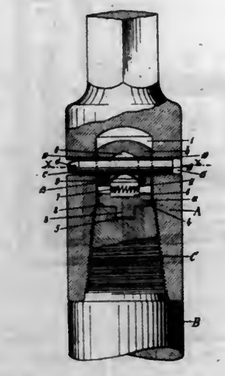
1,487,486. CARRIAGE. CHARLES C. SPREEN, Detroit, Mich., assignor to Kelvinator Corporation, Detroit, Mich., a Corporation of Delaware. Filed July 26, 1923. Serial No. 653,970. 5 Claims. (Cl. 64—52.)



1. In combination, a bar mounted to permit reciprocation in a direction parallel to its axis and to prevent motion of any other kind, a base carried thereby and adapted to support an electric motor, a lever pivoted to swing in a plane parallel to the plane of said base and having a free end operatively connected to said bar whereby pivotal movement of said lever will result in reciprocation of said bar and said base, and means acting on said lever adjacent its pivot to cause such pivotal movement of said lever and thus cause such reciprocal movement of said bar and said base.

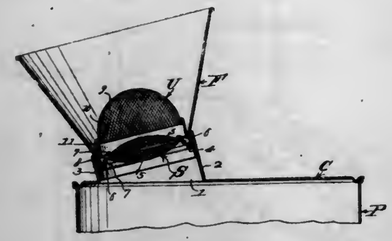
1,487,487. DRAFT EQUALIZER. ARTHUR STARK, Ralston, Nebr. Filed July 10, 1922, Serial No. 573,837. Renewed Jan. 22, 1924. 7 Claims. (Cl. 278—8.)

1. A draft-equalizer comprising a draw member, a laterally-shiftable transverse member on said draw member, a lever fulcrumed on one of said members arranged to shift said transverse member, a draft-arm swingably connected with said transverse member at one end and arranged in its other end portion to be connected with a draft-animal, a cross member swingably connected in one end portion with said draft-arm and in its other end portion adapted for connection with draft-animals, and links swingably connected with said transverse member and with said cross member between its ends.



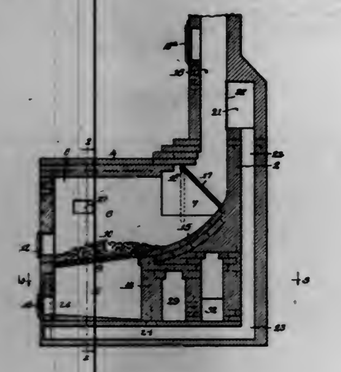
1,487,488. LAPPING-IN TOOL FOR INTERNAL-COMBUSTION ENGINES. HARRY W. STIMSON, West Allis, Wis. Filed Oct. 2, 1922. Serial No. 591,893. 10 Claims. (Cl. 51—206.)

1. In a tool of the class described, a plurality of lapping members, axially displaceable means including releasable dogs for radially displacing said members and means for releasing said dogs.



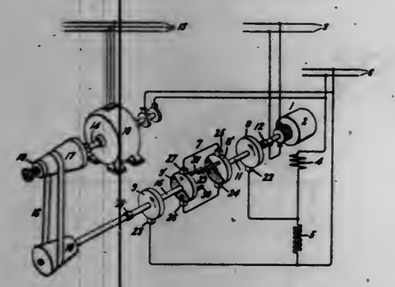
1,487,489. ROCK AND LIKE DRILL. JOSEPH STREDA, London, England. Filed Dec. 4, 1922. Serial No. 604,941. 2 Claims. (Cl. 279—100.)

1. A device for locking together two screw-joined parts of a rock or like drill, comprising a cylindrical block divided transversely into two parts and fitted in a cavity in the female drill part, the lower part of the block being feathered to the male drill part so as to be prevented from rotary displacement relative to the latter, the adjoining faces of the block part being formed with intermeshing ratchet teeth preventing relative rotation in the unscrewing direction of the drill elements but allowing the top part to be turned in the opposite direction, a headed lock bolt, the top part of the block and the female part of the drill being slotted for the reception of said lock bolt, a split pin for fastening the bolt in



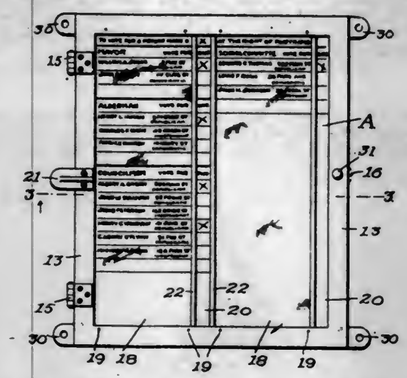
locking position, the female drill part being recessed to accommodate the head and the split pin, a blade spring fitted in the top part of the block so as to bear against the inserted lock bolt and press the block parts together, the lock bolt having a notch in which to receive the abutting part of the spring, and means for turning the top part of the block so as to admit the lock bolt after the drill parts have been screwed together.

1,487,490. MILK STRAINER. LEWIS H. SUBLETT and EMIL B. PETERS, Georgetown, Ky. Filed Apr. 15, 1922. Serial No. 553,141. 2 Claims. (Cl. 210—158.)



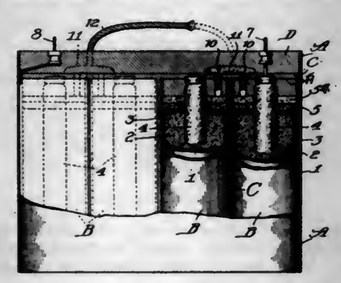
2. A strainer of the class described comprising, in combination, a receiving member provided with an inwardly disposed bead and a straining unit insertable within said member and engageable with the bead, said unit comprising two straining elements, an annular member secured to the marginal portion of each of the elements and having its periphery defined by an outstanding flange, said flange having close contact with the inner wall of the member when the straining unit is in applied position, and a supplemental screening element having an annular member secured to the marginal portion thereof, said last named annular member telescopically engaging within the flange of one of the first named elements.

1,487,491. INCINERATOR. GEORGE SUTCLIFFE, Chicago, Ill., assignor of one-half to George T. Williams, Chicago, Ill. Filed Aug. 3, 1923. Serial No. 655,399. 3 Claims. (Cl. 110—8.)



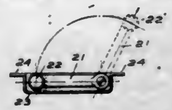
3. An incinerator comprising a combustion chamber having a grate in the forward portion and an ash pit below said grate, a hearth at the rear of said grate, an outlet duct leading downwardly from the upper portion of said combustion chamber and connected with transverse passages beneath said hearth, a chimney connecting with said passages, a chute opening into said chamber above said hearth, a gate mounted above said hearth and adapted to be swung into positions to open and close the lower end of said chute, and a duct communicating with said chute at a predetermined distance above its lower end and extending exterior of said chamber to the ash pit.

1,487,492. REGULATING SYSTEM. LOUIS W. THOMPSON, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed May 28, 1923. Serial No. 641,821. 4 Claims. (Cl. 172—293.)



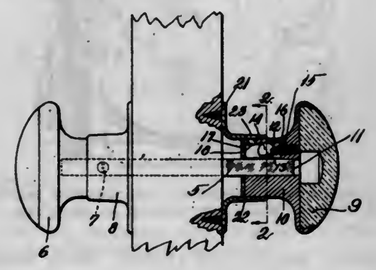
3. In combination, an electric motor the speed of which is to be controlled, a second electric motor arranged to rotate at a speed in accordance with which the speed of the first mentioned motor is to be controlled, rotatable elements respectively driven by said motors and comprising conducting segments connected and arranged to control the excitation of said first mentioned motor in accordance with the relative angular position of said rotatable elements, and means for limiting the angular movement of said rotatable elements with respect to each other.

1,487,493. BALLOT-MARKING APPARATUS. ROY D. TOLMAN, Worcester, Mass. Filed Feb. 21, 1923. Serial No. 620,539. 20 Claims. (Cl. 35—12.)



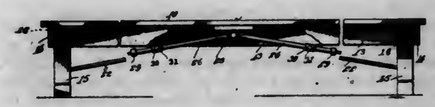
1. A ballot marking apparatus comprising a base with a transparent cover for the ballot and a vertical column open in the cover.

1,487,494. BATTERY. DONALD W. TYRRELL, Madison, Wis., assignor to French Battery & Carbon Co., Madison, Wis., a Corporation of Wisconsin. Filed Jan. 3, 1921. Serial No. 434,682. 7 Claims. (Cl. 204—53.)



1. A battery comprising a main container, a plurality of dry cells therein provided with cores of depolarizing material and electrolyte surrounding said cores, layers of inert material in said cells above said cores and electrolyte, individual seals in said cells, a common seal in said main container above and completely covering said cells, passages extening thru said seals and communicating with said layers of inert material, an upper seal in said main container, and venting means extending thru said upper seal and communicating with said passages, whereby the gases generated in said cells may pass to the external atmosphere.

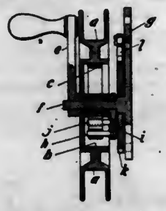
1,487,495. DISAPPEARING FOOT REST. GEORGE THEO. VON GERMETEN and CARL F. HANSEN, Racine, Wis. Filed Feb. 16, 1923. Serial No. 619,399. 1 Claim. (Cl. 296—75.)



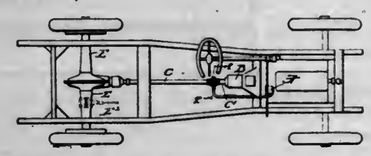
A disappearing foot rest for a vehicle comprising a casing adapted to be inset within the floor of the vehicle and having outwardly extending supporting flanges, a foot rest plate provided with trunnions projecting laterally therefrom adjacent its rear edge, said casing having slots therein for the sliding reception of said trunnion, and a link pivotally joined to said foot rest plate at a point intermediate the ends of said plate and pivotally joined to the inner side of said casing whereby said foot rest may be slid with its inner end continuously positioned within said casing and with its forward end elevated and retained in such position.

1,487,496. DOORKNOB. JAMES H. WENTWORTH, Lynn, Mass. Filed July 28, 1920. Serial No. 399,562. 1 Claim. (Cl. 292—355.)

The combination of a spindle, a knob having a bore in its shank into which said spindle telescopes, and also having a guideway inclined with respect to and communicating with said bore, and a spring-pressed ball located in said guideway and projecting into said bore to lock the knob to said spindle, said shank having an aperture communicating with said guideway, through which an implement may be passed for pressing back the ball and releasing the knob in combination with an escutcheon having an aperture normally out of register with said first mentioned aperture with which said first mentioned aperture may be brought into registration.



1,487,497. FOLDING FURNITURE. THOMAS WHEWELL, New York, N. Y. Filed Feb. 13, 1923. Serial No. 618,881. 2 Claims. (Cl. 45—11.)



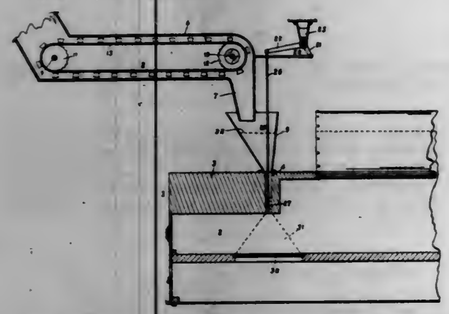
1. A foldable piece of furniture including a top and legs pivotally connected to the ends thereof, hollow rods having angularly turned ends movably connected with the intermediate portion of the top, other rods pivotally connected with the legs and being slidable through the hollow rods, the angular ends of the hollow rods being formed with openings at an angle to the movably connected portions thereof through which the other rods are arranged to slide, and means for holding the rods against relative movement, at times.

1,487,498. WINCH. ARTHUR WILLIAM WHISTLECROFT, London, and HAROLD ROBERT CORBY VAN DE VELDE, Bromley, England, assignors to Radio Corporation of America, New York, N. Y., a Corporation of Delaware. Filed Oct. 25, 1920. Serial No. 419,202. 7 Claims. (Cl. 254—150.)

1. In a winch, the combination of a winding drum, a friction brake located within said drum and adapted normally to engage the inner surface of said drum to hold the same stationary and means for driving said drum through said brake and for releasing said drum from said brake.

1,487,499. INSTRUMENT-DRIVING CONNECTION FOR MOTOR VEHICLES. FREDERIK G. WHITTINGTON, Evanston, Ill., assignor to Stewart-Warner Speedometer Corporation, Chicago, Ill., a Corporation of Virginia. Filed Mar. 17, 1922. Serial No. 544,644. 6 Claims. (Cl. 74—7.)

1. In an automobile, a construction for applying to a propeller shaft which is housed throughout its length, and at an intermediate point in said length, a gear for transmitting driving power from said shaft to an accessory instrument, consisting in the combination with such shaft of a housing transversely severed and having the severed ends of the parts spaced apart for a distance sufficient to accommodate a gear on said shaft, such gear comprising a plurality of members severed axially of the shaft and secured together clamping the shaft; a coupling joining rigidly the two severed members of the shaft housing, said coupling being enlarged over the interval between the spaced-apart ends of the shaft housing to form a chamber housing said gear, said coupling comprising two members severed axially and secured together clamping said spaced-apart ends of the shaft housing, said housing coupling having a journal bearing for a driven shaft, a shaft journaled in said bearing, and a gear on said shaft within the coupling chamber meshing with the first mentioned gear therein.



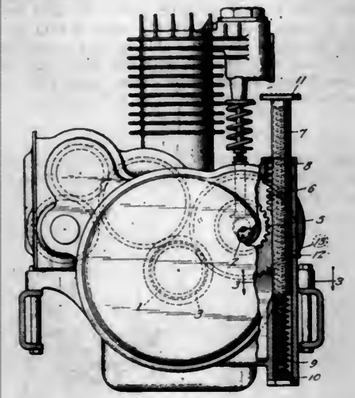
1,487,500. CHANGEABLE SIGN WITH LOCKING DEVICE. LESLIE ELVIN WILLIAMS, Wichita Falls, Tex., assignor of one-half to Clifford Allday, Petrolia, Tex. Filed Jan. 11, 1923. Serial No. 611,950. 2 Claims. (Cl. 40—125.)

1. A changeable sign with locking device, comprising a pair of standards attached to a frame; a pair of bracing standards attached to said first mentioned standards; a frame hinged to said first mentioned frame, each frame

having a plurality of eyelets at the top thereof, a perforated member attached at each end of the first mentioned frame; a rod having a head on one end and an eyelet on one end inserted through said perforated members and said eyelets, a lock larger than the hole in said perforated members, locked in the eyelet of said rod.

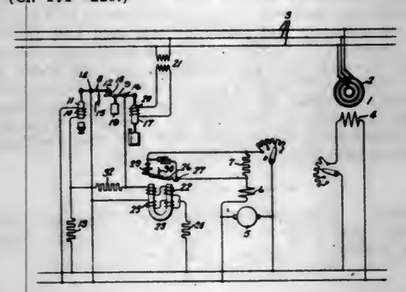
1,487,501. STOKER. CASIMIR J. WOOD, San Francisco, Calif. Filed May 12, 1919. Serial No. 296,674. 1 Claim. (Cl. 110—102.)

The combination of a furnace having a top wall with a vertical conduit therethrough, a grate within the furnace arranged under said conduit, a fuel receiving hopper arranged on said wall of the furnace to discharge through said conduit therein, a movable conveyor positioned above the hopper for delivering fuel thereinto, said conveyor including a rotatable supporting shaft, a bell crank lever journaled above said hopper and having one portion of said lever extending toward said shaft and the other away from said shaft, an eccentric secured to said conveyor shaft, a strap about said eccentric, a rod connecting said strap with the remote end portion of said bell crank lever and an agitator in said conduit and connected with the other end of said bell crank lever.



1,487,502. MAGNETO FLASH LAMP. JAMES J. WOOD, Fort Wayne, Ind., assignor to General Electric Company, a Corporation of New York. Filed May 4, 1922. Serial No. 558,376. 8 Claims. (Cl. 240—8.5.)

1. In a device of the character described, the combination of a casing, a generator located within the casing and extending longitudinally thereof, a frame also located within the casing which extends longitudinally thereof and has transverse shafts, gearing arranged on the shafts and within the frame, a centrifugal coupling for connecting the gearing with the rotor of the generator, an actuator which extends outside of the casing for driving the gearing, a lamp carried by the casing, and means for carrying current from the generator to the lamp.

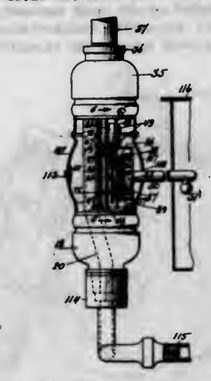


1,487,503. STARTER. ADAM ZISKA, Jr., Milwaukee, Wis., assignor to Harley-Davidson Motor Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Sept. 20, 1919. Serial No. 325,214. 7 Claims. (Cl. 74—7.)

2. A starter for internal combustion engines comprising a rack, a gear normally disengaged from said rack, and means for connecting said gear and engine shaft and for allowing said engine shaft to overrun said gear under

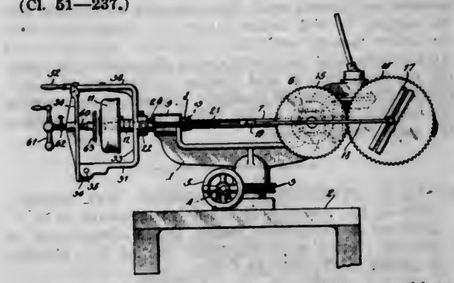
certain conditions, said rack being free from engagement with said gear at the lower portion of its stroke.

1,487,504. REGULATING SYSTEM. HENRY STEVENSON BAKER, Niagara Falls, Ontario, Canada, assignor to General Electric Company, a Corporation of New York. Filed Apr. 19, 1921. Serial No. 462,768. 4 Claims. (Cl. 171—229.)



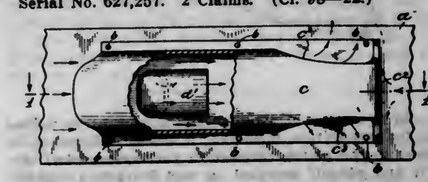
1. In a regulating system, the combination of a pair of cooperating contacts arranged to effect by their engagement and disengagement the desired regulation, means for actuating one of said contacts in accordance with the condition being regulated, an electromagnet for operating the other one of said contacts, a source of current connected to said electromagnet, an impedance device in the circuit of said electromagnet and a second impedance device arranged to be connected in parallel to the coil of said electromagnet by the engagement of said contacts.

1,487,505. AUTOMATIC VALVE CLOSER. AURELIO BARCHIESI, Jersey City, N. J., assignor of forty one-hundredths to Angelo Baratta, ten one-hundredths to Antonio Orrico, both of Jersey City, N. J., and twenty one-hundredths to Giovanni Squarcialupi, New York, N. Y. Filed Apr. 9, 1921. Serial No. 459,914. 6 Claims. (Cl. 67—116.)



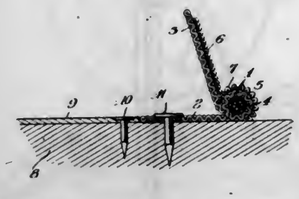
1. In an automatic valve closer of the character described the combination of a valve for a gas conduit of the closer, a valve stem for the valve, a stop lug extending from the valve stem, a spring in the heat zone of a flame fed by gas flowing through the valve closer, a ratchet wheel pivoted in the valve closer connected to one end of said spring and rotated in one direction with the expansion of said spring, a lever pivoted in the valve

closer, a locking pin extending from the lever adapted to lock with the stop lug a second lever pivoted to the first lever, a pawl extending from the second lever, a pin extending from the second lever, an operating arm



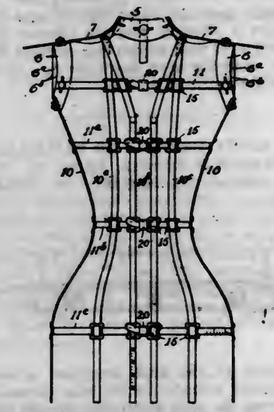
extending from the valve stem to raise it with the valve, and a second arm extending from the valve stem to contact with the pin on the second lever to unlock the pawl from the ratchet wheel to enable the spring to assume its normal position when cooled.

1,487,506. WORKHOLDER FOR POLISHING MACHINES. SAUL BLICKMAN, Far Rockaway, N. Y. Filed Mar. 23, 1923. Serial No. 627,074. 10 Claims. (Cl. 51—237.)



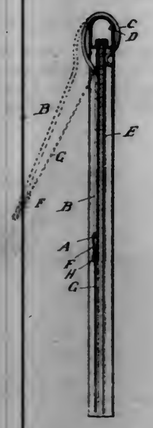
1. Work clamping mechanism for polishing machines, comprising a rotary head-stock, a tail-stock, a carrier therefor connected to move the tail-stock toward and from operative relation to the work in a direction generally inward and toward or outward and away from the face of the head-stock, and quickly releasable positive locking means for securing the carrier in active position, whereby clamping and unclamping of the work may be rapidly and accurately effected.

1,487,507. VENTILATOR FOR VEHICLES. EDWARD J. BRAISTED, Flushing, N. Y. Filed Mar. 24, 1923. Serial No. 627,257. 2 Claims. (Cl. 98—22.)



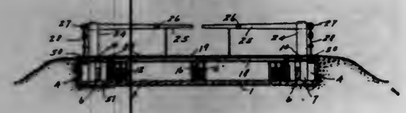
1. A ventilator of the character described including an outer casing constituting an open-ended channel adapted to receive air currents, a transverse baffle closing the other end of the casing, said casing being provided with lateral ports to permit the escape of air in proximity to said baffle, and an eductor nozzle disposed within the channel formed by the casing and communicating with the interior of the vehicle.

1,487,508. FINISHING STRIP. ALBERT BROWN, Rochester, N. Y., assignor to Vogt Mfg. Corporation, Rochester, N. Y., a Corporation of New York. Filed Sept. 22, 1920. Serial No. 411,998. 5 Claims. (Cl. 155—184.)



1. A fabricated finishing strip for upholstery comprising an ornamental corded bead constituted by weaving a tubular portion about a cord, a plain flange portion proceeding integrally therefrom and by which it may be tacked to a support independently of the formation of the bead and a second and ornamental flange portion connected integrally to one of said parts and adapted to overlie and to be secured to the plain flange to conceal it and its attaching means.

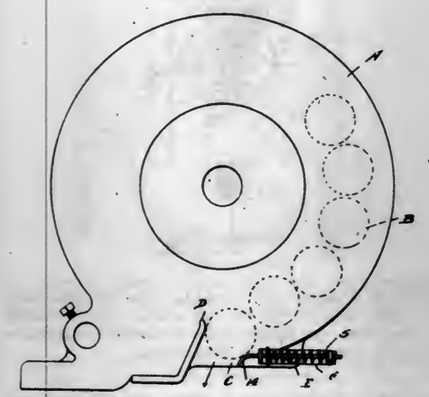
1,487,509. MEASURING AND FITTING FORM FOR BODY GARMENTS. HYMAN BUSHLOWITZ, Reading, Pa. Filed Aug. 29, 1922. Serial No. 585,020. 1 Claim. (Cl. 223—18.)



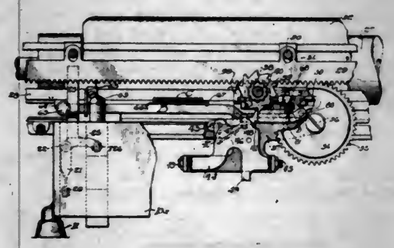
In a combined measuring and fitting form for body garments, the combination with a top body frame work made up of an open-front neck band and arm opening bands, each independently adjustable and united by adjustable top shoulder straps, of a series of front, side and rear resilient measuring strips suspended from said frame and carrying a series of circumferential measuring strips of like material, the latter having their meeting ends overlapping a central vertical line of the form, adjustable slip clamps at the crossings of said vertical and circumferential strips, and releasable clamping devices for said overlapping ends of the circumferential strips, whereby the latter may be parted to form an opening to said form.

1,487,510. WINDSHIELD ATTACHMENT. CURTIS L. CRUVER, Chicago, Ill. Filed Nov. 23, 1922. Serial No. 602,816. 4 Claims. (Cl. 296—97.)

1. A device of the kind specified including a plate or sheet of suitable material, a folded strip of metal secured to and embracing one edge portion thereof, a supporting member for said plate or sheet comprising a U-shaped wire frame having its middle portion passed through and pivotally engaged with said metal strip, the arms of said supporting member terminating in flexible hooks adapted to receive the upper frame-portion of the windshield, the free end portions of said hooks opposing portions of said arms bent to prevent their contact with the inner face of the windshield pane and said free ends adapted to bear upon the outer face of said windshield pane and exert a yielding pressure thereon to thereby cause the portion of said supporting member below said hooks to bear yieldably upon the inner face of the windshield to prevent rattle.



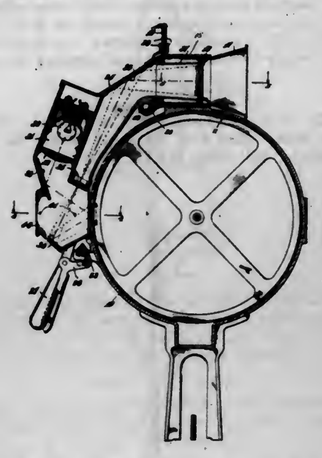
1,487,511. SAFETY DEVICE FOR RAILROAD CROSSINGS. LAWRENCE T. DOUVIER, Amboy, Ill. Filed Jan. 24, 1924. Serial No. 688,127. 4 Claims. (Cl. 246—128.)



4. In a device of the kind described, a base; road platforms slidingly mounted in the base; means for lowering and raising the road platforms through the weight of a vehicle; semaphores mounted on the base; means for operating the semaphores through the medium of the road platforms; means for locking the approach side road platforms; and means for operating the locking means upon the approach of a train.

1,487,512. LOOM BOBBIN HOLDER. JOSEPH EPPS, Williamston, S. C., assignor of one-half to T. I. Barber, Williamston, S. C. Filed Feb. 6, 1923. Serial No. 617,241. 1 Claim. (Cl. 139—251.)

The combination with the bobbin battery of a weaving machine having an outlet opening for the bobbin, of a bobbin holder including a U-shaped bracket member formed with slots in the parallel leg portions thereof, a latch member of strip form slidably mounted in the openings of the bracket member having a shoulder formed thereon between the leg portions of the bracket, a plate mounted on said latch member and fitted on said shoulder portion, a coil spring mounted on the latch member and engaging said plate and one leg of the bracket member for normally forcing said plate against the shoulder of the latch member and forcing said latch member outwardly into the opening in said bobbin battery for engagement with the bobbin therein, and means adjustably mounted on the latch member and cooperating with the bracket for limiting the projection of said member to any one of a plurality of predetermined positions, and means for securing the bracket member to the bobbin battery for holding the same rigidly thereon.

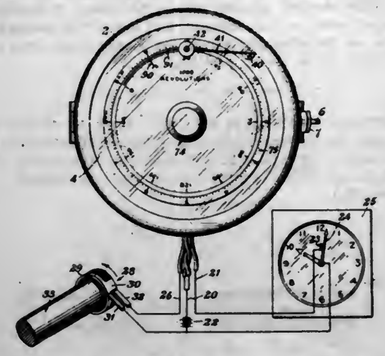


1,487,513. TYPEWRITING MACHINE. MAX GARBELL, Chicago, Ill., assignor, by mesne assignments, to O. D. Jennings & Company, Chicago, Ill., a Corporation of Illinois. Filed May 31, 1921. Serial No. 474,029. 2 Claims. (Cl. 197—91.)

1. As an article of manufacture, a backspacer mechanism for typewriters, including: a bracket adapted to be secured to the platen carriage, a back-spacer pawl pivotally and slidably mounted on said bracket, a connecting link pivotally attached to said pawl, and an expansible spring interposed between said pawl and said link at points intermediate the pivotal mounting of the pawl and the pawl tooth proper thereof.

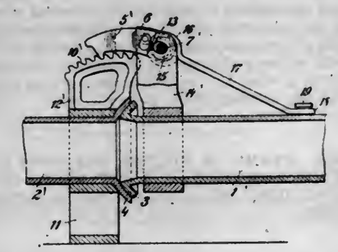
1,487,514. READING APPLIANCE FOR SCALES. HARRY T. GOSS, Rutherford, N. J., assignor, by mesne assignments, to Dayton Scale Company, Dayton, Ohio, a Corporation of New Jersey. Filed Dec. 19, 1919. Serial No. 346,142. 18 Claims. (Cl. 88—24.)

18. In a weighing scale, in combination, a weight-controlled movable chart having a plurality of series of graduations, a screen, and means for selectively projecting graduations from each of said series upon said screen.



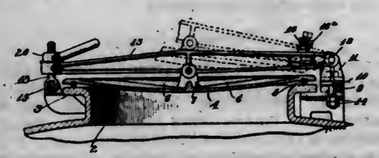
1,487,515. THERMAL RESPONSIVE SWITCH. CHESTER I. HALL, Fort Wayne, Ind., assignor to General Electric Company, a Corporation of New York. Filed May 2, 1921. Serial No. 466,335. 10 Claims. (Cl. 200—122.)

1. The combination in an electric switch of a switch member biased to a normal position, a pivotally supported flexible thermostatic latch adapted to engage the switch member for holding the switch member in another position, the said latch adapted to be flexed responsively to the heating effect of a predetermined value of current to thereby disengage the switch member and release the same to return to the normal position after an interval of time, and means for adjusting the position of the latch about its pivotal support for varying the said time interval.



1,487,516. PRODUCTION METER. HAPLEY HOWARD HELLER, New York, N. Y., assignor to Ford Instrument Company, Inc., a Corporation of New York. Filed Feb. 5, 1921. Serial No. 442,773. 12 Claims. (Cl. 234—1.5.)

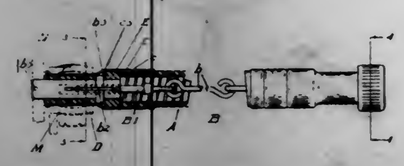
1. In an instrument of the class described, a chart bearing predetermined indications of steps of work and of time intervals allotted to individual work-steps, a marker arranged to bear on said chart, means responsive to recurring displacement of a moving part of a machine operable to move said chart, and time-controlled means



for operating said marker, the combined movement of said chart and marker generating a time scale comparatively related to said predetermined indications.

1,487,517. PIPE JOINT. WALTER KRAUSE, Berlin-Zehlendorf, Germany. Filed Sept. 29, 1921. Serial No. 504,177. 7 Claims. (Cl. 285—110.)

1. In a pipe joint, the combination, with the pipes to be connected having contacting faces, of supporting means for one of said pipes disposed in such a way that axial pressure is exerted by gravity by one of said pipes whereby the contacting faces are forced together, said supporting means comprising cooperating members respectively mounted on said pipes and movable relatively to each other transversely of the pipes, one of said co-operating members being also movable relatively to the pipe on which it is mounted.



1,487,518. MANHOLE CLOSURE. EDGAR B. NICHOLS and HOMER C. BROWNLEE, Rochester, N. Y., assignors to The Pfaudler Company, Rochester, N. Y., a Corporation of New York. Filed June 12, 1922. Serial No. 567,529. 6 Claims. (Cl. 220—35.)

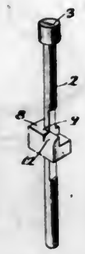
1. The combination with a container having a manhole, of a closure for said manhole comprising a support pivoted upon the container at one side of the opening

and adapted to swing transversely of the opening, an operating and clamping lever pivoted upon the support to swing axially of the manhole opening, a cover plate for the manhole pivoted upon the lever, a spring arranged between the support and lever for moving the latter on its pivot and means for securing the lever when the plate is in closed position.

1,487,519. FLEXIBLE SHAFT. JOHN K. OLSEN, Chicago, Ill., assignor to Stewart-Warner Speedometer Corporation, Chicago, Ill., a Corporation of Virginia. Filed June 12, 1922. Serial No. 567,512. 4 Claims. (Cl. 64—30.)

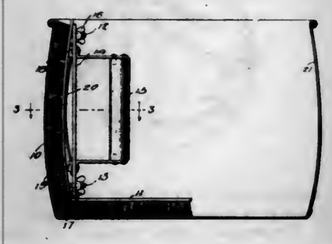
1. A flexible shaft construction comprising in combination with a flexible non-revolving casing and a flexible revolving shaft element therein, a two-part terminal for the latter, said two parts having sliding rotation-transmitting engagement with each other; the casing having a rigid unitary terminal ferrule which extends beyond the flexible portion of the casing; two journal bearing stops fixed and interspaced in said unitary extended part of the ferrule, the said outer part of the revolving shaft terminal protruding from said casing terminal through one of said stops and having a diametric enlargement or encompassing boss which is engaged in said interspace for longitudinally stopping the rotating shaft element.

1,487,520. FRAME OR HOLDER FOR DISPLAY MATTER. WILLIAM A. RINGLER, Philadelphia, Pa. Filed Mar. 14, 1923. Serial No. 624,885. 4 Claims. (Cl. 40—148.)



1. In a device of the character stated the combination of an easel the front of which is provided with oppositely located guides, with a chambered pocket having its front wall transparent and its rear wall provided with overlapping portions, the ends of the pocket being closed and the top and the bottom of the pocket being open, said pocket being adapted to slidably engage said guides and have its open sides closed thereby.

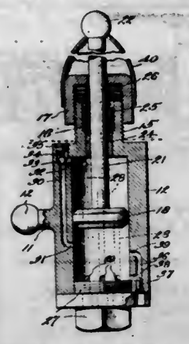
1,487,521. FIXATION OF NITROGEN BY MEANS OF TITANIUM AND ITS TRANSFORMATION INTO INDUSTRIAL PRODUCTS. PAUL ANDREU and RENÉ PAQUET, Paris, France. Filed Jan. 13, 1922. Serial No. 529,028. 3 Claims. (Cl. 23—13).



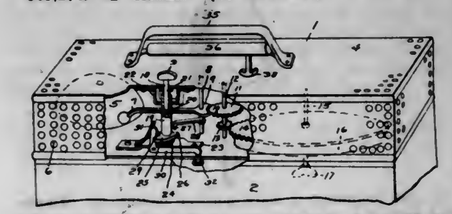
1. A process of producing titanium oxid with simultaneous recovery of nitrogen compounds which comprises mixing a titanium containing ore, with about an equal weight of carbonaceous material and amount of an alkali corresponding to about three fourths said weight of sodium carbonate, subjecting the mixture to an atmosphere containing free nitrogen at a temperature near 1850° C., and thereafter subjecting the resulting product to action of steam at near 1800° C., whereby nitrogen compounds are evolved, leaching the solid product with water whereby the soluble titanium compounds are separated from iron and other insoluble materials, subjecting the resulting solution to hydrolytic dissociation and calcining the product.

1,487,522. DOOR FASTENER. MARION A. ANDREWS, Yuma, Ariz. Filed Jan. 11, 1923. Serial No. 611,960. 3 Claims. (Cl. 292—175.)

1. In a closure fastening device, a stem having intermediate its length a block for preventing rotation of the stem in its mounting, said block having a latching part, and a keeper including a plate attachable to a supporting element, the keeper having a hook parallel to said plate end engageable by the said part.



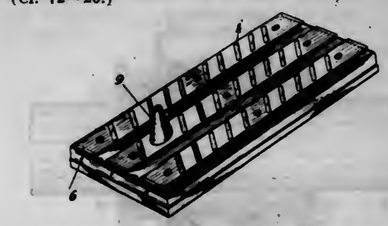
1,487,523. BRUSH. SIMON L. APATOW, New York, N. Y. Filed July 17, 1922. Serial No. 575,620. 3 Claims. (Cl. 15—164.)



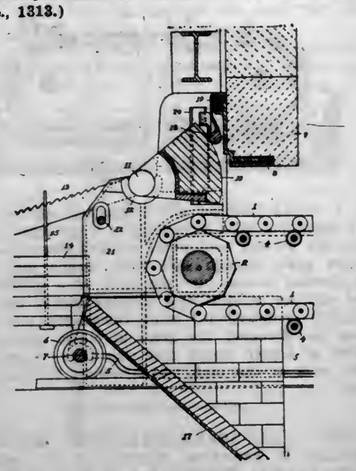
1. A cleaning tool, comprising a brush having a flexible back, a brush having a rigid back attached to the brush having a flexible back and extending at an angle thereto, a handle removably mounted on the flexible back, and a spring member positioned between the flexible brush back and the handle for forcing the brush into engagement with surfaces having different contours.

1,487,524. SHOCK ABSORBER. JOHN J. BAMBACH, Wilkes-Barre, Pa. Filed Feb. 12, 1923. Serial No. 618,649. 3 Claims. (Cl. 188—88.)

1. A shock absorber for vehicles comprising a fluid containing cylinder adapted to be secured to the axle, a piston operating therein and including a rod secured to the frame of the vehicle, said cylinder having longitudinal bores opening into the cylinder adjacent the ends thereof, whereby said fluid is transferred from one side of the piston to the other as the piston reciprocates, the corresponding lower extremities of certain of said bores lying substantially in the same plane, and the upper extremities of the latter mentioned bores being stepped from the top of the cylinder for the purpose specified.



1,487,525. ALARM MECHANISM. CLARENCE BASCOME, Cleveland, Ohio. Filed July 3, 1923. Serial No. 649,274. 2 Claims. (Cl. 116—99.)

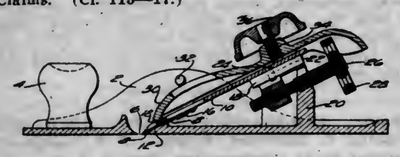


2. An alarm mechanism comprising an oscillating clapper, and means for operating the same, a locking member for the clapper, means for releasing the locking member to provide for intermittent operation of the clapper, a carrying member adapted to be held in inoperative position by the hand, said carrying member comprising a barrel, a contractile spring housed therein, and a plunger slidably mounted in the barrel and provided with a depending arm for engagement with said releasing means, the barrel being provided with a longitudinal slot through which said arm extends.

1,487,526. CONCRETE BUILDING BLOCK. WILLIAM M. BASHLIN, De Land, Fla. Filed Jan. 13, 1922, Serial No. 528,953. Renewed Sept. 28, 1923. 5 Claims. (Cl. 72—20.)

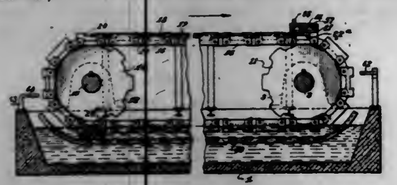
1. A concrete building unit comprising a flat block having a face thereof provided with longitudinal dovetail locking grooves extending below the level of the face of said block, and with locking recesses arranged angularly of said grooves, and a spacing boss projecting from the face of said block remote from the edges thereof.

1,487,527. ADJUSTABLE FIRE BRIDGE FOR FURNACES HAVING MOVABLE GRATES. ALFRED WILLIAM BENNIS, Bolton, England. Filed Jan. 27, 1917. Serial No. 144,994. 2 Claims. (Cl. 110—40.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



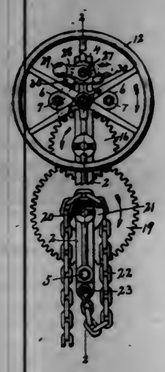
1. A furnace comprising walls, a moving grate extending through the back wall, an adjustable bridge, means guiding the bridge vertically, a swinging plate preventing leakage of air about said bridge, walls partially surrounding the rear portion of the grate and forming an approximately air-tight enclosure for the rear end of the furnace.

1,487,528. GRATE. LEO J. BINDER, Spokane, Wash. Filed Mar. 16, 1921. Serial No. 452,849. 3 Claims. (Cl. 126—168.)



3. In a grate bar, a pair of end members, a pair of side bars having hooked ends and channels formed intermediately of their ends, housings on said end members and pins in each housing for supporting said hooked ends, dove-tailed hooks on said end members, a plurality of grate sections having dove-tailed hook members interlocking with each other and with the hook members on said end members, a tapered wedge-shaped spacing member between the side bars received in the intermediate channels in said side bars; the grate sections having flanges overlapping said bars.

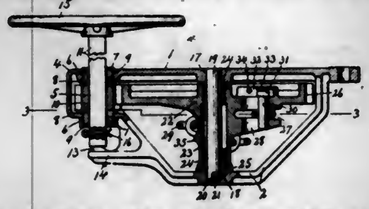
1,487,529. PLANE BLADE. WALDO H. BLACKMER, New York, N. Y., assignor to Tvedt-Smith Company, a Firm consisting of Thomas T. Tvedt and Channing Smith. Filed Dec. 5, 1922. Serial No. 605,026. 7 Claims. (Cl. 115—17.)



1. A plane having in combination a stock, a blade having projections at its ends extending at an angle to the plane of the blade and means for engaging said projections to locate the blade in operating position.

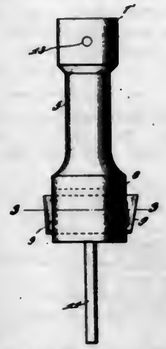
1,487,530. SPRING FORMING AND TEMPERING MACHINE. JESSE ALLEN BOWERS, Wilkes-Barre, Pa., and EDWARD JOHN BAUMGARTEN, Canton, Ohio. Filed Aug. 16, 1919. Serial No. 318,037. 8 Claims. (Cl. 266—6.)

1. A spring forming and tempering machine including a tempering bath, a plurality of metal forming means, means for moving said metal forming means in a non-circular path through said bath, means for lowering said forming means into the bath at a predetermined point and for raising said forming means out of the bath at a predetermined point, cams upon said forming means for clamping the same in closed position upon a strip of heated metal, and trip arms located at opposite ends of the tank and arranged to operate said cams.



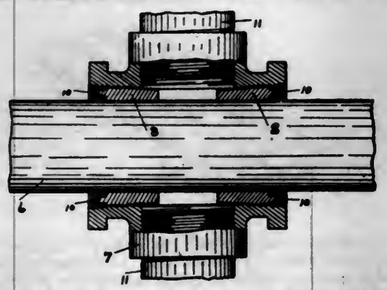
1,487,531. CAR-BRAKE-OPERATING MECHANISM. WILLIAM D. BREWSTER, Syracuse, N. Y., assignor to National Brake Company, Inc., Buffalo, N. Y., a Corporation of New York. Filed July 18, 1923. Serial No. 652,283. 3 Claims. (Cl. 74—119.)

1. In a brake operating mechanism for box cars, in combination with one of the end walls of the car, an upright frame secured to and between the inner and outer sides of said wall, a sprocket wheel journaled in said frame, an operating shaft journaled in the frame above the sprocket wheel and provided with a hand wheel, a sprocket chain passed over the sprocket wheel and having one end attached to the lower portion of the frame and its other end adapted to be connected to a brake mechanism, means for transmitting rotary motion from the operating shaft to the sprocket wheel, and means including a pawl for cooperating with a part of the last named means for holding the operating shaft against rotation.



1,487,532. CAR-BRAKE-OPERATING MECHANISM. WILLIAM D. BREWSTER, Syracuse, N. Y., assignor to National Brake Company, Inc., Buffalo, N. Y., a Corporation of New York. Filed Aug. 4, 1923. Serial No. 655,712. 4 Claims. (Cl. 74—119.)

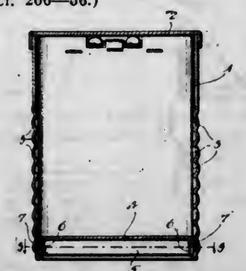
1. In a car brake operating mechanism, a main supporting frame, a drum journaled on the frame, means for rotating the drum including a vertical operating staff of the same angular cross section and size from end to



end, and a driving pinion on said staff, said frame being provided with an end thrust bearing engaging the lower end of the staff.

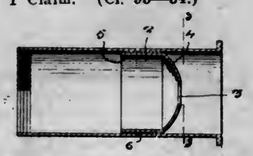
1,487,533. VALVE-SEATING TOOL. JAMES B. BRYAN, Hutchinson, Kans. Filed Feb. 7, 1923. Serial No. 617,558. 1 Claim. (Cl. 90—12.5.)

A tool including a body portion having an enlargement formed at one end thereof, the enlargement having an opening extending therethrough, overlapping laterally adjustable blades positioned within the opening and having their cutting edges extending beyond the periphery of the enlargement, a set screw extending into the enlargement and engaging one of the blades for forcing the blades into close engagement with each other and into engagement with one wall of the opening securing the blade within the openings and said set screw being disposed at an oblique angle with respect to the body portion of the tool.



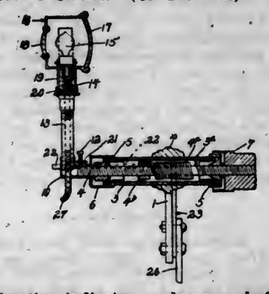
1,487,534. ADJUSTABLE BUSHING. ALPHEUS C. BUNTEN, Council Bluffs, Iowa, assignor of one-half to Margaret Beall Harding, Omaha, Nebr. Filed Feb. 23, 1922. Serial No. 538,509. 2 Claims. (Cl. 287—52.)

1. In an adjustable bushing for a pipe coupling and pipe, a tapered sleeve having a slot formed longitudinally therein to open on its ends and having lugs projecting



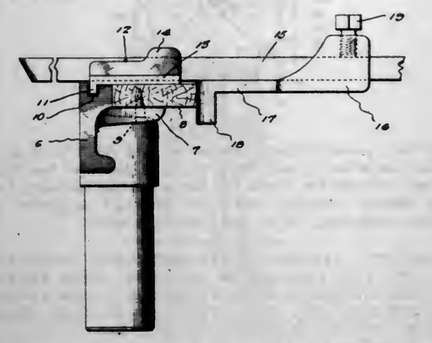
beyond its end of greater thickness having a lesser thickness than the wall of the sleeve, said sleeve having a threaded connection with the pipe coupling and being revoluble on the pipe for a movement inwardly of the pipe coupling.

1,487,535. TOBACCO CAN. JAMES A. BUREN, Tacoma, Wash. Filed Apr. 9, 1923. Serial No. 630,890. 1 Claim. (Cl. 206—56.)



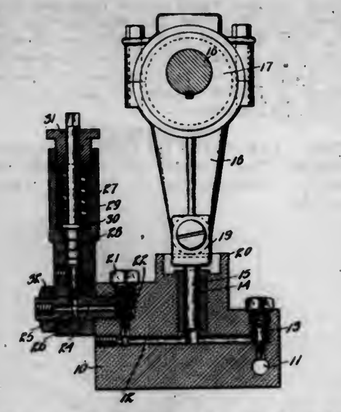
A container having in its walls opposed vertically disposed convolutions forming spaced internal recesses, a bottom arranged for vertical sliding movement in said container, said bottom having a downwardly projecting flange provided with oppositely disposed parallel slits extending upwardly from the lower edge of the flange and into said bottom, and tongues formed by bending the metal between said parallel slits, outwardly and then inwardly for close resilient engagement with the recesses formed by the convolutions in the walls of the container when the bottom is pushed upwardly therein.

1,487,536. LENS DIAPHRAGM. MERLE G. CAMPAU, Oconto, Nebr. Filed Apr. 29, 1921. Serial No. 465,413. 1 Claim. (Cl. 95—54.)



As a new article of manufacture, a contracting device for lens tubes comprising a cylindrical body, a concavo-convex front wall fixed to the said body and arranged with its convex side foremost and having a central opening, and a covering of friction creating and light excluding material carried by the body and adapted to retain the contracting device in a position in which it is placed in a lens tube.

1,487,537. DIRECTION INDICATOR. OLIVER C. CANNON, Wilkinsburg, Pa. Filed Sept. 11, 1920. Serial No. 409,631. 3 Claims. (Cl. 116—54.)

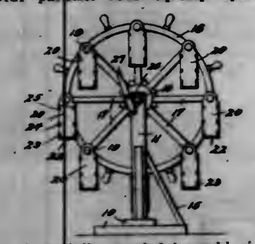


1. In a direction indicator, a sleeve, a shaft rotatably mounted through the sleeve, anti-friction bearings carried by said shaft and fitting into the ends of the sleeve, a coil spring mounted about the shaft within the sleeve and secured at one end to the shaft and at its other end to said sleeve, the spring acting to rock the shaft in one direction, a signal device connected to said shaft, and means for rocking the shaft in the other direction.

1,487,538. ATTACHMENT FOR WOOD-TURNING LATHES. JAMES CHADEK, Appleton, Wis. Filed June 23, 1922. Serial No. 570,387. 4 Claims. (Cl. 142—38.)

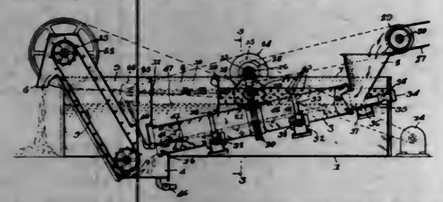
1. The combination of a horizontally disposed profile member, a chisel guide movable longitudinally of said member and provided with a chisel passage extending at right angles to the direction of movement thereof and a chisel freely movable in said passage and equipped with a follower engageable with said profile member.

1,487,539. OIL PUMP. CLARENCE W. CLEMENTZ, Jacksonville, Fla., assignor to Crankless Engine Company, Jacksonville, Fla., a Corporation of Florida. Filed Aug. 17, 1922. Serial No. 582,567. 4 Claims. (Cl. 103—11.)



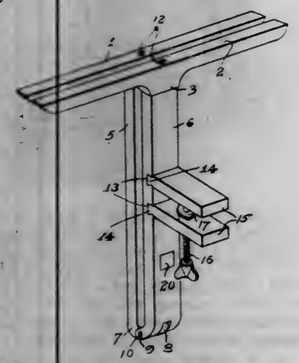
1. A fuel oil pump comprising a block, a plurality of pumps operating therein, a common inlet passage leading to said pumps, a common outlet passage receiving fuel pumped from said pumps, branch passages leading from said common outlet passage and a relief valve connected with each branch passage whereby the common outlet passage is interposed between the pumps and the said branch passage, substantially as set forth.

1,487,540. DISPLAY STAND FOR MERCHANDISE. THOMAS HOLLOWAY COKER, Hartsville, S. C. Filed June 16, 1922. Serial No. 568,748. 3 Claims. (Cl. 211—20.)



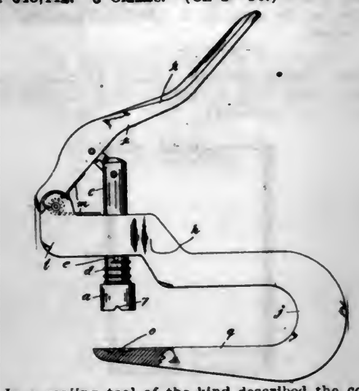
1. A display device of the class described comprising in combination, a stand having spaced upright supporting

members, a horizontal shaft carried by said members at their upper ends, a rotary carrier in the form of a single wheel mounted on said shaft midway between said supporting members and having a solid rim portion, a series of horizontal parallel rods equally spaced from each



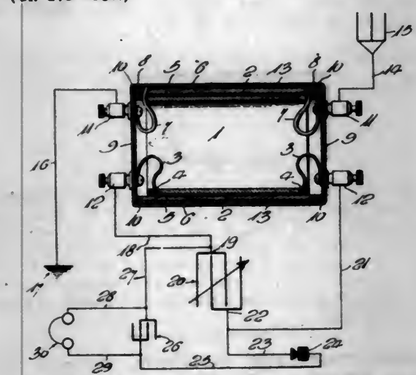
other circumferentially carried by said rim and projecting therefrom on both sides for equal distances less than that between the wheel and its supporting members and a display container below and pivotally supported by each projecting end of each rod of the series.

1,487,541. APPARATUS AND METHOD OF EXTRACTING THE PETROLEUM CONTENT FROM PETROLEUM-BEARING SAND OR SHALE. JESSE COOGAN, Salt Lake City, Utah. Filed Apr. 16, 1920. Serial No. 374,328. 8 Claims. (Cl. 196—25.)



2. The method of extracting bituminous material from sand and the like, which method comprises the agitation of such sand in water, the injection into said water during such agitation of a petroleum solvent, whereby the petroleum in said sand will be floated to the surface of the water, and the re-circulation of a portion of the petroleum so floated through the sand in the course of its continued agitation.

1,487,542. SAW CLAMP OR VISE. BENJAMIN F. COOK, Portland, Oreg. Filed Oct. 25, 1919, Serial No. 333,137. Renewed Aug. 11, 1923. 3 Claims. (Cl. 76—78.)

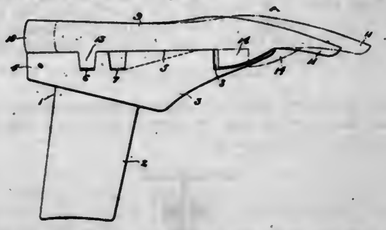


1. A clamping device of the class described having arms with conical projections at the free ends thereof, arms to swivel thereon, and screws passing through the arms into the projections to bind the heads and projections to prevent independent relative movement.

1,487,543. SHALING TOOL. THOMAS EDMUND DINGWALL, Hutton, England. Filed June 4, 1923. Serial No. 643,442. 6 Claims. (Cl. 1—50.)

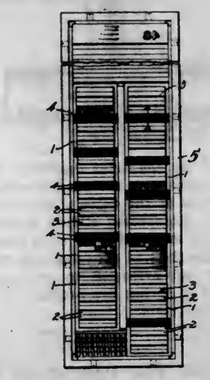
3. In a sealing tool of the kind described the combination with a co-operating anvil and a driver for driving and clinching a pronged sealing device, of a rotatable notched sleeve on the driver provided with notches for receiving the strings sealed by the seal attached by the sealer, said rotatable notched sleeve being mounted for recession on the leading end of the driver, and a spring for normally projecting said sleeve beyond the leading end of the driver.

1,487,544. TRANSFORMER FOR RADIO RECEIVING SETS. ROBERT MAXWELL DINSMORE, Little Falls, N. J. Filed Nov. 20, 1922. Serial No. 602,111. 4 Claims. (Cl. 175—360.)



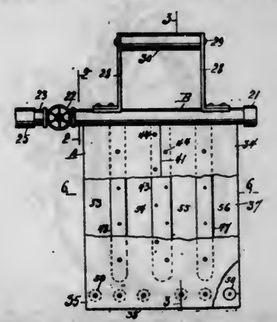
1. A transformer coil for radio receiving sets comprising an open ended supporting tube of insulating material, a winding disposed around the outside of said tube, a winding disposed upon the inside of said tube in inductive relation to the first mentioned winding, caps closing the ends of said tube, binding posts carried by said caps and located on the outer sides thereof, said binding posts having portions extending through said caps into the interior of said tube and having the terminals of said windings secured thereto, and a covering of insulating material disposed around the first mentioned winding upon said tube and sealing said caps onto the latter.

1,487,545. SHOE LAST. JOHN DOMINICK, Massillon, Ohio. Filed Apr. 12, 1922. Serial No. 551,793. 2 Claims. (Cl. 12—134.)



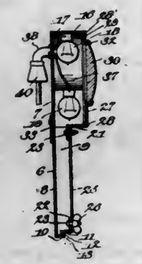
1. An adjustable shoe last including a base member having transverse grooves in its upper surface, a last

member having a transverse rib in its under surface arranged to selectively engage either of the grooves in



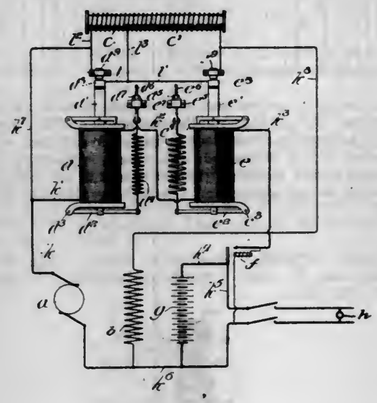
the base member, and depending lugs upon the last member for engaging the sides of the base member.

1,487,546. PRINTING FORM. RALPH J. DORION, Binghamton, N. Y. Filed May 1, 1923. Serial No. 636,010. 8 Claims. (Cl. 101—368.)



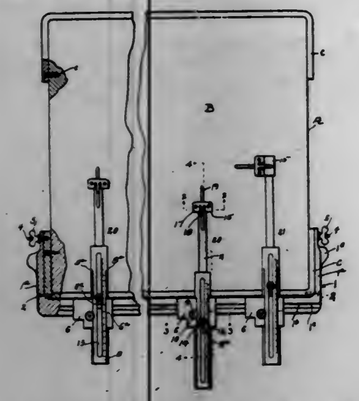
1. A printing form for factory tags comprising a plurality of type holding frames disposed in a row within a common chase, each of said frames containing coupon printing types consecutively arranged corresponding to successive operations in the manufacture of a shoe, and killer printing types arranged between all of the frames to prevent fraudulent alteration of the printing tag.

1,487,547. ICE-CUTTING DEVICE. PETER DOW, Lake Hopatcong, N. J., assignor of seventy-five per cent to Consumers Coal and Ice Company, Bayonne, N. J., a Corporation of New Jersey. Filed May 19, 1922. Serial No. 562,242. 7 Claims. (Cl. 62—112.)



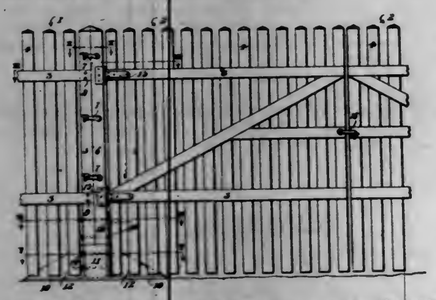
2. In a cutting device the combination of a supply pipe for a heated fluid, a hollow blade connected to said pipe, said blade having an outlet opening, the interior of the pipe and the interior of the blade forming connected passages for a fluid and means to insulate the walls of the blade substantially as described.

1,487,548. COMBINED AUTOMOBILE TAIL LIGHT AND LICENSE-PLATE ILLUMINATOR. JACQUES G. ESTERS, Brooklyn, N. Y. Filed Feb. 9, 1923. Serial No. 618,076. 6 Claims. (Cl. 40—133.)



1. A device of the class described comprising a casing, an opening in the bottom of said casing extending the length thereof, a colored back wall formed in said casing, a license plate removably supported by said casing in spaced relation to said colored back wall, cut-out indicia upon said license plate for co-action with the opening in said casing whereby to cause a draft of air to circulate through said opening and said cut-out indicia to automatically clean said colored back wall when a vehicle is in motion.

1,487,549. LIGHTING SYSTEM. STEPHEN W. EVERETT, Topeka, Kans. Filed Jan. 5, 1906. Serial No. 294,785. 57 Claims. (Cl. 171—229.)

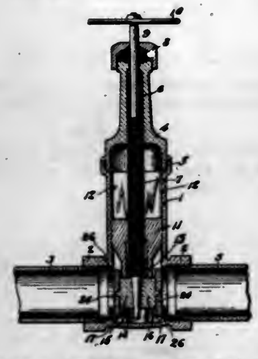


19. A system comprising a variable speed generator, a storage battery charged thereby, a vibratory switch, a winding in series with said battery to vibrate said switch and means controlled by said switch to regulate said generator.

1,487,550. FEED GAUGE. FRANK M. FAHLOR, Manorville, Pa. Filed Jan. 23, 1923. Serial No. 614,414. 7 Claims. (Cl. 101—415.)

1. In combination with a platen and tympan clamping bails carried thereby, a frame mounted on one of said bails and adjustable about an axis extending longitudinally of said bail, and gauges carried by said frame and adjustable longitudinally thereof.

1,487,551. FENCE AND GATE CONSTRUCTION. JOSEPH FAZEKAS, St. Paul, Minn. Filed Apr. 6, 1923. Serial No. 630,311. 3 Claims. (Cl. 39—87.)

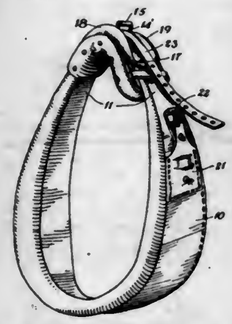


1. In a gate construction, a mounting post for the gate including a pair of rails rigidly assembled, one of the rails having a laterally offset block at its lower end upon which the other rail is supported, and a base supporting plate having a socket receiving the block, means for anchoring the block in the socket, and a gate hinged to one of the rails.

1,487,552. WHEEL. WALTER F. FRANZ, Utica, N. Y. Filed Jan. 25, 1922. Serial No. 531,694. 3 Claims. (Cl. 301—63.)

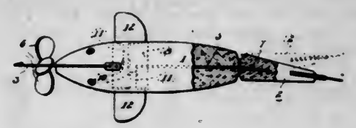
1. A wheel having opposed side plates comprising body portions and tire engaging portions, the said plates being bent inwardly intermediate the said portions to provide a pocket for the tire located between the said tire engaging portions, the angle between the body portion and the tire engaging portion of the plate being such that the pressure of the overlying load will force the tire engaging portions of the plate toward each other to securely clamp the tire in position.

1,487,553. GATE VALVE. JOHN H. FREEZE, North Canton, Ohio. Filed Aug. 7, 1922. Serial No. 580,078. 2 Claims. (Cl. 251—69.)



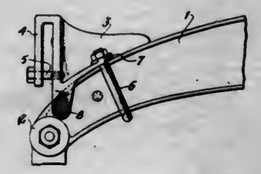
1. In a valve of the character described, the combination of a casing, a valve stem threaded therein, a nut upon the inner end portion of the valve stem, a pair of wedge blocks mounted for transverse sliding movement in the nut, a disk rotatably mounted upon each wedge block and a tapered pin within the nut engaging the wedge faces of the wedge blocks and arranged to be engaged by the threaded stem, and a spring for urging the tapered pin toward the threaded stem.

1,487,554. PROCESS FOR HARDENING STEEL ALLOYS. ADOLF FRY, Essen-Stadtwald, Germany, assignor to Fried. Krupp Aktiengesellschaft, Essen-on-the-Ruhr, Germany. Filed Oct. 26, 1921. Serial No. 510,623. 2 Claims. (Cl. 148—14.)



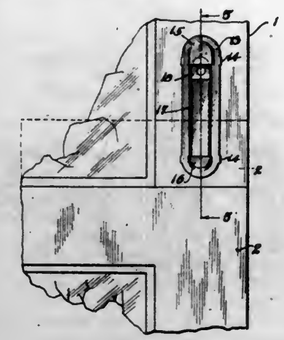
1. Process for hardening a steel alloy, consisting in subjecting the alloy to nitrogenization at a temperature below the temperature of peritectorial transformation.

1,487,555. HORSE COLLAR. ALBERT GERMUNDSON, Elbow Lake, Minn. Filed Apr. 17, 1923. Serial No. 632,737. 2 Claims. (Cl. 54—67.)



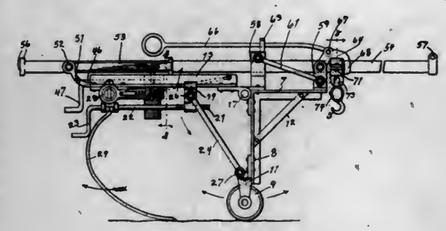
1. In a collar of the class described, a collar cap comprising a metallic plate curved longitudinally to fit the upper part of the collar and curved transversely to provide front and rear flange portions, a pad beneath said plate and shaped to conform thereto and to project peripherally beyond the plate, means to secure the pad fixedly to the front and rear edges of said plate, the curvature transversely of the plate and pad being arranged to prevent contact of the securing means with the neck of an animal, a staple projecting upwardly from the center of the plate and adapted to lie between the terminal ends of the collar, a top pad having an opening therein fitted on top of said collar and bridging the joint between the free ends of the collar, said staple passing through said opening, means for securing the collar ends and top cap and top pad together including a strip passing through said staple, said strip being secured to the collar on one side of the terminal ends of the collar, and means for connecting the said strip to the collar on the opposite side of the terminal ends.

1,487,556. ARTIFICIAL BAIT. BERT G. GOBLE, Tulsa, Okla. Continuation in part of application Serial No. 561,203, filed May 15, 1922. This application filed Dec. 12, 1922. Serial No. 606,533. 11 Claims. (Cl. 43—46.)



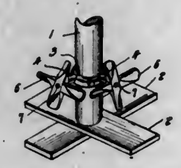
1. In an artificial bait, the combination with a body portion provided with an articulated member, of a power shaft journaled in said body portion and operatively connected to said articulated member to cause the latter to describe an orbital path lying vertical and transversely of the bait, upon rotation of the shaft, a water wheel secured on the shaft and operating to revolve it when immersed in a current of water or drawn through it, said body portion and articulated member being formed in the general outline of a fish with the articulated member constituting the tail portion thereof, said shaft embodying a rear end portion projecting beyond the rear end of the body portion at an angle to the portion of the shaft journaled in said body portion and fixed to the articulated member.

1,487,557. AUTOMOBILE BUFFER BRACKET. OSCAR H. GOETZ, Bridgeport, Conn., assignor to American Chain Company, Inc., a Corporation of New York. Filed Aug. 30, 1922. Serial No. 585,144. 4 Claims. (Cl. 293—55.)



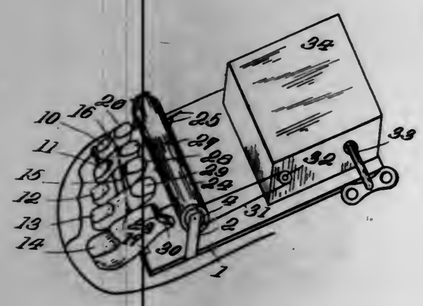
3. In an automobile buffer supporting bracket of the type adapted to be clamped on the upper surface of the frame horn, a pair of ears depending on each side of the frame and adapted to contact with an abutting portion of said horn.

1,487,558. SASH LOCK. FRANK C. GORHAM, Los Angeles, Calif. Filed Jan. 8, 1923. Serial No. 611,392. 12 Claims. (Cl. 292—343.)



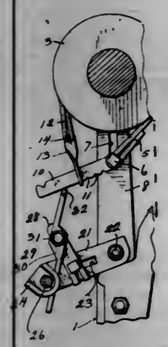
10. In window sash locks, the combination of a locking wedge having extending tongues, and means adapted to be anchored to a window sash for engaging the tongues and retaining the wedge in normally operative position, the said wedge being movable to and from a position in engagement with the retaining means.

1,487,559. BRUSH RAKE. GOVERT C. GROENEVELD, Hanford, Calif. Filed July 29, 1922. Serial No. 578,445. 4 Claims. (Cl. 56—387.)



1. In a device of the character described, a frame, ground engaging wheels mounted therebelow, T shaped members pivoted to said frame, rake teeth pivotally mounted on said T shaped members and at a point remote from said frame, and means for varying the pivotal connection between said frame and said T shaped member.

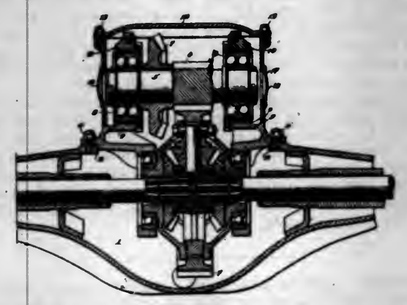
1,487,560. CHURN DASHER. JAMES B. GURNEY, Collinsville, Ala. Filed Jan. 2, 1923. Serial No. 610,289. 4 Claims. (Cl. 259—142.)



1. A dasher comprising a spider including a hub, arms radiating from said hub and having their outer ends inclined upwardly in converging relation, and a rotary agitator applied to the outer end of each of the arms and disposed to converge upwardly and flare downwardly.

1,487,561. MECHANICAL DEMONSTRATING DEVICE. PETER R. HAMMER, Dallas, Tex. Filed July 30, 1923. Serial No. 654,791. 9 Claims. (Cl. 35—16.)

1. A mechanical demonstrating device comprising a support a digit movably mounted thereon and constructed and arranged to simulate a human digit, and means to impart a wriggling movement to said digit.

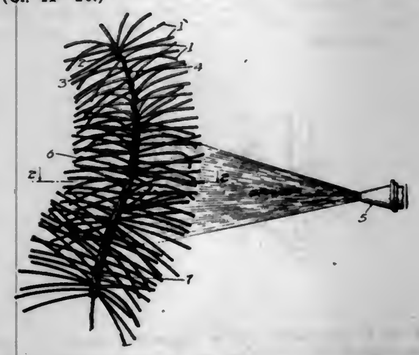


1,487,562. LET-OFF MOTION FOR LOOMS. LENNARD L. HAWKINS, Greenville, S. C., assignor of one-half to Charles T. Hughes, Greenville, S. C. Filed Oct. 7, 1922. Serial No. 592,984. 3 Claims. (Cl. 139—109.)

1. A let-off for looms, the combination with the yarn roller and whip roller, of a pulley on one end of the yarn roller, a brake band engaged about the pulley and having one end anchored, a pivoted lever connected with the other end of the band, a tensioned spring applying pressure to said lever for causing the band to grip the pulley, a stand mounted on the frame of the loom and supporting the whip roller, the stand being formed with a slot, an arm pivoted on the stand and having its upper end engaging against the underside of said lever and having its other end extending through said slot and engaging the whip roller.

1,487,563. DOUBLE-REDUCTION AXLE FOR MOTOR TRUCKS. WILLIAM G. HAWLEY, Elmira, N. Y. Filed Oct. 12, 1922. Serial No. 594,143. 6 Claims. (Cl. 74—99.)

1. A double reduction gear housing for driving axles of motor vehicles comprising the main axle housing, a jack-shaft housing secured thereto and having jack-shaft bearings and side orifices aligning with the jack-shaft

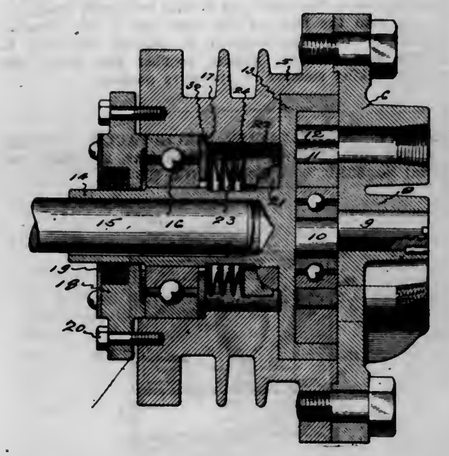


bearings for the introduction of the boring bar, said orifices being permanently sealed after the boring with suitable plugs.

1,487,564. AUTOMOBILE LUGGAGE CARRIER. ALFRED JOHN HAYDEN, Daytona Beach, Fla. Filed Apr. 21, 1923. Serial No. 633,733. 1 Claim. (Cl. 280—164.)

In combination, a vehicle having a running board supported upon haugers, a retaining wall hinged to said hangers, spring means to hold the retaining wall in vertical position at the edge of the running board, the upper portion of said hanger being cut away to allow the spring means to exert pressure upon the hinge portion when the retaining wall occupies both vertical and horizontal positions.

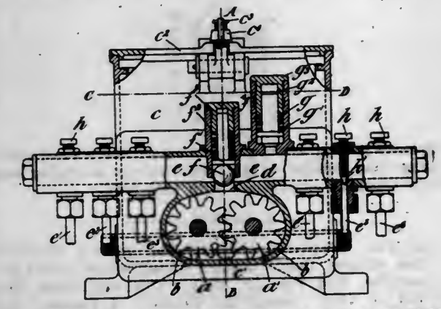
1,487,565. TINSEL. HUGO HELLER, Milwaukee, Wis. Filed Feb. 23, 1923. Serial No. 620,668. 5 Claims. (Cl. 41—10.)



1. A tinsel having a central twisted stem and a plurality of metallic strips radiating therefrom, a portion of each of said strips being cemented to the central stem.

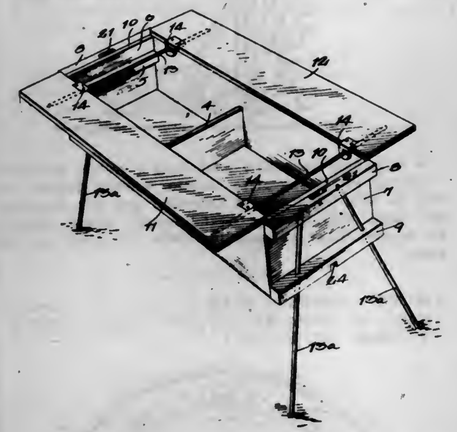
1,487,566. MOUTHPIECE FOR MUSICAL INSTRUMENTS. H BENNE HENTON, Philadelphia, Pa. Filed July 7, 1922. Serial No. 573,262. 1 Claim. (Cl. 84—383.)

A mouthpiece for musical instruments comprising a body formed with a facing surface for the reed, the opposite side of said body being formed with a slope terminating at the tip of the body, said slope being dished longitudinally on a curve extending toward said facing surface and receding therefrom toward the tip to form a relatively thick tip portion.



1,487,567. PACKING MEANS FOR ROTARY PUMPS. EBENEZER HILL, South Norwalk, Conn., assignor to The Hill Compressor & Pump Company, New York, N. Y., a Corporation of Delaware. Filed May 1, 1923. Serial No. 635,852. 8 Claims. (Cl. 230—30.)

1. A rotary pump comprising a casing having a pumping chamber and a leakage cavity communicating with the pumping chamber, a rotor rotatably fitting said chamber and closing one end of the leakage cavity, a bearing for the rotor exterior to the pumping chamber and leakage cavity, and an expansible packing interposed and forming a wall between the leakage cavity and the bearing whereby fluid pressure leaking from the pumping chamber to the leakage cavity is prevented from escaping through the bearing and is caused to exert pressure against the back of the rotor.

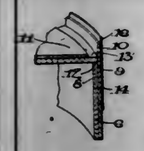


1,487,568. FORCE-FEED LUBRICATOR. ALFRED EDWARD HOWELL, Newcastle-upon-Tyne, England. Filed Apr. 26, 1921. Serial No. 464,678. 1 Claim. (Cl. 184—27.)

A lubricator construction of the class described including a casing constituting an oil reservoir, the bottom of which casing is provided with an opening, a gear pump housing communicating with the reservoir through said opening, a gear pump arranged within the housing, a distributing manifold arranged above the gear pump housing and communicating therewith through an opening, a sleeve piercing said manifold adjacent the opening connecting the same with the gear pump housing, a ball valve guided in the end of said sleeve, a spring within the sleeve for normally maintaining said ball seated over

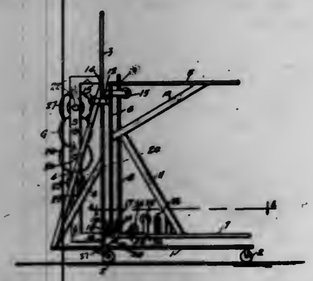
the opening between the gear pump and the manifold, and a relief valve carried by and communicating with said manifold.

1,487,569. COMBINED LUNCH BOX AND PORTABLE TABLE. COLUMBUS I. HUDDLE, Porterville, Calif. Filed Sept. 21, 1922. Serial No. 589,694. 5 Claims. (Cl. 190—12.)



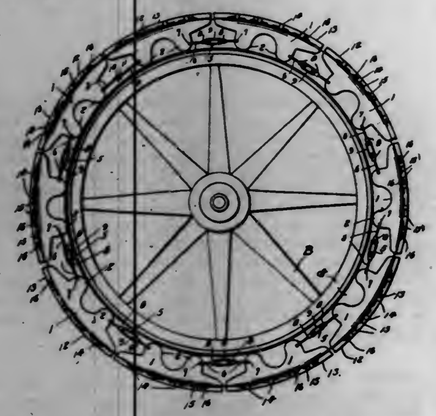
2. A combined lunch box and table comprising an open ended container, a pair of removably mounted table leaves adapted to be supported laterally and horizontally from a longitudinal side of the container, said leaves adapted to form a closure for the open end of the container when said container is used as a lunch box, a cover for the open end of the container and cooperating with the leaves when laterally supported to form a table top, means for supporting the leaves in a laterally extended position, and legs removably connected with the container for supporting the container and leaves in an elevated position, the cover being adapted to embrace the leaves when said leaves are positioned as a closure for the container.

1,487,570. CONTAINER. EDWIN F. HULBERT, Milwaukee, Wis., assignor to Master Package Corporation, Owen, Wis., a Corporation of Wisconsin. Filed Dec. 29, 1922. Serial No. 609,686. 5 Claims. (Cl. 229—5.6.)



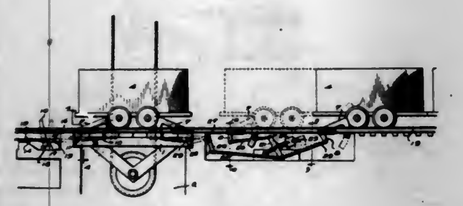
1. In a container, the combination, with a circular head, of siding including concentric inner and outer rings secured together, the outer ring extending beyond

the inner ring to form a chime and the outer edge of the inner ring forming a seat for the head whose pe-



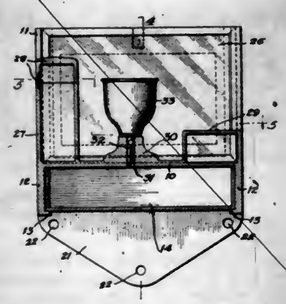
ripheral portion fits within said chime, and a sheet metal chime ring clamped to the outer ring and extending over into clamping engagement with said head.

1,487,571. LOADING APPARATUS. SAMUEL HURWITZ, Los Angeles, Calif. Refiling of application Serial No. 446,789, filed Feb. 21, 1921. This application filed Oct. 4, 1922. Serial No. 592,387. 6 Claims. (Cl. 187—11.)



4. A loading apparatus comprising a frame, platforms vertically movable relative thereto, winding means carried by said frame, and a reduction gear for operating the same, said winding means having cables adapted to engage either of said platforms for elevating the same.

1,487,572. ANTISKID DEVICE. ALLEN B. HUSELTON, Butler, Pa. Filed Mar. 20, 1923. Serial No. 626,343. 2 Claims. (Cl. 152—14.)

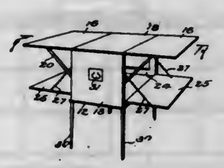


2. A traction device including a shoe for application against a tire, a calk on said shoe, said calk having a main bar and branches extending therefrom, webs integral with the main bar and branches, and fastening means passing through the webs and the shoe.

1,487,573. MINE-CAR-LOADING DEVICE. HARRY INGRAM, Marion, Ill. Filed Feb. 9, 1922. Serial No. 535,375. 4 Claims. (Cl. 214—126.)

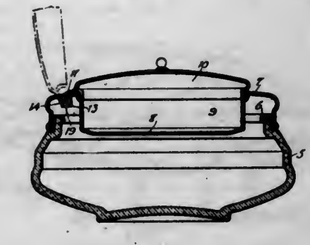
1. A mine car loader comprising a pair of pivotally mounted locking members arranged adjacent the bottom of a mine cage shaft and spaced from each other, means for normally retaining the adjacent member in locked position and the remote member in released position, a pivoted lever connected to each of said locking members, a bell crank lever having one end operatively connected to said first lever, the other end of said bell crank lever projecting into the path of the cage, and a trip member carried by the cage adapted to depress said arm to release said adjacent locking member and move said remote locking member to operative position.

1,487,574. COMBINATION RECEPTACLE. WALTER SCOTT JORDAN, Alvo, Nebr. Filed Mar. 27, 1923. Serial No. 628,088. 4 Claims. (Cl. 206—1.)



1. In a receptacle of the character set forth, a body defining a drawer slide, a drawer mounted therein, an upstanding case having a hinged closure for the reception of cigarettes, a horizontal compartment for the reception of a match box, an upstanding bearing boss, a removable ash tray, means on the ash tray for frictionally associating the same with the bearing boss, and a vertical wall having guides in its opposite faces for holding a mirror and for receiving a license card.

1,487,575. COMBINED CARRYING CASE AND ARTICLE OF FURNITURE. ALBERT F. KANTHACK, St. Paul, Minn. Filed Oct. 18, 1922. Serial No. 595,384. 4 Claims. (Cl. 190—12.)

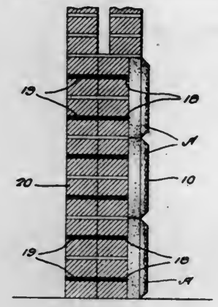


1. A combined carrying case and article of furniture comprising a box-like body having open sides and an open upper end, a top hinged to said body for covering the upper end, inner and outer side walls hinged to

said body and adapted to overlap one another for closing the open side, the outer side walls being hinged for upward swinging movement to a horizontal plane in alignment with the top and the inner side walls being hinged

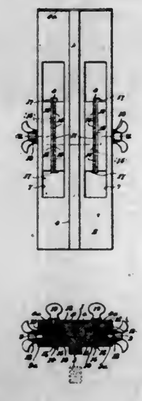
for downward swinging movement to a horizontal plane in alignment with the bottom, and independent means for respectively retaining said inner and outer side walls in their opened positions.

1,487,576. TOILET ARTICLE. WILLIAM G. KENDALL, Newark, N. J. Filed Mar. 1, 1923. Serial No. 622,175. 2 Claims. (Cl. 215—6.



1. In combination with a container and its cover, a second container formed in the cover, a plurality of depending ears projecting inwardly of said cover, a pintle carried thereby, and a hinged cover for said second container, said hinged cover having projecting portions adapted to be rolled past the pintle to form means for pivotally mounting said hinged cover.

1,487,577. SLIDING-PRONG BUCKLE. ALLEN H. KERNGOOD, Baltimore, Md., assignor to Alma Manufacturing Company of Baltimore City, Baltimore, Md., a Corporation of Maryland. Filed Nov. 22, 1923. Serial No. 676,318. 5 Claims. (Cl. 24—179.)



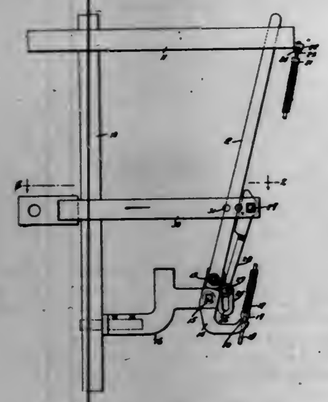
1. A sliding prong buckle, having a frame constructed with a cross bar, and a pronged tongue made as a one piece structure, rigid throughout and mounted to slide back and forth on said cross bar in a right line, means to connect the cross bar and tongue and maintain them in operative position, and means mounted in the frame and engaging the tongue to impart thereto the right line movement back and forth in the frame.

1,487,578. BLOCK. EMERSON H. KIRKPATRICK, Fort Collins, Colo. Filed Apr. 14, 1922. Serial No. 552,492. 1 Claim. (Cl. 72—19.)

The combination with a building block having a crushed rock veneer face, of spaced reinforcing elements embedded in the block and extending longitudinally thereof, one of the elements being formed with eyes which project beyond one face of the block for a slight distance and tie rods provided with eyes coacting with the first mentioned eyes for holding the blocks in walled formation.

1,487,579. GAUGE. JOSEPH KURCZEWSKI, Detroit, Mich. Filed May 29, 1923. Serial No. 642,250. 6 Claims. (Cl. 33—197.)

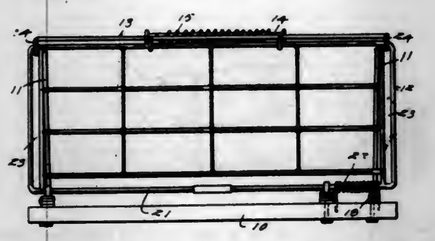
1. In a gauge of the type described, a frame block having spaced pockets therein, a gauge block adjustably mounted in each pocket, each gauge block having a longitudinal groove in the exposed side thereof, marking spurs removably mounted in the block groove, a retaining strip for the spurs and means for clamping the spurs and retaining strip in the block groove.



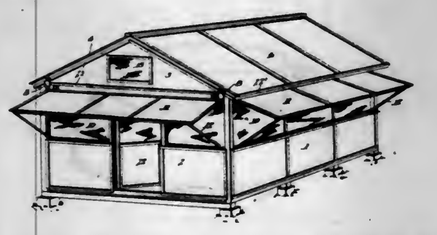
1,487,580. PEN AND PENCIL CASE. FRANK KURGAN, Holyoke, Mass. Filed Oct. 19, 1922. Serial No. 595,567. 1 Claim. (Cl. 120—23.)

In a device of the class described, a body portion having a receptacle therein, a bearing pin carried by the body portion, a cover for the receptacle having a slotted opening therein receiving the pin, a shoulder at one end

of the body portion adapted to be engaged by the free end of the cover, said shoulder having a socket therein and a lug carried by the end of the cover adapted to be received in the socket, the underside of the cover having a cut-away portion adjacent its pivoted end with angularly disposed shoulders at one end of the cut-away portion, and a lever plate pivoted on the bearing pin within the cut-away portion of the cover and having angularly disposed end walls engaging the shoulders of the cut-away portion to lock the cover on the body portion against sliding movements.

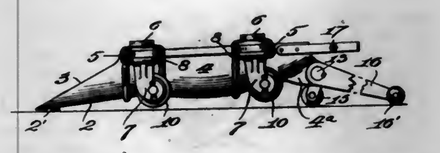


1,487,581. PICKER MOTION. ADOLPHUS H. LANDRY, Lowell, Mass. Filed Oct. 12, 1921. Serial No. 507,227. 1 Claim. (Cl. 139—152.)



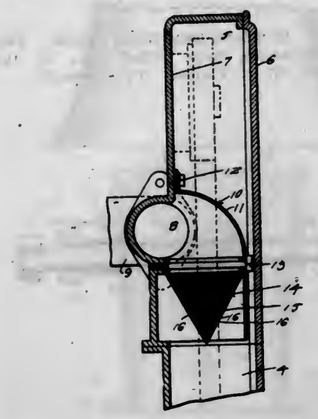
A picker motion including a picker staff, a pivotally mounted holder to which the picker staff is secured, a rod having support at its lower end on said holder, means to secure the upper end of the rod to a lay, a lever adjustably fulcrumed and disposed alongside of said picker staff, and means to actuate said lever.

1,487,582. FOLDING CRATE. WILLIAM O. LATTA and JOHN A. PLUNK, Michie, Tenn. Filed Oct. 3, 1922. Serial No. 592,051. 7 Claims. (Cl. 220—6.)



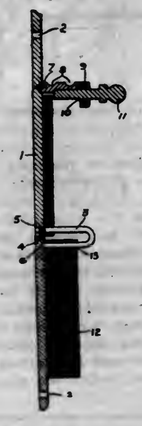
1. A folding crate having a base, inwardly foldable end and side walls and a top wall carried by the side walls and having an interlocking sliding connection at its extremities with said side walls, the side walls having outwardly swinging or expanding actuating springs.

1,487,583. PORTABLE BUILDING. ANDREW LOEFFLER, Cleveland, Ohio. Filed Aug. 23, 1921. Serial No. 494,564. 2 Claims. (Cl. 20—2.)



1. A portable dwelling comprising a plurality of relatively connected sections presenting respectively a floor, side and end sections, gables and roof, the said side and end sections presenting floor-attaching elements at their lower edges and roof-attaching elements at their upper edges, the said roof-attaching elements of the said end sections presenting gable-receiving spaces for receiving and maintaining the said gable sections in position between the roof and end sections.

1,487,584. AUTO TRUCK OR DOLLY. THOMAS J. McCARTHY, Los Angeles, Calif. Filed Apr. 15, 1922. Serial No. 553,181. 1 Claim. (Cl. 280—44.)

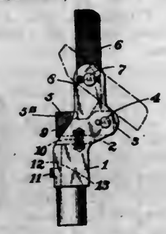


A dolly adapted to receive and support a wheel of a vehicle and being provided at one end with an entrance runway inclining downwardly at the front, a crank shaft journaled across the opposite end of the dolly and provided with crank arms extending rearwardly and provided with an intermediate crank or cam element adapted to be shifted down into dolly elevating position, the said pads and said element forming non-rolling supports to prevent the dolly rolling when the wheel is run onto the dolly.

1,487,585. OIL-VAPOR BAFFLE BOX. THOMAS M. McKELVY, Fresno, Calif. Filed Apr. 10, 1922. Serial No. 551,430. 3 Claims. (Cl. 183—1.)

2. In combination with a chamber having a passageway in communication with the fuel line of an internal combustion engine and open at one side thereof, an oil trap means consisting of a screen disposed in the path of travel of oil vapor to said passageway, a deflector plate extending upwardly from the screen adjacent one side thereof and over the screen and terminating adjacent the plane of the other side of and above the screen to deflect material to said passageway, and fastening means extending through the deflector and screen into the chamber and adjacent the base of said passageway.

1,487,586. MEMORANDUM-PAD HOLDER. NICOL MACNICOL, Kamloops, British Columbia, Canada. Filed June 6, 1923. Serial No. 643,761. 1. Claim. (Cl. 40—119.)

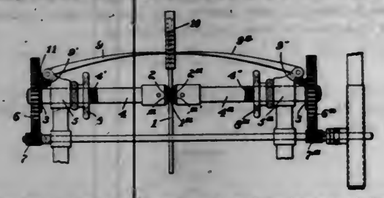


A combined memorandum pad and pencil support comprising a base plate, means for supporting the pad on the base plate in such manner that each leaf of the pad may be separately swung from a depending to a reverse position, and means for retaining the leaves in the last mentioned position comprising a pencil supporting shelf projecting outwardly from the base plate at a suitable point above the depending leaves, a plate secured to and depending below the outer edge of said shelf, said plate being formed with an opening aligned with a guide groove provided in the underside of the shelf, a plug arranged to slide in said groove and through said opening, and a knob at the outer end of said plug.

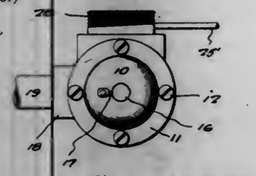
1,487,587. STRAW CUTTER. JOSEPH MELEG, Beaver Falls, Pa. Filed Sept. 21, 1922. Serial No. 589,605. 2 Claims. (Cl. 30—8.)

1. In a foot rest for tools, the combination with a handle shank having a slot extending longitudinally thereof, a plurality of laterally extending openings with recesses at their outer ends communicating with one side of said slot, and a plurality of inclined openings with recesses at their outer ends communicating with the other side of said slot and in staggered relation to the first mentioned openings, of a foot rest consisting of a horizontal portion and a vertical leg formed integrally therewith, a headed bolt carried by the horizontal portion adapted to selectively engage the inclined openings and a headed bolt carried by the vertical leg adapted for selectively engaging the laterally extending openings for holding said foot rest in adjusted positions in respect to the length of the shank.

1,487,588. ROTARY BACK-UP POST. WILLIAM J. MILLER, Sulphur, La., assignor to C. E. Reed, Houston, Tex. Filed Jan. 3, 1922. Serial No. 526,615. 4 Claims. (Cl. 255—35.)



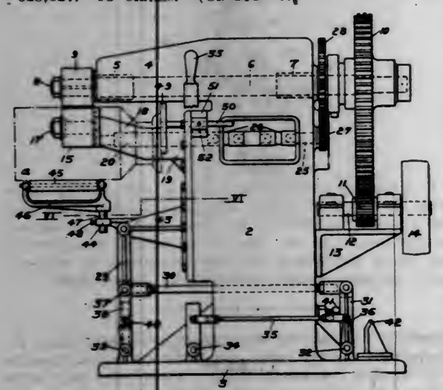
1. A back-up post for the rotary of well drilling apparatus comprising a main portion furnishing a support and a bearing member at the upper port of said support pivoted thereto to one side of the vertical axis thereof, and means for holding the bearing member in substantially upright position, substantially as described.



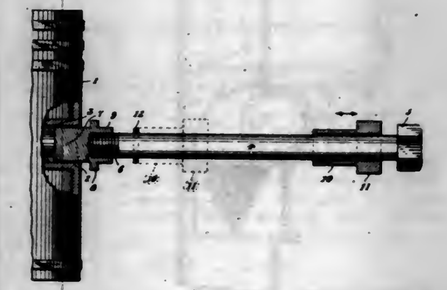
1,487,589. MACHINE FOR MILLING TOOTH SOCKETS IN SAW BLADES. JAMES H. MINER and THOMAS C. MUSTIN, Meridian, Miss. Filed July 31, 1920. Serial No. 400,344. 5 Claims. (Cl. 90—14.)

1. In a milling machine for milling sockets in saw blades to receive insertable or removable teeth, the com-

bination with a pair of lengthwise movable shafts and milling cutters carried thereby of indicator means associated with each shaft and arranged to be moved by the lengthwise movement of such shaft.

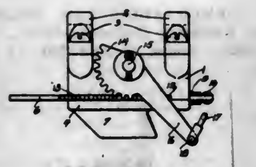


1,487,590. GAS-ENGINE ATTACHMENT. GUY R. MOATS and CLAUDE B. REXROAD, Harrisville, W. Va. Filed Feb. 28, 1923. Serial No. 621,873. 3 Claims. (Cl. 48—180.)



2. In a gas and air mixer for gas engines, a mixing chamber having a port connected with the gas intake of a gas engine, a gas inlet providing a valve seat in the chamber below the port, a frusto-conical valve on the seat having a disk head and a kerfed stem, and whose combined weight normally retains the valve seated, guide means for the valve stem, spring means in the path of contact with the stem for exerting an impelling force thereagainst to quickly seat the valve when the latter has been moved too far off of its seat by the suction of the engine, an air inlet sleeve having an inwardly flared mouth disposed below the disk head of the valve to direct air currents through the passage therebetween into the mixing chamber, and likewise to direct such air currents against the under face of the disk head of the valve, a choke valve in the sleeve, operating means therefor, and means holding the sleeve adjusted with respect to the valve head.

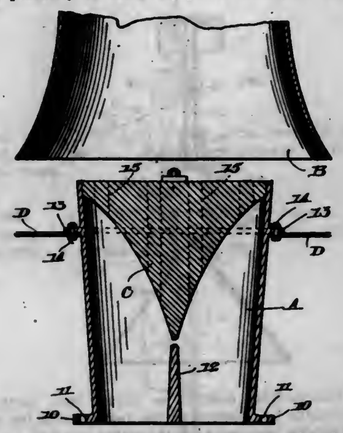
1,487,591. EMBOSSING MACHINE FOR MILK CANS. JOHN NAGY, West View, Pa., assignor to Pittsburgh Stamp Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Mar. 16, 1923. Serial No. 625,627. 13 Claims. (Cl. 101—7.)



1. An embossing machine for cans having a pair of coacting cylindrical stamping rollers, means for continuously maintaining them in driving connection and in parallelism, and means for adjusting one roller with relation to the other.

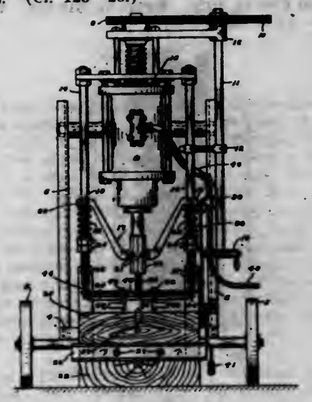
1,487,592. BUSHING-REMOVING TOOL. LOUIS NOVOTNY, Valparaiso, Nebr. Filed June 14, 1923. Serial No. 645,337. 3 Claims. (Cl. 29—88.2.)

1. In a bushing removing tool for pistons, a rod having an integral head at one end, a removable head having an outwardly directed annular flange carried by the other end of the rod, a transverse pin carried by the rod adjacent the removable head and a block slidable on the rod between the integral head and pin to forcefully strike the pin and move the removable head into engagement with a bushing.



1,487,593. CUT-OUT VALVE. LESTER P. PATTON, Bucyrus, Ohio. Filed Apr. 25, 1923. Serial No. 634,583. 2 Claims. (Cl. 251—114.)

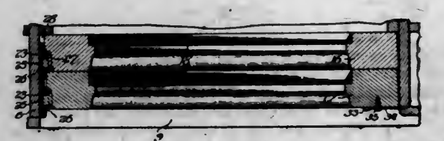
1. In a device of the character described, a body adapted to be secured about an exhaust pipe and provided with an outlet opening through its bottom wall, a bottom plate secured on the body, and provided with an outlet opening in alignment with the opening through the bottom wall of the body, a valve plate slidable between the body and the botom plate, said valve plate being provided with an opening, means for normally holding the valve plate in position with the opening thereof out of alignment with the opening through the bottom wall of the body, a rack carried by the valve plate, and a gear rockably mounted on the body and meshing with said rack for moving the valve plate into position to bring the opening thereof into alignment with the openings through the bottom plate and the bottom wall of the body when the gear is rocked in one direction.



1,487,594. EXHAUST SPREADER FOR LOCOMOTIVE ENGINES. JOHN VINCENT PAUL, Verdun, Quebec, and CHARLES ALAN NORTON, Sunny Brae, New Brunswick, Canada. Filed Sept. 13, 1922. Serial No. 588,018. 2 Claims. (Cl. 162—4.)

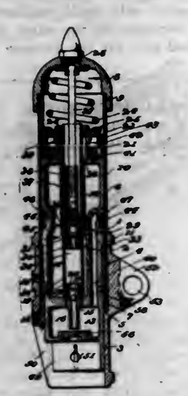
1. An exhaust steam spreader for locomotive engines comprising an exhaust pipe, a bridge wall, a conical spreading member extending from above the bridge having its peripheral edge fitting snugly against the wall of the exhaust pipe, the conical surface of the spreader being concave in cross section, the spreader being formed with a plurality of radiating ports, each port increasing

in width from the centre outwardly, a pair of ears on the exhaust pipe, and lugs on the spreader engaging the ears.



1,487,595. MACHINE FOR SPLITTING OR BREAKING PAVING BLOCKS. JOSEPH PETERMANN, Philadelphia, Pa. Filed Sept. 17, 1921. Serial No. 501,236. 3 Claims. (Cl. 125—23.)

1. In a machine for splitting or breaking paving blocks the combination with a vehicular underframe and a power actuated tool adjustably mounted thereon, of an anvil adjustably connected thereto, a notched wedge shaped member projecting above and seated in a pocket in the upper face of said anvil in direct alignment with the power actuated tool, a sled for supporting said anvil removably anchored to the vehicle underframe, a V-shaped yoke having lateral flanges through which pass the power actuated tool guide rods, compression springs between said lateral flanges and lock nuts threaded on the guide rods, said yoke being secured to the tool holder whereby the latter is prevented from turning, and means for varying the stroke of the tool.

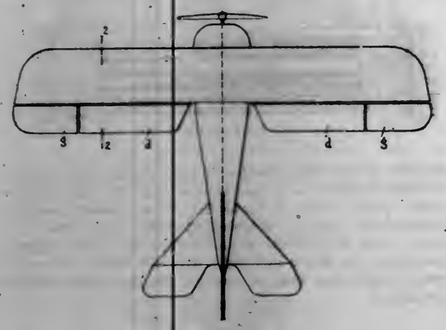


1,487,596. WINDOW MOUNTING. PHILIP G. PFEIL, Chicago, Ill. Filed June 16, 1921. Serial No. 477,884. 2 Claims. (Cl. 20—50.)

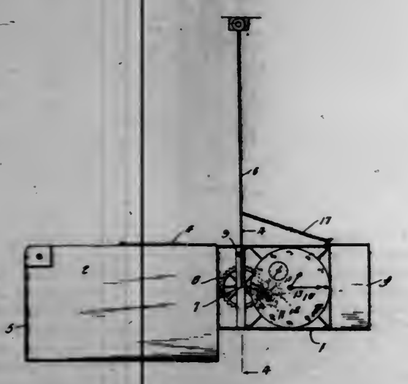
1. The combination of a window frame provided with an outer window stop only, the jambs of the frame from said outer stop to the inner edge of the frame being devoid of stops, a pair of upright guideways fixed to one side of said frame, a slide working in each guideway, a pair of sashes slidably disposed in contiguous relation in said frame and hinged at their extreme outer edges to said slides, respectively, the inner sash when in position for normal sliding movement maintaining the outer sash in engagement with said stop, window weights

attached to the hinged sides of said sashes and adapted to counterbalance said sashes, the opposite sides of the sashes being devoid of connection to any counterbalance weights and adapted to swing inwardly away from the frame, and adjustable means detachably and slidably connecting the inner sash only with the frame for maintaining said inner sash in position for its normal sliding movements.

1,487,597. SHOCK ABSORBER. FRANKLIN EMERY POINDEXTER, St. Louis, Mo., assignor, by mesne assignments, to Benjamin S. Davidson, Denton, Tex. Filed Nov. 16, 1920. Serial No. 424,490. 7 Claims. (Cl. 267—64.)



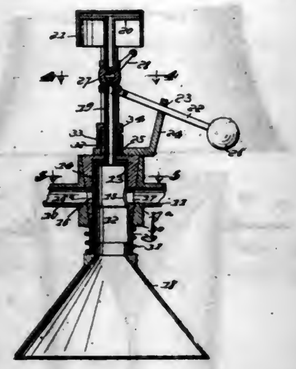
1. A fluid pressure device comprising a casing, a plunger therein, said plunger being formed to provide an oil reservoir, and a storage chamber arranged below such reservoir, pumping elements carried by the casing and plunger, an oil duct extending lengthwise the plunger and opening thru the side wall of the plunger at one end and into the storage chamber at the opposite end, said duct serving to transfer excess oil from between the plunger and casing to the storage chamber, and packing carried by the plunger to cooperate with the casing above and below the upper opening of the oil duct.



1,487,598. APPARATUS FOR INCREASING THE RANGE OF SPEED OF AEROPLANES. PIERRE JEAN RENÉ POSTEL-VINAY, Paris, France, assignor to Société des Moteurs Salmson (Systeme) Canton Unne, Billancourt, Seine, France. Filed Dec. 20, 1918. Serial No. 267,723. 2 Claims. (Cl. 244—29.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

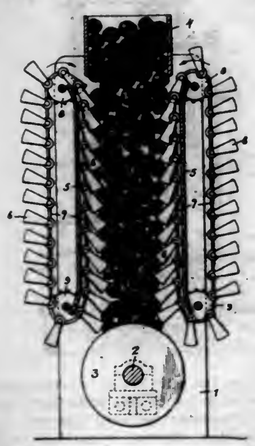
1. An aeroplane comprising in combination: rigid wings, rigid ailerons or balancing flaps hinged by their respective forward edges to the outer portions of the

rear edges of the wings, respectively and rigid cambering flaps independent of said ailerons hinged by their forward edges to the rear edges of said wings inside the ailerons and capable of being moved from a position in which they constitute a continuation of the general profile of the wing into another position wherein they constitute a raised trailing edge for the wing, means controlled by the pilot for oscillating the ailerons in reverse directions, and means controlled by the pilot and acting simultaneously upon said rigid cambering flaps alone to cause them to oscillate in the same direction, substantially as described and for the purpose set forth.



1,487,599. AUTOMATIC FEEDER. EDWIN F. POTTER, Woodbridge, N. J. Filed Dec. 28, 1922. Serial No. 609,417. 3 Claims. (Cl. 161—10.)

1. An automatic feeder comprising a frame pivoted intermediate its ends, a container at one end of the frame for receiving the feed, a counterbalance at the opposite end of the frame, and a clock mechanism mounted upon the frame and adapted to release the latter at a predetermined time.



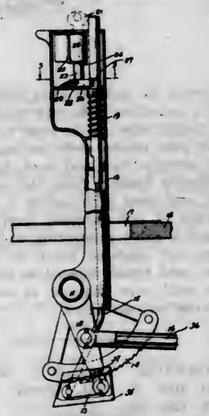
1,487,600. SHOWER-BATH VALVE. WELBY POWELL, Sewellton, Ky. Filed Aug. 11, 1921. Serial No. 491,471. 9 Claims. (Cl. 137—139.)

1. A valve mechanism comprising a casing provided with ports for connection respectively to hot and cold water supply pipes, a valve operatively mounted in said casing and ported to expose in either of its extreme open positions one or the other of the ports in said casing

and in intermediate position to expose both ports, and means actuable by pressure in the valve casing for effecting progressive movement of the valve member.

1,487,601. WOOD GRINDER. PAUL PRIEM, Heidenheim-on-the-Brenz, Germany, assignor to American Voith Contact Company, Inc., New York, N. Y., a Corporation of New York. Original application filed June 12, 1922, Serial No. 567,778. Divided and this application filed Feb. 10, 1923. Serial No. 618,328. 7 Claims. (Cl. 83—75.)

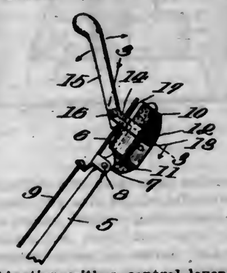
1. In a wood grinder, a grind stone, an associated hopper for a charge of wood blocks, and means engaging a side of the charge for forcibly feeding the latter against the grind stone, said means comprising an endless carrier rotating continuously in one direction and thrust blocks mounted thereon and engaging a side of the charge, and serving by variation of inclination as they approach the stone to compact the charge.



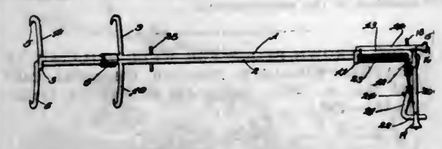
1,487,602. SHOE-LACE TIP. WYLLIS F. W. PULVER, Rensselaer, N. Y. Filed Aug. 23, 1921. Serial No. 494,699. 1 Claim. (Cl. 24—143.)

A lacing tip consisting of a rolled blank of oblong form provided at one side edge with a spur and at its

rear edge with a plurality of spurs for penetrating the lace, the spurs at the rear end of the blank being arranged respectively at the side edge carrying the first named spur and at a point about mid-way of the width of the blank.

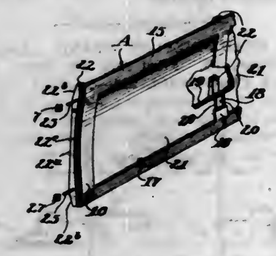


1,487,603. AUTOMOBILE LOCK. JOSEPH RATTO, Brooklyn, N. Y. Filed Sept. 13, 1921. Serial No. 500,325. 2 Claims. (Cl. 70—132.)



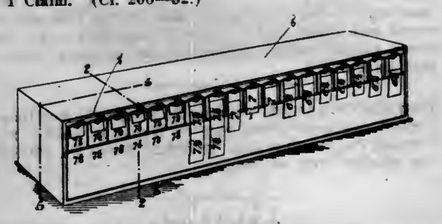
1. A lever controlling mechanism comprising a casing having a transverse partition defining a pair of chambers, one of which is adapted for the reception of the rear end portion of the lever and the controlling member of the lever, a latch slidably carried by said partition and adapted for locking engagement with said pawl controlling member, a leaf spring connected at one end of said partition and at the other end to said latch for urging the latch out of engagement with said pawl controlling member, a lock in the other chamber and having a lock plug provided at the forward end thereof with a cam face adapted to contact with and operate said latch, and means mounted on said lock plug for limiting the rotation of the lock plug.

1,487,604. EXTENSION LEVER. WILLIAM A. RIDEOUT, Oshkosh, Wis. Filed June 28, 1923. Serial No. 648,249. 2 Claims. (Cl. 74—39.)



1. The combination with a control lever having a grip lever, of a sleeve mounted on the control lever, straps connected to the sleeve, and an extension lever pivotally connected to the straps and adapted to be operated for actuating the grip and control levers.

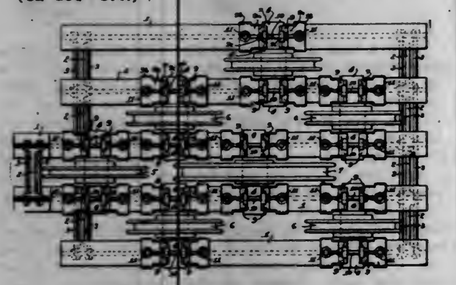
1,487,605. TRAP. DANIEL W. RISLING, Mission Hill, S. Dak. Filed Aug. 11, 1922. Serial No. 581,271. 4 Claims. (Cl. 43—91.)



4. In a trap, a pair of parallel rods, arcuate gripping jaws formed on said rods, one of said rods being bent to provide a plurality of bearing eyes through which the other rod rotatably extends, said rod having said bearing eyes thereon having its end remote from said jaws extended laterally, a spring connected to said rods for urging said jaws into animal gripping position, and a latch rod carried by said laterally extended end, said second named rod having its end adjacent to said laterally extended end bent transversely for providing a length adapted to be engaged by said latch rod, a second latch rod adapted to engage over said first named latch rod, a hook formed upon one end of said second named latch rod, and a trigger movable longitudinally of said first named rods and looped for engagement with said hook, said trigger having an abutment projection formed thereon adapted to be engaged by the rodent passing between said jaws.

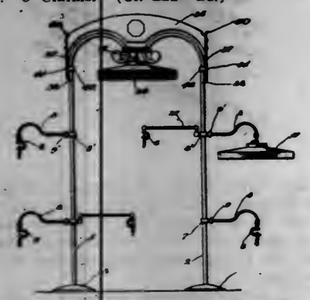
1,487,606. SIGN HOLDER. JOHN C. ROBESON, Los Angeles, Calif. Filed July 27, 1923. Serial No. 654,129. 7 Claims. (Cl. 40—125.)

2. A sign card holder, comprising a frame having openings therein, a backing plate, and spacing strips between the backing plate and frame for maintaining the two in spaced relation to each other to form pockets, the front side of said bars being concave for the purpose described.



1,487,607. LABEL HOLDER. JOSEPH S. ROSEN, New York, N. Y. Filed Feb. 7, 1923. Serial No. 617,507. 1 Claim. (Cl. 206—52.)

In a label holder, a series of rolls, each roll being marked throughout its length with one size and being gummed on the rear surface thereof, said rolls being held in a series of upright cartons, there being an opening in each carton to permit the detachment of any part of said rolls, a carton for holding said series of

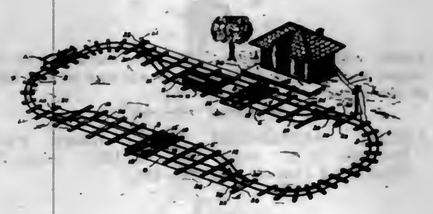


rolls and having an opening registering with the entire series of openings in the containers for the individual rolls, the walls of the inner cartons practically closing the opening in the outer carton.

1,487,608. CROWN BLOCK FOR WELL-DRILLING APPARATUS. WILLIAM B. ROWLAND, Bakersfield, Calif. Filed Mar. 6, 1923. Serial No. 623,145. 5 Claims. (Cl. 254—190.)

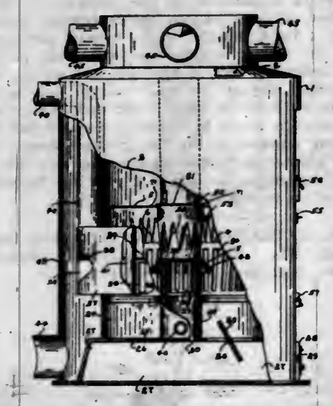
1. A crown-block comprising spaced, parallel, flanged beams; a sheave-sustaining shaft resting upon said beams; clamps embracingly fitted to the shaft said clamps having flat-foot-portions resting on the beams with hooks slidably embracing the beam-flanges, adapting said clamps for adjustment along said beams, to vary the position of the shaft thereon; and set screws fitted to the clamp foot-portions for fixing the clamps on the beams in adjusted position.

1,487,609. SHADE-DISPLAY STAND. JOHN S. SAMMONS, Chicago, Ill. Filed Aug. 19, 1922. Serial No. 583,020. 5 Claims. (Cl. 211—24.)



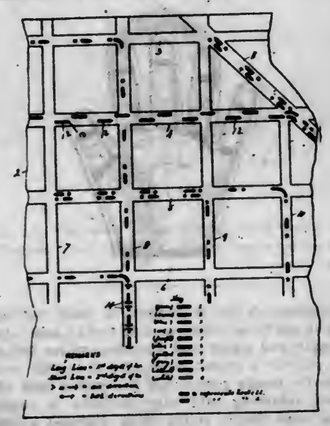
1. In a display stand, standards, a plurality of arms, pivotally carried by said standards for movement in horizontal planes, and combined lamp bulb socket and shade supports carried by the free ends of said arms, said standards having their upper ends curved inwardly towards each other, and a combined lamp bulb socket and shade support rigidly carried by the inturned ends of said standards.

1,487,610. WASHER. ALBERT F. SCHATZEL, San Diego, Calif., assignor of one-half to Irving M. Smith, San Diego, Calif. Filed Sept. 27, 1922. Serial No. 590,881. 8 Claims. (Cl. 85—50.)



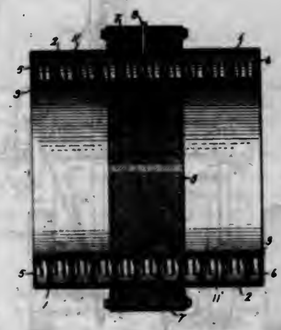
1. A washer of the character described comprising a band having cutting means, said band providing a tapered body to receive the head portion of a screw.

1,487,611. TOY TRACK. RUDOLPH H. SCHEIBERT, Cincinnati, Ohio, assignor of one-fourth to Nancy C. Shelton, Covington, Ky., and one-fourth to Cora A. McClanahan, Cincinnati, Ohio. Filed Nov. 2, 1922. Serial No. 598,679. 6 Claims. (Cl. 246—83.)



1. In toy tracks, an endless main track having a positive rail and a negative rail, said rails connected to a source of electricity, side tracks each having a switch at each end, said side tracks each having a negative rail and a divided positive rail and each having an electric switch, a conductor leading from the main positive rail to each switch and from each switch to the positive rail of the side track, a car operated lever at each end of each switch and a cable connecting each electric switch lever with the car operated lever at each end of the switch, cars on said tracks headed in opposite directions and means on said cars adapted to engage and throw said car operated switch levers.

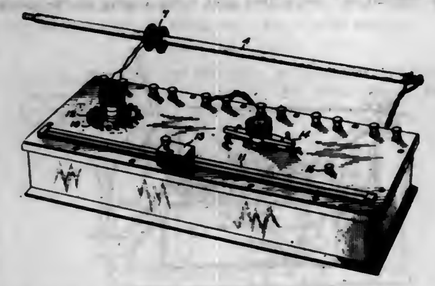
1,487,612. FURNACE. THEOSIS C. SEBRING, Morenci, Mich. Filed Mar. 7, 1921. Serial No. 450,274. 9 Claims. (Cl. 126—99.)



7. A fuel burning apparatus embodying a fire pot, an air chamber centrally of the fire pot around which the fuel is burned and having vertical hollow bars, a double-walled member below said bars for supplying air into said chamber and having a space between the walls thereof communicating with said bars for the flow of air through the bars, said bars being spaced apart for the flow of air from within said chamber between the bars into the fuel, and means for the flow of air through said space and bars.

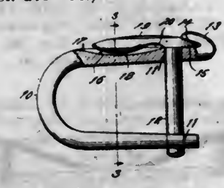
1,487,613. ROUTE OR GUIDE MAP. GEORGE W. SHAW, Philadelphia, Pa. Filed Mar. 21, 1923. Serial No. 626,460. 3 Claims. (Cl. 283—34.)

1. A guide system comprising a map, representing the routes of travel each designated by a numeral and long and short colored lines having numerical digit values arranged in numerical sequence on said routes to indicate each respective route number.



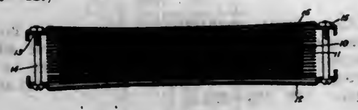
1,487,614. REACTANCE COIL. ERIK G. SOHLBERG, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Feb. 26, 1923. Serial No. 621,148. 11 Claims. (Cl. 171—242.)

7. A reactor comprising a conductive coil collapsible under the influence of the magnetic field induced by a current in the coil, and means for supporting and guiding the turns of the coil as the coil collapses.



1,487,615. ALTERNATING-CURRENT POTENTIOMETER. BYRON W. ST. CLAIR and STEPHEN C. HOARE, Lynn, Mass., assignors to General Electric Company, a Corporation of New York. Filed Oct. 18, 1922. Serial No. 595,359. 3 Claims. (Cl. 175—183.)

3. An instrument for measuring coil turns comprising a pair of air core transformers adapted to have their primaries connected in series to a source of alternating current, a calibrating resistance and a graduated resistance in the secondary circuit of one of said transformers, said graduated resistance comprising a slide wire and a multiple section resistor in series, each section of said resistor being of equal resistance and less than that of said wire, a coil to be measured constituting the secondary of said other transformer arranged to be electrically balanced across a portion of said graduated resistance when the primaries of said transformer are energized,

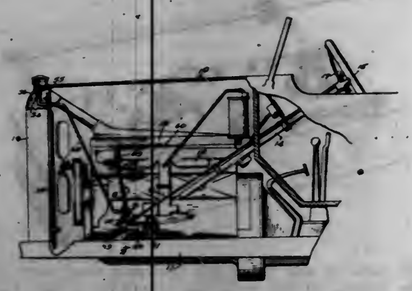


the value of said calibrating resistance being such that the portion of the graduated resistance across which said coil is balanced is a direct indication of the numbers of turns in said coil.

1,487,616. CLEVIS. VERNER T. STOCKTON, Okemah, Okla. Filed Dec. 2, 1921. Serial No. 519,445. 3 Claims. (Cl. 278—96.)

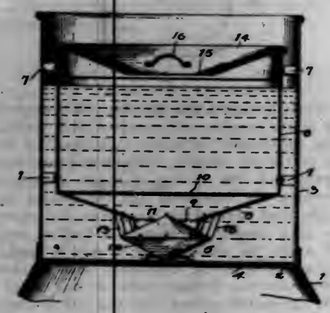
1. A clevis having a pin opening and a depression on one side of the opening and provided with sloping walls, a locking lip integral with the clevis and on the opposite side of the pin opening, a clevis pin associated with said clevis, said pin having a shank penetrating the clevis between the depression and the locking lip and a tensionable head carried by the shank and extended on opposite sides thereof to provide a locking tongue engageable under the said locking lip and a spring extension engageable with the depression, said extension riding easily over the sloping walls of the cavity as the tongue is alternately swung into and out of engagement with the said locking lip.

1,487,617. ELECTRICAL APPARATUS. DONALD C. STOPPENBACH, New York, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Aug. 17, 1920. Serial No. 404,243. 3 Claims. (Cl. 250—41.)



1. In a condenser, alternate sheets of conducting and insulating material, and means comprising resilient plates between which said sheets are held for forcing said sheets together with a pressure which is uniform throughout their area.

1,487,618. ATTACHMENT FOR INTERNAL-COMBUSTION ENGINES. JOHN STUTIKA, West Pullman, Ill. Filed June 26, 1922. Serial No. 570,879. 6 Claims. (Cl. 123—25.)



1. The combination with an internal combustion engine having an intake manifold, of a valve casing, an auxiliary gasoline tank, means for connecting said tank to said

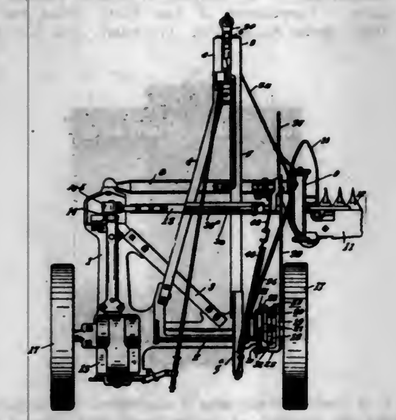
valve casing, a pipe for connecting said valve casing to a source of water supply, a check valve arranged in said pipe, means for normally closing said check valve, a conduit for connecting said valve casing to the intake

manifold of the engine, a control valve arranged in said valve casing, said control valve being provided with openings of varying sizes, and means for operating said control valve.

1,487,619. APPARATUS FOR THE CLEANING OF CLOTHES AND THE LIKE. CHARLES EDWIN TAYLOR, Rocksprings, Tex. Filed Oct. 29, 1921. Serial No. 511,271. 6 Claims. (Cl. 68—30.)

2. In a device of the character described, a body having a socket formed on its bottom, a holder secured in spaced relation to the body, and a baffle arranged in spaced relation below the center of the holder and seated within the said socket.

1,487,620. WIRE TERMINAL. GEORGE B. THOMAS, Bridgeport, Conn., assignor to The Bryant Electric Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Dec. 17, 1920. Serial No. 431,403. 6 Claims. (Cl. 173—259.)



1. A wire terminal comprising a standard with integral base and top flanges offset therefrom in the same direction, said standard being divided by a slot extending between said flanges, and the flanges notched in register with said slot to accommodate a wire.

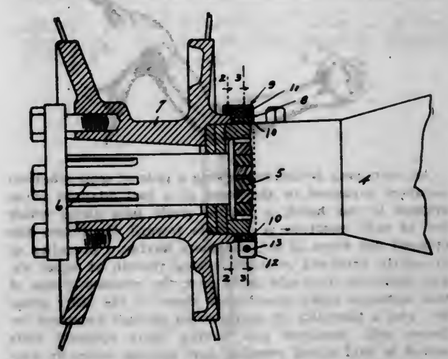
1,487,621. SCRUBBING DEVICE. JOSEPH THOMAS, Aberdeen, Wash. Filed Oct. 11, 1922. Serial No. 593,853. 1 Claim. (Cl. 15—227.)

A scrubbing device comprising a body having finger and thumb portions corresponding to the hand, the edges of the body and finger and thumb portions being curled back to provide a pocket to receive the hand, and transverse elastic straps connecting the curled back edge portions and retaining said edge portions in their curled positions, said elastic strips being disposed at the bases of the thumb and finger portions and also near the forward ends thereof.

1,487,622. MOWING MACHINE. WALLACE S. THOMAS, Springfield, Ohio, assignor to The Thomas Manufacturing Company, Springfield, Ohio, a Corporation of Ohio. Filed Dec. 5, 1921. Serial No. 520,114. 12 Claims. (Cl. 56—273.)

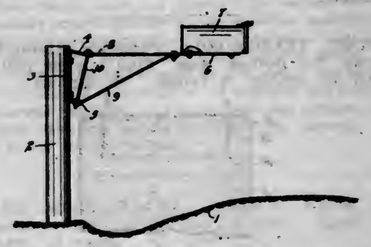
1. In a mowing machine, the combination, with cutting devices, of a continuously rotating ratchet wheel, a pawl lever mounted to oscillate at the side of said wheel and having a connection with said cutting devices, a pivoted pawl carried by said lever, means for throwing said pawl into engagement with said wheel, means for throwing said pawl out of engagement with said wheel, after a predetermined movement thereof, a detent to engage said lever to hold it in the position to which it is moved by said ratchet wheel, and means for releasing said detent.

1,487,623. TIRE PROTECTOR. MORRIS THOMPSON, Nyack, N. Y. Filed Mar. 8, 1923. Serial No. 623,726. 1 Claim. (Cl. 152—18.)



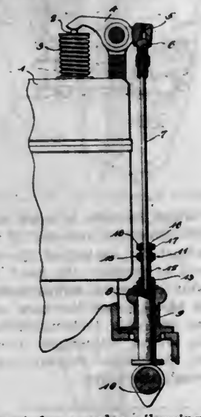
A tire protector consisting of an annular metallic band arcuate in cross section, spurs on said band and adapted

to project through and beyond a tire casing and be disposed in the casing substantially throughout the length



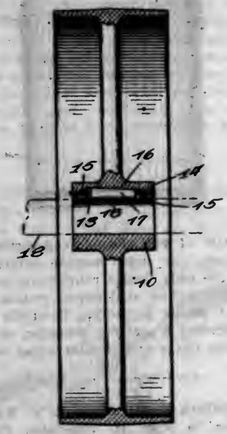
of the spurs, the side edges of the band being substantially feather, and a lining on the inner surface of the band.

1,487,624. DUST GUARD. TOLLAK TOLLEFSON and GEORGE MERKLIN, Bonilla, S. Dak. Filed Apr. 26, 1920. Serial No. 376,492. 4 Claims. (Cl. 301—123.)



1. A dust guard comprising main and supplemental clamping bands, and main and supplemental pliable linings, the main lining being secured within the main clamping band and the supplemental lining being interposed between the main and supplemental clamping bands, said supplemental clamping band and lining being secured to said main clamping band and extended outward of one edge of the main lining, and means for securing said parts in operative position.

1,487,625. MAIL-BOX BRACKET. TOLLAK TOLLEFSON, Bonilla, S. Dak. Filed Nov. 20, 1922. Serial No. 601,966. 2 Claims. (Cl. 232—40.)

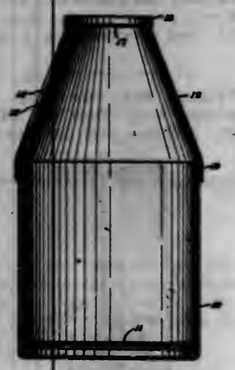


1. A mail box structure comprising a support, a bracket rigidly secured thereto in a vertical position having outwardly projecting vertically spaced arms, the upper arm being longer than the lower arm, a rotatable spindle journaled in said arms and inclining outwardly from its bottom to its top, a swinging bracket having spaced arms journaled on said spindle and normally projecting outward from said support in substantial alinement with said first mentioned bracket and arms but movable laterally into a higher plane at either side of said normal position about the axis of said spindle.

1,487,626. VALVE SILENCER. WILLIAM M. TULLEY, Corpus Christi, Tex. Filed Oct. 27, 1921. Serial No. 510,743. 2 Claims. (Cl. 123—90.)

2. An abutment for a valve silencing spring comprising a collar externally threaded and having a longitudinally extending unthreaded rod receiving passage, said collar being split from its upper end to a point in spaced relation to its lower end and having its lower end portion provided with wrench-engaging faces, the lower end of said collar being provided with a spring receiving seat.

1,487,627. PULLEY AND THE LIKE. LAURENCE R. TUTEN, Columbia, S. C. Filed Mar. 24, 1923. Serial No. 627,342. 2 Claims. (Cl. 287—52.)



1. The combination with a pulley having a recess formed in the wall of the shaft receiving bore thereof, the recess tapering from end to end, of a similarly tapered key mounted in said recess, and means extending through the ends of the hub into said recess and engaging against the ends of said key for shifting the key longitudinally of the recess, said recess being transversely tapered, said key being similarly tapered.

1,487,628. BANDAGE. FREDERICK HERBERT VON HOFE, South Orange, N. J. Filed July 28, 1922. Serial No. 578,089. 2 Claims. (Cl. 128—76.)

2. A bandage which includes a broad band of material passing around the sides and the rear of the head of the wearer, straps adjustably connected thereto and extending over the head to support the band thereon, a plurality of adjustably connected straps extending from the front end of the band across the nose and chin of the wearer, and nose and chin forming plates mounted respectively on the straps, adjustable connections of the straps permitting the proper pressure to be applied to the features through the plate.

1,487,629. PAPER BOTTLE. JONATHAN WAINWRIGHT, Jr., Philadelphia, Pa. Filed June 26, 1922. Serial No. 570,997. 5 Claims. (Cl. 225—4.5.)

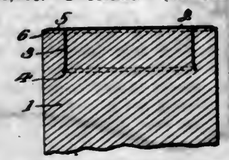
1. In a bottle of the character described, a body of cellulosic material, an upper section extending from the upper end of the body, and a reinforcing member secured about the upper end of said upper section and provided with abutment means projecting inwardly of the upper section and forming a seat for reception of a closure cap pressed into the upper end of said upper section.

1,487,630. PISTON RING. BURTON T. WALSH, Chicago, Ill., assignor to Fred H. Funchess, Hanford, Calif. Filed Nov. 24, 1919. Serial No. 340,086. 1 Claim. (Cl. 74—109.)

The combination with a piston having an annular groove therein, of a piston ring comprising a central expander ring of less width than said groove leaving free space for the full depth of said groove on each side thereof, said expander ring having bevelled shoulders on opposite sides thereof and a central portion forming stop shoulders; and expansible packing rings arranged on opposite sides of said expander ring, shaped to fit said expander ring, and being slightly projected thereby, whereby inward move-

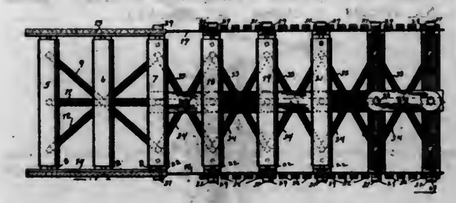
ment of one of said packing rings fixes the central ring and the other packing ring in definite projected position, said inward movement being limited by said stop shoulders.

1,487,631. EXERCISING DEVICE. DAVID E. WANGER, Winnetka, Ill. Filed Nov. 5, 1920. Serial No. 421,902. 1 Claim. (Cl. 46—69.)



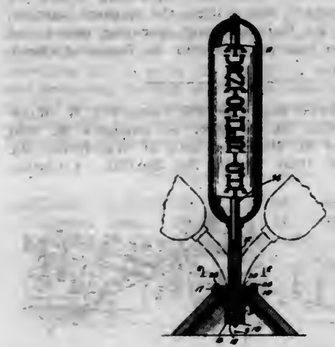
An exercising device comprising a pair of semi-spherical members arranged in the form of a ball adapted to be gripped in one hand, a central guide post along which one of said members is movable toward the other, the opposed flat faces of said members having a plurality of annularly arranged recesses formed therein at equal radial distances from said guide post, the recesses of one of said members being alined with those of the other member, and a plurality of compression springs arranged between said members and having their opposite ends seated in said alined recesses, said springs normally urging said members away from each other so as to spread the fingers of a hand encircling said ball by exerting pressure radially in substantially all directions.

1,487,632. POLISHING COMPOUND FOR CLEANING AND RESTORING THE LUSTER OF VARNISH, ENAMEL, AND LACQUER. RALPH G. WARING, Syracuse, N. Y. Filed Sept. 28, 1921. Serial No. 503,971. 5 Claims. (Cl. 134—24.)



4. A polishing compound for varnish, lacquer and analogous surfaces comprising paraffine oil, vegetable oil, turpentine substitute, wood alcohol, caustic soda and water in approximately the proportions described and emulsified.

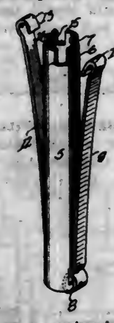
1,487,633. TEXTILE ROLL. FREDERICK CLIFTON WASHBURN, New Bedford, Mass. Filed July 29, 1921. Serial No. 488,346. 2 Claims. (Cl. 242—68.)



1. A wooden textile roll having a metal reinforcing ring on its extremity, said ring comprising a cylindrical body having its end beveled on its inner face to form a chisel edge, and having an annular outward extending end flange formed with a sharpened angular edge to penetrate the end face of the roll.

1,487,634. FLEXIBLE CONVEYER. LAWRENCE W. WATERS, Kingsburg, Calif. Filed Feb. 28, 1923. Serial No. 621,912. 4 Claims. (Cl. 193—35.)

1. In a device of the character described, a plurality of rollers spaced one from the other, flexible sides movably secured to each of said rollers and means connecting said rollers for causing an angular displacement between said rollers, said angular displacement being upon the radii of any given arc.

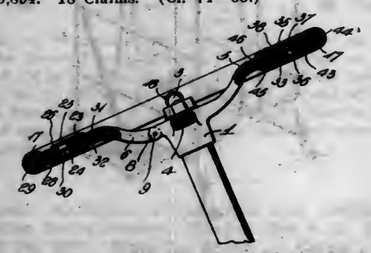


1,487,635. SILENT POLICEMAN. JOHN A. WATTS, Milford, Pa. Filed Apr. 23, 1923. Serial No. 634,091. 2 Claims. (Cl. 40—145.)

1. In a device of the character described, a hollow base of frusto-conical form, a signal device, a transversely flexible supporting device connected to the signal device, and means for mounting the supporting device on the base including a tubular bracket member having its upper end open and provided with an outwardly extending annular flange adapted to rest on the top of the frusto-conical base, the lower end of the tubular bracket member being closed and being disposed within the frusto-conical base and adjacent the bottom thereof, said tubular bracket member having a portion constituting a socket and an enlarged portion providing a clearance, the transversely flexible supporting device having its lower end received and secured in said socket and having a portion adapted to operate in the clearance provided by the enlarged portion of said tubular bracket member, and releasable fastening means for adjustably securing the flange to the top of the base.

1,487,636. HAIR CURLER. JULIUS G. WHITE, San Francisco, Calif. Filed Apr. 4, 1922. Serial No. 549,481. 1 Claim. (Cl. 132—41.)

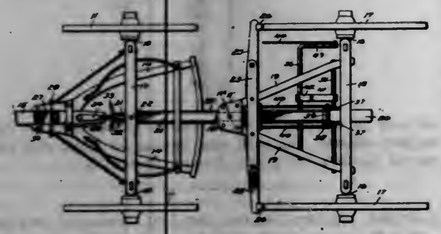
A device of the character described comprising a tubular member for receiving thereon hair to be curled and adapted to house a heating medium, said member being provided with spaced notches on one extremity thereof and an enlarged opening adjacent its opposite extremity, a resilient arm curved at its lower extremity, with the curved portion being movable through the opening of the tubular member, said arm terminating at its upper extremity in a hook end adapted to engage the tubular mem-



ber and be retained on an extension formed between the notches thereof, the said arm having its hook end and curved portion integrally formed therewith.

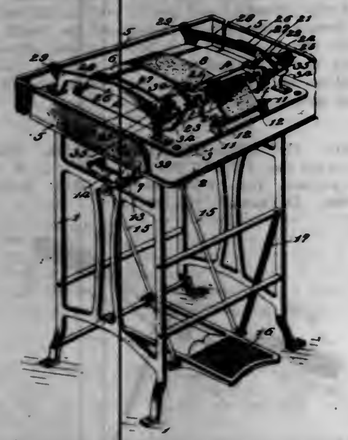
1,487,637. HAIR-CURLING DEVICE. JULIUS G. WHITE, San Francisco, Calif. Filed Apr. 4, 1922. Serial No. 549,482. 1 Claim. (Cl. 132—41.)

A hair curler comprising a pair of arms, one of said arms being resilient and slotted adjacent one extremity and having formed on its opposite extremity a lateral extension, the other of said arms being provided with a pointed free extremity and having horizontally extending beads formed substantially throughout the length of the arm, the last mentioned arm being reduced adjacent its opposite extremity and continuing into an integrally rounded portion adapted to be received in the slot of the resilient arm.



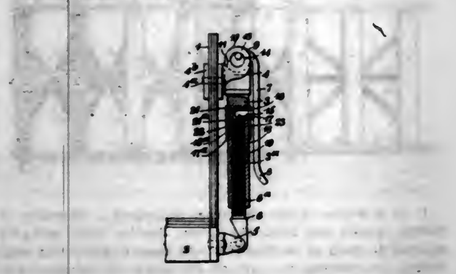
1,487,638. TILTABLE STEERING WHEEL. HARRY S. WILLIAMS, San Antonio, Tex., assignor to J. W. Heard, San Antonio, Tex. Filed Nov. 17, 1921. Serial No. 515,894. 18 Claims. (Cl. 74—33.)

1. A steering wheel comprising a spider including a hub having pairs of opposed spokes radiating therefrom, one pair of said spokes being rigid with the hub, one of the spokes of the other pair being also rigid with said



hub and the remaining spoke being hinged thereto, a tiltable rim pivotally connected to the outer ends of the first named pair of spokes, an extensible member mounted on the outer end of said hinged spoke and hingedly connected with said rim, and a quick releasable retaining device cooperative with the outer end of the remaining spoke and said rim.

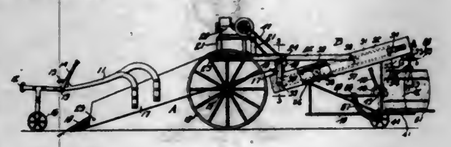
1,487,639. WAGON BRAKE. WILLIAM Z. WILLIS, Oakman, Ala., assignor of forty-nine one-hundredths to Claude D. Roberts, Oakman, Ala. Filed Dec. 11, 1922. Serial No. 606,153. 1 Claim. (Cl. 188—120.)



The combination with a vehicle running gear including the forward and rear axles, the carrier wheels, and a reach member, of an operating member movable longitudinally of the reach, forward and rearward rock shafts in spaced relation and mounted for oscillation on the running gear, arms carried by one of the rock shafts and coupled to the operating member, a brake beam carrying brake shoes, coupling means between said arms and brake beams, cooperating cam arms carried respectively by said rock shafts, means under the control of the driver of the vehicle for operating said forward rock shaft, and a draft tongue slidably coupled to the running gear and engaging the operating member by the rearward movement of the draft tongue or the forward movement of the rear axle.

1,487,640. CIGAR-WRAPPING MACHINE. JASPER STANLEY WINGET, York, Pa., assignor of one-half to Augustin Converse Winget, Tyrone, Pa. Filed July 7, 1920. Serial No. 394,464. 17 Claims. (Cl. 93—5.)

1. A machine of the type described, comprising a belt, a reciprocating mechanism, carrying gripping means for holding the wrapped ends of a wrapper, and means for closing the gripping means after the wrapping is completed.



1,487,641. FASTENING FOR BAGS, TRUNKS, BOXES, AND THE LIKE. JOHN FREDERICK FRANKLAND WINNING, Hanwell, England, assignor to Finnigans Limited, Manchester, England. Filed Nov. 10, 1920. Serial No. 423,103. 7 Claims. (Cl. 70—14.)

2. A fastening comprising a bracket on each of the members to be fastened, a link member interposed between said brackets, means for connecting one end of said link member to one of said brackets, an eccentric disc pivoted on the other end of said link member, a curved surface provided on the other bracket, and adapted to receive said eccentric disc, operating means for rotating said eccentric disc to draw the brackets together, and a key lock for fastening said operating means and said link member together to retain the fastening closed

---

1,487,642. POTATO HARVESTER. GOODWIN W. WISEMAN, Waterville, Me., assignor to Dominick M. Susi and Nathaniel H. Barrows, both of Waterville, Me. Filed Feb. 20, 1920. Serial No. 360,091. 4 Claims. (Cl. 55—9.)

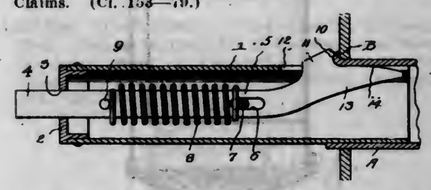
1. In combination a potato digger, a cleaner, means for supporting the digger unit, means for independently supporting the cleaner unit at times, and means to withdraw the independent support of the cleaner unit and support the cleaner unit from the digger unit when desired.

2. In combination, a potato digger supported by wheels, a normally wheel-supported cleaner unit trailing therefrom, means for withdrawing the supporting wheels of the cleaner unit, and means for supporting the cleaner unit from the digger unit.

3. The combination of a potato digger, a cleaner trailing from the digger, means for supporting said cleaner from the ground, means for raising the cleaner supporting means off the ground, and other means for supporting the cleaner from the digger.

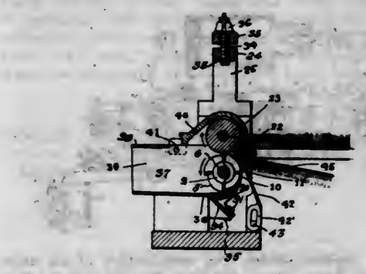
4. In a potato digger mounted upon wheels, a cleaner unit trailing therefrom and normally wheel-supported, a slotted segment extending upwardly from the axle of the cleaner unit, means for guiding the segment upwardly to withdraw the supporting wheels of the cleaner unit from the ground, and other means for supporting the cleaner unit from the digger when the said wheels are withdrawn.

1,487,643. HAIR CURLER. PAULINE WOLFE, Davenport, Iowa. Filed Apr. 23, 1923. Serial No. 634,118. 8 Claims. (Cl. 132—41.)



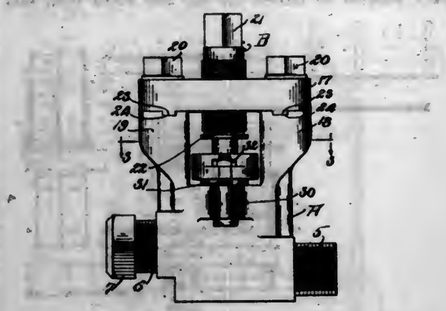
1. A hair curler comprising two arms hinged together at one end, the other end of one of said arms being

turned inwardly and backwardly to form a hook under which the free end of the other arm may be inserted,



and a tongue formed upon one of said arms near the middle thereof.

1,487,644. FLUE BEADER. LESTER M. ZEA, La Hogue, Ill. Filed Apr. 17, 1922. Serial No. 554,334. 2 Claims. (Cl. 153—79.)

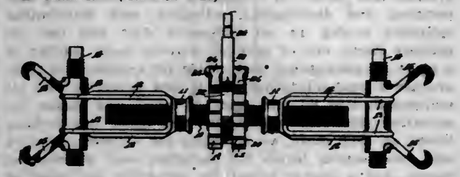


1. In a beader, a tubular body, a closure plug in one end of said body, a bead forming member slidably mounted within said body and provided with a longitudinally extending slot, a guide pin carried by said tubular body and projecting through said slot, a transverse pin carried by said member, a spiral spring carried by said member and engaging said transverse and guide pins, and a bead forming anvil formed upon said member.

1,487,645. PLUCKING MACHINE. GUSTAV BOESCH, Danbury, Conn. Filed July 14, 1920. Serial No. 396,269. 38 Claims. (Cl. 149—27.)

9. In apparatus of the character described, in combination, a frame member having two oppositely disposed supports each provided with a guideway, a rotary operating member rotatably supported by said frame, a journal box slidably mounted in each of said guideways, a second rotary member supported in said journal boxes and adapted to coact with said first-mentioned rotary member, a housing associated with each of said supports and extending in substantial alignment with said guideway, a controlling member slidably mounted in each of said housings and engaging at its lower end one of said journal boxes, each of said controlling members being of less longitudinal extent than its associated housing, a bridging member extending across said two supports and having at its respective ends a projection extending slidably into one of said housings and engaging the controlling member therein, and means detachably mounting said bridging member with respect to said supports to permit removal thereof and adapted also to permit said bridging member to be adjusted toward or away from said housings.

1,487,646. VALVE FOR HIGH FLUID PRESSURES. AUGUSTUS H. EUSTIS, Milton, Mass. Filed Jan. 31, 1923. Serial No. 616,095. 6 Claims. (Cl. 251—155.)

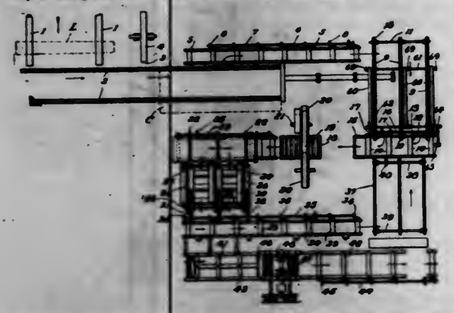


3. A valve for controlling high pressure corrosive substances having therein passageways comprising bores in a solid piece of inert metal, and an unitary internal closure element of a different inert metal, in combination with an exterior mechanical connection for controlling the position of said closure element.

1,487,647. PROCESS OF RECOVERING NITROGEN FROM RESIDUAL AMMONIA OXIDATION GASES. GIACOMO FAUSER, Novara, Italy. Filed Apr. 11, 1922. Serial No. 551,730. 1 Claim. (Cl. 23—10.)

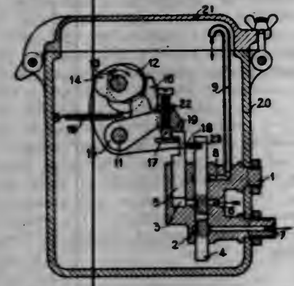
In the production of free nitrogen from the exit gases from the oxidation of ammonia and subsequent oxidation and absorption of nitrogen oxide, which exit gases contain oxygen and nitrogen and a proportion of oxygen which is only a minor fraction of the content of oxygen in air, and which exit gases may also contain a much smaller percentage of an oxide of nitrogen, which comprises adding hydrogen in amount at least chemically equivalent to the oxygen present and passing the gas mixture in contact with a catalyzer at a temperature at which free oxygen and hydrogen combine to form water, then separating the water.

1,487,648. WHEEL-RIM TOOL. ALBY F. FOLSOM, Jackson, Mich. Filed Oct. 17, 1923. Serial No. 669,129. 2 Claims. (Cl. 157—1.)



1. In an expanding and contracting device, an oppositely threaded bar, clamping means movable on the ends of the bar, a collar fixed on the intermediate portion of the bar in relation to the threads of one end of said bar, a disk threaded on the threads of the other end of the bar and operable in a direction to constantly urge the disk against said collar.

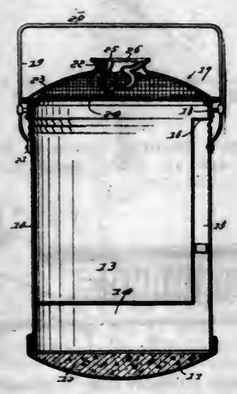
1,487,649. SAWMILL APPARATUS AND METHOD. LEMUEL ROSCOE FOREMAN, Elizabeth City, N. C. Filed May 18, 1916. Serial No. 98,340. 3 Claims. (Cl. 143—92.)



1. In an apparatus for sawing logs the combination of a supporting structure, a conveyer for moving the log longitudinally, a saw for cutting a board from the underside of the log during said movement, horizontally mov-

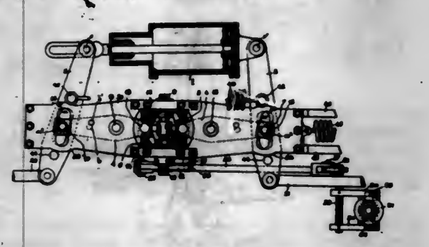
able carriers adapted to receive the log and board and move the same transversely, inclined conveyers adapted to receive the log and board from said carriers, inclined ways adapted to receive the log and board from said

inclined carriers, and stops mounted on said inclined ways adapted to engage and withhold the board and allow the log portion to separate therefrom by gravity, substantially as set forth.



1,487,650. LUBRICATING-OIL-PUMPING APPARATUS. LOUIS FRIEDMANN, Vienna, Austria. Filed Apr. 25, 1922. Serial No. 556,425. 3 Claims. (Cl. 184—27.)

2. In a lubricating oil pumping apparatus, the combination of an oil vessel fitted with a lid, an oil pump comprising a pumping cylinder and piston, a distributing cylinder and piston, oil conducting means connecting said pumping and distributing cylinders, said distributing cylinders having an oil admission duct and two oil delivery ducts, one of said oil delivery ducts leading to a place of consumption, and a pipe for receiving oil from another of said oil delivery ducts and delivering said oil underneath said lid into said oil vessel, and means for actuating said pistons comprising a shaft, two rocking levers on said shaft, an eccentric for actuating one of said two rocking levers for operating said distributing piston, and a double tappet for actuating the other of said two rocking levers for operating said pumping piston, an adjustable member located on the end of said other rocking lever for operating said delivering piston, and means for connecting said other rocking lever to said delivering piston in such a manner that said adjustable member shall move said delivering piston out of its cylinder, whereas said other rocking member will force it into its cylinder.



1,487,651. GARBAGE RECEPTACLE AND INCINERATOR. HENRY P. FULLER, Richmond, Va. Filed Aug. 27, 1921. Serial No. 495,892. 1 Claim. (Cl. 110—18.)

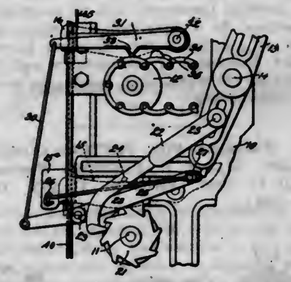
A garbage receptacle comprising a casing having an interiorly located garbage receiving compartment, the wall of which is spaced from the bottom of the casing, thereby providing a fire space and smoke flue space within the casing, a screen located in the upper portion of the casing and bridging the smoke flue, a cover for the casing, a perforated plate carried by the cover and adapted to extend over the end of the casing and the ends of the garbage compartment and smoke flue therein, a cage located under the cover and mounted upon said plate, the cover being provided at its center with an

opening, a screen disposed over the opening, and tortuous tubes passing through the screen and the top of the cage and having their lower ends disposed above the plate, said tubes adapted to serve as means for permitting insects to enter the cage and the products of combustion and evaporation from the can to pass from under the cover.

1,487,652. BRAKE DEVICE. JEAN LOUIS GAGET-RAGOT, Paris, France. Filed Jan. 25, 1922. Serial No. 531,743. 9 Claims. (Cl. 188—195.)

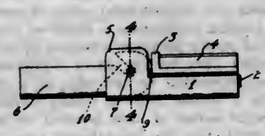
5. In a braking device, the combination of an actuating device, brake shoes, actuated thereby, intermediate levers for transmitting the motive power from the first named device to the brake shoes, said levers mounted on a connecting member provided with slots, said levers having slots, angularly disposed to the first named slots, pivotal connections in the slots, levers actuated by a cam for displacing said pivotal connections, a cam, a lever mounted on said cam and actuating the latter, a slot in said lever and means connected with the slot for actuating said lever.

1,487,653. HEAD FOR METAL CONTAINERS. HERBERT H. HART, Evanston, Ill. Filed Apr. 2, 1920. Serial No. 370,699. 7 Claims. (Cl. 220—55.)



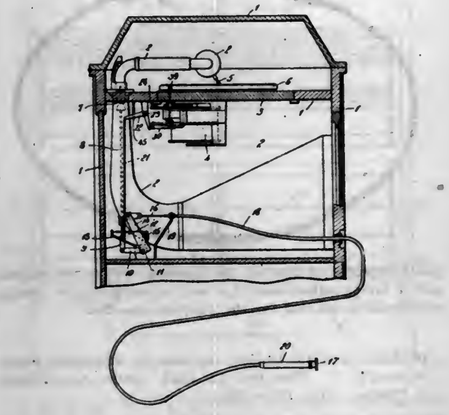
1. The combination with a container head having an opening, of a closure mounted over said opening, said closure having a dome-shaped portion extending above the plane of the head, a locking plate having a dished or dome-shaped portion overlying and engaging the dome-shaped portion of the closure, the dome-shaped portion of

said plate being curved on a greater radius than the dome-shaped portion of the closure whereby said plate engages the central part only of the dome-shaped portion of the closure, a holding device engaging said plate on



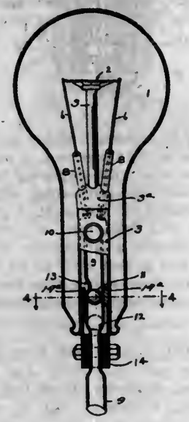
one side of said opening, a second holding device engaging said plate on the opposite side of said opening, the edge of said locking plate between said holding devices being spaced from the upper surface of the head.

1,487,654. LOOM DOBBY. HENRI HATTOY, Blackstone, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Mar. 22, 1923. Serial No. 626,778. 8 Claims. (Cl. 139—74.)



1. In a loom dobby, a main pattern cylinder, an auxiliary pattern cylinder, upper and lower dobby fingers co-operating with said cylinders respectively, and links connecting said upper and lower fingers in pairs, each lower finger being movable upward by its pattern cylinder while the associated link and upper finger remain at rest.

1,487,655. BLADE-HOLDING DEVICE. LOUIS HLAVACEK, Chicago, Ill. Filed Mar. 9, 1922. Serial No. 542,414. 1 Claim. (Cl. 30—10.)

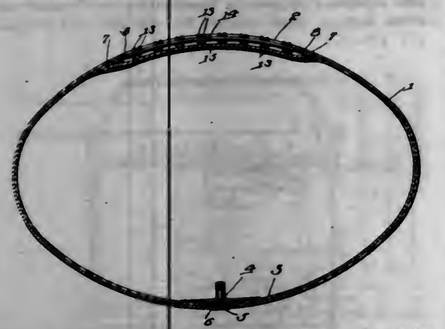


A blade holding device comprising a holder component formed from a piece of material bent centrally to constitute side portions, in spaced-apart relationship; a member joining the sides at one end thereof; a member joining the edges of the side portions at another portion thereof and constituting a restraining element for a blade when inserted in the holder; a bearing and pivot for a handle formed on another portion of the holder component; and a handle and guard component formed from a piece of material folded to constitute spaced apart sides, pivotally and detachably associated with the holder and foldable over a portion thereof when in one position, and means for holding the blade securely in the holder, said means including a bearing member on the handle and adapted to bear against and force the blade into position in the holder when the handle is in open position.

1,487,656. EXPRESSION DEVICE FOR PHONOGRAPHS. ROBERT HEAD, Yonkers, N. Y., assignor to The Aeolian Company, a Corporation of Connecticut. Filed Sept. 4, 1920. Serial No. 408,225. 12 Claims. (Cl. 181—27.)

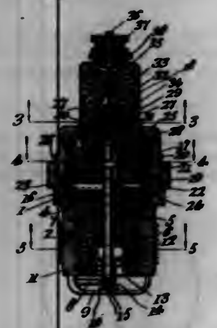
1. In combination with a phonograph, a tone-volume control, and automatic means which operates said tone-volume control to produce repeatedly tone-volume variations.

1,487,657. GAS-FILLED ELECTRIC LAMP. EDWARD JARVIS HUNT, Newark, N. J. Filed July 10, 1920. Serial No. 395,255. 3 Claims. (Cl. 176—16.)



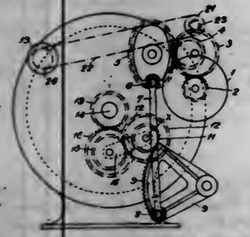
1. An incandescent electric lamp, comprising an envelope or bulb, a filament mounted therein, a gas-filling tubulure adapted to be sealed within the lamp structure, and a check-valve of magnetic material permanently enclosed in the sealed tubulure adjacent the sealing point and adapted to automatically close the bore of said tubulure.

1,487,658. BALL-LACING DEVICE. CHARLES J. JENSEN, North Plainfield, N. J. Filed Dec. 3, 1921. Serial No. 519,757. 4 Claims. (Cl. 46—4.)



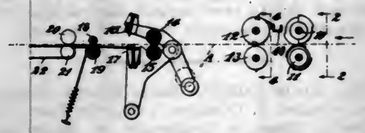
1. In combination with a foot ball and the like, comprising a casing having a slit or opening therein, an inflatable bladder adapted to be housed by said casing, a

valve for said bladder, a valve protector, said valve protector being adapted to extend through said casing at a



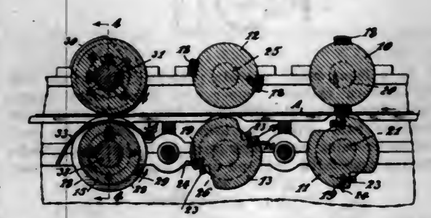
point opposite to that of the opening within the casing, and a lacing attachment for said opening in the casing, substantially as and for the purpose specified.

1,487,659. SPARK PLUG. ROBERT H. JOHNSON, Washington, D. C. Filed Feb. 12, 1923. Serial No. 618,605. 2 Claims. (Cl. 123—169.)



1. A spark plug comprising a shell, an insulator therein having a recess in its lower end, a positive electrode carried by the insulator and projecting through said recess, a negative electrode cooperating with said positive electrode and grounded on said shell, a plunger mounted to reciprocate in said recess and to scrape the carbon therefrom, said plunger also slidably fitted above the positive electrode and having slots at its base with teeth formed between the slots, and a yoke beneath the spark gap to arrest the movement of the plunger.

1,487,660. DRIVING GEAR FOR ROTARY WASHING MACHINE. CHARLES KINGSTON and WILLIAM MCCHESNEY, London, England. Filed July 16, 1923. Serial No. 651,939. 3 Claims. (Cl. 74—14.)

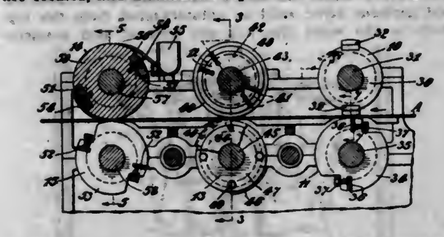


1. A driving and quick reversing gear for rotary washing machines comprising the combination of an eccentric driving spur pinion, an elliptical spur wheel driven by said eccentric spur pinion, and having a crank pin located on its longer diameter, a quadrant driving the drum of the washing machine the requisite number of times in opposite directions at each stroke through intermediate gearing, and a connecting rod attached at one end to said crank pin and connected at the other end to said quadrant.

1,487,661. MACHINE FOR CUTTING COMPOSITION SHINGLES. SAMUEL M. LANGSTON, Wenonah, N. J. Filed June 30, 1922. Serial No. 571,983. 15 Claims. (Cl. 164—68.)

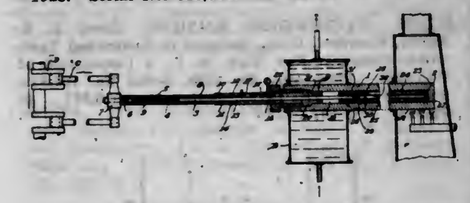
1. A machine for cutting shingle strips, including means for forming transverse rows of longitudinally extending tongues in a longitudinally advancing sheet, and a pair of coacting rotary members having knives spaced apart lengthwise of the members and each of a length equal to the width of a tongue for severing the tongues at their bases.

1,487,662. MACHINE FOR CUTTING COMPOSITION SHINGLES. SAMUEL M. LANGSTON, Wenonah, N. J. Filed July 11, 1922. Serial No. 574,273. 16 Claims. (Cl. 164—68.)



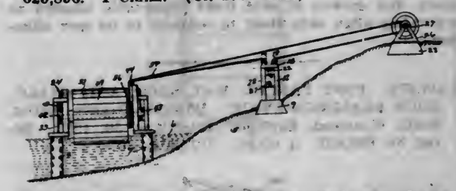
1. A machine for making shingle strips with spaced recesses along one longitudinal edge thereof, including means for feeding lengthwise a sheet of prepared material, a pair of rotary members coacting to cut a series of spaced parallel slits in the sheet transversely thereof and each corresponding to one edge of a recess of the shingle strip, a second pair of rotary members coacting to cut a second series of slits parallel to and arranged alternately with the firs tmentioned slits in the same row, and each corresponding to the opposite edge of a recess, a third pair of rotary members coacting to cut a series of pairs of longitudinal slits corresponding to the other two edges of each recess and for removing the circumscribed pieces to leave apertures, and means for sub-dividing the sheet lengthwise thereof into strips along lines intersecting a plurality of said apertures.

1,487,663. MACHINE FOR CUTTING COMPOSITION SHINGLES. SAMUEL M. LANGSTON, Wenonah, N. J. Filed July 28, 1922. Serial No. 578,171. 18 Claims. (Cl. 164—68.)



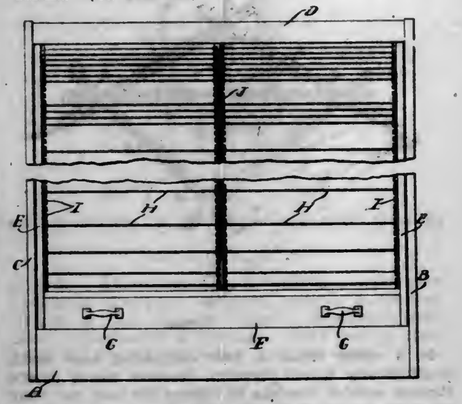
1. In a machine for forming apertures in sheet material, two pairs of coacting rotary members, one pair adapted to form a transverse slit and the other pair adapted to form a pair of longitudinal slits, the pairs being so adjusted that one end of each longitudinal slit

substantially registers with a corresponding end of the transverse slit, whereby longitudinally extending tongues are formed, and mechanism separate from said two pairs



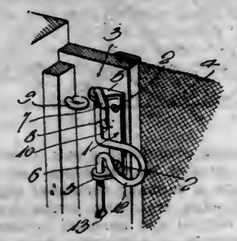
of coacting rotary members for cutting off the tongues at their bases and removing them from the sheet to form apertures.

1,487,664. HEAT ENGINE. JOHN FOX JENNENS MALONE, Newcastle-on-Tyne, England. Filed Feb. 27, 1923. Serial No. 621,594. 11 Claims. (Cl. 60—23.)



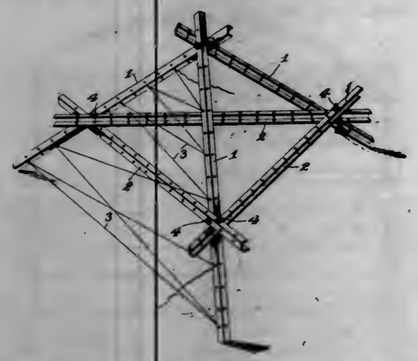
1. A heat engine comprising in combination a cylinder and means for maintaining the ends of the cylinder at a constant difference of temperature, a ram adapted to reciprocate within said cylinder, a displacer reciprocable in the cylinder, means for connecting the displacer with said ram to be reciprocated thereby during part of the stroke of the ram and to be idle during another part of the stroke thereof, and a liquid in said cylinder alternately moved towards either end of the cylinder by said displacer.

1,487,665. CURRENT MOTOR. KICHIMATSU MUKAI, San Francisco, Calif. Filed Mar. 17, 1923. Serial No. 625,896. 1 Claim. (Cl. 170—103.)



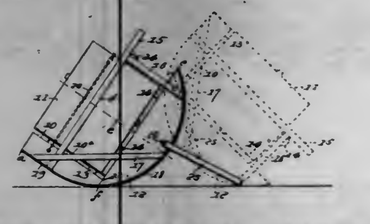
In a device of the character described, spaced supports, a shaft extending between said supports, the ends of said shaft being mounted in movable bearings, counterweights secured to each of said bearings, a drum mounted on said shaft, said drum being adapted to float upon the surface of a stream, paddle wheels secured to the periphery of said drum for the purpose of imparting rotation from said stream to said drum, a pulley secured on the end of said drum, a shaft remotely located with respect to said drum, a pulley on said shaft, a cable extending between said first mentioned pulley and said second mentioned pulley, and means for automatically maintaining the tension of said cable, said means consisting of a weight having a pulley secured thereto, spaced pulleys mounted above said pulley in such a manner that said cable is trained over one of said pulleys under said pulley on said weight and over the other of said pulleys.

1,487,666. SHELF CABINET. ENOCH OHNSTRAND, Mohawk, N. Y., assignor to Library Bureau, Cambridge, Mass., a Corporation of New Jersey. Filed Oct. 12, 1922, Serial No. 594,006. Renewed Feb. 7, 1924. 5 Claims. (Cl. 211—27.)



4. A cabinet having vertically adjustable shelves and opposed series of end supports for said shelves attached to upright portions of the cabinet, each of said supports comprising a horizontal portion on which a shelf is adapted to rest and angular flanges at opposed edges of said portion, one of said flanges serving as a means of attachment to the cabinet and the other flange serving with the support next below to define the shelf space.

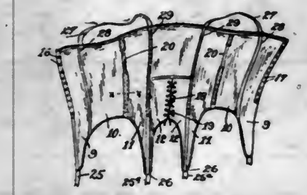
1,487,667. WINDOW-SCREEN LATCH. WENDELL H. OMLER, Philadelphia, Pa. Filed Sept. 28, 1922. Serial No. 591,133. 1 Claim. (Cl. 292—114.)



A fastener for a swinging screen or the like comprising a bearing bracket mounted on the inner face of one of the vertical side-pieces of the screen, a vertically disposed shaft journaled in the bearings of said bracket to permit sliding and rotary movement thereof, said shaft having a stop at its lower end to limit the upward sliding movement and having a portion of its upper end bent to extend at right angles to the inner face of the aforesaid side-pieces and said portion being then bent downwardly to extend in spaced parallelism to the body portion of the shaft, thus forming a hook for engagement with a keeper mounted on the inner face of the stop strip which the screen abuts, the bill of said hook being spaced a distance from said shaft less than the thickness of said strip, and the extremity of the bill being bent obliquely to form a cam nose to draw the screen into tight contact with said strip, the intermediate portion of said shaft being bent into a loop between its ends to form a finger-grip and the latter being bent at an angle to the hook so as to dispose it substantially midway between the aforesaid inner surfaces of the screen and stop strip to provide sufficient space on either side to permit quick gripping thereof when releasing the device.

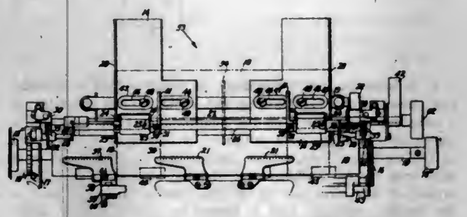
1,487,668. SILT ACCUMULATOR. GEORGE WILLIAM REHFELD, Riley County, Kans. Filed Apr. 9, 1921. Serial No. 460,145. 1 Claim. (Cl. 61—3.)

In a water break, a unit comprising bars having longitudinally spaced openings, fastener means passing through selected openings to connect the bars and retain the bars assembled in the form of a tripod, a second series of bars adapted to form a triangle embracing the said tripod, the above mentioned triangle occupying a horizontal position.



1,487,669. CARBOY LIFT. ROSCOE B. SHIFFNER, Kansas City, Mo. Filed May 4, 1921. Serial No. 466,646. 1 Claim. (Cl. 248—55.)

A carboy cradle comprising a pair of parallel rockers having outer rounded bearing edges and cut away at the rear to form a normally horizontal edge and a normally vertical edge, transverse strips connecting both the normally vertical and normally horizontal edges to provide, respectively, a seat and a back, of which the former is adapted for the reception of a carboy, diagonal braces spanning the rockers in intersecting relation with the angle between the seat and the back, handles secured to the rockers on opposite sides of the seat in a plane midway the depth of the seat, brace bars disposed in parallelism with the seat and connecting the handles with the rockers adjacent the upper ends of the former, legs pivotally connected with the rockers and adapted to maintain the device in upright position when the seat is disposed in a horizontal plane, and a flexible retainer consisting of detachably connected chains having their extremities secured respectively to the two rockers and adapted for spanning relation with a carboy carried on said seat.

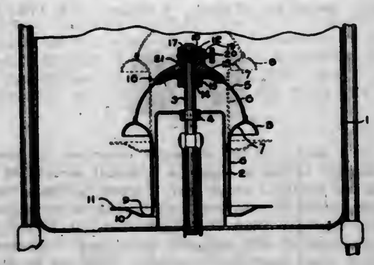


1,487,670. BRASSIÈRE CORSET. HARRY SLIKERMAN, Brooklyn, N. Y., assignor to The Belfit Brassiere Company, Inc., Brooklyn, N. Y., a Corporation of New York. Filed Oct. 7, 1921. Serial No. 506,017. 3 Claims. (Cl. 2—75.)

1. A brassière corset garment including an integral structure extending above and below the waist so as to embrace the bust and the hips, said garment having releasable fastening means at one side thereof, the top edge of said garment being substantially straight and terminating below the line of the armpits, the back of said garment being solid or uninterrupted from the top down to the waist line and the part of said garment

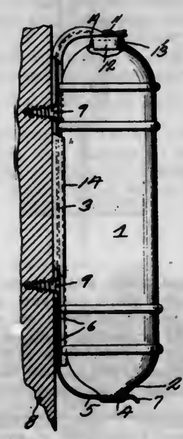
above the waist being solid or nonadjustable, said garment at the rear side being bifurcated from the lower end to the waist line only, and means for adjusting and drawing in said garment at the back from the lower end to the waist line only.

1,487,671. TYPEWRITING MACHINE. JESSE A. B. SMITH, Stamford, Conn., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Aug. 20, 1920, Serial No. 404,882. Renewed July 17, 1922. Serial No. 575,577. 32 Claims. (Cl. 197—127.)



1. In a typewriting machine, the combination with a platen and a platen frame, of a rear paper-table fixed in said frame, a front paper-table, devices associated with the rear paper-table for separately aligning thereon in superposed relation a wide work-sheet and a narrow work-sheet lying between the edges of the wide work-sheet, and devices at said front paper-table adapted to separately align each sheet to conform to its rear alignment.

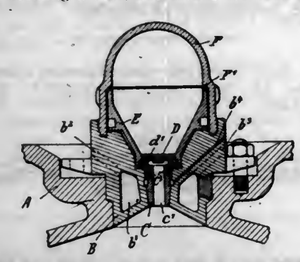
1,487,672. POST PARCEL, BAG, SACK, AND ANALOGOUS SEALING DEVICE. WILLIAM BARBER SMITH, South Wanstead, England. Filed Apr. 30, 1923. Serial No. 635,637. 1 Claim. (Cl. 292—307.)



A sealing device comprising a substantially round dished metallic head having an upwardly-extending annular bead beyond the rim of the head, a shallow downwardly-turned flange at the outer edge of said annular bead having a toothed edge, and pairs of long prongs extending down from the flange, the prongs being substantially radial with respect to the head and the prongs of each pair being located closer to one another than quadrants of the circle of the bead, whereby to leave relatively wide spaces between the prongs of different pairs, the prongs of different pairs being diametrically opposite one another, a portion of the toothed flange extending between the prongs of each pair and a greater portion extending between the prongs of opposite pairs.

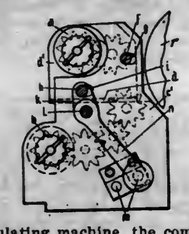
1,487,673. WASHING MACHINE. DONALD SOPER, London, Ontario, Canada. Filed Dec. 23, 1922. Serial No. 608,725. 6 Claims. (Cl. 259—113.)

1. In a washing machine, the combination with a vertically reciprocable vacuum casing open at its bottom, and means in the tub extending up into the vacuum casing for restricting the cross sectional area of its mouth whereby the air compressed in the vacuum casing during its down stroke is forced thereoutof between the vacuum casing and the restricting means.



1,487,674. FIRE EXTINGUISHER. AUSTIN C. STARBIRD, Opopka, Fla., assignor to Fireite Extinguisher Co., Masontown, Pa., a Corporation of Delaware. Filed Aug. 1, 1922. Serial No. 578,930. 1 Claim. (Cl. 248—20.)

In a fire extinguisher, a bracket having a resilient arm at its upper end, and means at its lower end for supporting a fire extinguisher, a fire extinguisher supported by said means and having a discharge opening in its upper end, a resilient sheet metal cap secured to the resilient arm, the walls of the cap being bent upon themselves intermediate their ends and extended at an angle with respect to the walls of said opening, and disposed within the same.

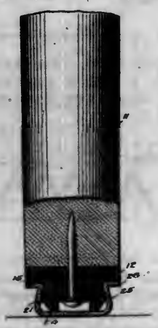


1,487,675. INTERNAL-COMBUSTION ENGINE. KARL STEINBECKER, Charlottenburg, Germany. Filed Sept. 11, 1922. Serial No. 587,550. 6 Claims. (Cl. 123—33.)

1. An arrangement for the operation of solid injection internal combustion engines of the Diesel type, in which a small part of the fuel is atomised in a bulb comprising a cylinder, an atomising bulb, an induction passage branching towards the bulb into a plurality of separate passages forming a rose, and means for cooling said rose

extending into the top part of the rose, which faces the bulb.

1,487,676. CALCULATING MACHINE. FERDINAND STEMMLER, Brunswick, Germany, assignor to Grimme, Natalis & Co., Aktiengesellschaft, Brunswick, Germany, a Corporation of Germany. Filed Dec. 13, 1921. Serial No. 522,174. 4 Claims. (Cl. 235—73.)



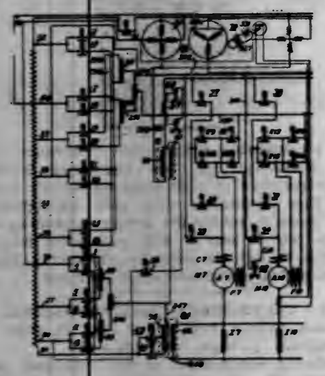
1. In a calculating machine, the combination, with the setting mechanism, of two registering mechanisms, means independent of each other operatively connecting said setting mechanism with both registering mechanisms, means to render the setting mechanism inoperative relatively to one of said registering mechanisms, and means to lock the shiftable registering mechanism in its connected and disconnected positions.

1,487,677. VALVE-SURFACING COMPOSITION. HUGH H. THEIS, Taylor, Tex. Filed June 16, 1922. Serial No. 568,853. 1 Claim. (Cl. 134—54.)

A surfacing composition of the character described comprising rubber cement, 5 ozs., cup grease, 6 ozs., differential grease, 4 ozs., graphite, ½ oz., denatured alcohol, ½ oz., muriatic acid, ½ oz., and distilled water, ½ oz.

1,487,678. SLIDING CASTER. CARL GEBHARD, Long Beach, Calif. Filed Sept. 15, 1922. Serial No. 588,454. 5 Claims. (Cl. 16—42.)

1. A pad for chairs comprising a cushioning element, a metallic foot-member adapted to receive the cushion-



ing element, and a flange formed on said metallic foot member and adapted for engagement with the cushioning member, substantially as described.

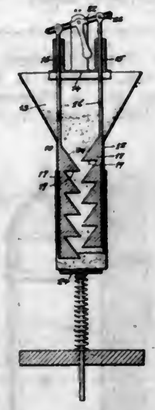
1,487,679. SAW JOINTER. ARON HANSON, Libby, Mont. Filed Mar. 19, 1923. Serial No. 625,937. 2 Claims. (Cl. 76—46.)

1. The combination with a saw jointer and its file, of longitudinally disposed arms having their inner ends adjustably secured to said jointer, and pivoted slide shoes at the free ends of said arms for guiding the file in a predetermined line along the cutting edge of saw teeth.

1,487,680. SYSTEM OF CONTROL. LLOYD J. HIBBARD, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 17, 1919. Serial No. 345,486. 12 Claims. (Cl. 172—179.)

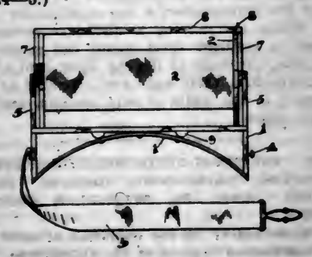
5. In a system of regenerative control, the combination with a supply circuit and a dynamo-electric machine having an armature and a field winding, of a switch for connecting a machine circuit to the supply circuit, and a controller for regulating the voltage of said armature and for automatically effecting the opening of said switch if regeneration is attempted at a relatively low speed.

1,487,681. LATHE TOOL. FERNANDO OSCAR JAQUES, Jr., Providence, R. I. Filed July 13, 1923. Serial No. 651,378. 5 Claims. (Cl. 29—96.)



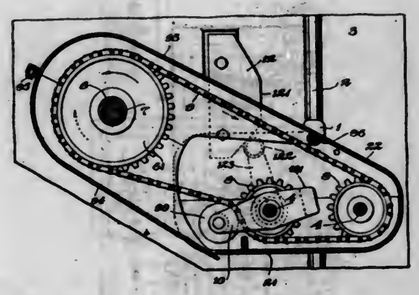
1. A lathe tool comprising a zigzag shaped cutting member, a holding member having a corresponding zigzag shaped groove and means for rigidly securing the zigzag shaped cutting member in the zigzag shaped groove of the holding member.

1,487,682. ELECTRIC-CIRCUIT TERMINAL. HENRY E. LEPPERT, New Britain, Conn., assignor to The Trumbull Electric Manufacturing Company, Plainville, Conn., a Corporation of Connecticut. Filed July 3, 1922. Serial No. 572,534. 6 Claims. (Cl. 173—269.)



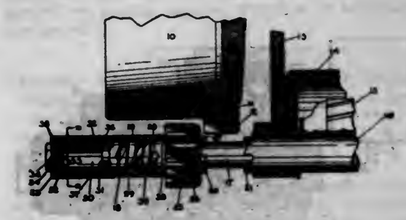
2. In a device of the character described, an insulating support having a recess, a terminal secured in said recess and having a screw seat, a screw having a threaded engagement in said seat and having an extension of smaller diameter than the screw seat but longer than the thickness of said terminal permitting the screw to be tilted when partially disengaged from the terminal.

1,487,683. FEEDER AND PACKER FOR PULVERULENT MATERIALS. ESLI A. MARSH, Chicago, Ill., assignor to J. F. Elam Sales Service, Inc., Chicago, Ill., a Corporation of Illinois. Filed Oct. 22, 1923. Serial No. 669,979. 5 Claims. (Cl. 226—24.)



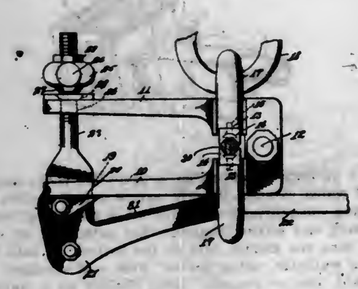
1. In a combined feeder and packer, the combination of a chute, a plunger within the chute, said plunger having downwardly projecting teeth, an opposing member having downwardly projecting teeth, and means for reciprocating the plunger, the edges of the opposed teeth lying in close relation to one another when in the medial position, substantially as described.

1,487,684. BERRY-PICKER'S CARRIER. WILLIAM THOMAS OLIVER, Harrop, British Columbia, Canada. Filed Nov. 13, 1922. Serial No. 600,644. 6 Claims. (Cl. 224—5.)



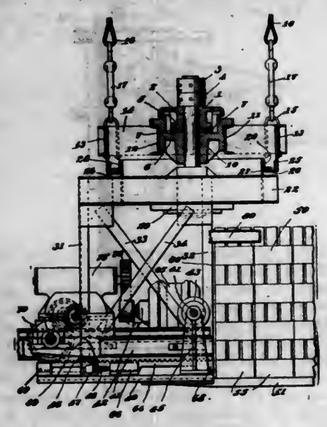
1. In a carrier of the character described, the combination of a supporting frame; a pair of arms pivotally supported on the frame; a tray pivotally supported on said arms, said tray being open at one side; and a closure member for the open side of the tray carried by said arms.

1,487,685. ROVING FRAME. GEORGE F. ALBRECHT and HARRY BROOK, Woonsocket, R. I., assignors to Woonsocket Machine & Press Co., Inc., Woonsocket, R. I., a Corporation of Rhode Island. Filed Dec. 7, 1923. Serial No. 679,183. 15 Claims. (Cl. 118—41.)



1. In chain-driven mechanism, the combination with a driving sprocket-wheel, a driven sprocket-wheel partaking of traverse movements, a drive-chain passing around both of the said sprocket-wheels, and a tightener-roll engaging with said drive-chain intermediate the said sprocket-wheels, of means positively controlling the tightener-roll and causing it to keep the slack taken up during the up and down movements of the traverse.

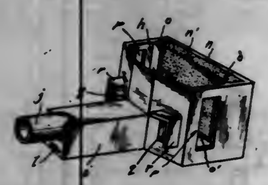
1,487,686. ELECTRIC STARTER. ERNEST R. HUNTLEY, Milwaukee, Wis., assignor to Industrial Research Corporation, Toledo, Ohio, a Corporation of Delaware. Filed Oct. 6, 1920. Serial No. 415,156. 10 Claims. (Cl. 74—7.)



1. In a starting mechanism for gas engines, the combination of a motor having a main shaft; an extension shaft having a diameter less than that of the main shaft; an element of a jaw clutch formed at the junction of said shafts; a pin on the extension shaft; a sleeve on the extension shaft formed with an advancing slot therein, said slot being adapted to have sliding engagement with the pin; a clutch element on the end of the sleeve adjacent the first named clutch element and adapted to engage therewith; a gear wheel secured to the sleeve adjacent the sleeve clutch element; a plug at the end of the sleeve opposite to the clutch end, said plug having an aperture therein; a valve for the aperture fitted to permit free passage of air into the sleeve interior and prevent free passage of air from within the sleeve; a coil spring surrounding said sleeve and having a bearing on the pin and a portion of the sleeve whereby the sleeve is urged along the extension shaft in a direction to open the jaw clutch; and a tubular casing fixed to and enclosing said spring and sleeve.

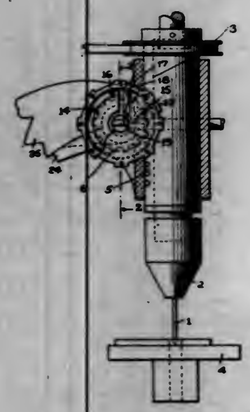
1,487,687. TEMPER SCREW CLAMP. JOHN F. HARRISON, Columbus, Mont., assignor to Harrison Clamp Company, Casper, Wyo., a Corporation of Wyoming. Filed May 7, 1923. Serial No. 637,384. 3 Claims. (Cl. 24—135.)

1. A temper screw clamp including movably connected members having rope gripping means at their connected portions, a lever movably mounted in the other end of one of the members, and a clamping means movably carried by the lever and adjustably engaged through the other member and releasable therefrom.



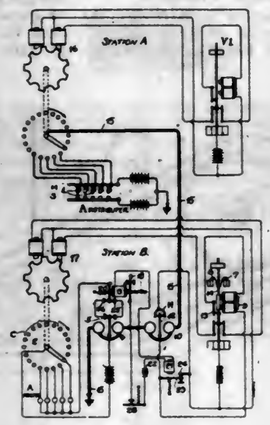
1,487,688. BRICKSETTING MACHINE. GRAFTON E. LUCE, Chicago, Ill. Filed Oct. 6, 1919. Serial No. 328,712. 5 Claims. (Cl. 294—63.)

1. Brick handling apparatus of the kind described, consisting in means to engage and lift a stack of brick, including means to contact with substantially the central portion of the foundation rows of brick in the stack, said brick engaging means having mechanism adapted to move



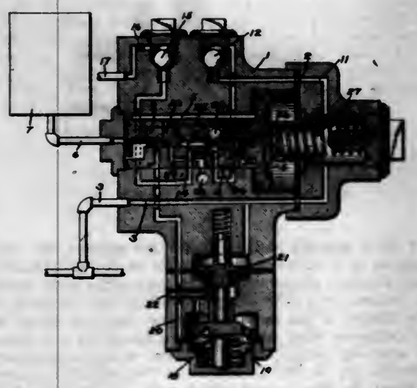
the same under the brick while the carrier is stationary for loading the brick stack onto the carrier, said brick engaging means being movable rearwardly to release the brick stack for unloading.

1,487,689. OIL BURNER FOR FURNACES. HARRY W. MANNING, Portland, Oreg. Filed Oct. 17, 1922. Serial No. 595,134. 10 Claims. (Cl. 158—4).



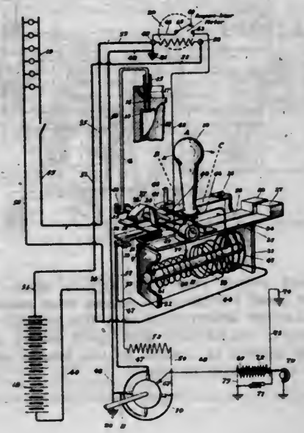
1. An oil burner comprising, a basin-like body, one wall side of which extends straight across and the other wall side being substantially semi-circular, a horizontal tubular vaporizing and mixing chamber, the outlet end of which enters thru the middle and at the bottom of, said semi-circular wall-side, being normal with said straight wall-side, said tubular chamber being divided by a partition extending part of the length thereof into parallel oil and air ducts, the walls of said body having flame openings, the openings in the wall portions adjacent said tubular chamber being provided with deflectors arranged to deflect part of the flames against said chamber thereby to heat the latter and gasify the oil admitted thru the oil duct thereof.

1,487,690. METHOD OF AND APPARATUS FOR DRILLING. CHARLES MARTI, East Orange, N. J., assignor to The Martian Manufacturing Co., Inc., Newark, N. J., a Corporation of New Jersey. Filed Sept. 24, 1920. Serial No. 412,574. 11 Claims. (Cl. 77—55.)



1. In a drill press the combination of a longitudinally movable drill holder, a pinion operatively connected therewith, a housing to support said pinion, a lug secured eccentrically to said pinion and rotatable therewith, a stop operatively secured to the housing, and means interposed between the lug and the stop to yieldingly oppose rotation of the pinion.

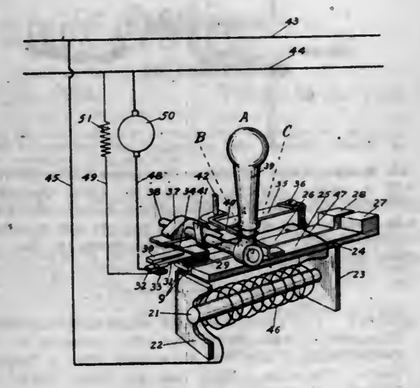
1,487,691. TELEGRAPH SYNCHRONIZING SYSTEM. DONALD MURRAY, London, England, assignor to The Western Union Telegraph Company, New York, N. Y., a Corporation of New York. Filed Feb. 15, 1924. Serial No. 693,112. 4 Claims. (Cl. 178—53.)



1. In a synchronous multiplex printing telegraph system, a telegraph line, means for transmitting impulses of different polarities on said line, a multi-channel receiving distributor, printer relays connected to each channel, circuit connections whereby the printer relays in one channel are unresponsive to impulses of one polarity and means for changing said circuit connections, whereby said relays are made responsive to impulses of said polarity.

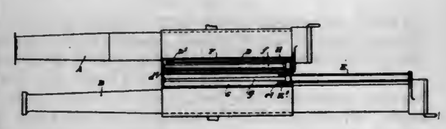
1,487,692. FLUID-PRESSURE BRAKE. THOMAS H. THOMAS, Edgewood, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Mar. 7, 1923. Serial No. 623,538. 15 Claims. (Cl. 303—37.)

1. In a fluid pressure brake, the combination with a valve mechanism having a valve provided with a port through which fluid under pressure is supplied, of a movable member mounted in said valve and subject to the pressure of fluid supplied to said port, whereby the pressure in said port reacts on the valve to hold same to its seat.



1,487,693. ELECTRIC SYSTEM FOR GENERATING UNITS. CARL P. BROCKWAY, Toledo, Ohio, assignor to Industrial Research Corporation, Teledo, Ohio, a Corporation of Delaware. Filed Apr. 28, 1919. Serial No. 293,261. 5 Claims. (Cl. 290—35.)

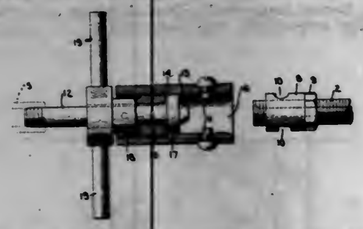
1. In an electric generating system, an electric circuit, an automatic switch for opening and closing said circuit, a gas engine having cranking means operable by said electric circuit and having a compression relief valve, a switch operating handle capable of limited motion in either direction, means for manually closing the switch by moving the handle to either extreme position, means for opening said compression relief valve operable by movement of the handle to one extreme position only, and means for automatically returning the handle to intermediate or neutral position whenever it is released by the operator.



1,487,694. CIRCUIT BREAKER. CARL P. BSOCKWAY, Toledo, Ohio, assignor to Industrial Research Corporation, Toledo, Ohio, a Corporation of Delaware. Continuation of application Serial No. 293,261, filed Apr. 28, 1919. This application filed Nov. 8, 1919. Serial No. 336,630. 8 Claims. (Cl. 200—103.)

4. In an electric switch, an electro-magnet having a coil and a pole piece, an armature of greater permeability and an armature of lesser permeability, both in position to be attracted by said pole piece, said armature of lesser permeability carrying an electric contact, and said armature of greater permeability carrying a stop arm, a rock-shaft capable of limited motion from a neutral position, a cam thereon adapted to shift said armature of lesser permeability toward said pole piece when said shaft is rocked to its operative position, a second cam on said shaft adapted to engage said stop arm at the same time to hold said armature of greater permeability away from the pole piece, means tending to withdraw said armature of lesser permeability, whereby, when said rock-shaft is in neutral position a current through said coil of more than a certain predetermined strength will cause said armature of lesser permeability to become over-saturated, after which said armature of greater permeability will be drawn into engagement with said pole piece, thereby magnetically short circuiting said armature of lesser permeability and permitting it to be withdrawn, and whereby when said rock-shaft is in neutral position and a current of less than said predetermined strength is flowing, said stop arm may be manually depressed to shift said armature of greater permeability into engagement with said pole piece, thereby magnetically short circuiting said armature of lesser permeability, and permitting it to be withdrawn.

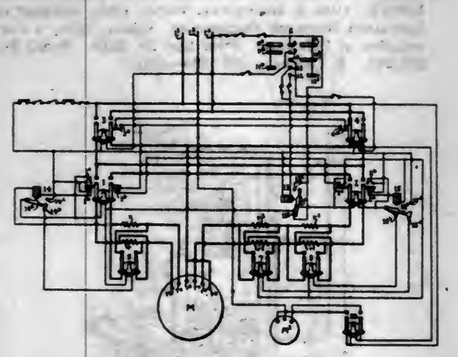
5. In an automatic circuit breaker for an electric circuit, the combination of an electromagnet having an armature, means for breaking the electric circuit by the movement of said armature, a second armature for said electromagnet adapted to magnetically short circuit the first armature when the current in the circuit exceeds a predetermined value, and means operable to prevent said second armature from acting when it is desired to send a high current through said circuit.



1,487,695. MULTIBARREL GUN. EUGÈNE SCHNEIDER, Paris, France, assignor to Schneider & Cie., Paris, France, a Limited Joint Stock Company of France. Filed Jan. 4, 1924. Serial No. 684,420. 7 Claims. (Cl. 89—43.)

1. A multi-barrel gun comprising, in combination, an even plurality of barrels, a common cradle for said barrels, means including a rod and an apertured diaphragm having operative engagement with each of said barrels for braking the recoil of the latter, and means for transferring the energy of recoil of one barrel to the rod and diaphragm of an adjacent barrel for running out the latter, said rod and diaphragm having relative longitudinal movement during the recoil of the barrels.

4. A multi-barrel gun comprising, in combination, a cradle, an even plurality of barrels mounted in said cradle the breech of said barrels being normally in the same vertical plane, means for braking the recoil of said barrels and for simultaneously running out one of said barrels, tappets on said barrels, and a recuperator having engagement with said tappets and adapted to be energized by the recoil of one of the barrels for returning the latter to their normal position of alignment.



1,487,696. VULCANIZER CONNECTION. CLIFFORD D. SMITH, Akron, Ohio, assignor to The Firestone Tire and Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Apr. 28, 1920. Serial No. 377,247. 6 Claims. (Cl. 285—177.)

2. A separable connection comprising a casing provided with a central opening and internal screw threads, a projection extending into said opening, a sleeve slidable in said opening, said sleeve having a bayonet slot therein to cooperate with said projection and means to lock the sleeve in the casing.

1,487,697. CONTROLLER FOR ELECTRIC MOTORS. HARRISON P. REED, Milwaukee, Wis., assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Apr. 10, 1922. Serial No. 550,969. 12 Claims. (Cl. 172—179.)

7. In a controller for two speed A. C. motors, the combination with separate slow speed and high speed switches of control means therefor to effect operation thereof progressively or operation of said high speed switch independently of said slow speed switch, the latter means including a relay normally positioned to arrest operation of said high speed switch and responsive to render the

high speed switch responsive and to effect release of said slow speed switch and a second relay normally positioned to arrest operation of said slow speed switch and responsive to render said slow speed switch responsive but being subject to control by the former relay to be arrested by response thereof.

Patents Nos. 1,487,698 to 1,488,460.

THE OFFICIAL GAZETTE OF THE United States Patent Office.

Vol. 320—No. 4. TUESDAY, MARCH 25, 1924. Price—$5 per year.

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $5.00 per annum; single numbers, 10 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

Adhesion of Esthonia to the International Convention for the Protection of Industrial Property.

U. S. PATENT OFFICE, *March 15, 1924.*

The following communication, referred to this Office by the Secretary of the Interior, is published for the information of those concerned.

THOMAS E. ROBERTSON,
Commissioner.

[Translation.]

LEGATION OF SWITZERLAND,
Washington, D. C., January 31, 1924.

Mr. SECRETARY OF STATE:

On my Government's request I have the honor to inform you that by a note dated December 18, 1923, the Ministry of Foreign Affairs of Esthonia notified the Swiss Federal Council that the Republic of Esthonia decided by a law enacted in the State Assembly on November 29, 1923, to adhere to the International Convention for the Protection of Industrial Property, signed at Paris, March 20, 1883, revised at Brussels, December 14, 1900, and at Washington, June 2, 1911, with its final protocol (see article 18 of the Convention).

In accordance with article 16, paragraph 3, of the revised Union Convention of Paris this adhesion will take effect one month after the sending of the notification by the Swiss Government to the other countries belonging to the union, that is to say, on and from February 12, 1924.

With regard to the contribution to the expenses of the International Bureau, the Swiss Federal Council has asked the Esthonian Government to indicate to it the class in which that country wishes to be placed.

Begging you kindly to take note of this adhesion, I take the opportunity to renew to you, etc.

MARC PETER,
Minister of Switzerland.

TRADE-MARKS CANCELED.

122,831. Automobile dolly jacks. Mid-West Manufacturing Company, Sioux Falls, S. Dak. Registered July 23, 1918. Canceled February 25, 1924.

159,681. Cotton piece goods and drapery fabrics of cotton, silk and cotton, and silk-mixture piece goods. Colony Mills, Inc., New York, N. Y. Registered October 3, 1922. Canceled January 24, 1924.

162,552. Burnishing compound. Mid-West Manufacturing Company, Minneapolis, Minn. Registered December 19, 1922. Canceled February 25, 1924.

ADJUDICATED PATENTS.

(C. C. A. Mass.) The Steele patent, No. 997,472, for an artificial tooth, claims 1 and 2 *Held* invalid. *Columbus Dental Mfg. Co.* v. *Ideal Interchangeable Tooth Co.*, 294 Fed. Rep. 422.

(D. C. N. Y.) The Just and Hanaman patent, No. 1,018,502, for a filament for incandescent lamps *Held* valid and infringed. *General Electric Co.* v. *P. R. Mallory & Co.*, 294 Fed. Rep. 562.

(D. C. N. Y.) The Langmuir patent, No. 1,180,159, for an incandescent electric light, claims 4, 5, 12, and 13 *Held* valid and infringed. *General Electric Co.* v. *P. R. Mallory & Co.*, 294 Fed. Rep. 562.

ADVERSE DECISIONS IN INTERFERENCE.

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed:

Pat. 1,432,341, M. A. Kendall, Leer conveyer, decided February 11, 1924, claim 1.

Pat. 1,450,125, M. L. Webb, Automatic heat control, decided February 7, 1924, claims 1, 2, and 3.

Condition of Applications Under Examination at Close of Business March 14, 1924.

(Total number of applications awaiting action, excluding Trade-Mark Division, 61,804; Trade-Mark Division, 1,730. Oldest new case, June 14, 1923; oldest amended, June 16, 1923. The dates given are 1923 except where * indicates 1924.)

Room No.	Divisions, Examiners, and subjects of inventions.	Oldest new application and oldest action by applicant awaiting office action. New.	Amended.	No. of applications awaiting action.

DECISIONS IN PATENT AND TRADE-MARK CASES.

U. S. Circuit Court of Appeals—Second Circuit.

AMERICAN STAINLESS STEEL CO. *v.* LUDLUM STEEL CO.

Decided April 16, 1923.

[290 Fed. Rep. 103.]

1. PIONEER PATENTS.

When to the scientific triumph of succeeding where other scientists have failed is added the development of a new branch of industry, the word "pioneer" may well be accorded to the patent which describes and defines, even though lamely, the essentials of such success.

2. PATENTABILITY—ANTICIPATION—SUFFICIENCY OF DISCLOSURE.

It requires more than prophecy of what may be done or than declarations of what ought to be accomplished to make a good patent reference, not to speak of anticipation. It is necessary to show with reasonable certainty how the desired result can be accomplished.

3. PIONEER INVENTIONS—"STAINLESS STEEL."

Where all the evidence unites to prove that steel of a polished luster, secured by its composition against the commoner forms of acid or corrosive attack, was something sought for, suspected as possible to come from chromium admixtures, but never obtained until B. and H. produced as a new article of manufacture a wholly novel product and something almost in denial of previous scientific disclosure—"stainless steel"—*Held* that to such an inventive concept the often misleading word "pioneer" may fairly be applied.

4. SPECIFICATION—SUFFICIENCY OF DESCRIPTION—PERSONS "SKILLED IN THE ART."

Where patents are addressed to the cutler, but refer to the production of a certain kind of steel and instruct with precision as to the component parts of the material, *Held* that the patents are to be interpreted in the light of what their disclosures would mean to one accustomed to the art of making steel, or to a metallurgist, and not to one who was concerned only with the forming thereof into implements.

APPEAL from the District Court of the United States for the Southern District of New York.

Suit in equity by the American Stainless Steel Company against the Ludlum Steel Company. Decree for defendant, and complainant appeals. Reversed and remanded.

STATEMENT OF THE CASE.

Suit is upon two patents, one (claims 1, 2, and 4) granted to Haynes April 1, 1919, No. 1,299,404; and the other (claims 1 and 3) granted to Brearley September 5, 1916, No. 1,197,256. Haynes called his application one for a "wrought metal article," and Brearley his for "cutlery." But the object of both patentees is the same, and may be shortly described as a desire to produce what has for some years been increasingly well known under the trade-name "stainless steel." Although Brearley's patent date is earlier, his date of application is later, and it may be summarily held that Haynes's is the generic and Brearley's the specific patent.

Haynes declares that his invention relates to the production of wrought metal articles of manufacture—

having polished surfaces of the general character which is termed noble, in that such surfaces are incorrodible.

Brearley states that his invention relates to the production of—

cutlery or other hardened and polished articles of manufacture where nonstaining properties are desired.

Both patentees are of opinion that they have shown such desirable product by the use of a described alloy, to wit:

A worked-down and hard body of an iron-chromium alloy, low in carbon and in other metals. (Haynes.)

The addition of certain percentages of chromium and carbon to iron, [producing] a steel capable of taking a polish and having the characteristics above referred to. (Brearley.)

Haynes's most specific claim is No. 2, viz.:

A wrought metal tool having polished surface of the incorrodible character of polished surfaces of noble metal, and comprising an alloy of iron and chromium containing from 8 per cent. to 60 per cent. of chromium and from 40 per cent. to 92 per cent. of iron, with carbon in amount between 0.1 per cent. and 1.0 per cent.; said alloy being readily malleable and workable and being substantially free of other metals.

Brearley's definition of his own invention is best found in his first claim, viz.:

A hardened and polished article of manufacture composed of a ferrous alloy containing between 9 per cent. and 16 per cent. of chromium and carbon in quantity less than seven-tenths of 1 per cent.

Defendant is alleged to infringe by making and selling certain kinds of steel known by the trade-names of "Nevastain" and "Silchrome." The ultimate manufactured article, tool, or implement does not appear to have been made by the defendant, but what it sells is by its own commercial literature described thus:

Nevastain is a high chromium-silicon alloy completely resistant to the effects of fruit acids. * * * It is particularly adapted for exposed surfaces which have to withstand the combined action of salt water and the atmosphere. It can be hardened by the usual methods, and made file hard, and can then be drawn to requirements. * * * Nevastain steel, when polished, will retain its high finish indefinitely. The atmospheric dirt can be readily removed by soap and water.

Silchrome is very resistant to the action of acids, organic and inorganic. It will not stain when subjected to the fruit acids, providing the steel has been hardened.

The usual defenses were interposed, and the court below in a careful and able opinion by Learned Hand, J., set out substantially all the facts adduced at hearing, and held that the Brearley claims in suit could not "create a monopoly over the whole extent which they claimed," but that said claims might be considered (for argument's sake) "valid for as much of the field as [Brearley's] invention really covers." No definite finding of validity was made in respect of Haynes, but noninfringement of both patents was declared (as to Brearley), because, if his disclosure were followed, defendant's alloy or composition "would become hard and would not become stainless," and as to Haynes his disclosure nowhere indicated any method of rendering stainless what defendant had made and sold.

From decree dismissing bill for noninfringement, plaintiff appealed.

Mr. Charles Neave, *Mr. Marshall A. Christy*, and *Mr. Maxwell Barus* for the appellant.

Messrs. Kenyon & Kenyon (*Mr. Allan D. Kenyon* and *Mr. Herbert Dyke* of counsel) for the appellee.

Before ROGERS, HOUGH, and MANTON, Circuit Judges.

HOUGH, *Cir. J.* (after stating the facts as above):

Judgment in this case seems to us primarily to depend on ascertainment of patent validity and scope. This is a prerequisite to determination of the place in the art, or that branch of art, to which the patents belong. If this invention be found broadly new, meritorious in ingenuity, and lying at the foundation of a wholly novel development of human labor, it should receive in construction a liberality too well recognized to need additional exposition, though we may point out that *Treibacher* v. *Roessler*, 219 Fed. 210; 135 C. C. A. 108; 209 O. G. 1689, is a rather striking illustration of such appropriate liberality.

The history of steel is almost as old as that of commerce, and the story of its use for tools of every kind a commonplace; but equally has it heretofore been a commonplace that, unless kept bright by repeated polishing or protected with oil, the steel utensil was expected to lose its luster, and especially have all steel articles needed protection from the common acids of human food, something usually at hand, and certainly as much needed as steel itself.

The difficulty of producing a steel resistant to what is roughly called "corrosion," even by some of the experts testifying herein, has long been recognized. That compound of pure iron and the carbide thereof, which is steel, has itself been admixed (for many purposes) with other and more infrequent metals; e. g., nickel, tungsten, etc., and chromium. Ferrochromium is one form of admixture; and the fact that ferrochromium itself was well known to be peculiarly resistant to powerful acids doubtless suggested years ago that some chromium alloy might be at once useful for many of the commercial purposes of steel and yet maintain its polished luster.

[1] This record is replete with accounts of speculations on this subject and dissertations thereon by men confessedly skillful in their day in the arts of steel making and metallurgy. These publications have been advanced by defendant to minimize the inventive concept of Haynes and Brearley. To us they magnify it. There are many inventions which seem to have been gathered, as it were, from the scrap heaps of human effort. They appear to observers as the results of accident, rather than intelligent design. But where men, doubtless well equipped for a particular sort of work, have hoped and investigated and even prophesied as to what could be done, but never did it, and other men similarly equipped have by intensive study and skillful experiment succeeded, such success commands and should receive a greater meed of intellectual appreciation than is accorded even to the cleverness of picking up and utilizing an unconsidered or discarded trifle. When to the scientific triumph of succeeding where other scientists have failed is added the development of a new branch of industry, the word "pioneer" may well be accorded to the patent which describes and defines, even though lamely, the essentials of such success.

[2] Half a century ago Woods and Clark (British No. 1,923 of 1872) filed provisional specification for an "improved alloy for anti-acid metal"; but they never completed their application. Of this abandoned disclosure defendant declares that these men—

> taught the world * * * that high chromium ferrous alloys, consisting of low carbon Bessemer steel and high chromium content, with more or less tungsten—

could be used to produce stainless alloys, and it is urged that "the patents in suit have added nothing to that knowledge." On the contrary, our inference is that Woods and Clark must have thought little of their own concept, as they dropped the matter at once; while examination of their disclosure shows that their preferred alloy for "anti-acid metal" was made in proportions wholly wrong, while their methods of production were merely impossible. They were perhaps among the prophets; but it requires more than prophecy of what may be done, or than declarations of what ought to be accomplished, to make a good patent reference, not to speak of an anticipation. It is necessary to show with reasonable certainty how the desired result can be accomplished. *Westinghouse, etc., Co.* v. *Great Northern Co.*, 88 Fed. 258; 31 C. C. A. 525; 85 O. G. 455.

In 1892 Sir Robert Hadfield investigated chromium steel and published his results. That publication we regard as potent evidence of what were then regarded as insuperable difficulties in attaining permanent luster in steel. We accept that eminent steel maker's statement, made in 1916, that he in 1892 saw no way of utilizing low-carbon high-chromium steel for making articles capable of remaining untarnished in contact with the common acids.

[3] We have taken from the historical evidence one example of thought expressed in a patent specification, and one of thought expressed in scientific dissertation; the quotations might be much extended, for all the evidence unites to prove that steel of a polished luster, secured by its composition against the commoner forms of acid or corrosive attack, was something sought for, suspected as possible to come from chromium admixtures, but never obtained until contemporaneously in England and the United States Brearley and Haynes, proceeding along similar lines and having in view substantially the same purpose, produced as a new article of manufacture a wholly novel product, and something almost in denial of previous scientific disclosure, "stainless steel." To such an inventive concept the often misleading word "pioneer" may fairly be applied.

Having thus given our view of the rank of this inventive thought, the question is crucial (in considering validity): To whom were these patents addressed? Who were the "men skilled in the art" to whom they spoke, and by whose intelligent appreciation they are to be measured as to clarity and sufficiency of disclosure?

Here we are constrained to disagree with the learned district court, where these patents were measured by what a cutler would learn from them, and more particularly from Brearley. A cutler may mean either a man who makes edged tools or one who grinds them. He has nothing to do with the manufacture of the steel, which for him is raw material. Yet these patents refer to the production or making of a certain kind of steel; they instruct with remarkable precision as to the component parts of the material, which is to be stainless. It seems to us clear that such a disclosure speaks directly to those whose business it is to make the steel, and not to the cutler who is to fashion it.

[4] We have recently considered the meaning of the phrase "man skilled in the art," and concluded that it is always a relative term, and that no absolute definition of its meaning can be laid down as matter of law, because the query as to who is the man skilled in any particular art is itself a question of fact and one having regard to the patent under consideration. *Dick* v. *Barnett*, 288 Fed. 799; 317 O. G. 789. It follows that we are of opinion that these patents are to be interpreted in the light of what their disclosures would mean to one accustomed to the art of making steel, or to a metallurgist, and not to one who was concerned only with the forming thereof into implements of industry.

What the patentees told metallurgists was that stainlessness might and would be attained by the making of low-carbon and (comparatively) high-chromium alloys when, and only when, what Haynes called "special precautions" were taken in preparation; substantially that crucibles differing from those in ordinary use should be availed of, in order to prevent the proximity and consequent admixture of carbonaceous matter during the process of melting. Haynes thought that he could use either electric or fire heat, while Brearley preferentially recommended an electric-arc melting furnace. The product of both depended upon the making (under melting conditions as above set forth) of an alloy of iron in which the admixture of chromium was in Haynes to be from 8 to 60 per cent, with a content of between 10 and 25 per cent preferred; and in Brearley (who devoted himself to a material particularly suitable for tools) between 9 and 16 per cent; while Haynes's carbon might run from 0.1 to 1 per cent and Brearley's must be less than 0.7 per cent. The patented product is according to Haynes to be (inter alia) a "*hard* body of an iron chromium alloy," and according to Brearley, "a tempered steel *hardened* article." The noninfringement hitherto declared is based on consideration of the word "hard" or "hardened."

Defendant's "Nevastain" and "Silchrome" show an average (in figures near enough for discussion) of carbon 0.43, chromium 9.73, and an addition of silicon 3.84. Leaving silicon out of consideration for the moment, and accepting defendant's laudatory comments on its own product (prefixed to this opinion), it is evident that the alleged infringing articles have taken, not only the proportions of both patents, but (as will appear on closer reading of his disclosure) the especially preferred compound or admixture of Brearley. It was found below and (as may be assumed for purposes of discussion) that such steels as Nevastain and Silchrome—

> will often (it is believed always) become *hard* if heated to the critical temperature taken with the utmost liberality, but will not be stainless. They must be heated further, and to 1700° F., to acquire that second character—

of stainlessness. The degree of heat indicated is distinctly above the critical temperature of ordinary steel.

This means, without going into a detail which may be pursued in the opinion below, that since the patents were addressed to the cutler, and the cutler was accustomed to harden steel, which is his raw material, by heating to and slightly beyond what is known as the "critical temperature," he ought to have been told by the disclosure, not only that he must harden steel (which was an old story), but to just what degree of heat he must proceed in order to attain not only hardness but stainlessness.

It is admitted that both the patents plainly disclose a hard steel, particularly when the chromium is low, and it is also admitted that the process of hardening generally is not a matter of heating to a fixed point. While it has long been known that the critical point of any steel may be indicated by pyrometric instruments, well known in commerce, it is also proven that even among artisans, including cutlers, the practice of skilled men has been to determine the proper hardening or heating point empirically. We do not go into the exact number of heat degrees above the critical point of ordinary steel, to which steels like defendant's or Brearley's preferred product (minus the silicon) must be heated to insure stainlessness, because we do not think the exact number of degrees makes any difference, and are of opinion that such higher degree of heat is very far within the professional knowledge of the metallurgist or steel maker by whose competency these patents are to be judged. Indeed, we are of the opinion that the determination of such proper degree of heat is within even the range of a workman's competency under what has been called the "try it and see" rule. Cf. *Bethlehem, etc., Co.* v. *Niles, etc., Co.*, C. C., 166 Fed. 880, affirmed 173 Fed. 1019; 98 C. C. A. 640; *Pittsburgh, etc., Co.* v. *Seaman Co.*, 248 Fed. 705; 160 C. C. A. 605.

It is worthy of note that this slight extra or additional heating, in order to insure stainlessness, does not affect the whole range of proportions as prescribed by either or both patentees. It seems to be true of a comparatively small number of the possible and contemplated variations in carbon and chromium content. The reasons for it are not apparent—to us, at all events. Defendant in effect insists that, since the invention relates to stainlessness, and the instructions on that subject are good for all but a small area of the ground covered by the claims, he is free of infringement if he stays in that area. The argument does not prevail, because we think the instructions good enough for the class by whose attainments the disclosure is to be tested.

The facts of this particular case seem to us a perfect illustration of the unfairness of reading these patents by the light of a cutler's (rather underestimated) workaday knowledge. If the patents were to be judged by what a cutler could make out of them, and it were true that the best cutler did not know enough to properly harden the stainless steel of the patents after reading the disclosure, such ignorant workman could never infringe. But the defendant is not a cutler, but an incorporated steel maker, equipped with the professional skill of metallurgists; and it is plain enough that the patents were full of instruction for men of the trade of the infringer, and it is to us a strange argument that substantially alleges noninfringement of patent by a metallurgist, because a cutler would not understand what the patentee was trying to express, when the metallurgist had no difficulty in the premises.

It was held below and has not been here successfully disputed, that, omitting silicon, defendant has produced stainless steel; with the silicon added, it has also produced stainless steel; therefore, in respect of infringement, the silicon is immaterial, *no matter how beneficial it may be*. It was not thought necessary below, and we do not think it necessary, to dwell upon the differences between the Haynes and Brearley patents. It is enough for the purpose of this case that defendant's product is within the disclosure of both. Whether there may not be in Haynes an attempt to cover too much ground is a question that may be left until occasion for decision arises.

Decree reversed, with costs, and case remanded to the district court, for further proceedings in accordance with this opinion.

Court of Appeals of the District of Columbia.

CALIFORNIA PACKING CORPORATION *v.* HALFERTY.

Nos. 1,609, 1,610, and 1,611. Decided January 7, 1924.

1. TRADE-MARKS — OPPOSITION — CANNED FRUITS AND CANNED SALMON—SAME DESCRIPTIVE PROPERTIES. Canned fruits and canned salmon belong to the same class and have the same descriptive properties, since they are related to each other, both being food products, not only commonly used together, but commonly sold in the same kind of stores.

2. SAME—SAME—"WHITE BAND"—NOT DECEPTIVELY SIMILAR TO "GOLD BAR" AND "SILVER BAR." Where H. applied for the registration of a trade-mark consisting of the words "White Band" and a band of white extending from one end to the other of the label and opposer bases its contention on two registered marks, one consisting of the words "Gold Bar," the background of which is a gold bar or band, and the other of the words "Silver Bar," the background of which is a silver band, *Held* that no confusion would follow from the use of the marks on goods of the same descriptive properties.

3. SAME—"GOLD BAND" AND "SILVER BAND" HELD DECEPTIVELY SIMILAR TO "GOLD BAR" AND "SILVER BAR," RESPECTIVELY. Where applicant's mark consisted of the words "Gold Band" or "Silver Band" and a band of gold or silver extending from one end to the other of the label and opposer's marks consisted of the words "Gold Bar" or "Silver Bar," the background of which was a gold or silver bar or band, *Held* that the opposition should have been sustained.

4. SAME—SAME—ADOPTION BY OPPOSER OF MARK SIMILAR TO APPLICANT'S AFTER LONG USE OF ANOTHER MARK. Where opposer had applied its marks to canned fruits and vegetables and the applicant applied his to canned salmon, the fact that opposer put out canned salmon for many years under a mark different from that which it now applies to that product was held immaterial, because canned fruits and vegetables belong in the same class as canned salmon.

Mr. Archibald Cox and *Mr. W. G. Henderson* for California Packing Corporation.

Mr. A. E. Wallace for Halferty.

Before SMYTH, Chief Justice, ROBB, Associate Justice, and MARTIN, Presiding Judge of the United States Court of Customs Appeals.

SMYTH, *C. J.*:

These are opposition proceedings in each of which Halferty applied for the registration of a trade-mark to be used on canned salmon. The mark in No. 1609 consisted of the words "Gold Band" and a band of gold extending from one end to the other of the label; in No. 1610, of the words "Silver Band" and a silver band extending like the gold band; and in No. 1611, of the words "White Band" and a band of white of the same length as the other bands. Applicant commenced the use of his brands about June, 1921. Opposer bases its contention on two registered marks, one consisting of the words "Gold Bar," the background of which is a gold bar or band, and the other of the words "Silver Bar," the background of which is a silver band. Each was applied by it to canned fruits for many years before the applicant came into the field, but neither was used on canned salmon until after the applicant had adopted his mark. The latter is, therefore, prior in point of time as to that use.

Two questions are presented for decision—(1) whether canned salmon and canned fruits have the same descriptive properties within the meaning of the Trade-Mark Act, and (2), if they have, whether or not the marks are so similar as to be likely to produce confusion in the mind of purchasers. The Examiner of Interferences held that they were not similar and dismissed the opposition. The dismissal was upheld by the Assistant Commissioner, who ruled that the silver and gold bars of the opposer were readily distinguishable from the marks of the applicant.

[1] We think the goods belong to the same class and have the same descriptive properties. Both are known as canned goods. We held in *California Packing Corporation* v. *Price-Booker Mfg. Co.*, 285 Fed. 993; 308 O. G. 451, that canned fruits and canned pickles were goods of the same class. The reasons given for doing so support our conclusions here. In the second circuit it was decided by the Circuit Court of Appeals that pancake flour and pancake sirup had the same descriptive properties. In doing so it observed that sirup and flour are both food products, and food products commonly used together. Obviously, the public, or a large part of it, seeing the trade-mark in question on a sirup would conclude that it was made by the complainant, although they might not do so if it were used on flatirons. *Aunt Jemima Mills Co.* v. *Rigney & Co.*, 247 Fed. 407. We may say the same here with respect to the goods of the contending parties. They are related to each other, both being food products, and are not only commonly used together but are commonly sold in the same kind of stores.

[2, 3] Concerning the alleged similarity of the marks, it seems to us that the goods would be known by the printed words in the mark attached to them, as, for instance, a package of salmon bearing the mark "White Band" would be known as White Band salmon, and that bearing the "Gold Bar" as Gold Bar salmon. It is not believed that any confusion would follow from the use of the White Band, and the Gold Bar or Silver Bar marks. But in our judgment it is otherwise in the case of the Gold Band and Silver Band marks of the appellant and the Gold Bar and Silver Bar marks of the opposer. "Gold Bar" and "Gold Band" look and sound a good deal alike. So do "Silver Bar" and "Silver Band." It would be easy to mistake the one name for the other. While the bands used by the opposer are wider on its specimens than are those on the specimens of the applicant, there is nothing in either case which specifically limits the size of the band or bar. Of course, if a prospective purchaser could see the marks of both parties together, he would have no difficulty in distinguishing the one from the other, but that is not the test, because he rarely has such an opportunity. Suppose a person is accustomed, let us say, to use canned fruits put out by the opposer, and that he desires canned salmon. He sees a package on the dealer's shelf with petitioner's mark thereon. He decides at a glance, as he may (*Patton Paint Co.* v. *Orr's Zinc White, Limited*, 48 App. D. C. 221; 258 O. G. 814), what he shall do. We think he would be likely to assume, because of the mark, that the product of the petitioner originated with the opposer, and to purchase it as the output of the latter. To prevent such confusion as this is the aim of the law. Since the field from which a person may select a trade-mark is practically limitless, there is no just reason for taking one which nearly resembles that of a rival in trade. *Thomas Manufacturing Company* v. *Aeolian Company*, 47 App. D. C. 376, 249 O. G. 505; *Coca-Cola Co.* v. *Chero-Cola Co.*, 51 App. D. C. 27; 273 Fed. 755; 288 O. G. 432, and *Florence Manufacturing Co.* v. *J. C. Dowd & Co.*, 178 Fed. 73. Where one does so, there is room for the belief that he is seeking some of his competitor's goodwill. *Coca-Cola Co.* v. *Chero-Cola Co.*, supra. Consequently, whenever we doubt in a trade-mark opposition case, as we do here, we resolve the doubt against the one last to adopt the mark. *William Waltke & Co.* v. *Geo. H. Schafer Co.*, 49 App. D. C. 254, 263 Fed. 650; 273 O. G. 630, and *United Electric Co.* v. *Replogle*, 289 Fed. 626; 313 O. G. 233.

[4] The fact that the opposer put out canned salmon for many years under a mark different from that which it now applies to that product is immaterial. Even though it had never used any of its marks on canned salmon, our decision would have to be the same, because it had applied them to fruits and vegetables, which we hold belong in the same class as canned salmon, and, this being so, the confusion against which the statute is leveled would result if registration was granted to the applicant.

We do not think the decision in *Pabst Brewing Co.* v. *Decatur Brewing Co.*, 284 Fed. 110; 306 O. G. 837, cited by the Commissioner, throws any light upon the subject. That was an infringement suit in which the Pabst Company sought to prevent the Decatur Company from using the term "Blue Ribbon" on malt extract, claiming that as it had used it for years as a trade-mark for beer, for which it had been registered, it, the Pabst Company, had a right to extend its use to malt extract. The opinion shows that the term "Blue Ribbon" had been registered in the Patent Office more than sixty times as a trade-mark for various articles of commerce, and because of this extensive use the court held that the term had acquired special significance wholly apart from its use as a trade-mark for any product, and, consequently, that the Pabst Company's right to use it was limited to the product for which it had been registered.

For the reasons given we think the opposition in No. 1611 was correctly overruled, but that in 1609 and 1610 it should have been sustained. As to 1611 the decision of the Commissioner is affirmed, and as to 1609 and 1610 it is reversed.

Interference Notices.

U. S. PATENT OFFICE, *Washington, Mar. 15, 1924.*

Mae Caesar Porter, her assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Wythe D. Sims, 1120 Cullom Street, Birmingham, Ala., for registration of a trade-mark and trade-mark registered December 27, 1921, No. 150,061, to Mae Caesar Porter, 1717 Hall Street, Dallas, Tex., and a notice of such declaration sent by registered mail to said Mae Caesar Porter at the said address having been returned by the post office as undeliverable, notice is hereby given that unless said Mae Caesar Porter, her assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

KARL FENNING, *Acting Commissioner.*

U. S. PATENT OFFICE, *Washington, Mar. 3, 1924.*

Clarence E. Kenyon, his assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of the Eckman Chemical Company, 526 Paxton Block, Sixteenth and Farnam Streets, Omaha, Nebr., for registration of a trade-mark and trade-mark registered October 12, 1915, No. 106,110, to Clarence E. Kenyon, Great Falls, Mont., and a notice of such declaration sent by registered mail to said Clarence E. Kenyon at the said address having been returned by the post office undeliverable, notice is hereby given that unless said Clarence E. Kenyon, his assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

KARL FENNING, *Acting Commissioner.*

U. S. PATENT OFFICE, *Washington, Mar. 4, 1924.*

William P. Sumner, his assigns or legal representatives, take notice:

An interference having been declared by this Office between Kinney Brothers, 243–245 Water Street, Binghamton, N. Y., for registration of a trade-mark and trade-mark registered January 15, 1907, No. 59,624, to William P. Sumner, Jacksonville, Fla., and the Office having been unable to secure service upon said party, notice is hereby given that unless said William P. Sumner, his assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

KARL FENNING, *Acting Commissioner.*

U. S. PATENT OFFICE, *Washington, Mar. 4, 1924.*

The Lithotone Colortype Company, its assigns or legal representatives, take notice:

An interference having been declared by this Office between the Niagara Lithograph Co., 209–219 West Thirty-eighth Street, New York, N. Y., for registration of a trade-mark and trade-mark registered April 10, 1900, No. 34,443, to The Lithotone Colortype Company, Chicago, Ill., and a notice of such declaration sent by registered mail to The Lithotone Colortype Company at the said address having been returned by the post office authorities as undeliverable, notice is hereby given that unless The Lithotone Colortype Company, its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

KARL FENNING, *Acting Commissioner.*

TRADE-MARKS

OFFICIAL GAZETTE, MARCH 25, 1924.

[VOL. 320. No. 4.]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

Ser. No. 145,057. (CLASS 17. TOBACCO PRODUCTS.) CUMBERLAND TOBACCO WORKS, Nashville, Tenn. Filed Mar. 22, 1921.

REDOX

TWIST

No claim is made for the word "Twist" apart from the mark shown.

Particular description of goods.—Smoking and Chewing Tobacco.

Claims use since Nov. 1, 1903.

Ser. No. 146,056. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) THE WOOLSON SPICE CO., Toledo, Ohio. Filed Apr. 11, 1921.

Delite

No claim is made to the word "Delight." The mark consists of the word and associated matter in the drawing.

Particular description of goods.—Coffee.

Claims use since Mar. 30, 1921.

Ser. No. 151,802. (CLASS 39. CLOTHING.) LOUIS S. KAN, doing business as Imperial Sales Co., New York, N. Y. Filed Aug. 15, 1921.

Imperial

Particular description of goods.—Hosiery for Men, Women, and Children.

Claims use since June 1, 1921.

Ser. No. 152,379. (CLASS 12. CONSTRUCTION MATERIALS.) NEW ALBANY VENEERING COMPANY, New Albany, Ind. Filed Aug. 30, 1921.

NAVCO

Particular description of goods.—Built-Up or Veneered Tops, Panels, and Plywood.

Claims use since July 1, 1913.

Ser. No. 152,828. (CLASS 16. PAINTS AND PAINTERS' MATERIALS.) BRAN-U AUTO POLISH CO., Los Angeles, Calif. Filed Sept. 12, 1921.

The words "Auto Polish" shown in the drawing are hereby disclaimed.

Particular description of goods.—Polishing of Wood Work, Household Furniture, and Automobiles.

Claims use since June 15, 1917.

Sweetmeets

Particular description of goods.—Candy.
Claims use since Feb. 1, 1923.

181,880. (CLASS 34. HEATING, LIGHTING, AND VENTILATING APPARATUS, NOT INCLUDING ELECTRICAL APPARATUS.) WILLIAM EDWARDES BAXTER, Louisville, Ky. Filed June 21, 1923. Serial No. 182,287.

BAXTER

Particular description of goods.—Cooking and Heating Stoves and Ranges and Portable Stoves.
Claims use since 1897.

181,881. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) JOACHIM MESSINA, doing business as J. Messina Chemical Company, Memphis, Tenn. Filed Feb. 21, 1923. Serial No. 176,415.

PRINCESS YOLANDA SHAMPOO

Particular description of goods.—Shampoos.
Claims use since June 5, 1922.

181,882. (CLASS 27. HOROLOGICAL INSTRUMENTS.) THE CASTELBERG NATIONAL JEWELRY COMPANY, INC., Baltimore, Md. Filed Feb. 10, 1923. Serial No. 175,848.

COLUMBIA

Particular description of goods.—Watch Movements.
Claims use since Jan. 1, 1923.

181,883. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) BEITS ELECTRIC & MANUFACTURING CORPORATION, New York, N. Y. Filed Feb. 10, 1923. Serial No. 175,841.

BI-LITE

Particular description of goods.—Lamp Sockets.
Claims use since July 1, 1922.

181,884. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) EDWARD EMMEL, Milwaukee, Wis. Filed Feb. 9, 1923. Serial No. 175,776.

BUTTER COLOR

Particular description of goods.—Lard.
Claims use since Jan. 31, 1923.

181,885. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) THE ART LAMP MFG. COMPANY, Chicago, Ill. Filed Jan. 20, 1923. Serial No. 174,812.

VOGUE LAMPS

Particular description of goods.—Electric Lamps.
Claims use since Nov. 11, 1922.

181,886. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) GORDON O. WILKINSON, Philadelphia, Pa. Filed Jan. 17, 1923. Serial No. 174,715.

HOME-BUILT

Particular description of goods.—Radio Receiving Coils.
Claims use since Dec. 20, 1922.

181,887. (CLASS 24. MUSICAL INSTRUMENTS AND SUPPLIES.) SONORA, INC., New York, N. Y. Filed Jan. 13, 1923. Serial No. 174,396.

MARLBOROUGH

Particular description of goods.—Talking Machines and Phonographs.
Claims use since on or about August, 1922.

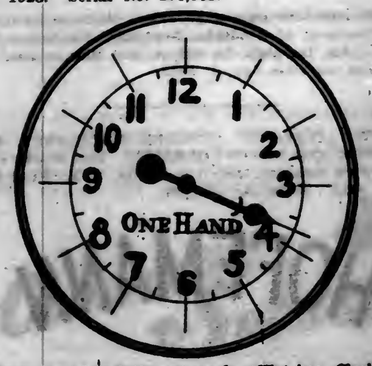
181,888. (CLASS 27. HOROLOGICAL INSTRUMENTS.) WILLIAM HELBEIN, New York, N. Y., assignor to Fisher Importing Co., Inc., New York, N. Y., a Corporation of New York Filed Jan. 6, 1923. Serial No. 174,244.

SARANAC WATCHES

Particular description of goods.—Watches, Watch Movements, and Parts of the Same.
Claims use since on or about Dec. 8, 1922.

181,889. (CLASS 35. BELTING, HOSE, MACHINERY PACKING, AND NONMETALLIC TIRES.) THE MASTER TIRE & RUBBER CO., Dayton, Ohio. Filed Feb. 23, 1923. Serial No. 176,489.

Miami Cord



Particular description of goods.—Rubber Tires.
Claims use since Jan. 2, 1923.

181,890. (CLASS 27. HOROLOGICAL INSTRUMENTS.) THE CASTELBERG NATIONAL JEWELRY COMPANY, INC., Baltimore, Md. Filed Mar. 5, 1923. Serial No. 176,947.

LEXINGTON

Particular description of goods.—Watch Movements.
Claims use since Jan. 1, 1923.

181,891. (CLASS 27. HOROLOGICAL INSTRUMENTS.) ONE HAND CLOCK COMPANY, Warren, Pa. Filed Apr. 4, 1923. Serial No. 178,565.

Particular description of goods.—Watches, Clocks, and Watch and Clock Dials.
Claims use since about December, 1921.

181,892. (CLASS 27. HOROLOGICAL INSTRUMENTS.) THE CASTELBERG NATIONAL JEWELRY COMPANY, INC., Baltimore, Md. Filed Mar. 5, 1923. Serial No. 176,948.

VERNON

Particular description of goods.—Watch Movements.
Claims use since Jan. 1, 1923.

181,893. (CLASS 44. DENTAL, MEDICAL, AND SURGICAL APPLIANCES.) HYGIENIC FIBRE COMPANY, Versailles, Conn., and New York, N. Y. Filed Mar. 10, 1923. Serial No. 177,224.

HYGIENIC MADE

Particular description of goods.—Absorbent Cotton, Absorbent Gauze, Absorbent Waste, Bandage Rolls, Crinoline Bandages, Dental Napkins, Gauze Bandages, Gauze Pads, Muslin Bandages, and Surgeon's Adhesive Plaster.
Claims use since Feb. 1, 1923.

181,894. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) VAN ESS LABORATORIES, INC., Chicago, Ill. Filed Mar. 13, 1923. Serial No. 177,415.

CASTROIL SHAMPOO

The word "Shampoo" does not form a part of the registration sought apart from the mark as shown on the drawing.
Particular description of goods.—Shampoo.
Claims use since Feb. 1, 1923.

181,895. (CLASS 16. PAINTS AND PAINTERS' MATERIALS.) STANDARD VARNISH WORKS, New York, N. Y. Filed Mar. 16, 1923. Serial No. 177,577.

KWIKDRY

Particular description of goods.—Enamel Paints.
Claims use since Jan. 30, 1923.

TRADE-MARK REGISTRATIONS RENEWED.

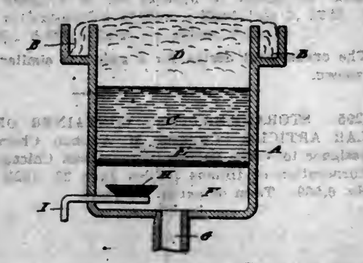
REISSUES

MARCH 25, 1924.

15,800. AUTOMOBILE BUMPER. OSCAR H. GOWTZ, Bridgeport, Conn., assignor to Stewart-Warner Speedometer Corporation, Chicago, Ill., a Corporation of Virginia. Filed Apr. 27, 1923. Serial No. 635,152. Original No. 1,394,893, dated Oct. 25, 1921, Serial No. 490,209, filed Aug. 6, 1921. 3 Claims. (Cl. 293—55.)

3. An automobile bumper comprising an impact member consisting of two horizontal transversely extended bars set vertically edgewise in substantially the same vertical plane; inflexible ties extending across both said bars at a substantial distance inward from their opposite ends for securing said bars rigidly together and definitely spacing them apart, and supporting arms of flat spring bar set vertically edgewise secured to said ties, respectively, and curved horizontally in opposite directions from their securement to said vertical ties and from their said curves extending for attachment to the vehicle; whereby the shock of impact upon the end portions of either of the impact bars outward from the ties tends to torsionally flex the curved end portion of the supporting arm, stiffening it against flexure in the plane of different curvature.



15,801. SEMIAUTOMATIC FIREARM. RUDOLF RICHIGER, Thun, Switzerland. Filed Jan. 21, 1921. Serial No. 439,025. Original No. 1,135,722, dated Apr. 13, 1915, Serial No. 876,242, filed Dec. 9, 1914. 19 Claims. (Cl. 42—4.)

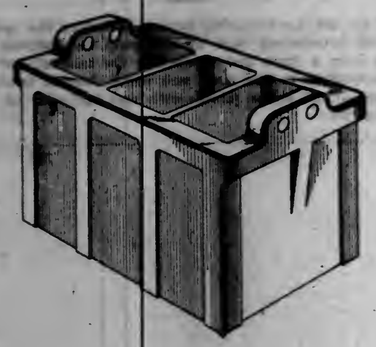
1. In a recoil operated firearm, the combination with a stock, of a raceway fixedly attached thereto, a recoilable receiver upon said raceway, a breech-bolt carrier rotatable and slidable in said receiver, a breech-bolt upon said carrier, and means whereby upon recoil of the receiver the carrier is caused to impart rotative movement to the breech-bolt and rotate itself upon the latter in a

direction opposite to the direction of rotation of the breech-bolt, including means carried by the raceway to transmit the recoil of the receiver to said carrier.

15,802. ORE-CONCENTRATION PROCESS. WALTER A. SCOTT, Chicago, Ill., assignor to Minerals Separation North American Corporation, a Corporation of Maryland. Filed Feb. 1, 1919. Serial No. 274,527. Original No. 1,246,665, dated Nov. 13, 1917, Serial No. 186,666, filed Aug. 17, 1917. 22 Claims. (Cl. 83—85.)

21. An ore concentrating process including the operations of introducing into an ore pulp fine bubbles of air to form a froth and separating the mineral carried by the bubbles in the froth and which further includes the use of oil vapor mixed with the air prior to its introduction.

DESIGNS



MARCH 25, 1924.

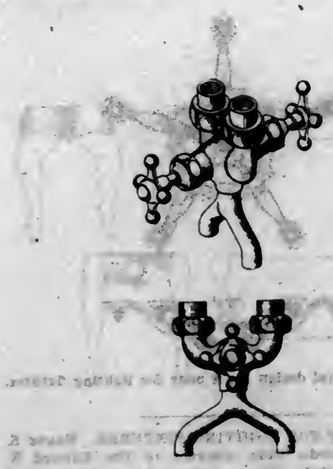
64,294. SPOON OR SIMILAR ARTICLE. GROSVENOR N. ALLEN, Oneida, N. Y., assignor to Oneida Community, Limited, Oneida, N. Y. Filed Dec. 7, 1923. Serial No. 7,973. Term of patent 14 years.

The ornamental design for a spoon or similar article, as shown.

64,295. STORAGE-BATTERY CONTAINER OR SIMILAR ARTICLE. CLIFFORD M. ANGELL, Chicago, Ill., assignor to Vesta Battery Corporation, Chicago, Ill., a Corporation of Illinois. Filed June 23, 1923. Serial No. 6,559. Term of patent 14 years.

The ornamental design for a storage battery container or similar article, as shown.

64,296. DOOR HANDLE. GEORGE CAWTHRON, Redwood City, Calif., assignor to Axford & De Shields, San Jose, Calif., a Copartnership comprising H. W. Axford and A. De Shields. Filed May 31, 1923. Serial No. 6,354. Term of patent 3½ years.

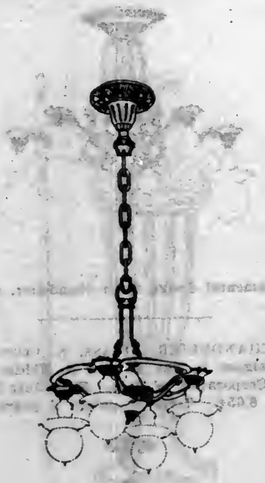


The ornamental design for a door handle as shown.

64,297. BOTTLE. LEON COHN, Paris, France. Filed Sept. 26, 1923. Serial No. 7,341. Term of patent 7 years.

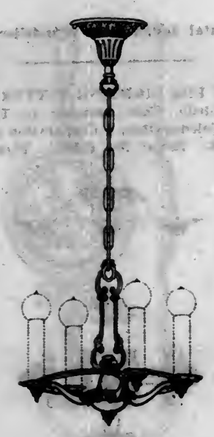
The ornamental design for a bottle substantially as shown.

64,298. FAUCET. CHARLES R. CRANE, 2d, Chicago, Ill., assignor to Crane Co., Chicago, Ill., a Corporation of Illinois. Filed Dec. 6, 1923. Serial No. 7,968. Term of patent 14 years.



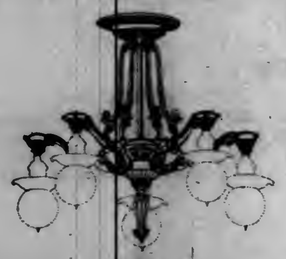
The ornamental design for a faucet as shown.

64,299. LIGHTING-FIXTURE BRACKET. FRANK S. CROWELL, Toledo, Ohio, assignor to The Edward N. Riddle Co., Toledo, Ohio, a Corporation of Ohio. Filed July 3, 1923. Serial No. 6,658. Term of patent 7 years.



The ornamental design for a lighting fixture bracket, as shown.

64,300. CHANDELIER. FRANK S. CROWELL, Toledo, Ohio, assignor to The Edward N. Riddle Co., Toledo, Ohio, a Corporation of Ohio. Filed July 3, 1923. Serial No. 6,657. Term of patent 7 years.

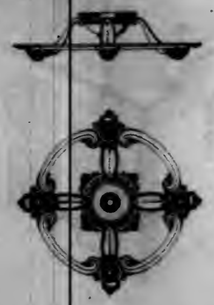


The ornamental design for a chandelier, as shown.

64,301. CHANDELIER. FRANK S. CROWELL, Toledo, Ohio, assignor to The Edward N. Riddle Co., Toledo, Ohio, a Corporation of Ohio. Filed July 3, 1923. Serial No. 6,656. Term of patent 7 years.

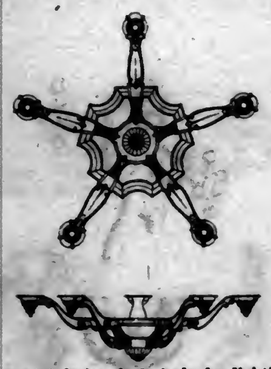
The ornamental design for a chandelier, as shown.

64,302. CHANDELIER. FRANK S. CROWELL, Toledo, Ohio, assignor to The Edward N. Riddle Co., Toledo, Ohio, a Corporation of Ohio. Filed July 3, 1923. Serial No. 6,655. Term of patent 7 years.



The ornamental design for a chandelier, as shown.

64,303. CHANDELIER. FRANK S. CROWELL, Toledo, Ohio, assignor to The Edward N. Riddle Co., Toledo, Ohio, a Corporation of Ohio. Filed July 3, 1923. Serial No. 6,654. Term of patent 7 years.

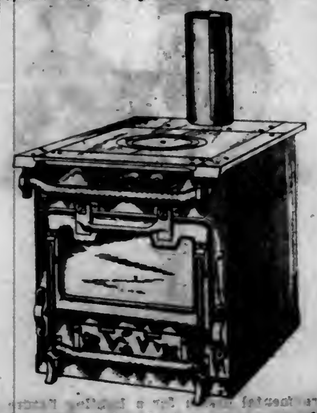


The ornamental design for a chandelier, as shown.

64,304. BODY FOR LIGHTING FIXTURES. FRANK S. CROWELL, Toledo, Ohio, assignor to The Edward N. Riddle Co., Toledo, Ohio, a Corporation of Ohio. Filed July 3, 1923. Serial No. 6,650. Term of patent 7 years.

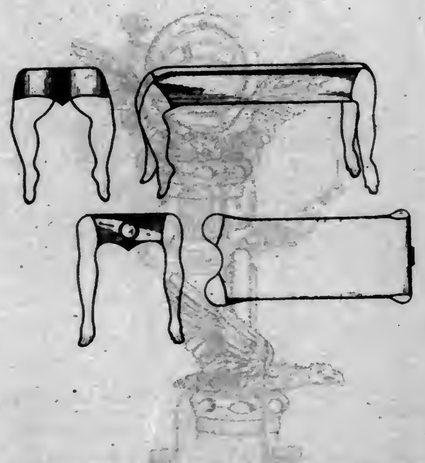
The ornamental design for a body for lighting fixtures, as shown.

64,305. BODY FOR LIGHTING FIXTURES. FRANK S. CROWELL, Toledo, Ohio, assignor to The Edward N. Riddle Co., Toledo, Ohio, a Corporation of Ohio. Filed July 3, 1923. Serial No. 6,649. Term of patent 7 years.



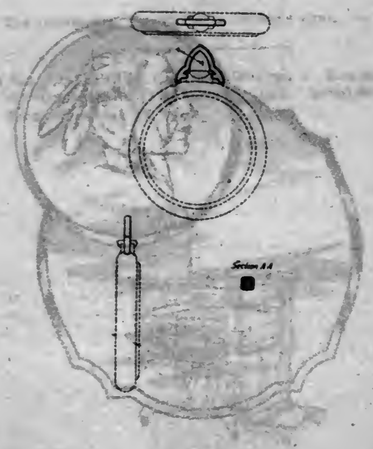
The ornamental design for a body for lighting fixtures, as shown.

64,306. BRACE FOR LIGHTING FIXTURES. FRANK S. CROWELL, Toledo, Ohio, assignor to The Edward N. Riddle Co., Toledo, Ohio, a Corporation of Ohio. Filed July 3, 1923. Serial No. 6,647. Term of patent 7 years.



The ornamental design for a brace for lighting fixtures, as shown.

64,307. GAS RANGE. HENRY W. O'DOWD, Jersey City, N. J., assignor to William M. Crane Company, a Corporation of New York. Filed Aug. 27, 1921. Serial No. 496,172. Term of patent 14 years.

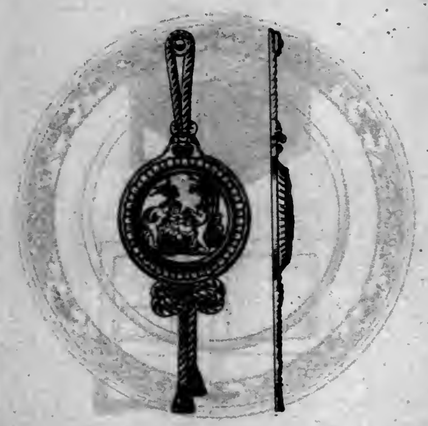


The ornamental design for a gas-range, as shown.

64,308. TOY COUCH. CARL EMMERT, Cincinnati, Ohio. Filed June 12, 1922. Serial No. 2,649. Term of patent 7 years.

The ornamental design for a toy couch, substantially as shown.

64,309. WATCHCASE BOW. JOSEPH FAHYS, Locust Valley, N. Y., assignor to Joseph Fahys & Company, New York, N. Y., a Corporation of New York. Filed Jan. 29, 1924. Serial No. 8,478. Term of patent 7 years.



The ornamental design for a watchcase bow, as shown.

64,310. ORNAMENT FOR BEDSTEAD FRAMES. BENJAMIN M. FRANK, New York, N. Y., assignor to Greenpoint Metallic Bed Co., Inc., Brooklyn, N. Y., a Corporation of New York. Filed July 7, 1923. Serial No. 6,726. Term of patent 3½ years.

The ornamental design for an ornament for bedstead frames, as shown.

64,311. ORNAMENT FOR BEDSTEAD FRAMES. BENJAMIN M. FRANK, New York, N. Y., assignor to Greenpoint Metallic Bed Co., Inc., Brooklyn, N. Y., a Corporation of New York. Filed Aug. 21, 1923. Serial No. 7,053. Term of patent 3½ years.

The ornamental design for an ornament for bedstead frames, as shown.

64,312. PLATE OR SIMILAR ARTICLE. WILLIAM P. GRAHAM, New York, N. Y. Filed Dec. 27, 1923. Serial No. 8,159. Term of patent 7 years.

The ornamental design for a plate or similar article.

64,313. PLATE OR SIMILAR ARTICLE. WILLIAM P. GRAHAM, New York, N. Y. Filed Dec. 27, 1923. Serial No. 8,160. Term of patent 7 years.

The ornamental design for a plate or similar article.

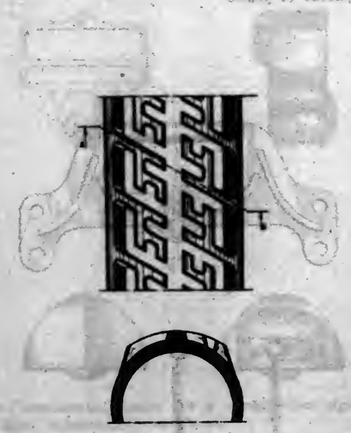
64,314. RADIATOR CAP. GIUSEPPE JOANNES, Turin, Italy. Filed Aug. 7, 1923. Serial No. 6,965. Term of patent 14 years.

The ornamental design for a radiator cap, as shown.

64,315. NAME PLATE FOR A DOOR. SAMUEL M. KATZ, New York, N. Y. Filed Jan. 10, 1924. Serial No. 8,289. Term of patent 14 years.

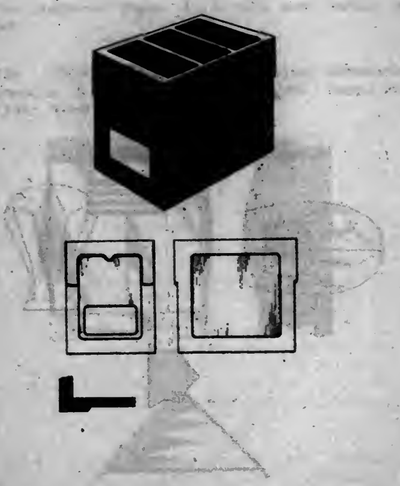
The ornamental design for a name plate for a door, as shown.

64,316. BARBER'S CHAIR. WALTER F. KOKEN, Webster Groves, Mo. Filed Jan. 2, 1924. Serial No. 8,224. Term of patent 14 years.



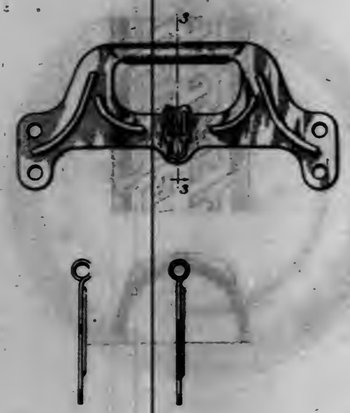
The ornamental design for a barber's chair, as shown.

64,317. BARBER'S CHAIR. WALTER F. KOKEN, Webster Groves, Mo. Filed Jan. 2, 1924. Serial No. 8,227. Term of patent 14 years.



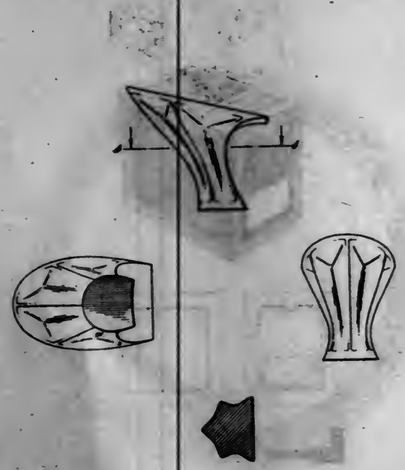
The ornamental design for a barber's chair, as shown.

64,318. TIRE. ARMOND D. MATHYS, Milwaukee, Wis., assignor to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed Dec. 31, 1923. Serial No. 8,205. Term of patent 14 years.



The ornamental design for a tire substantially as shown.

64,319. BATTERY BOX. PAUL E. NORRIS, Forest Hills Borough, Pa., assignor to Westinghouse Union Battery Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Feb. 26, 1923. Serial No. 5,275. Term of patent 14 years.



The ornamental design for a battery box, as shown.

64,320. HANDLE. PAUL B. NORRIS, Forest Hills Borough, Pa., assignor to Westinghouse Union Battery Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Feb. 26, 1923. Serial No. 5,272. Term of patent 14 years.

The ornamental design for a handle, as shown.

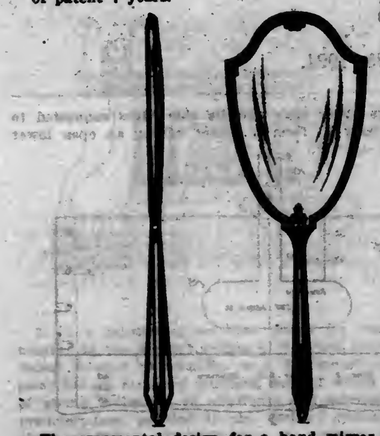
64,321. SHOE HEEL. WILLIAM H. NUTT, Newburyport, Mass. Filed Jan. 17, 1923. Serial No. 4,909. Term of patent 7 years.

The ornamental design for a shoe heel, as shown and described.

64,322. AUTOMOBILE SIGNAL LAMP. HANS PETERSEN, Milwaukee, Wis. Filed Apr. 26, 1923. Serial No. 5,965. Term of patent 7 years.

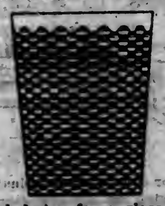
The ornamental design for an automobile signal lamp, as shown.

64,323. COAT AND HAT RACK. JOHN SAFAR, Chicago, Ill. Filed Dec. 15, 1923. Serial No. 8,060. Term of patent 7 years.



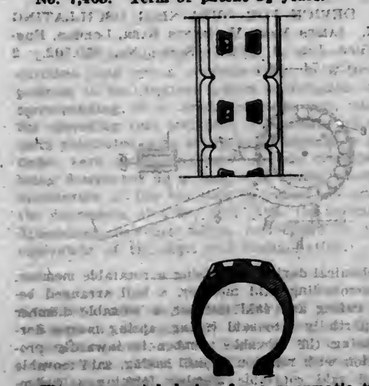
The ornamental design for a coat and hat rack, as shown.

64,324. BELT SLIDE. JACOB I. SCHAFFER, New York, N. Y., assignor to Slote & Schaffer, Mount Vernon, N. Y., a Copartnership consisting of Jacob I. Schaffer and Reuben Slote. Filed Dec. 31, 1923. Serial No. 8,203. Term of patent 3½ years.



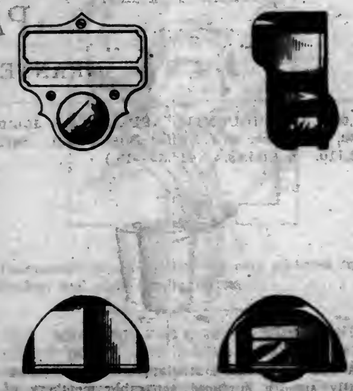
The ornamental design for a belt slide as shown.

64,325. HAND MIRROR OR SIMILAR ARTICLE. RICHARD J. SCHULER, Brooklyn, N. Y., assignor to Saart Brothers Company, a Corporation of Rhode Island. Filed Jan. 9, 1924. Serial No. 8,283. Term of patent 7 years.



The ornamental design for a hand mirror or similar article as shown.

64,326. GLASS TUMBLER OR SIMILAR ARTICLE OF MANUFACTURE. JOHN F. SMYTH, Toledo, Ohio, assignor to The Libbey Glass Manufacturing Company, Toledo, Ohio, a Corporation of Ohio. Filed Sept. 8, 1921. Serial No. 499,346. Term of patent 3½ years.

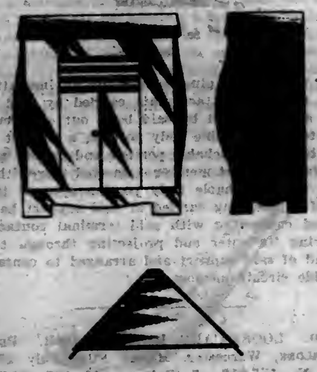


The ornamental design for a glass tumbler or similar article of manufacture, substantially as shown.

64,327. PNEUMATIC-TIRE TREAD. CHARLES E. A. SPIEGEL, New York, N. Y. Filed Oct. 10, 1923. Serial No. 7,465. Term of patent 3½ years.

The ornamental design for a pneumatic tire tread as shown.

64,328. COMBINATION SIGNAL AND TAIL LIGHT. JOHN S. WILLIAMSON, Baltimore, Md., and HERBERT L. BEACH, Pittsburgh, Pa. Filed Dec. 21, 1923. Serial No. 8,116. Term of patent 3½ years.



The ornamental design for a combination signal and tail light, substantially as shown.

64,329. RADIO OUTFIT CABINET. FRANK ZIDAR, Detroit, Mich. Filed Feb. 3, 1923. Serial No. 5,064. Term of patent 14 years.

The ornamental design for a radio outfit cabinet as shown.

64,330. PHONOGRAPH CABINET. JACOB ZITSERMAN, Brooklyn, N. Y. Filed Dec. 20, 1923. Serial No. 8,106. Term of patent 14 years.

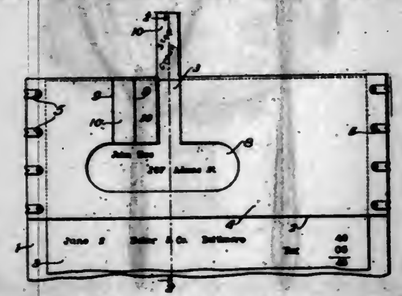
The ornamental design for a phonograph cabinet, as shown.

PATENTS

GRANTED MARCH 25, 1924.

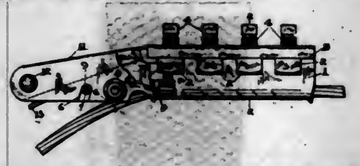
1,487,696. ORTHODONTIC APPLIANCE. JULIUS ADLER, New York, N. Y. Filed July 2, 1921. Serial No. 482,110. 6 Claims. (Cl. 32—19.)

1. A two part orthodontic appliance comprising longitudinally smooth surfaced separable members of such relative configuration that when the two are in close surface contact with each other, the two parts become so firmly united so as to become incapable of separation by manual means, or by any of the effects of use, but only by an instrument, said two parts comprising respectively a tubular socket open only at its opposite ends and having continuous walls forming a receiving recess of fixed outline and a plug having a continuous rigid surface conforming to the cross-sectional form of said socket and adapted to fit into said fixed recess in surface engagement with said socket so as to be completely enclosed thereby, said socket and plug being both tapered toward one end with the same degree of convergence.



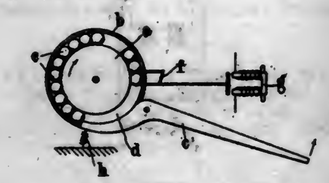
1,487,699. ATTACHMENT PLUG. ALBERT W. ALBRECHT, St. Louis, Mo. Filed Mar. 25, 1920. Serial No. 368,536. 3 Claims. (Cl. 200—115.5.)

1. An attachment plug, comprising an insulating base body, a terminal contact plate carried by said body, a contact sleeve carried by said body out of circuit with said plate, a detachable body portion, a contact member carried by said detachable portion and having an exteriorly threaded socket member connected therewith, a support in said detachable body portion open at its outer end, and a fuse plug carried in said support having its inner end contacting with said terminal contact plate, and having its outer end projecting through the open outer end of said support and arranged to contact with an outside circuit member.



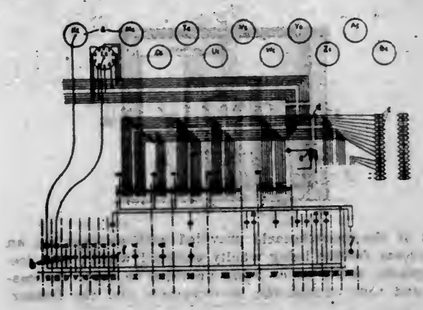
1,487,700. LOOSE-CARD BILL HOLDER. PERCY M. BACHELDER, Worcester, Mass. Filed July 27, 1922. Serial No. 577,912. 7 Claims. (Cl. 126—16.7.)

1. A loose card bill holder comprising a body part, and a wall across the upper part of said body part and having its upper edge and its side edges connected to the said body to form a pocket having an open lower



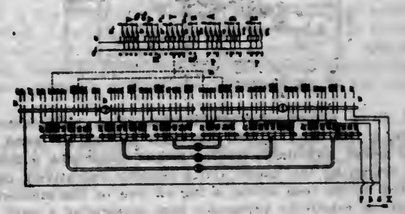
end to permit the upper end of a sheet to be inserted in said pocket, the said wall being formed with an opening to permit the display of a name written on said sheet.

1,487,701. CLAMP. THOMAS H. BARNARD, Toronto, Ontario, Canada. Filed Feb. 27, 1923. Serial No. 621,658. 10 Claims. (Cl. 24—135.)



1. In a clamp for cables, the combination of a channel-shaped casing having an opening formed in each side thereof; a stationary block supported in said openings; and a movable member carried by said block by means of which a cable may be clamped against the bottom of the casing.

1,487,702. DEVICE FOR OBTAINING OSCILLATING MOTION. JAMES MARK MCGINNIS BARR, London, England. Filed July 9, 1923. Serial No. 650,502. 2 Claims. (Cl. 74—14.)



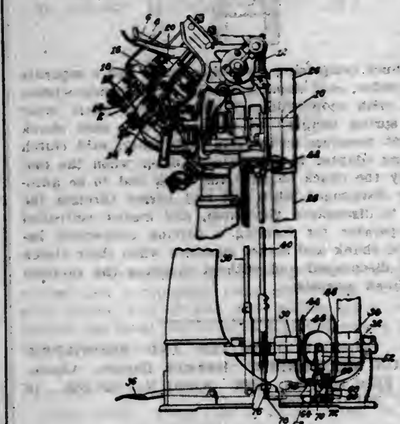
1. A mechanical device comprising a rotatable member, a casing surrounding said member, a ball arranged between said casing and said member, a movable member projecting partially into said casing, spring means normally retaining the movable member in inwardly projected position with relation to said casing, said movable member and said rotatable member forming a wedge-shaped space, and means for permitting said ball to pass into said space.

1,487,703. CALCULATING MACHINE. JAMES MARK MCGINNIS BARR, London, England. Filed July 9, 1923. Serial No. 650,503. 5 Claims. (Cl. 235—61.)

1. In a calculating machine means for converting a number in the decimal system of notation into the equivalent number or numbers in a denominational system comprising a series of counters, each of which is capable of giving indication of all digits and corresponds to a predetermined position in the decimal system of notation, printing means indicating the number in the denominational system, and electrical means interposed between the printing means and the counters and selectively controlled by the counters, said electrical means controlling the printing means to indicate the number in the denominational system.

1,487,704. COMMUNICATION OF TYPED OR REGISTERED NUMERICAL VALUES TO COMPUTING MECHANISMS. JAMES MARK MCGINNIS BARR, London, England. Filed July 9, 1923. Serial No. 650,504. 7 Claims. (Cl. 235—61.)

1. In a calculating machine, a series of groups of switches each group corresponding to a predetermined position in the decimal system of notation, each switch corresponding to a predetermined digit, electomagnets for operating said switches, a plurality of electric circuits associated with said electromagnets, a plurality of finger keys controlling said electric circuits, each key being designated by a digit, and means whereby the denomination of the key may be varied, so arranged that the depression of a key will cause the operation of predetermined switches which correspond to the decimal equivalent of the digit and denomination.



1,487,705. ADVERTISING-DISPLAY CARD. JAMES B. BATEMAN, Arlington, N. J., assignor to Bewtex Products Corporation, New York, N. Y., a Corporation of New York. Filed July 31, 1923. Serial No. 654,861. 8 Claims. (Cl. 40—135.)

1. An advertising display card comprising a picture clearly visible by reflected light, and a positive print of the same picture on transparent material placed behind and coincident with the aforesaid picture to enhance the contrast when viewing the picture by transmitted light,

and transparent means for holding said pictures in fixed relationship, and rigid for handling.

1,487,706. MACHINE FOR USE IN THE MANUFACTURE OF BOOTS AND SHOES. CHARLES FAWCETT BENNION, Leicester, England, assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed June 22, 1920, Serial No. 390,943. Renewed Jan. 5, 1924. 37 Claims. (Cl. 12—4.)

1. In a machine for operating on shoes, the combination with means for performing different operations on a shoe successively in the course of the cycle of operations of the machine, of power driven operating mechanism, and means operative as an incident to the normal cycle of the machine to change the speed of said operating mechanism at a predetermined time in the cycle.

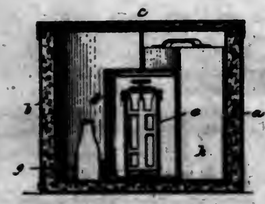
1,487,707. GOLF CLUB. DUDLEY C. BENTON, San Diego, Calif. Filed Dec. 13, 1922. Serial No. 606,619. 6 Claims. (Cl. 46—4.)

1. A golf club including a shaft provided with a tapering recess in its normally lower end and an annular key on the inside of said recess, and a head member

provided with a tapered lug conforming substantially with the tapered recess in said shaft and provided with an annular channel for the reception of said annular key.

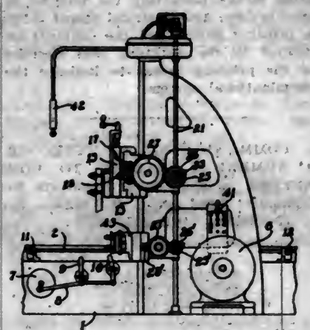
1,487,708. CHUCK. JAMES L. BERNARD, Beaver, Pa. Filed Feb. 28, 1923. Serial No. 621,851. 6 Claims. (Cl. 279—1.)

1. A chuck comprising a shank member and a separate socket member, said shank and said socket members being provided with cooperating clutch faces on their inner ends, a spring adapted to normally force said shank and socket members away from each other, said clutch faces being adapted to engage each other when the tool carried by the chuck engages the work and to be automatically disengaged when the tool passes through the work or is disengaged therefrom, and means controlled by the operator for forming a driving connection between said shank and socket members when their clutch faces are disengaged and without stopping the rotation of said shank member.



1,487,709. FUEL ECONOMIZER AND SMOKE-PREVENTION MECHANISM. HERMAN BESSER, Alpena, Mich. Filed Mar. 15, 1923. Serial No. 625,265. 18 Claims. (Cl. 126—99.)

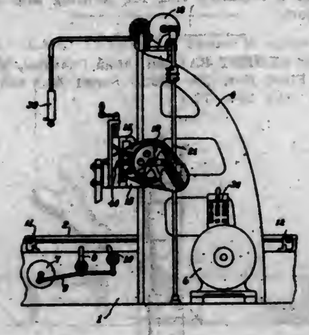
1. The combination of a pair of drums, one positioned eccentrically within the other and having common end closures, pipes communicating with the interior of the inner drum through said closures, means in one of said end closures for permitting entrance of air into the space between the drums, and pipe means leading from said space near the opposite end adapted to convey heated air therefrom to a distant point.



1,487,710. COMBINED REFRIGERATOR AND ICE-CREAM FREEZER. PORTER L. BLISS, San Francisco, Calif. Filed Jan. 27, 1920. Serial No. 354,455. 1 Claim. (Cl. 220—16.)

In a portable refrigerator and ice cream freezer, an insulated casing, a smaller metal wall ice-receptacle anchored centrally therein to thereby form an annular article-holding space around the ice-receptacle within the insulated casing, and a metal food-receptacle shaped to fit said annular space having a side adjacent the metal

wall of the ice-receptacle provided with an opening, an ice cream freezer being wholly enclosed within said ice-receptacle, and a cover being provided to cover the casing and thus enclose the ice-receptacle and the freezer.

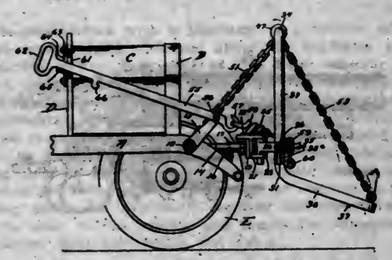


1,487,711. FEED MECHANISM FOR PLANERS. HAROLD L. BLOOD, Plainfield, N. J., assignor to Niles-Bement-Pond Company, New York, N. Y., a Corporation of New Jersey. Filed Mar. 24, 1921. Serial No. 455,058. 13 Claims. (Cl. 90—49.)

7. In a planer, the combination of a reciprocating table, a tool head, a feed screw for moving the head, a feed motor, adjustable feeding means comprising a member driven by the motor and a member operatively connected to the feed screw, a lug on one of the members, a pair of relatively adjustable lugs comprising a part of the other member and adapted to engage the first lug, means for relatively adjusting said pair of lugs, mechanism including the said adjustable means for intermittently and automatically feeding the head from the motor in synchronism with the table reciprocation, and means for controlling the continuous operation of the motor for traversing the head, the feeding and traversing of the head taking place from the motor to the screw through the said adjustable means.

1,487,712. FEED MECHANISM FOR PLANERS. HAROLD L. BLOOD, Plainfield, N. J., assignor to Niles-Bement-Pond Company, New York, N. Y., a Corporation of New Jersey. Filed Mar. 29, 1921. Serial No. 456,545. 21 Claims. (Cl. 90—49.)

1. In a planer, the combination of a reciprocating table, means for reciprocating the table, a tool head adjacent the table, a feed screw for moving the head transversely of the table reciprocation, a tool feeding and traversing shaft, an operative connection from the shaft to the screw for continuously traversing the tool, driving means for said shaft, manual controlling means for said driving means remote from the tool head for controlling the operation of the shaft to traverse the tool in either direction, the reverse traverse of the tool be-

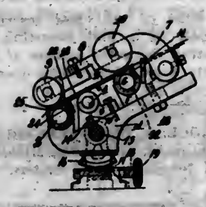


ing controlled from the said remote controlling means, and means whereby the tool may be intermittently fed from the said shaft.

1,487,713. HOE. BENJAMIN BUCHER, Whitehouse, Ohio. Filed Jan. 21, 1922. Serial No. 530,905. 2 Claims. (Cl. 97—227.)

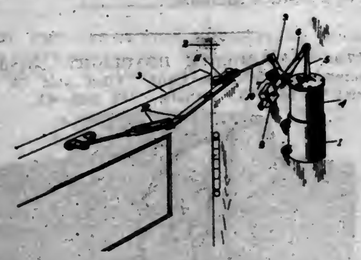
2. A hoe comprising a bottom member and side cutting member, a handle having a shank secured to the bottom member and bent upwardly and forwardly in substantially the same plane with the side cutting member said shank having a cutting edge, substantially as set forth.

1,487,714. SAFETY FENDER FOR AUTOMOBILES. THOMAS F. BUCK, New Castle, Pa. Filed Oct. 17, 1923. Serial No. 669,100. 10 Claims. (Cl. 293—45.)



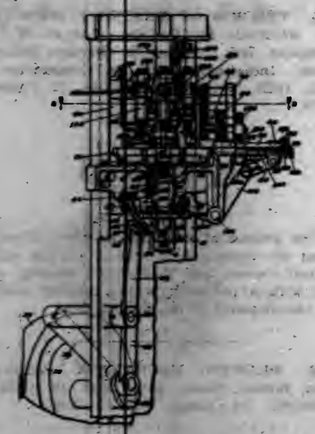
1. A safety fender for automobiles comprising a pair of arms secured upon the forward ends of the side bars of the automobile frame, a transverse member extending through said arms, a pair of arms rotatably mounted upon said transverse member and connected by a cross-bar normally resting upon the first named arms, a bar carried by the forward ends of the second named arms, U-shaped hinge elements carried by the ends of said bar, forwardly extending members engaged within said U-shaped hinge elements and removably held by pintle pins, an inverted U-shaped hand-rail connected with said last named members, a shaft extending through said last named members, a fender carried by the shaft, and means for swinging the fender vertically.

1,487,715. PROCESS OF MAKING A BIFOCAL LENS WITH MERGED SURFACES. LUCIAN W. BUGBEE, Indianapolis, Ind., assignor to Onepiece Bifocal Lens Company, Indianapolis, Ind., a Corporation. Filed July 5, 1923. Serial No. 649,649. 2 Claims. (Cl. 51—278.)



1. In the process of surfacing onepiece bifocal lenses, generating the reading field with a slightly raised surface central thereof, and thereafter polishing said reading field with a polishing button, having substantially one-half the diameter of the reading field.

1,487,716. DRAWING MECHANISM. ARTHUR CECIL BUTLER, Boston, Mass. Filed Sept. 16, 1922. Serial No. 588,582. 14 Claims. (Cl. 10—130.)

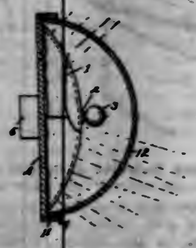


13. A drawing mechanism comprising a plurality of rollers, and a retarding plate cooperating with two of said rollers, one of said two rollers being adjustable toward and from the other of said two rollers and relative to said plate.

1,487,717. DOORCHECK. BENEDETTO CAPRA, Sacramento, Calif. Filed Aug. 7, 1922. Serial No. 580,023. 4 Claims. (Cl. 16—51.)

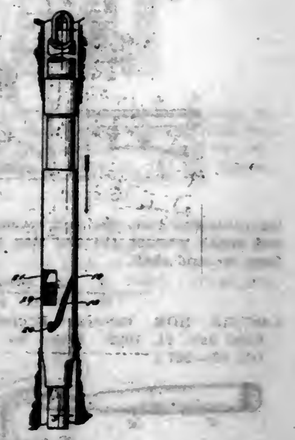
1. A door check including a vertical cylinder, a plunger therein, means between the door and said plunger whereby when the door is opened and closed the plunger will be lowered and raised respectively, means automatically acting on the plunger tending to cause the same to be raised and the door to be closed, means permitting unobstructed lowering of the plunger, and means acting thereon with a gradually lessening force as the door closes for retarding the closing action.

1,487,718. MACHINE FOR OPERATING ON SHOE PARTS. LOUIS A. CADORAIN, Beverly, Mass., assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Oct. 22, 1917, Serial No. 197,890. Renewed Apr. 29, 1922. Serial No. 557,424. 121 Claims. (Cl. 12—47.)



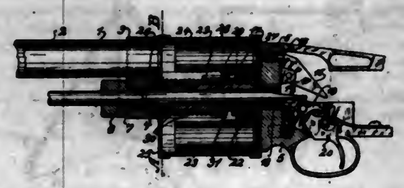
2. In a machine of the class described, means for treating one heel to a first breasting operation, and means for treating the same portion of another heel at the same time to a second breasting operation.

1,487,719. PROCESS OF MALLEABLEIZING IRON. HENRY T. CHANDLER, Marysville, Mich. Filed Nov. 14, 1921. Serial No. 514,844. 7 Claims. (Cl. 148—13.)



1. The method of malleableizing iron which consists in heating the work in one enclosure and in cooling the work in a separate enclosure.

1,487,720. AUTOMOBILE HEADLIGHT. SANDER I. CHRISTENSEN, Willows, Calif. Filed Aug. 14, 1922. Serial No. 581,573. 1 Claim. (Cl. 240—41.)



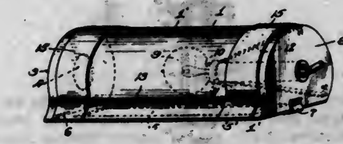
An automobile head light comprising a flat supporting plate, a convex reflector carried thereby, said reflector having its lower portion silvered and having silvering on a portion of its upper portion, the central portion of said reflector being treated to make it dimly reflecting, a lamp placed to illuminate said reflector, a transparent convex cover adapted to enclose said lamp and the reflector and a retaining ring for securing said cover to said support.

1,487,721. CEMENT BAILER. LEE CLAYTON, Maricopa, Calif. Filed Nov. 29, 1922. Serial No. 603,965. 5 Claims. (Cl. 294—72.)

1. A bailer of the class described comprising a bucket having side windows, a sleeve surrounding said bucket and provided with corresponding windows in its side normally displaced relative to the windows in the bucket, the sleeve also having a helical slot in its side and a downwardly opening notch in the upper wall of said slot at the lower end thereof, and a lateral stud on the side of the bucket playing in said slot whereby to effect rotation of the sleeve during axial movement thereof, said stud being adapted to seat in said notch upon upward movement of the bailer.

1,487,722. FIREARM. AUGUST CORNDERS, Dusseldorf, Germany. Filed Aug. 29, 1921. Serial No. 496,790. 5 Claims. (Cl. 42—8.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

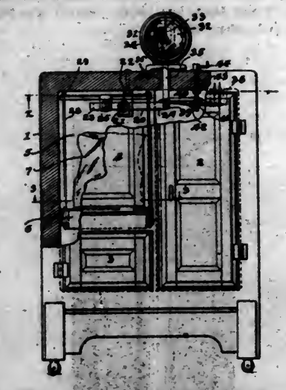
1. In a recoil firearm of the character set forth, in combination with the gun stock including a lock mechanism, a rotatable cartridge holder, a reciprocable barrel adapted to be forced into the one end position for cartridge exploding purposes by mechanical means and into the other, inoperative, end position by the projectile friction and the powder gases therewithin, and means positively controlled by said reciprocable barrel and cooperating with said lock mechanism for retaining said barrel in the inoperative, normal, end position and



for cartridge exploding purposes at a predeterminable time just prior to said barrel having reached its momentary operative end position.

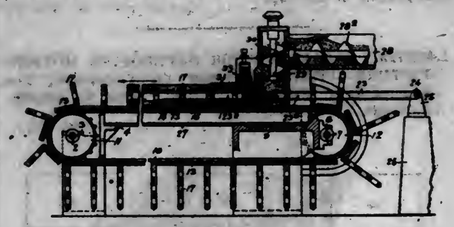
1,487,723. LAND LEVELER. JAMES H. CORBITT, Solomonville, Ariz. Filed Apr. 25, 1921. Serial No. 464,282. 6 Claims. (Cl. 37—122.)

1. A device of the character described including a pair of ground engaging parallel side runners, a shaft extending transversely of the runners, a blade secured to the shaft and adapted to have either of its longitudinal edges disposed in contact with the ground, said blade when in one of said positions forming with the runners a load carrying receptacle in front of the blade and means for retaining the blade in contacting relation to the ground when in either of said positions.



1,487,724. LIGHTING DEVICE FOR VEHICLES. NELLIE M. CORRIGAN, Kansas City, Mo. Filed Feb. 19, 1923. Serial No. 619,946. 1 Claim. (Cl. 240—7.)

The combination with a headlamp of a vehicle, of a supplementary lamp arranged above the headlamp and forwardly of the front edge of the latter whereby to direct light against the front end of the vehicle and downwardly and forwardly of the headlamp, the said supplementary lamp comprising a somewhat cylindrical-shaped casing, the inner surface of which is adapted to serve as a reflector, said casing having closed ends and being open on its underside, a glazed door closing the opening and being pivotally connected at one end to the casing, means for detachably securing the opposite end of the door to the casing, and means for supporting an electric light bulb within the casing.

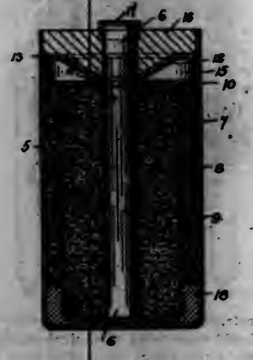


1,487,725. REFRIGERATOR. GEORGE E. DAVIDSON, Huntington, W. Va. Filed Apr. 16, 1923. Serial No. 632,491. 6 Claims. (Cl. 62—74.)

1. In a refrigerator, the combination of a casing having an ice compartment, an ice supporting tray vertically movable in said compartment, a spring controlled scale indicator upon the exterior of the refrigerator and secured thereto, a supporting head within the refrigerator, suspending means conecting the ice supporting tray with the supporting head, and a beam pivotally supported

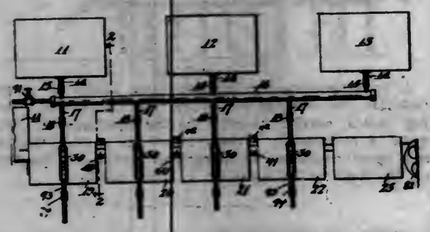
within the refrigerator and having oppositely projecting arms, one of said arms being pivotally coupled to the head and the other to the spring controlled scale indicator.

1,487,726. MACHINE FOR MAKING CORED BLOCKS. GEORGE C. DEBAT, Springdale, Pa. Filed Dec. 2, 1920. Serial No. 427,829. 2 Claims. (Cl. 25—99.)



1. In a machine for forming cored blocks of plastic material, the combination of an endless-conveyer, open-top molds carried thereby having openings in their walls, a horisontally extending core-bar passing through said openings having an attenuated portion at the point of the delivery of material to said molds.

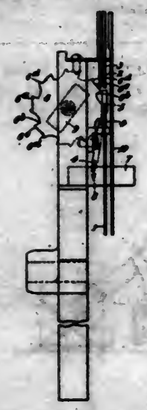
1,487,727. PROCESS OF PHOTO-ENGRAVING. MICHAEL J. DE GRAVE, Chicago, Ill. Filed Oct. 13, 1922. Serial No. 594,257. 3 Claims. (Cl. 41—43.)



1. The method of preparing photo-engravings which consists in covering a metal plate with a sensitized coating and exposing the same to the action of light operating through a photographic negative and a screen; then removing by hand certain of the screen marks from said coating; and then etching said plate, substantially as described.

1,487,728. DRY CELL. HAROLD DE OLANETA, New Haven, Conn., assignor to Winchester Repeating Arms Company, New Haven, Conn., a Corporation of Connecticut. Filed Mar. 24, 1920. Serial No. 368,324. 9 Claims. (Cl. 204—29.)

1. In a dry cell having a cup and a pitch seal, an upwardly facing cup shaped washer supporting the seal and presenting a gas space beneath the washer at the peripheral portion of the cup.



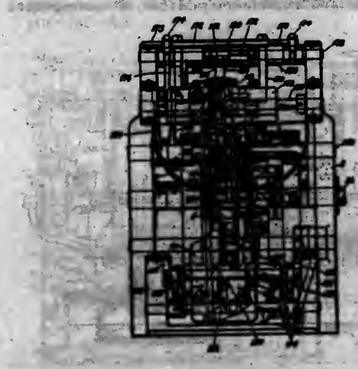
1,487,729. APPARATUS FOR DEVELOPING MOTION-PICTURE FILMS. VINCENT DE YBARRONDO, Los Angeles, Calif. Filed July 31, 1920. Serial No. 400,468. 5 Claims. (Cl. 95—90.)

1. An apparatus for developing photographic film comprising a box for containing a developing solution, a sprocket in each end of said box over which said film passes, means adapted to ride on the loops of film between said sprockets for holding said film below the surface of said solution, means for driving said sprockets at a constant speed, and means by which either spocket may be turned by hand at a faster or slower speed without interfering in any way with the other sprocket.

1,487,730. ESCAPEMENT-ACTUATING MECHANISM OF TYPOGRAPHICAL COMPOSING MACHINES. TOM DRAKE and JOSEPH GRACIE WINTER FIELD, Altrincham, England, assignors to Linotype and Machinery Limited, London, England, a British Company. Filed July 26, 1922. Serial No. 577,528. 10 Claims. (Cl. 199—24.)

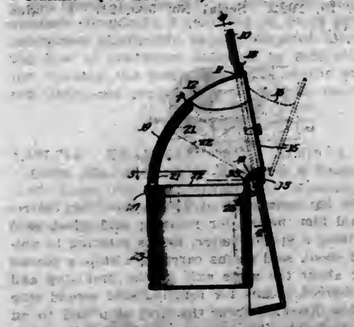
1. In or for the escapement-actuating mechanism of a typographical composing machine wherein a single key-rod at successive actuations is caused to operate different escapement rods, a disc or wheel adapted to be partially rotated directly by the key-rod at each actuation of the

latter and at different angular positions to present respectively different guiding surfaces which cause the said key-rod to engage respectively different escapement rods.



1,487,731. EYELET-SETTING MACHINE. ERNST F. H. ENNA and ANTON HAABR, Copenhagen, Denmark; said Haabr assignor to said Enna. Filed Sept. 11, 1922. Serial No. 587,297. 10 Claims. (Cl. 218—14.1.)

1. An eyelet-setting device, comprising a setting member adapted to cooperate with an anvil in partly spreading an eyelet barrel inserted in adjacent layers; a hammer adapted to cooperate with the anvil and with a concealing layer in clenching the eyelet on one of said adjacent layers; means for depressing said setting member and hammer successively, so that the partial spreading of the eyelet precedes the clenching thereof, and the clenching is effected wholly at one side of the concealing layer, and means for guiding the setting member and hammer in the performance of their functions.



1,487,732. BUTTONING MACHINE. HERBERT E. ENGLIN, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed May 1, 1920. Serial No. 378,107. 75 Claims. (Cl. 12—69.3.)

1. In a buttoning machine, means for disposing the material adjacent to a buttonhole of a buttonhole fly in buttoned relation to a button on a button piece, a support for the button, and means for moving said means and the support together with the work engaging portions of

said means and the support in substantially constant relation to each other to feed the buttonhole fly and the button piece.

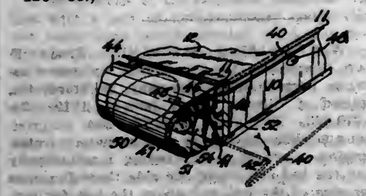
1,487,733. ASH RECEIVER. HARRY L. FARGO, Ripon, Wis. Filed Jan. 25, 1923. Serial No. 614,722. 10 Claims. (Cl. 220—18.)

1. An ash receiver comprising in combination a pair of members in telescopic arrangement with each other, a closure member secured to one of said members at its outer end, latch means for securing the said member in closed position, and means for forcing one of said members apart from the other member into open position.

1,487,734. VARIABLE TABLE. GEORGE E. FAY, Chelsea, Mass., assignor of one-half to Salvatore Gangi, Salvatore Larzzara, and Philip Searnici, all of East Boston, Mass. Filed Aug. 31, 1922. Serial No. 585,394. 2 Claims. (Cl. 45—122.)

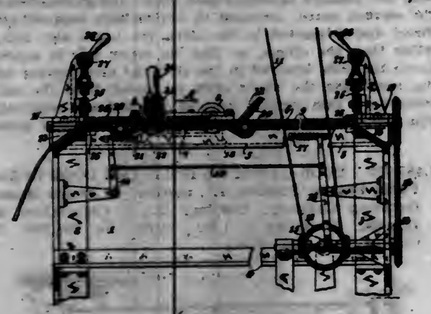
1. A variable table comprising a box-shaped body, having its top portion formed as an open frame, and its walls arranged to form a storage space below the opening in said top portion, a plurality of slides identical with each other in size and shape, a transparent cover filling the said opening, a vertical series of spaced apart horizontal slots being formed in one of the side walls of the body and adapted to receive said slides, and guides within the storage space, arranged to horizontally support and direct slides inserted in the slots, the upper slot being wider than the others, so that its upper side is spaced above the slide inserted in the slot, the arrangement being such that the upper slide is spaced from the said cover by a thin crevice, adapted to receive a relatively thin supplemental slide superimposed on the upper slide.

1,487,735. DOOR CATCH TO HOLD THE DOOR OPEN. PETER FRANTZ, Sterling, Ill., assignor to Frantz Manufacturing Company, Sterling, Ill., a Corporation of Illinois. Filed Oct. 1, 1921. Serial No. 504,760. 3 Claims. (Cl. 292—278.)



1. In a catch or door holder to hold the door open, the combination of a bracket plate adapted to be secured to the inner side of the door and provided with upper and lower portions having vertically alined openings therein, a horizontally disposed sheet metal arm having the sheet metal at one end thereof bent to form a cylindrical portion the upper and lower ends of which turn or rotate in said openings, means to connect said arm with the building and means carried by said arm to lock the door in open position.

1,487,736. CAMP-STOVE CASING. LOUIS B. GOLDBERG, NATHAN GOLDBERG, JACOB M. GOLDBERG, and WILLIAM GOLDBERG, Denver, Colo. Filed Nov. 26, 1921, Serial No. 517,903. Renewed Feb. 9, 1924. 12 Claims. (Cl. 126—38.)



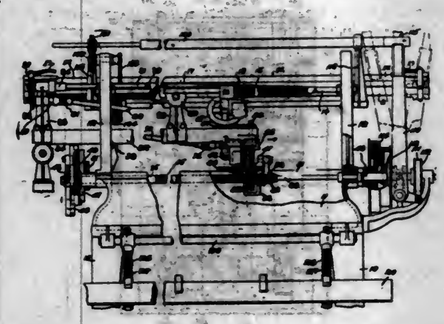
1. A casing and supports pivoted thereon, said supports including pivoting parts, a spaced casing-engaging bar for engaging the bottom of the casing when supporting the same and projecting legs at opposite ends of said bar adapted to be swung along the sides of the casing into retracted position.

1,487,737. PORTABLE LIQUID-FUEL CAMP STOVE. LOUIS B. GOLDBERG, JACOB M. GOLDBERG, NATHAN GOLDBERG, and WILLIAM GOLDBERG, Denver, Colo. Filed June 26, 1922. Serial No. 570,995. 20 Claims. (Cl. 126—38.)

1. A camp stove having a casing and burners therein, and a fuel tank adapted to be connected with said burners and adapted to be removably mounted upon an outside wall of the casing when not in use.

1,487,738. FIBER-CLEANING MACHINE. WINFIELD S. GROVE, Manila, Philippine Islands. Filed Dec. 1, 1920. Serial No. 427,530. 8 Claims. (Cl. 19—17.)

2. A machine of the class described comprising in combination a longitudinally extending member providing a track, two sets of decorticating tools at one end of the track and on opposite sides thereof, a carriage mounted so as to move along said track, said carriage having gripping jaws at opposite sides thereof in cooperative relationship with respect to said decorticating tools, and means for reciprocating said carriage and jaws toward and from the decorticating tools.

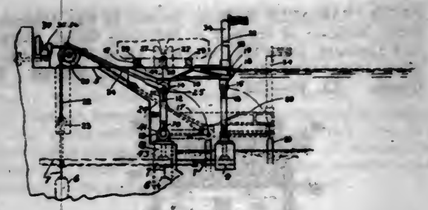


1,487,739. PAN OR PLATE LIFTER. VERNON J. HARRIS, Adrian, Mich. Filed Apr. 5, 1922. Serial No. 549,854. 4 Claims. (Cl. 294—30.)

1. In a device of the class described, a pair of cooperating, relatively movable, pivotally connected elements, one of which elements is formed of a single wire looped upon itself at one end to form a gripping jaw and bent at the other end to form a hand grip portion, said other element also formed of a single wire bent at one end to form a jaw corresponding to the jaw of said first element and pivoted to the handle portion of said first element for relative rotatability thereabout to move the jaw thereof toward or away from the jaw of said first element.

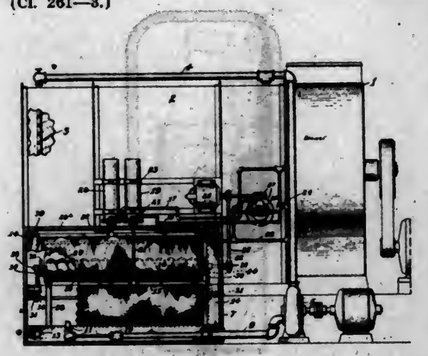
1,487,740. WARP-LEASING MACHINE. EDGAR F. HATHAWAY, Dorchester, Mass., assignor, by mesne assignments, to Barber-Colman Company, Rockford, Ill., a Corporation of Illinois. Filed Jan. 13, 1919. Serial No. 270,893. 22 Claims. (Cl. 28—40.)

1. A leasing machine having, in combination, a framework comprising a bed, a rod extending longitudinally of and above the bed and along one side thereof, means at the other side of the bed and above the bed for supporting a warp clamp, means at the first-mentioned side of the bed and below the bed to receive a warp clamp, the warp extending from the first-mentioned clamp to said rod and thence downwardly to the second-mentioned clamp, a carriage mounted on the bed to travel below the sheet of threads, a thread-spacer mounted on said carriage and slidable on said rod into engagement



with the threads extending over said rod, and leasing means located on said carriage between said spacer and the first-mentioned clamp.

1,487,741. AUTOMATIC FILM-SHIFTING DEVICE FOR CAMERAS. IRVING HERSHEY, Denver, Colo. Filed June 19, 1922. Serial No. 569,421. 1 Claim. (Cl. 242—71.)



In a camera having a strip of film, a spool for the reception of said film, means for rotating said spool, said means comprising a spring motor, means rotating in unison with said spool, said means carrying a stop, a second stop rotating about the same axis as the first stop and in the path thereof, means for rotating said second stop in the opposite direction from the first stop and to an extent proportional to the amount of film on the spool, said means comprising a feeler resting on the surface of the film.

1,487,742. DRY DOCK. MYRON F. HILL, New York, N. Y. Filed Mar. 27, 1919. Serial No. 285,505. 7 Claims. (Cl. 61—65.)

1. The combination with a ship lifting platform, of a rigid girder disposed longitudinally under the keel of a ship carried thereby, a row of pivotal columns supporting substantially the entire weight of the ship on said girder, a plurality of tension members secured to the girder for raising and lowering the same, and means for mechanically interconnecting said tension members to simultaneously control the same.

1,487,743. HUMIDIFYING APPARATUS. WILLIAM B. HOOOE, Charlotte, N. C., assignor to Parks-Cramer Company, Fitchburg, Mass., a Corporation of Massachusetts. Filed Aug. 31, 1918. Serial No. 252,221. 4 Claims. (Cl. 261—3.)

1. In a humidifying plant, the combination of a conduit providing a passageway for the air, a blower to cause the air to flow through said passageway, means in said conduit for delivering water to the flowing air, a pit below said means to collect the excess water, a strainer comprising a plurality of parts arranged to be interposed alternately in and removed alternately from the flow of the water collected by said pit, and means for cleaning the individual parts of the strainer seriatim while said parts are removed from the water.

1,487,744. TRAMWAY GRIP. LOUIS A. KNOPF, St. Louis, Mo., assignor to Broderick & Bascom Rope Co., St. Louis, Mo., a Corporation of Missouri. Filed Dec. 19, 1923. Serial No. 681,529. 25 Claims. (Cl. 104—210.)

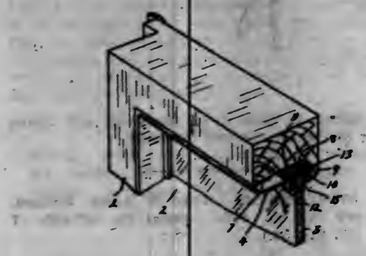
4. A tramway grip comprising a body casting provided with a fixed jaw, a worm mounted in the body casting for endwise movements therein, means for imparting endwise movements in either direction to said worm, a device for preventing said means from becoming locked or jammed, a shaft supported in the worm, means for holding the shaft in selected adjustments in the worm, a jaw for cooperation with the first named jaw, and a device swivelling said second jaw in connection with said shaft.

1,487,745. CLEANING TOOL FOR ELECTRIC FIXTURES. ALFRED KRAFFT and EDWARD SCOTT, Brooklyn, N. Y. Filed Dec. 1, 1921. Serial No. 519,168. 6 Claims. (Cl. 15—21.)

1. In a cleaning tool for shades a combination of a plurality of brushes adapted to clean the outside of the shade and a plurality of brushes adapted to clean the inside of the shade, with means for operating said

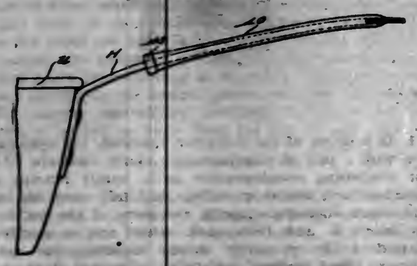
brushes in unison to close in on the shade and means for rotating the brushes around the shade.

1,487,746. STUD DRIVER. FORD R. LAMB, Redford, Mich. Filed Dec. 16, 1922. Serial No. 607,335. 7 Claims. (Cl. 81—53.)



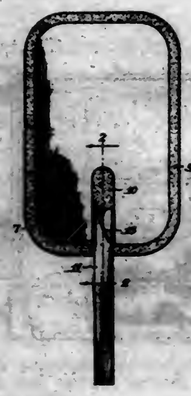
1. In a device of the character described, the combination with a pair of complementary clutch elements, of a nut comprising complementary parts jointly forming a threaded bore, means mounting said nut upon one of said clutch elements adapting the parts of the nut for movement to and from each other, and a member adapted to be rotatively driven mounting the nut-carrying clutch element for sliding movement along the axis of rotation and rigidly mounting the other clutch element, said member having a hollow portion snugly engaging the parts of said nut upon movement of the sliding clutch element toward the stationary clutch element, whereby said parts are forced into abutting relation preliminary to establishment of a drive to the nut through the clutch element.

1,487,747. MOTION-PICTURE SCREEN. WALDEMAR H. C. LASSEN, St. Paul, Minn. Filed Sept. 12, 1921. Serial No. 499,942. 2 Claims. (Cl. 88—24.)



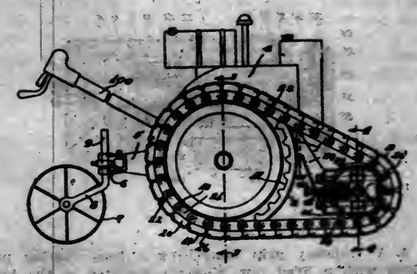
2. A motion picture screen comprising a fabric backing, an impregnation of highly elastic and pliable material applied to said backing comprising bees wax and white paint, a number of coloring coatings applied to said impregnation and a layer of glass particles applied to the outer of said coloring coatings.

1,487,748. WINDOW HEADER FINISH STRIP. HERMAN C. MAISE, Detroit, Mich., assignor to Briggs Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed Dec. 27, 1922. Serial No. 609,204. 4 Claims. (Cl. 296—44.5.)



1. The combination with a yieldable strip for engagement with the upper edge of a sashless glass panel, of a metallic header finish strip having an intermediate raised main body portion terminating at one edge in a return-bent flange and in the opposite edge in a channel for receiving said yieldable strip, said channel having portions for embracing portions of said yieldable strip to anchor the same in place.

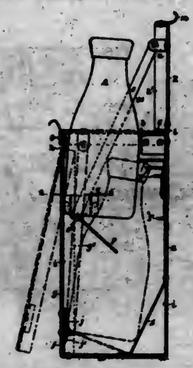
1,487,749. HOT-HANDLE GRIP. PHILIP F. MARTUS, South Boston, Mass. Filed Apr. 14, 1922. Serial No. 552,696. 3 Claims. (Cl. 16—116.)



1. A hot handle grip comprising a flexible tubular sleeve of non-heat-conductive fibrous material adapted to be fitted over the handle of a household utensil, having one end thereof closed and a distortable metallic ferrule borne by the other end thereof adapted to be pressed down upon the utensil handle to frictionally embrace the same.

1,487,750. INSECT DESTROYER. JOSEPH N. MILLER, McHenry, Ill. Filed Dec. 20, 1922. Serial No. 607,959. 1 Claim. (Cl. 43—137.)

An insect beater comprising an element of open mesh woven wire, an adhesive rubber tape folded longitudinally mediate its ends to provide a channel in which the edges of the wire mesh are disposed and which is caused to adhere together through the interstices of said mesh, a handle having a kerf in one end into which said structure is inserted, and separate pieces of adhesive rubber tape disposed upon opposite faces of the mesh at the location of the handle and adhering to each other through the interstices of the mesh and forming a flexible continuation of said handle.



1,487,751. CRAWLER-TYPE TRACK-LAYING TREAD ATTACHMENT FOR AUTOMOTIVE VEHICLES. ROYAL R. MILLER, Chicago, Ill., assignor to Miller Traction Tread Company, a Corporation of Delaware. Filed Apr. 11, 1921. Serial No. 460,250. 4 Claims. (Cl. 305—3.)

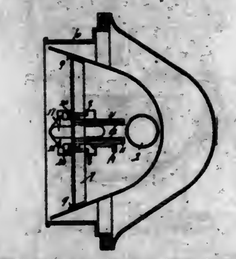
1. The combination with a motor vehicle and the wheels thereof, of driving gears mounted concentrically on said wheels, horizontal flanges on either said side of said driving gears, tread supporting mechanisms secured to the vehicle frame, and crawler type treads comprising a plurality of overlapping tread elements adapted to ride on said flanges and to be driven by said gears.

1,487,752. MILK-BOTTLE RECEIVER. WILLIAM MOLENAAR, Paterson, N. J. Filed Mar. 1, 1923. Serial No. 622,007. 3 Claims. (Cl. 232—41.)

1. In combination, a shell having a top opening, a closure for said opening, and a supporting stirrup for the article to be received movable with the closure in the shell downwardly and upwardly as the closure is moved to closed and open position, respectively, the shell having laterally thereof a stop arranged to stand above the article when the stirrup is depressed and thereby lock

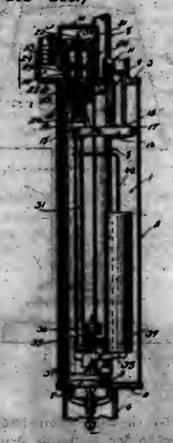
the closure against opening movement and the stirrup affording underneath support to the article only at a point thereof relatively opposite the stop, whereby the article will bear laterally against the stop in descending with thes stirrup.

1,487,753. WASHING MACHINE. JOHN P. MOOS, Evanston, Ill. Filed Dec. 1, 1922. Serial No. 604,179. 6 Claims. (Cl. 68—18.)



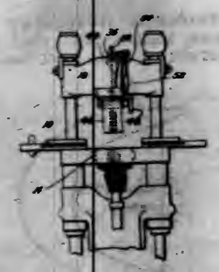
1. In a cylinder for washing machines, the combination of metallic end plates, lifter boards extending between and rigidly secured to said end plates, said end plates having outer and inner annular flanges near their periphery, spacing lugs within said flanges forming receiving pockets therewith, and slats engaging at their ends in said receiving pockets to form the circumferential wall of said cylinder, said receiving pockets serving as the sole means for locking said slats against the longitudinal and circumferential displacement.

1,487,754. WHEEL. THOMAS E. MURRAY, Brooklyn, N. Y. Filed July 11, 1921. Serial No. 483,656. 4 Claims. (Cl. 301—64.)



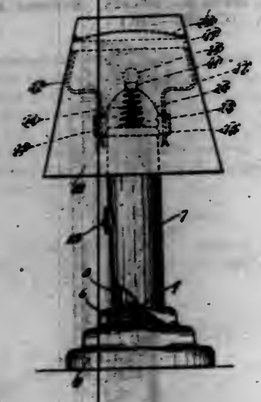
2. A wheel comprising members intermediate between the hub and the rim, said members being of hollow, substantially rectangular cross-section and comprising diverging legs integrally connected at their outer and inner ends and being made of two halves, each half being of sheet metal stamped up to form a web in a plane transverse to the axis of the wheel with flanges on its edges forming with the flanges of the other the desired hollow cross-section.

1,487,755. AUTOMATIC HEADLIGHT REFLECTOR. JOHN PETERSEN, Madison, Wis. Filed Mar. 24, 1923. Serial No. 627,502. 1 Claim. (Cl. 240—41.)



In automatically adjusting head-lights, a truncated reflector suspended from a hinge in the top of a casing, and controlled by a bar across the bottom of same, said bar loosely connected to the shaft of a hollow rim balance wheel which carries movable weights within the rim, said shaft through rollers and gears moving upon a track concentric with the hinge aforesaid.

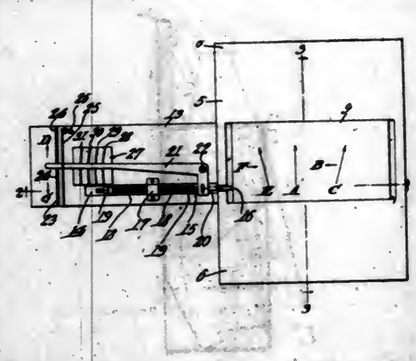
1,487,756. PNEUMATIC PUMP AND MEASURING APPARATUS. OTTO R. PFAU, Milwaukee, Wis., assignor, by mesne assignments, to Marvel Fresh Water System Corporation, a Corporation of Wisconsin. Filed Mar. 15, 1920, Serial No. 365,828. Renewed Aug. 3, 1923. 2 Claims. (Cl. 103—246.)



1. In a device of the character described, a fluid chamber, a compressed air inlet valve therefor, a fluid motor for actuating the inlet valve, a fluid passageway connecting said motor with the lower part of the fluid chamber below the low liquid level therein whereby a liquid seal is formed at the lower end, a check valve in said passageway opening to permit flow of liquid to the motor when the compressed air valve is open, said motor having means for closing said air valve after it has been actuated a predetermined distance by said flow of liquid and a bleed hole through said valve to permit a restricted return flow of liquid after the air valve has been closed.

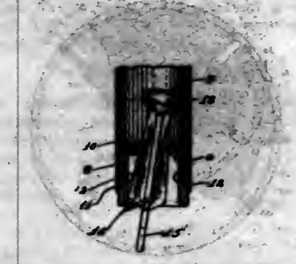
1,487,757. NAILING MACHINE. JOSEPH H. POPE, Hamilton, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Jan. 14, 1922. Serial No. 529,248. 15 Claims. (Cl. 1—36.)

1. In a nailing machine, nail-engaging means separable from the machine, movable securing means to prevent such separation of the engaging means, lever mechanism for manipulation by the operator and connected to the securing means, and a guard for the engaging means movable by said lever mechanism.



1,487,758. PORTABLE ELECTRIC LIGHT. EMIL RABIDEAU, Bay City, Mich. Filed Feb. 23, 1923. Serial No. 620,803. 4 Claims. (Cl. 240—8.5.)

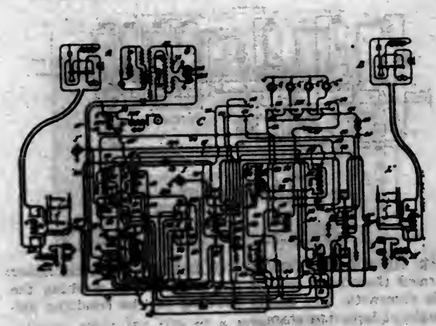
1. A portable electric light comprising a base having a cylindrical battery holder mounted thereon, a cone shaped cap enclosure therefor provided with ears or wings formed integral therewith, supports secured in said ears or wings and a reflector secured to the upper ends of said supports and adapted to support a shade thereon.



1,487,759. VEHICLE WHEEL GAUGE. RALPH L. SKINNER, Sacramento, Calif. Filed Sept. 18, 1919. Serial No. 324,423. 10 Claims. (Cl. 33—180.)

1. A vehicle wheel gauge comprising a movable element adapted to be placed in the path of travel of the vehicle wheel and laterally shiftable with reference to said path, an indicator, means for actuating said indicator upon the movement of said movable element to indicate the angular relation of the wheel to the path

of travel of the same when said movable element is traversed by the vehicle wheel, and means for locking said movable element and indicator in its newly assumed position.



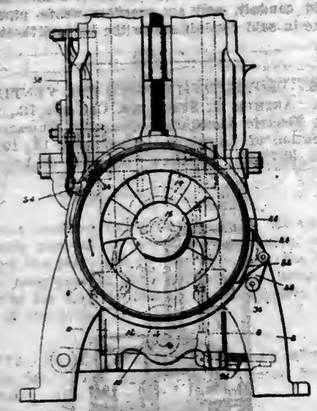
1,487,760. BAILER BOTTOM. JAMES W. SLOAN, Tulsa, Okla. Original application filed Feb. 27, 1920, Serial No. 361,886. Divided and this application filed Nov. 28, 1921. Serial No. 518,415. 3 Claims. (Cl. 166—19.)

1. A bailer bottom comprising a valve member embracing a valve head having a plurality of integral tapered ribs thereon disposed at right angles to one another to form a valve stem, a sleeve through which said valve stem projects, and a flange on said sleeve having a valve seat therein for receiving the valve head seated therein.

1,487,761. TELEPHONE SYSTEM. CHARLES SPARKS, Oak Park, Ill., assignor to Kellogg Switchboard and Supply Company, Chicago, Ill., a Corporation of Illinois. Filed June 29, 1918. Serial No. 242,584. 26 Claims. (Cl. 179—58.)

3. A telephone system including a pair of subscribers' telephone lines, a link circuit provided with an answering terminal and a calling terminal for connecting said lines, an operator's telephone for said link circuit but normally disconnecting therefrom, automatic means for connecting and disconnecting said operator's telephone and said link circuit, said means also serving to prevent more than one operator from answering the same call at the same time, an answering supervisory signal and a calling supervisory signal for said link circuit, subscriber-controlled means for causing a continuous operation of said calling supervisory signal, a source of interrupter current, a relay for connecting said source to said first

signal, a relay for connecting said source of current to said second signal, and circuits for said relays controllable by a third relay.

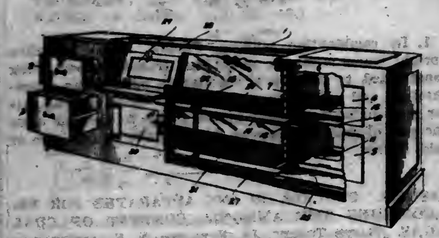


1,487,762. ROTARY DISK VALVE. MAX SPUHR, Werden-Ruhr, Germany. Filed Jan. 28, 1921. Serial No. 440,823. 5 Claims. (Cl. 251—84.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. In a rotary disk valve construction of the character set forth, in combination with a casing preventing a cavity, a valve disk rotatably operable in said casing, and said casing and said valve disk presenting registerable passageways, an opening clear through said valve disk presenting a housing, pressure responsive means disposed in said housing, and means within said pressure responsive means urging the latter outwardly toward the respectively opposing casing faces.

1,487,763. BRAKE MECHANISM. WILLIAM C. STEWART, Swampscott, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Original application filed May 15, 1916, Serial No. 97,583. Divided and this application filed July 2, 1920. Serial No. 393,598. 15 Claims. (Cl. 188—135.)

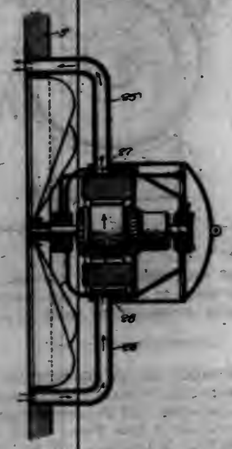
1. In a machine of the class described, the combination with a shaft, of a brake drum on the shaft, a brake band on said drum, means for applying the brake comprising connections to opposite ends of said band for tightening the band on the drum, the drum being eccentric to the shaft, and means for operating the brake ap-



plying means at such time in the rotation of the shaft as to cause the drum to operate said connections to increase the braking action of the band.

1,487,764. METHOD OF BRIQUETTING PEAT OR HUMUS. ALBERT L. STILLMAN, Plainfield, N. J., assignor to The General Fuel Briquette Corp., New York, N. Y., a Corporation of New York. Filed Dec. 8, 1922. Serial No. 605,707. 4 Claims. (Cl. 44—27.)

1. The method of briquetting peat which consists in macerating a mass of peat, reducing the moisture content from a point ranging from 80 to 90% to a point ranging from 30 to 40% by drying in the sun without liberating the moisture contained in the peat cells, subjecting the dried mass to a wringing pressure to bruise and open the peat cells and thereby liberate the moisture contained therein to form a binder and coincidentally briquetting said mass to produce soggy briquettes, hardening said soggy briquettes preliminarily and drying and shrinking the briquettes to a final state by exposure to the sun.



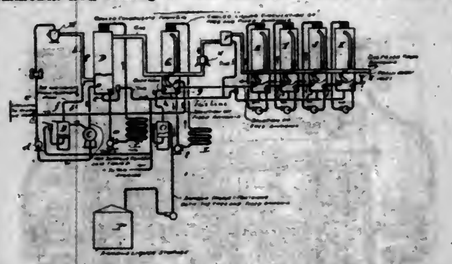
1,487,765. REFRIGERATOR. ERNEST L. STULTZ, Kansas City, Mo., assignor to Western Cabinet & Fixture Mfg. Co., Kansas City, Mo., a Corporation of Missouri. Filed June 5, 1922. Serial No. 566,040. 1 Claim. (Cl. 62—37.)

In a refrigerator, a casing comprising an ice chamber and a shelf for the support of articles to be cooled, an ice drawer slidably suspended in said chamber, having an apertured bottom, a false bottom in said drawer having edges spaced from the walls of the drawer to permit drainage from the false bottom to the apertured bottom, a catch pan in said chamber below the ice

drawer, a conduit leading from beneath the catch pan along said shelf, an overflow pipe having an intake in said pan above the bottom thereof and delivering into said conduit, and an overflow waste pipe having an intake in said conduit above the bottom thereof.

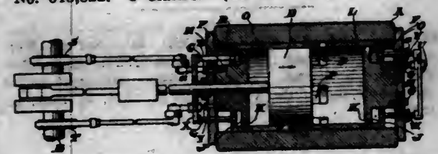
1,487,766. PROTECTIVE DEVICE FOR VENTILATING FANS. ARTHUR G. SUTCLIFFE, Chicago, Ill., assignor to Ilg Electric Ventilating Company, Chicago, Ill., a Corporation of Louisiana. Filed Nov. 13, 1919. Serial No. 337,732. 2 Claims. (Cl. 172—36.)

1. The combination with a wall, of an electric motor mounted on one side of said wall, a casing enclosing said motor, an outflow pipe for heated air extending upwardly from the top of said casing, and an inflow pipe for cool air extending downwardly from the bottom of said casing, the upper and lower ends of said outflow and inflow pipes communicating through said wall with the space on the other side of the latter.



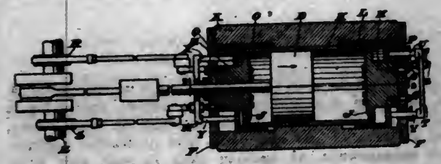
1,487,767. BUILDING VENTILATOR CONSTRUCTION. JOSEPH SYLVAN, Cicero, Ill. Filed Apr. 3, 1922. Serial No. 549,055. 5 Claims. (Cl. 98—31.)

1. In combination with a window frame including upright frame members, one of said frame members being constructed to provide a ventilation passageway therethrough, and a window sash mounted on a vertical axis for a swinging movement in the frame to open or close one end of said passageway with respect to one side of said frame.



1,487,768. PROCESS OF AND APPARATUS FOR RECOVERING THE AMMONIA CONTENT OF COAL GAS. BATES TORREY, Jr., Syracuse, N. Y., assignor to Semet-Solvay Company, Solvay, N. Y., a Corporation of New York. Filed Nov. 10, 1922. Serial No. 600,032. 9 Claims. (Cl. 23—71.)

1. The process of recovering ammonia from coal gas which consists in forming a fixed ammonia liquor by withdrawing liquor from the gas collecting main and and continuously returning it to the main and spraying the gas in the main therewith, completing the removal of free ammonia from the gas by scrubbing the gas with fresh water and free ammonia liquor formed therefrom, drawing off a portion of the liquor containing the fixed ammonia and mixing it with the liquor formed by scrub-

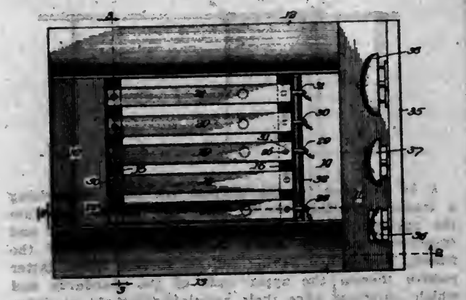


bing the gas with fresh water and free ammonia liquor formed therefrom, cooling the mixture and washing the gas therewith, and finally drawing off the resulting ammoniacal liquor to storage.

1,487,769. PISTON VALVE FOR COMPRESSORS. GROVER G. TUTTLE, Phillipsburg, N. J., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed June 7, 1923. Serial No. 643,822. 3 Claims. (Cl. 230—34.)

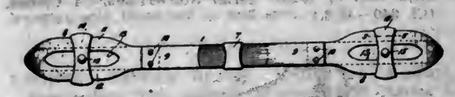
1. In a compressor, the combination with a cylinder and reciprocatory piston, of mechanically operated sleeve valves located wholly within the cylinder adapted to control the inlet to and discharge of pressure fluid from both ends of the cylinder, and in which the piston reciprocates.

1,487,770. PISTON VALVE FOR COMPRESSORS. GROVER G. TUTTLE, Phillipsburg, N. J., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed June 7, 1923. Serial No. 643,823. 3 Claims. (Cl. 230—34.)



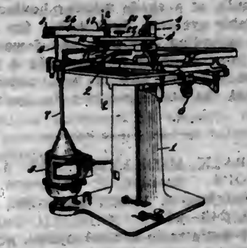
1. In a compressor, the combination with a cylinder and reciprocating piston of a plurality of mechanically operated sleeve valves located wholly within the cylinder adapted to control the inlet and discharge of the cylinder, and a renewable bushing having ports adapted to register at intervals with ports in the said valves, said bushing located within the cylinder and forming a bearing for the piston.

1,487,771. TIRE-INFLATION TESTING APPLIANCE. IRA A. WEAVER, Springfield, Ill., assignor to The Weaver Manufacturing Company, Springfield, Ill., a Corporation of Illinois. Filed Mar. 1, 1920. Serial No. 362,396. 11 Claims. (Cl. 177—311.)



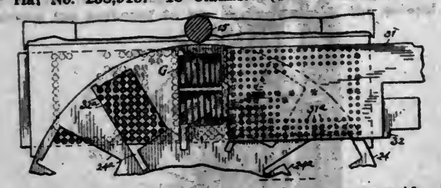
9. In a pneumatic tire-inflation testing appliance of the character described, the combination of an electric-circuit, a signal in said circuit, a pair of electric circuit

closers in said circuit, a pair of spaced depressible normally-elevated bars, a support between said bars, said bars being adapted to simultaneously close said circuit



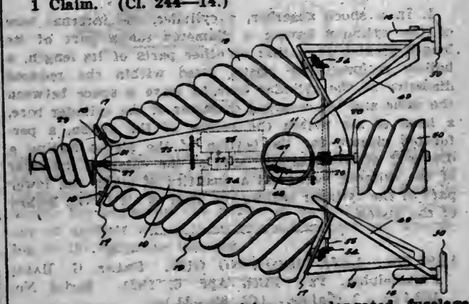
closers when the tire of a vehicle-wheel rolled over the bars and support is sufficiently deflated to cause it to depress both bars at the same time, substantially as described.

1,487,772. AUTOMOBILE BUMPER. FREDERICK A. WERNIG, Brooklyn, N. Y. Filed Jan. 23, 1922. Serial No. 531,062. 4 Claims. (Cl. 293—55.)



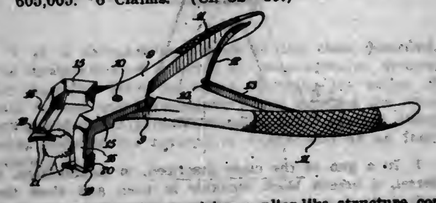
1. An automobile bumper comprising a rear supporting bar formed of spring material and having free ends; connecting arms engaging said supporting bar intermediate its ends for fastening the same to the automobile chassis; an impact member also formed of spring material having free ends and provided with horisontally-extending end portions of relatively large vertically-disposed impact area merging with a single-bar portion between such end portions of reduced impact area, and springs arranged between said supporting bar and said impact member to prevent rattling and take up shocks imposed on the impact member.

1,487,773. ROUTING MACHINE. FOLKE W. WESTON, Brooklyn, N. Y.; Helga M. Weston, executrix of said Folke W. Weston, deceased, assignor to F. Wesel Manufacturing Company, Brooklyn, N. Y., a Corporation of New York. Filed Dec. 4, 1920. Serial No. 428,285. 4 Claims. (Cl. 90—11.)



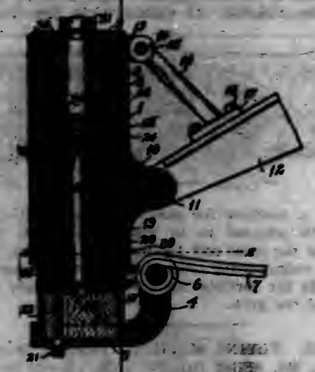
1. In a routing machine, the combination of a tool spindle, a driving means for said spindle, a driving connection comprising a pulley between said driving means and said spindle, and a brake for said pulley.

1,487,774. GRID-PASTING MACHINE. THEODORE A. WILLARD, East Cleveland, Ohio, assignor to Willard Storage Battery Company, Cleveland, Ohio, a Corporation of West Virginia. Filed Oct. 19, 1918. Serial No. 258,915. 13 Claims. (Cl. 226—39.)



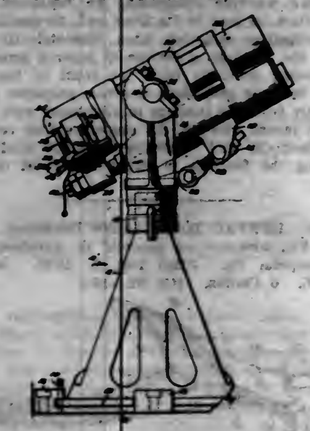
1. In a machine for pasting storage battery grids, a receptacle adapted to be filled with paste, means for receiving the grids and feeding them past the receptacle, and a reciprocating slide between the receptacle and the grids for forcibly feeding the paste into the interstices of the grids.

1,487,775. FLYING MACHINE. ADOLPH WITTMAN, St. Louis, Mo. Filed Oct. 27, 1922. Serial No. 597,252. 1 Claim. (Cl. 244—14.)



A flying machine comprising an elongated fuselage tapered from its rear to its front end, forwardly tapered screw propellers mounted upon diametrically opposite sides of the fuselage, a forwardly tapered screw propeller extending centrally from the front of the fuselage between the side propellers, a screw propeller extending rearwardly from the fuselage in alignment with the front propeller, means whereby the propellers may be operated and horisontally and vertically arranged land gear for supporting the fuselage in either horisontal or vertical position.

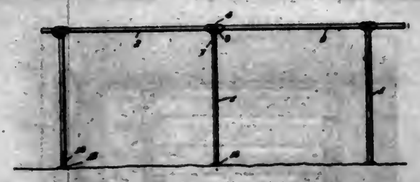
1,487,776. DENTAL TOOL. JACOB GOLDBERG, Philadelphia, Pa., assignor of one-half to Abraham Kolsky, Philadelphia, Pa. Filed Dec. 6, 1922. Serial No. 605,005. 6 Claims. (Cl. 32—10.)



1. A dental tool comprising a plier-like structure composed of two members pivoted together, each of said pivoted members having an operating jaw provided with an integral portion extending angularly downward and forward from the point of pivotal connection, the ends of said jaws diverging with respect to each other, and crown adjusting members carried at the ends of said projecting portions of the operating jaws, said crown adjusting members each having a relatively narrow curved working surface.

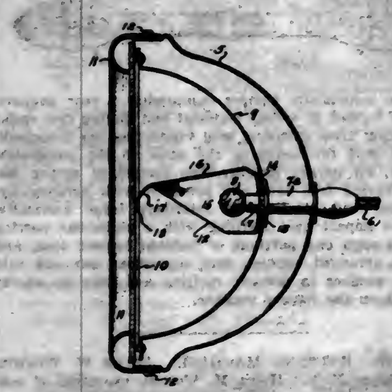
1,487,777. SHOCK ABSORBER. ROLAND M. GREENE, San Francisco, Calif. Filed Nov. 23, 1922. Serial No. 602,670. 8 Claims. (Cl. 267—64.)

1. In a shock absorber, a cylinder, the internal bore of the cylinder having a diameter for a part of its length greater than that of other parts of its length, a hollow reciprocating piston fitted within the reduced diameter of the cylinder bore to leave a space between the same and the enlarged diameter of the cylinder bore, a head of air within the hollow of the piston, a perforated closure for the bottom of the piston having a diameter of substantially that of the enlarged diameter of the cylinder bore, and a quantity of oil in the lower part of the cylinder sealing the head of air in the hollow of the piston.



1,487,778. LINE-THROWING GUN. FRANK G. HALL, Philadelphia, Pa. Filed Apr. 6, 1921. Serial No. 459,110. 7 Claims. (Cl. 89—24.)

1. In a gun of the class described, in combination, a barrel, a breech block movable to open and close the end of the barrel and an extractor operatively connected to the breech block and adapted to eject a shell case when the block is moved to open position, said extractor being supported by the barrel and adapted to be removed without removing the breech block.

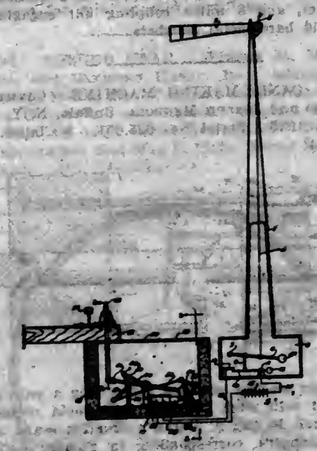


6. A gun having a barrel provided with rearwardly directed spaced extensions adapted to slidably retain between them a breech block, and means rigidly connecting the rear ends of said extensions, in rear of the breech block.

1,487,779. GRAPE ARBOR. HERMAN F. HARDT, near La Grange, N. C. Filed Apr. 3, 1923. Serial No. 549,044. 3 Claims. (Cl. 47—44.)

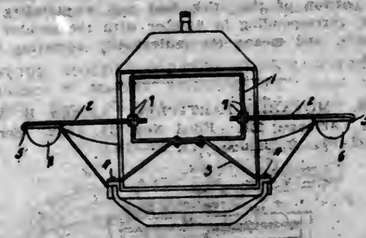
1. In a device for the purpose set forth, comprising a frame including tubular standards which constitute the uprights of a frame and tubular longitudinal and transverse members which constitute the top of the frame, T-couplings having central sockets which latter receive therein the upper ends of the standards and which couplings have their remaining sockets receiving therein the confronting ends of the longitudinal and transverse tubular members, removable means securing the tubular members in the sockets of the couplings, and spaced longitudinal and cross wires connected to the tubular top members of the frame.

1,487,780. SHADE. RALPH HATCHER, Detroit, Mich., assignor of one-half to Frank Koss, Detroit, Mich. Filed Jan. 8, 1923. Serial No. 611,306. 4 Claims. (Cl. 240—46.6.)



2. The combination with an electric head lamp comprising a concave casing fitted with a lens and provided with a concave reflector interior the casing and a light socket protruding thereinto from the rear and provided with a light bulb, of a shade member having a rear end portion receivable over the light socket for support and a top portion extending forwardly and downwardly from the rear end portion and terminating in a resilient tip which engages the lens and is held under distortion thereby to hold the shade securely in position against rattle.

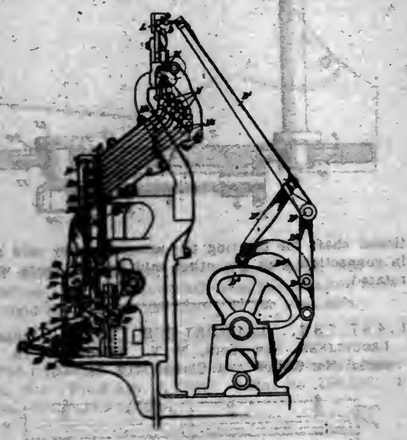
1,487,781. TRACK MECHANISM FOR AUTOMATIC TRAIN STOPS. SAMUEL P. JOHNSON, Longacre, W. Va. Filed May 9, 1922. Serial No. 559,615. 7 Claims. (Cl. 246—20.)



7. In an automatic train control system, a track mechanism comprising an elongated housing adapted to be mounted on the cross ties and having therein a vertical slot parallel with the track, said housing having the top surface convex, an elongated ramp rail curvilinear in side elevation and shaped to conform substantially

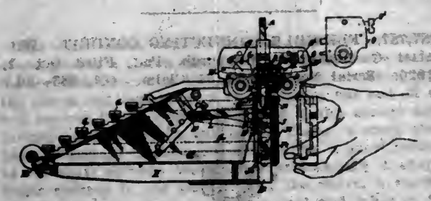
to the convex surface of the housing and mounted throughout its length in said housing slot, means to limit the upward movement of the ramp rail to hold the latter

in the slot with its ends substantially below the top level of the housing, and mechanism for raising and lowering said ramp rail in said slot.



1,487,782. FENDER BRACE. GEORGE M. KENDALL, Weatherford, Tex., assignor of one-half to Charles A. Fleming, Weatherford, Tex. Filed Sept. 7, 1922. Serial No. 586,713. 1 Claim. (Cl. 280—152.)

A fender brace comprising an open rectangular frame adapted to receive and support a license plate, the vertical sides of said frame having aligned openings, connecting members having hooks at their outer ends, said hooks adapted to engage over the outer edges of a pair of fenders, the inner ends of said connecting members being screw threaded and adapted to pass through the openings in the vertical sides of the frame, a pair of nuts upon the inner ends of each connecting member and adapted to adjustably connect the same to the frame, a stay of truss form attached intermediate its ends to the lower member of the frame, and said stay having its end portions outturned in opposite directions and perforated, whereby the same may be bolted to the chassis of the vehicle.

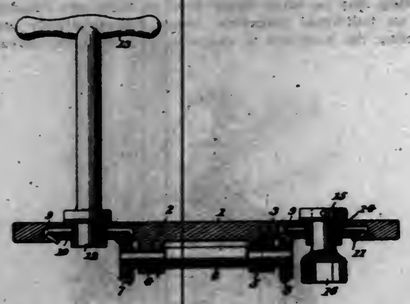


1,487,783. TYPOGRAPHICAL COMPOSING AND DISTRIBUTING MACHINE. DAVID S. KENNEDY, Brooklyn, N. Y., assignor to Mergenthaler Linotype Company, a Corporation of New York. Filed July 27, 1921. Serial No. 487,824. 41 Claims. (Cl. 199—20.)

2. In a typographical composing and distributing machine equipped with a font of matrices divided into a plurality of sets, the combination of a corresponding plurality of channeled magazines wherein the respective matrix sets are stored, a distributing apparatus cooperating with all of the magazines simultaneously, a keyboard having only as many finger keys as there are channels in an individual magazine, means for operatively connecting the keyboard to any selected one of the several

magazines, an indicator mechanism associated with the keyboard and comprising a plurality of sets of index characters, one set for each magazine, and automatic means for adjusting the indicator mechanism to bring one or another set of index characters into use according to the magazine selected.

1,487,784. KEYBOARD MECHANISM FOR TYPOGRAPHICAL MACHINES. DAVID S. KENNEDY, Brooklyn, N. Y., assignor to Mergenthaler Linotype Company, a Corporation of New York. Filed Feb. 26, 1923. Serial No. 621,228. 12 Claims. (Cl. 199—18.)



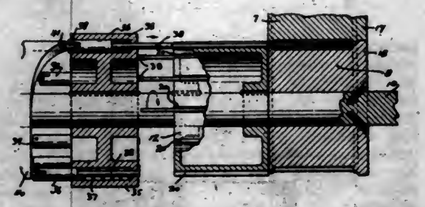
1. In a keyboard mechanism of the class described, the combination of a series of power-operated devices, key-controlled actuating slides governing the action of said devices, and a supporting frame carrying the actuating slides, the said frame with the contained slides being mounted for removal or replacement as an independent unit.

1,487,785. BEARING WRENCH. BUFORD L. KNOWLES, Chattahoochee, Fla. Filed Aug. 19, 1921. Serial No. 493,552. 2 Claims. (Cl. 81—57.)

1. A wrench of the class described comprising a body having a pair of spaced lugs formed on the under face thereof and provided with recesses adjoining said lugs, bearings formed on said lugs, a shaft rotatably supported in said bearings, beveled gears secured to the ends of said shaft and additional beveled gears rotatably supported in said recesses, a shaft engaged with one of

the last mentioned beveled gears and provided with a socket, a shaft in connection with the other said last mentioned beveled gears and a handle on the last mentioned shaft for rotating the same, whereby said socket in connection with the other said beveled gears will be rotated.

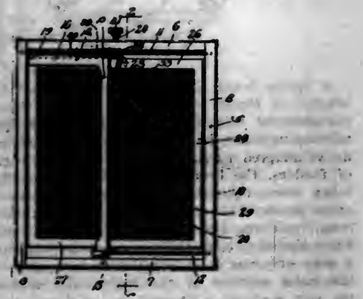
1,487,786. LAUNDRY-TUB COVER. PIERRE J. LEGUELINEL, New York, N. Y. Filed Apr. 19, 1923. Serial No. 633,046. 1 Claim. (Cl. 217—57.)



A laundry tub cover composed of sections, hinges to connect said sections, alternate sections having the hinges fastened at the top edges of the sides and the other sections having the hinges fastened at the bottom edges of the sides and means for attaching one of said sections to a laundry tub.

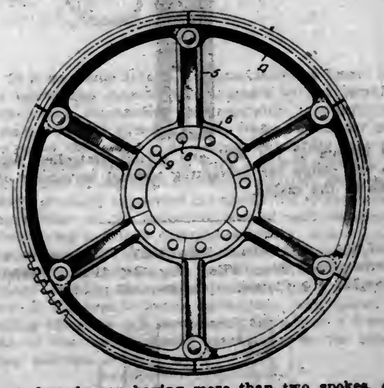
1,487,787. FLEXIBLE CONNECTING CONDUIT. WILLIAM C. LOEFFLER, Pittsburgh, Pa. Filed Oct. 1, 1920. Serial No. 413,964. 1 Claim. (Cl. 285—86.)

A flexible connecting conduit, comprising a hard metal sleeve having a cylindrical bore of uniform diameter from end to end, a soft metal flexible pipe having an end extending through and terminating with a convexly curved interior seat at an end of said sleeve, a hard metal tube provided at one end with an exterior curved face opposed to and bearing against said convexly curved seat and meeting therewith in a substantially line contact, and a union coupling nut engaging and uniting said hard metal members.



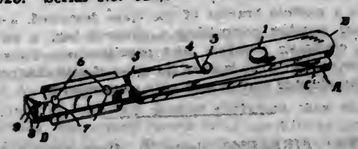
1,487,788. CANDY-MAKING MACHINE. CARMELO C. LOMBARDO and JOSEPH MENDOLA, Buffalo, N. Y. Filed Mar. 16, 1923. Serial No. 625,651. 8 Claims. (Cl. 107—81.)

1. A candy making machine comprising a pair of coacting mold rolls each provided with mold recesses, a stick seat roll having a plurality of stick seats, a plurality of plungers, corresponding in number with the number of stick seats, arranged adjacent the stick seat roll, and cam means for individually operating the plungers.



8. A candy making machine comprising a pair of coacting mold rolls each provided with mold recesses, a stick seat roll having a plurality of stick seats, a stick feed roll having a plurality of grooves registrable with the grooves of the stick seat roll, a hopper arranged above the stick feed roll, hopper rollers arranged in the bottom opening of the hopper and engageable with the stick feed roll, a circular shield arranged around the bottom portion of the stick feed roll, a plurality of plungers, corresponding in number with the number of stick seats, and means for individually operating the plungers.

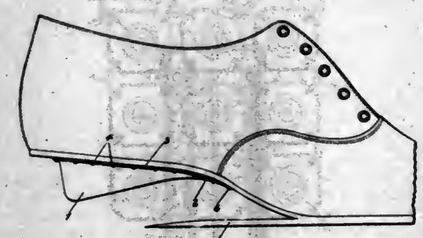
1,487,789. MOVABLE PARTITION. ANDREW B. McBRIDE, Carthage, Mo. Filed Nov. 21, 1922. Serial No. 602,481. 2 Claims. (Cl. 20—16.)



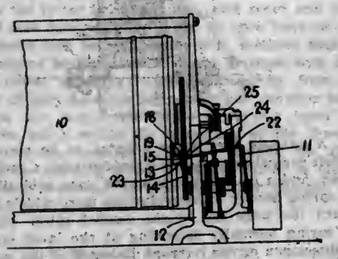
1. In a device of the kind described, a frame comprising top and bottom and side bars, the top bar having a slot therein, transversely disposed rods at the top and bottom of said frame, an inverted L-shaped bracket slidably mounted on said rods, the lower end of said bracket being formed with an offset portion having a stud mounted thereon, the upper end of the bracket formed with an apertured ear, the aperture of which is in alinement with said stud, a partition comprising top and bottom and side bars, the bottom bar of said partition having a bearing to loosely receive said stud and the top bar of said partition formed with an enlargement having an opening therein, a shaft extending through the slot in the top bar of the frame and through said apertured ear and engaging in the opening of said enlargement for rotating said partition.

1,487,790. FORGED GEAR. WARREN M. MANSFIELD, Moline, and RAYMOND HENRY, Rock Island, Ill., assignors to Moline Plow Company Incorporated, Moline, Ill., a Corporation of Virginia. Original application filed Mar. 16, 1921, Serial No. 452,749. Divided and this application filed May 3, 1923. Serial No. 636,360. 5 Claims. (Cl. 74—28.)

1. A forged gear having more than two spokes, comprising a plurality of forged gear sections each comprising a spoke portion having a hub portion on one end and a rim portion on the other end, the hub and rim portions of one section partially overlapping those of the other, and means fastening the sections together.



1,487,791. HOLDER FOR STROPPING RAZOR BLADES. ROBERT W. MANSON, Pittsburgh, Pa. Filed Jan. 23, 1923. Serial No. 614,374. 4 Claims. (Cl. 30—25.)

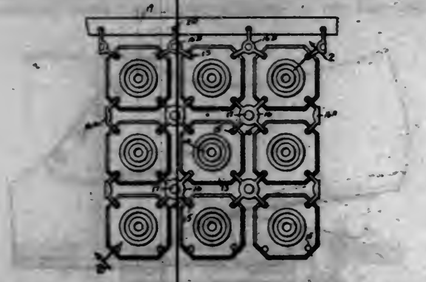


1. A stropping holder for razor blades comprising a pair of lever members movably connected toegther intermediate of their ends so as to oscillate in relation to each other, one pair of ends being compressed together, while the opposite ends are spread apart and vice versa, one pair of ends acting to grip the razor blade between them, while the major portion of the remainder is used as a handle for the holder, the longitudinal axis of the blade being longitudinal of the axis of the holder, and resilient means for normally maintaining the blade gripping ends compressed together and the handle ends spread apart whereby the razor blade is clamped in the holder for stropping and by compressing together the handle ends said blade gripping ends may be temporarily spread apart for the insertion or removal of a razor blade.

1,487,792. SHANK SUPPORT. FREDERICK P. MARX, St. Louis, Mo. Filed Aug. 24, 1921, Serial No. 495,098. Renewed Feb. 4, 1924. 7 Claims. (Cl. 36—76.)

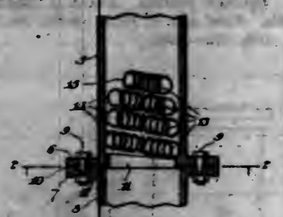
1. The combination with a shoe heel having a recess therein, of a shank support comprising a concave portion seated in the recess of the heel, and a forwardly extending narrow portion comprising upwardly and outwardly flaring walls in continuation of the walls of the concave portion converging toward their forward ends, said narrow portion extending forwardly from the heel and forming a rigid support for the shank of the shoe sole.

1,487,793. CHURN TIMER. FRANK J. MATHEWS, Deer Park, Wis. Filed Apr. 8, 1919. Serial No. 288,483. 1 Claim. (Cl. 192—139.)



The combination with a rotatably supported cylindrical churn having a clutch controlled operating means including a clutch lever, of a timing mechanism associated with the clutch and comprising a frame having one end off set and secured to the churn supporting means, spaced arms formed on the opposite end of the frame, a short shaft having bearings in the ends of the arms, a spool secured to the shaft between the arms, a substantially L-shaped finger secured to one side wall of the churn, a toothed wheel carried by one end of the spool and lying in the path of the L-shaped finger to be rotated thereby, such rotation being imparted to the spool, a ratchet wheel secured to the opposite end of the spool, a spring detent secured to the frame and having its free end arranged in the path of the ratchet wheel, an arm pivotally secured to the frame opposite the spring detent, a spring clamp secured to the free end of the arm and a flexible element passing through the spring clamp and being secured to the spool and clutch lever respectively as and for the purpose specified.

1,487,794. METAL SCREEN. ERNST MELAUN, Indianapolis, Ind. Filed Feb. 17, 1923. Serial No. 619,608. 8 Claims. (Cl. 156—10.)



2. A metal curtain or screen comprising a plurality of independently mounted metal plates, said plates being substantially rectangular and provided with apertures adjacent the corners thereof, and ornamental metal connect-

ing disks provided with four outwardly extending arms positioned between the adjacent four plates so that the

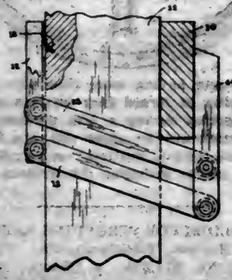
arms thereof extend through said apertures and bent so as to hook therein, substantially as and for the purpose described.

1,487,795. GAS-MIXING DEVICE. MARTIN T. MINOGUE, Philadelphia, Pa., assignor to Automotive Appliance Company, Philadelphia, Pa., a Corporation of Delaware. Filed Apr. 12, 1923. Serial No. 631,525. 6 Claims. (Cl. 48—180.)

4. A gaseous fuel mixer adapted to be mounted in a conduit comprising a device provided with a conical spiral ribbon, and a coil spring mounted upon said ribbon, said coil spring having its convolutions more widely separated toward the large end of the conical spiral ribbon, said coil spring normally extending at the large end beyond the dimension of the internal diameter of the conduit but adapted to be compressed therein.

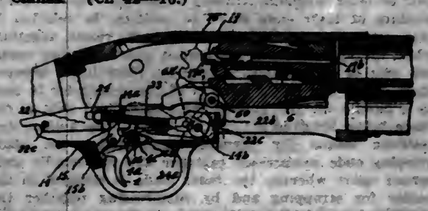
1,487,796. MILK PASTEURIZER. CORNELIUS MORTENSEN, Louisville, Ky. Filed Mar. 26, 1923. Serial No. 627,894. 1 Claim. (Cl. 257—85.)

A liquid treating apparatus including a fluid containing vat, tiers of communicating horizontally disposed pipes arranged within the vat, the tiers of pipes being arranged at angles with respect to the side walls of the vat, means for directing liquid to be treated to the tank, means for agitating the fluid within the vat, and forcing the liquid between the tiers of pipes, and means for directing a cooling medium through the pipes.



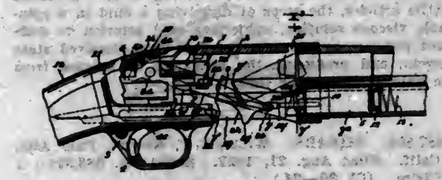
1,487,797. MEANS FOR CEMENTING WELLS. TROY RAYMOND NICHOLS, Tonkawa, Mo. Filed May 24, 1921. Serial No. 472,302. 1 Claim. (Cl. 166—1.)

Means for cementing a well comprising a pair of plugs adapted to be placed in a casing in the well with the cement mixture between them, means for applying pressure to the top piston to force the piston and mixture to



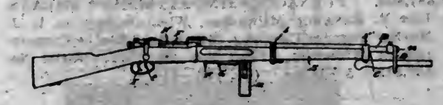
the bottom of the well and spring controlled dogs on the top piston for preventing upward movement of the same in the casing.

1,487,798. SCAFFOLD BRACKET. WALTER NOWICKI, Milwaukee, Wis. Filed Aug. 28, 1922. Serial No. 584,725. 4 Claims. (Cl. 304—33.)



1. In a scaffold bracket of the class described, a main clamping member comprising a channel bar, a pair of second clamping members, and parallelogram links pivotally secured at their ends to the sides of said channel bar clamping member and to said pair of members.

1,487,799. FIREARM. JOHN D. PEDERSEN, Jackson, Wyo. Filed Sept. 15, 1919. Serial No. 323,765. 17 Claims. (Cl. 42—16.)



1. In a firearm, in combination, a frame; a block reciprocatable in said frame rearwardly from and forwardly to a firing position; a hammer movable to firing position and to fired position; a movable bar for locking the block in firing position; and means appurtenant to the hammer engaging the movable bar for retaining it in position for locking the block in firing position when the hammer is in firing position and for moving, when the hammer is moved to fired position, said bar to unlock the block and permit rearward movement thereof.

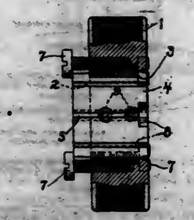
1,487,800. FIREARM. JOHN D. PEDERSEN, Jackson, Wyo. Original application filed June 6, 1916, Serial No. 101,931. Divided and this application filed Sept. 18, 1919. Serial No. 324,401. 15 Claims. (Cl. 42—17.)

1. In a magazine firearm, in combination, a frame having a mechanism chamber and provided with a barrel; a breech-closing mechanism reciprocatable forwardly and rearwardly in said chamber of the frame; a tubular magazine below the barrel and opening rearwardly into said frame chamber and provided with a spring-actuated follower; a pair of cartridge-delivery-controlling escapement members pivotally supported for oscillating movements on opposite sides of the magazine, one of said escapement members being normally cartridge actuable; means appurtenant to the breech-closing mechanism and in position and arranged for permitting the cartridge-actuation of said cartridge-actuable escapement member on a rearward stroke of the breech-closing mechanism, and means for actuating the other said escapement member on a forward stroke of the breech-closing mechanism to its breech-closing position.

1,487,801. FIREARM. JOHN D. PEDERSEN, Jackson, Wyo. Filed July 14, 1920. Serial No. 396,215. 23 Claims. (Cl. 42—77.)

1. In a firearm, in combination, a main barrel for firing long-range and relatively heavy projectiles having a normal trajectory of small curvature, and a second barrel for firing short-range projectiles having a normal trajectory of relatively greater curvature than the first projectiles; the second barrel being operatively arranged and supported in the firearm adjacently to and beneath the main barrel, the bore of the second barrel being in permanent converging forward and upward relation to the bore of the main barrel, whereby the trajectory of the projectiles from the second barrel intersects upwardly the trajectory of the projectiles from the main barrel at a point remote from the mussles of said barrels.

5. In a firearm, in combination, a main barrel, a second barrel arranged in the firearm adjacently to the main barrel, firing mechanism and trigger mechanism for the main barrel, and firing mechanism and trigger mechanism for the second barrel, the barrels being dischargeable separately or concurrently, and the second barrel being dischargeable automatically at will for rapid fire thereof.



9. In a firearm, in combination, a main barrel, a second barrel operatively arranged and supported in the firearm adjacent to and beneath the main barrel, and conductive means having an extended portion broadened at its edges interposed between said barrels extending longitudinally of the barrels for substantially the full length of the second barrel and contacting with both barrels for utilizing the main barrel for disposing of heat generated in the second barrel.

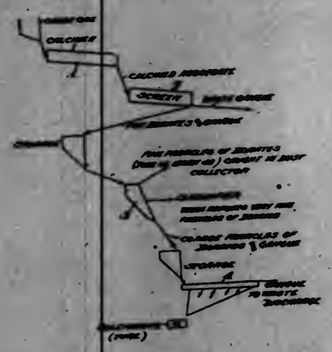
1,487,802. VERTICAL FILING CABINET. EMMETT B. PERKINS, Minneapolis, Minn. Filed Jan. 16, 1922. Serial No. 529,458. 1 Claim. (Cl. 45—2.)

In combination with a vertical filing cabinet, a door horizontally hinged to the front lower portion thereof, stops for limiting the outward movement of said door, a cover hinged to the top and rear portion of the cabinet, horizontal strips secured to the inner surfaces of the side members of the cabinet near the upper end thereof, a cross-bar supported by said strips, a drawing board, cleats secured to sad drawing board in such manner that when the latter is placed upon said cover and upon the top of said door with the latter in open position, the drawing board will be securely held in inclined position by the wedging action of said cleats between said door and said cover, supports extending inwardly from the lower end of said door for supporting the drawing board for storing the same, said supports having inner upturned ends which retain the lower end of the drawing board, and vertical separators in the cabinet, the upper portion of the drawing board when the latter is stored, engaging said cross-bar to hold the latter against said separators.

1,487,803. ADJUSTABLE RING GAUGE. GUSTAVE E. PETERSON, West Hartford, Conn., assignor to Pratt & Whitney Company, New York, N. Y., a Corporation of New Jersey. Filed July 28, 1921. Serial No. 488,184. 3 Claims. (Cl. 33—179.)

1. An adjustable ring gauge comprising in combination, a collar having a hole therethrough provided with a conical peripheral wall, a gaging member mounted within the said hole in said collar and in engagement with the said wall, and a plurality of screw threaded elements engaging the collar and member and adapted to act in opposite directions on the member whereby to adjust the member in the collar relative to the conical peripheral wall to vary the gaging dimensions of the member, the said elements also being operative to secure the member in its adjusted positions in the collar.

1,487,804. SUPPORT FOR BUFFING STEMS. EDWARD Posson, Chicago, Ill., assignor to Commonwealth Steel Company, St. Louis, Mo., a Corporation of New Jersey. Filed Sept. 22, 1922. Serial No. 589,878. 3 Claims. (Cl. 213—222.)

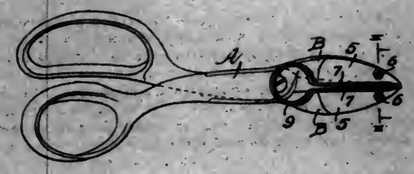


1. In a railway car, an end sill having a buffer stem recess and a passage below said recess open thereto and to the exterior of the end sill, and a roller journaled in said sill transversely of and below said recess with its upper surface extending above the lower face of said recess said roller being removable downwardly through said passage.

1,487,805. DEVICE FOR MAKING VECTOR CALCULATIONS. ALBERT F. PUCHSTEIN, Columbus, Ohio. Filed May 12, 1921. Serial No. 469,043. 13 Claims. (Cl. 235—70.)

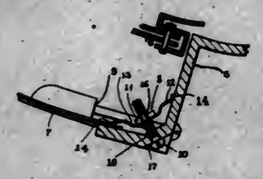
1. A calculating device comprising in combination a stock and an adjustable slide, a logarithmic scale on one edge of said stock, an inverted sine and cosine scale on the opposite edge of said stock, a logarithmic and degree scale on one side of said adjustable slide and a sine and cosine scale on the opposite side of said slide in opposed relation to said first named sine and cosine scale.

1,487,806. PROCESS FOR SEPARATING COLEMANITE FROM ITS GANGUE. CLARENCE M. RASOR, Los Angeles, Calif., assignor to Pacific Coast Borax Company, a Corporation of Nevada. Filed June 13, 1921. Serial No. 477,259. 5 Claims. (Cl. 83—54.)



1. A process of separating colemanite from its gangue which comprises: first, calcining a mixture of colemanite and its gangue, thus decrepitating and disintegrating the colemanite to form fine particles; second, screening the mixture, to separate the coarse particles of gangue from the fine particles of dehydrated colemanite and gangue; and, third, separating the fine particles of dehydrated colemanite from the gangue, by means of aid flotation.

1,487,807. HOLLOW ARTIFICIAL TEXTILE MANUFACTURING PROCESS. JULES ROUSSET, Nogent-sur-Marne, France, assignor to Société Alsa, Société Anonyme, Basel, Switzerland. Filed Nov. 15, 1921. Serial No. 515,411. 2 Claims. (Cl. 18—54.)

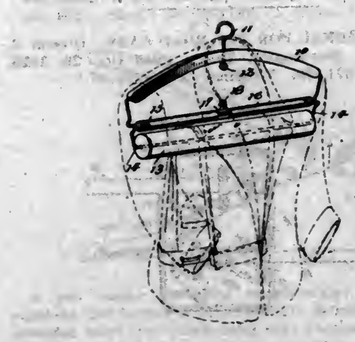


1. In the process of manufacturing hollow, artificial textile articles, the steps of dissolving a fluid in a spinnable viscous solution, subjecting said solution to sufficient pressure to maintain the fluid in a dissolved state therein, and producing the formation of bubbles from the fluid at the proper time.

1,487,808. SHEARS. WILLIAM T. ROWEN, Palo Alto, Calif. Filed Aug. 21, 1922. Serial No. 583,321. 1 Claim. (Cl. 30—24.)

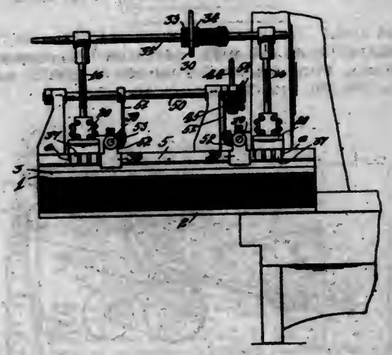
In combination, a pair of shears and clamping jaws therefor, the jaws being made from a single piece of sheet metal having flanges corresponding substantially to the width and shape of the faces of the cutters of the shears for attaching the jaws to the cutters of the shears with the confronting parallel faces of the jaws disposed in a transverse plane relatively of the cutters, the material of the jaws being looped to provide a spring band at the rear ends of the jaws, and said spring band adapted to exert an opening effect on the cutters.

1,487,809. FURNACE-CASING-ATTACHING MEANS. DON V. RUNNION, Milwaukee, Wis., assignor to L. J. Mueller Furnace Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Feb. 20, 1922. Serial No. 537,919. 5 Claims. (Cl. 126—114.)



1. The combination with a furnace having a front member of angular form in cross section, of a means for connecting a sheet metal casing edge portion thereto, comprising a plate positioned diagonally with relation to the angle of the front member and having one of its side edge portions bearing against the casing edge portion and its opposite edge portion bearing against one of the walls of the front member, said plate having a medial opening and means adjacent the opening for holding a nut in register with the opening, a nut held by the holding means, and a bolt extending through the angular portion of the front member and through the plate opening and threaded through the nut to clamp the casing edge portion between the edge portion of the plate and the front member.

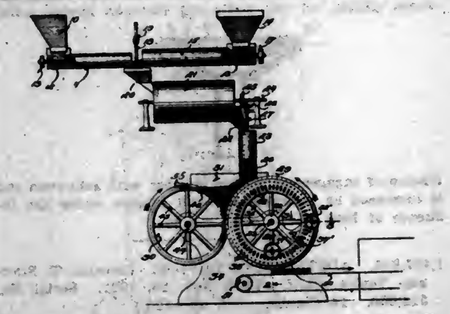
1,487,810. GARMENT HANGER. EINO SAUKKONEN, Rosslyn Heights, N. Y. Filed Oct. 11, 1920. Serial No. 416,042. 5 Claims. (Cl. 211—18.)



1. A garment support including a coat hanger portion a member supported thereon upon which to rest another garment, and a retaining element in the form of a straight

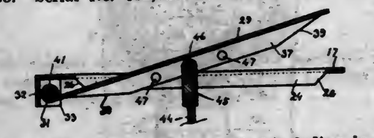
rod of resilient material anchored at its ends to the ends of the coat hanger portion and extending in close

contiguous relation to said member, whereby the retaining element may be flexed and stretched away from the member to insert the garment therebetween.



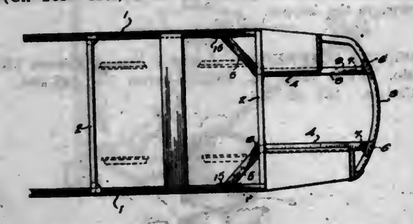
1,487,811. FEEDING SHEETS. EDWARD S. SAVAGE, Rochester, N. Y. Filed Oct. 26, 1921. Serial No. 510,527. 16 Claims. (Cl. 271—18.)

1. A picking means for separating, one at a time, metallic sheets lying in abutment embodying a magnet having its poles formed with engaging faces elongated in one direction and of such a width in the direction at right angles to the first named direction and so spaced apart as to produce lifting lines of force whose strength beyond the engaging faces are not sufficient to affect a second sheet.



1,487,812. CEMENT BRICKMAKING MACHINE. HERMAN SCHAMISA, Sheboygan, Wis. Filed Dec. 12, 1922. Serial No. 606,421. 2 Claims. (Cl. 25—79.)

1. A mould wheel comprising a cylinder, a pair of flanges outwardly directed therefrom, said flanges having radial slots therein, a series of moulds having radial bores therein, a plunger in each of said moulds, a plunger rod on each of said plungers, an ejector bar secured to said plunger rods, one end of said ejector bar extending through a slot in one of said flanges, the other end of said ejector bar extending through the slot in the other of said flanges, means cooperating with the ends of said ejector bar on the rotation of said wheel for moving said bar outwardly, and means cooperating with said



ends of said ejector bar for moving said bar inwardly on the rotation of said mould wheel.

1,487,813. OPERATING LEVER FOR ACCELERATORS. ALFRED J. SCHWARTZ, Detroit, Mich. Filed Mar. 1, 1923. Serial No. 622,046. 3 Claims. (Cl. 74—81.)

1. A device of the character described including, in combination with a slotted plate fitted in an apertured member of a motor vehicle, a depressible lever diagonally mounted in the slots of said plate lengthwise thereof, flanges on said lever guiding the same conjointly with the opposite sides of said slot, a self-rising link adapted to open the throttle valve of the vehicle's engine, and means flexibly connecting said link to said lever.

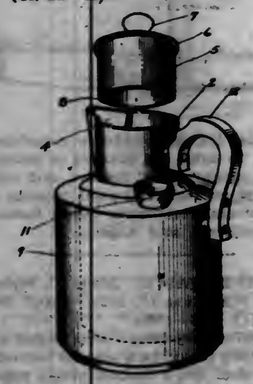
1,487,814. PLATFORM SUPPORT FOR RAILWAY CARS. LUTHER F. SEELAR, St. Louis, Mo., assignor to St. Louis Car Company, St. Louis, Mo., a Corporation of Missouri. Filed Aug. 11, 1923. Serial No. 656,771. 5 Claims. (Cl. 105—425.)

3. A cast knee for car platforms comprising a body portion having its outer end rounded to permit it to be secured to the bumper sill of the car, said body portion being extended at an angle at a point adjacent the center thereof, and integral reenforcing means formed on said body portion adjacent said angle.

1,487,815. POPPET VALVE. JOHAN C. SIMONSEN, Detroit, Mich. Filed June 17, 1922. Serial No. 568,932. 3 Claims. (Cl. 123—188.)

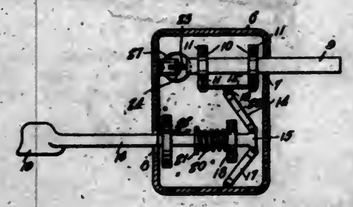
1. A poppet valve comprising a stem having an enlarged end portion, a head providing a seat for the enlarged end portion of said stem, and a concavo convex resilient member engaging the enlarged end of said stem and yieldingly holding the same seated upon its seat on the head, said member being engaged adjacent its edge portion by said

head and held under tension thereby with its convex side in contact with the enlarged end of the stem, whereby the



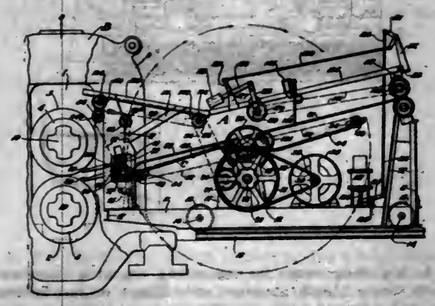
tension of engagement of said member with said stem end is increased by expansion of said member under the influence of heat.

1,487,816. ADVERTISING DEVICE. LEONARD T. SINTZ, Venice, Calif. Filed Nov. 29, 1921. Serial No. 518,660. 14 Claims. (Cl. 40—126.)



4. In combination, a device having the appearance of a grinder, the device having a receiving hopper with an outlet opening, a substantially vertical chute arranged to discharge into the hopper, a conveyer for delivering fruit, or the like, to the upper end of the chute, a trough for directing fruit from the outlet opening in the hopper to the conveyer so that it will be caught by the conveyer and delivered to the chute, and means for supplying liquid to the device so that it appears as the juice of the fruit delivered to the hopper.

1,487,817. COFFEEPOT. JAMES I. SLOAN, Kansas City, Mo. Filed Mar. 13, 1922. Serial No. 543,244. 2 Claims. (Cl. 53—3.)

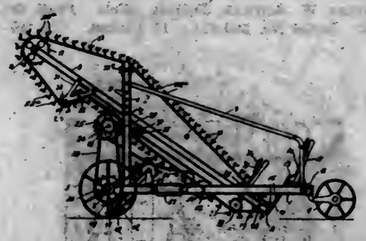


2. A coffee pot comprising an inner chamber having a constricted neck with an unobstructed spout opening, a cover having a depending flange for closing the spout opening and the top of the neck, and an outer receptacle closing the major portion of the first named receptacle and providing a water space about the same.

1,487,818. SIGNAL FOR RAILROAD CARS. GIDEON C. SPELLINGS, Huntingdon, Tenn. Filed Oct. 26, 1923. Serial No. 671,020. 7 Claims. (Cl. 116—67.)

3. In combination with the coupler heads and supporting wheels of railway rolling stock, a signaling device including a housing, supported adjacent to the coupler heads, movable bearings within the housing, a rotatable shaft supported in the bearings and adapted to move to frictionally engage the supporting wheel associated therewith, a signaling member within the housing and adapted to be operated by the rotation of the shaft, and means in the housing and adapted to contact with a coupler head for moving the shaft into and out of engagement with the wheel for controlling the sounding of the alarm.

1,487,819. ROLLING-MILL CATCHER. LAWRENCE C. STEELE, Pittsburgh, Pa. Filed May 5, 1922. Serial No. 558,580. 19 Claims. (Cl. 80—47.)

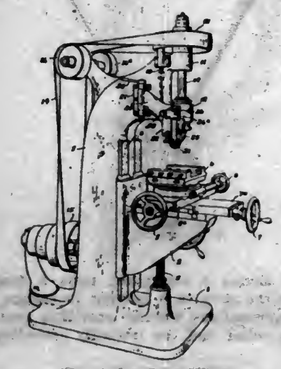


19. An automatic rolling mill catcher for sheets, comprising a platform, a plurality of stationary skids adapted to support the sheets as they are fed onto said catcher, a pair of pinch rollers adapted to receive the sheets from the mill and deliver them onto said skids, a rotary carrier mounted on said platform, means for rotating said carrier, means for locking said carrier in position below said skids while the sheets are passing between said pinch rollers, said means being adapted to automatically release said carrier when the sheets pass from between said pinch rollers to allow said carrier to rotate and elevate the sheets to a point above the top roll of the mill, conveyer chains on said carrier, other conveyer chains above said skids and in the path of travel of the sheets, said conveyer chains being adapted to co-operate to convey the elevated sheets forwardly over the mill.

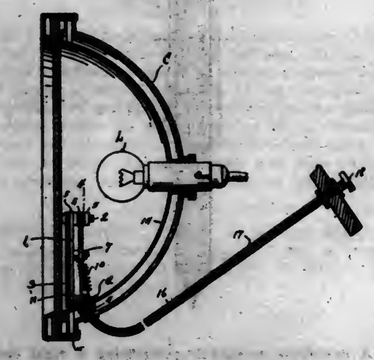
1,487,820. CAN OPENER. ROBERT T. STEVENSON, Chicago, Ill.; Claramond T. Stevenson, administratrix of said Robert T. Stevenson, deceased, assignor to The Stevenson Sales Company, Chicago, Ill. Filed Feb. 15, 1922. Serial No. 536,730. 1 Claim. (Cl. 30—3.)

A can opener including complemental sheet metal members one having a longitudinally directed offset jaw provided near one longitudinal edge thereof with a slot and the other having a blade projecting through said slot to cooperate with the jaw, the metal of said first mentioned member being folded to define an upstanding guide rib of abutting thicknesses of metal at the edge of the jaw opposite said slot as well as to define spaced ears at the base of the jaw and the metal of said second mentioned member being folded to define spaced ears at the base of said blade fitting between the ears of said first mentioned member, and a pivot pin extending through said ears pivotally connecting the members, an ear of said second mentioned member being continued to form the blade.

1,487,821. POTATO-PICKING MACHINE. LOUIS STOLTENBERG, Walcott, Iowa. Filed Jan. 9, 1922. Serial No. 527,903. 3 Claims. (Cl. 55—17.)



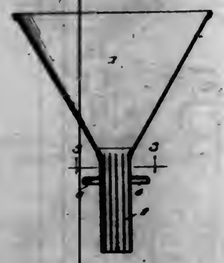
1. A device of the class described, comprising a portable frame; elevating devices operatively mounted therein; a plurality of independent wire pockets rigidly attached to said elevating devices; wire fingers fixed to the edges of said elevating devices; and means for upsetting said pockets at a given point in the upward movement of said elevating devices.



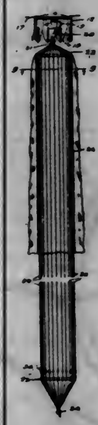
3. A device of the class described, comprising a portable frame; elevating devices operatively mounted therein; a plurality of wire pockets rigidly attached to said elevating devices, each provided with an outwardly projected loop adapted to loosen and elevate the potatoes into said pockets; and means for upsetting said carriers at a given point in the upward movement of said elevating devices.

1,487,822. CHERRYING ATTACHMENT. WILLIAM R. TOMLINSON, Hartford, Conn., assignor to Pratt & Whitney Company, New York, N. Y., a Corporation of New Jersey. Filed June 16, 1920. Serial No. 389,424. 18 Claims. (Cl. 90—11.)

1. A cherrying attachment comprising the combination of a supporting element adapted to be mounted for movement to an operative or an inoperative position on the frame of a metal working machine, means adjacent one end of the element for supporting the same on the machine, means adjacent the other end for rigidly securing the element to the machine in the operative position, means on the element for supporting a rotary tool therein, and driving means for the tool.



1,487,823. DIMMER. ANDREW L. TURNER, Kiefer, Okla. Filed July 30, 1923. Serial No. 654,656. 2 Claims. (Cl. 240—45.)



1. In combination with a lamp casing and an illuminating member positioned therein, an upstanding post supported by the casing and positioned therein, a shaft rotatably supported by the upper portion of the post, an elongated member supported by the upper portion of the post for rocking movement, said member being provided with an arcuate rack, a pinion fixed to the shaft and meshing with the rack, a spring operatively engaged with one end portion of the member for automatically moving the member in one direction, manual means operatively engaged with the opposite end portion of the member for imparting movement thereto in the opposite direction, and an opaque shield carried by the shaft, said shield when in one position being directly in advance of the illuminating member and when in a second position being below the illuminating member.

1,487,824. FUNNEL. CHARLES W. VINCENT, Ashley, Pa. Filed Nov. 11, 1922. Serial No. 600,311. 1 Claim. (Cl. 226—33.)

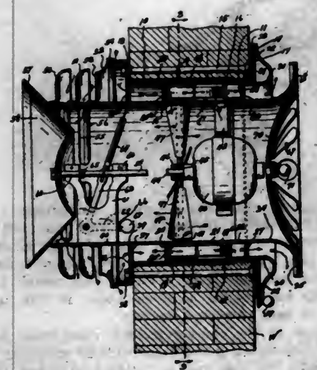
A funnel having a corrugated stem, a flanged collar surrounding the stem in a manner to engage the outer extending corrugations thereby providing vent openings between the collar and the inwardly extending corrugations.

1,487,825. PARACHUTE. WILLIAM F. WATKINS, Seattle, Wash., assignor to Watkins Appliance Company, Inc., Seattle, Wash., a Corporation. Filed Aug. 9, 1919, Serial No. 316,503. Renewed July 27, 1922. Serial No. 578,080. 3 Claims. (Cl. 244—21.)

1. A parachute receptacle comprising a rigid circular back portion, overlapping flap members secured to the edges of said back portion and arranged to form the sides and end of said receptacle the said flaps being arranged to fold with their ends toward the center of said receptacle in such manner that a central opening is left through which a cable that is connected with a parachute may project, a breaking string arranged to be connected with the end of each of said flaps for holding said flaps in a closed position and means for connecting the outwardly projecting parachute cable to said breaking string at a plurality of points.

1,487,826. PIANO SOUNDING-BOARD BRIDGE. CHARLES S. WEBER, Los Angeles, Calif. Filed July 31, 1920. Serial No. 400,563. 6 Claims. (Cl. 86—213.)

5. A sounding board bridge for a piano comprising a base having holes therein adapted to receive anchoring members for the strings and a crest adapted to support strings received from either side, and sides sloping away

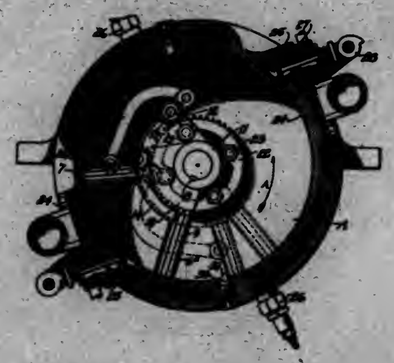


from said crest to support said strings, substantially as shown.

1,487,827. COMBINED TAIL LIGHT, NAME AND LICENSE PLATE HOLDER. HERBERT H. WEISS, Eugene, Oreg. Filed Oct. 14, 1922. Serial No. 594,479. 2 Claims. (Cl. 40—132.)

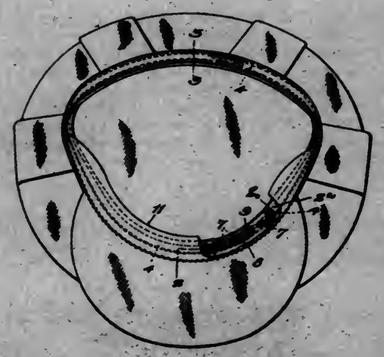
1. A device of the character described including a casing having a tapered portion, a name plate carried by the casing and removable endwise therefrom, and a keeper formed with a tapered portion having wedging engagement with the tapered portion of the casing supporting the keeper to overlie one end of the plate limiting said plate against displacement.

1,487,828. VENTILATOR. FERDINAND ZIGANEK and CHARLES W. SCHWAB, Detroit, Mich. Filed Oct. 14, 1922. Serial No. 594,471. 15 Claims. (Cl. 98—27.)



15. In a ventilator, concentric eduction and induction passages, and a fan common to both of said passages and producing by its operation a forced draft in each thereof.

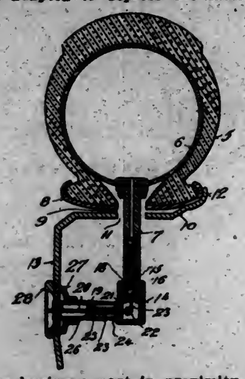
1,487,829. ROTARY GAS ENGINE. PIETRO ARRIGHI, San Francisco, Calif. Filed Sept. 29, 1920. Serial No. 413,585. 8 Claims. (Cl. 123—11.)



1. An internal combustion engine comprising a casing having a cylinder chamber formed therein, a cylinder head on each end of the casing forming a closure for the respective ends of the cylinder chamber, a main shaft extending directly through the cylinder chamber and

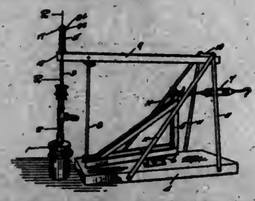
journaled in the head members, a main piston mounted on the shaft and comprising a transverse vane and spaced substantially sector shaped side plates forming a space between them, a second piston composed of a transverse vane, and a main substantially sector shaped

supporting plate mounted on the shaft and fitted in the space between the said side plates, said vanes and plates cooperating with the casing to form a case tight combustion chamber, and means carried by the first named piston for transmitting an oscillatory movement to the second named piston.



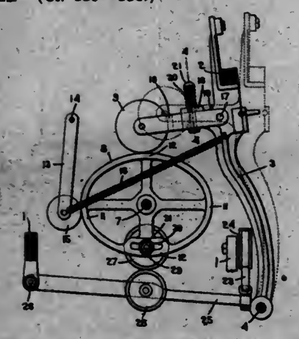
1,487,830. CAP. DAVID BARATZ and HARRY MILLER, Providence, R. I. Filed Feb. 28, 1923. Serial No. 621,936. 2 Claims. (Cl. 2—197.)

2. In a cap, a tubular head band forming a pocket extending throughout the circumference of the cap and having an opening, an elastic strip in the pocket having one end thereof free and extending in the opening, a member of a snap fastener on said free end of the strip, and a series of complementary snap-fastening members secured to the opposite end of the elastic and to the head band and extending in the opening for selective engagement with said first named snap fastening member.



1,487,831. TIRE-INFLATING CONNECTION FOR WHEELS. WILLIAM BARBER, Brooklyn, N. Y. Filed Aug. 6, 1920. Serial No. 401,630. 10 Claims. (Cl. 152—12.)

1. In a tire valve or the like, the combination with such valve, of an extension and a deflating device in said extension movable angularly to the movement of the valve pin and adapted to depress the latter and said



deflating device having a part in proximity to the end of the extension whereby to be engaged by a gauge or the like.

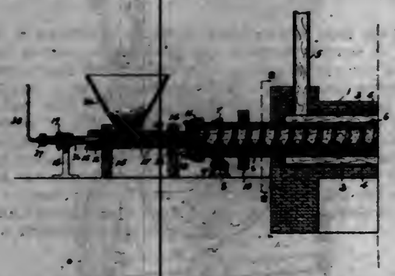
1,487,832. SHOCK ABSORBER FOR SUCKER RODS. WILLIAM R. BARNEY, Tulsa, Okla., assignor to Wilbur C. Norris, Tulsa, Okla. Filed Oct. 22, 1921. Serial No. 509,568. 1 Claim. (Cl. 74—48.)

In a pumping apparatus, the combination of an oscillating beam; a trunnion on the beam having vertical hollow extensions adapted to receive a sucker rod of an oil pump; a spring supported by the trunnion; an enlargement on the sucker rod resting on the spring; and a sleeve within the spring limiting the movement of the sucker rod relatively to the trunnion, said sleeve having a base on which the spring rests, said base centering on the upwardly extending extensions on the trunnion.

1,487,833. LOOM. JOSEPH F. BENOIT, Sanford, Me., assignor to Sanford Mills, Sanford, Me., a Corporation of Maine. Filed Jan. 25, 1923. Serial No. 614,907. 6 Claims. (Cl. 139—188.)

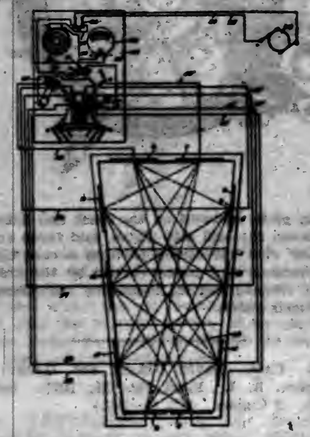
1. In a loom, the combination with a vibrating lay, of a picker stick, a cam shaft and a cam thereon operating both to vibrate the lay and actuate the picker stick.

1,487,824. REVERSIBLE GAUGE. BRYANT H. BLOOD, Hartford, Conn., assignor to Pratt & Whitney Company, New York, N. Y., a Corporation of New Jersey. Filed Apr. 8, 1922. Serial No. 550,748. 12 Claims. (Cl. 33—178.)



1. A cylindrical gaging head of the "go" and "not go" type comprising three sections, the middle section being of a slightly greater diameter than the end sections and acting as the "not go" section for an end section.

1,487,835. TIRE PUMP. ROBERT H. BOTTS, Parker, Ariz. Filed Jan. 17, 1923. Serial No. 613,188. 1 Claim. (Cl. 230—27.)

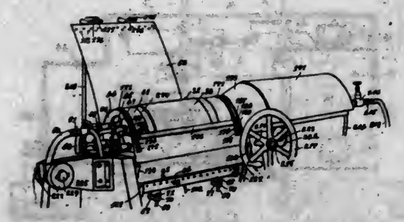


In an inflating pump, a cylinder having terminal heads, bolts disposed longitudinally and externally of the cylinder and through the edge portions of the heads, certain of the bolts projecting beyond one of the heads, a bar having terminal eyes receiving said projecting bolt ends, a U-shaped spring having a terminal eye receiving the said bar, the adjacent head of the cylinder having an opening, a valve on the other end of the spring seated in said opening, and clamping and adjusting nuts on the projecting bolts for regulating the tension of said spring.

1,487,836. OIL-EDUCTION APPARATUS. HARRY L. BROWN, Newark, N. J. Filed Apr. 21, 1920. Serial No. 375,420. 1 Claim. (Cl. 196—20.)

In an oil eduction apparatus, the combination with a furnace having a fire-box and a longitudinal combustion chamber communicating therewith, of a rotatable cylindrical retort extending through the combustion chamber provided with means for causing travel of material therethrough from its receiving end to its discharge end, a tubular housing having a feed hopper, said housing communicating with the receiving end of said retort, a rotatable conveyor screw in said housing operative to move material from said hopper into the receiving end of said retort, said screw having a central longitudinal steam injection conduit therethrough and a vertical drop well at the discharge end of said retort into which spent material is delivered after passing through the latter.

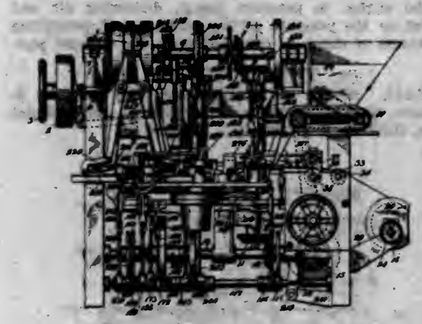
1,487,837. THERAPEUTIC APPARATUS. GEORGE BUSCKLE, Brooklyn, N. Y. Filed Dec. 14, 1920, Serial No. 430,690. Renewed June 14, 1923. 5 Claims. (Cl. 178—183.)



1. A controlling device for therapeutic apparatus having a plurality of electrodes, which comprises a panelboard, a plurality of contacts disposed on the panelboard and connected with the electrodes, the successive contacts so connected being separated by insulating contacts, a switch arm, and a source of power, said switch arm adapted to be moved selectively to energize the various contacts but the width of the switch arm being insufficient to span the space between successive live contacts.

1,487,838. SPARK ARRESTER. SAMUEL CHERRY, Guildford, Western Australia, Australia. Filed June 18, 1922. Serial No. 567,896. 2 Claims. (Cl. 183—72.)

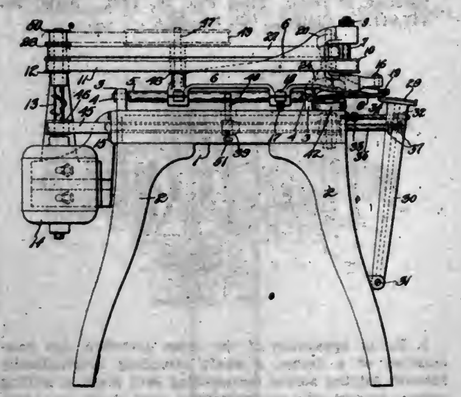
1. In a spark arrester, the combination with a funnel, of an inverted gauze cone having its apex situated within the funnel, a gauze ring secured to the base of the cone and depending therefrom, a filling ring connecting the lower edge of the gauze ring with the top of the funnel, and an annular baffle encircling the gauze ring in spaced relation thereto, both the upper and the lower edges of said baffle being separated from the gauze ring, whereby lateral movement of cinders and steam discharged from the ring is limited by the baffle but free vertical movement either upward or downward is permitted through the annular spaces between the upper and lower edges of the baffle and said gauze ring.



1,487,839. METHOD OF AND APPARATUS FOR FORMING PRINTING PLATES. LESLIE W. CLAYBOURN, Menasha, Wis. Filed June 24, 1921. Serial No. 480,073. 48 Claims. (Cl. 153—32.)

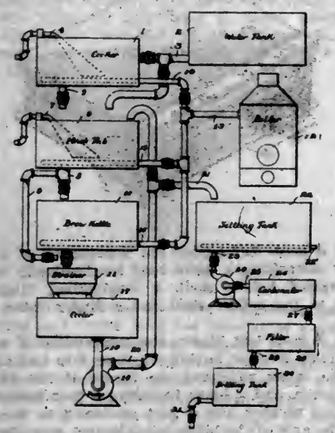
1. The method of curving a curved printing plate having an inner backing surface and an outer printing surface which consists in applying heat to said curved printing plate from the inside of the curvature thereof toward said printing surface in a manner to render the printing plate progressively more pliable toward said backing surface and less pliable toward said printing surface, and then applying enveloping pressure upon the heated plate in curved form.

20. In a printing plate apparatus of the character described, the combination of a heating mold, a forming mold, substantially concentrically arranged resilient bands between which the printing plate is received about said molds, and means to cause change of cross-sectional relation between said molds and bands.



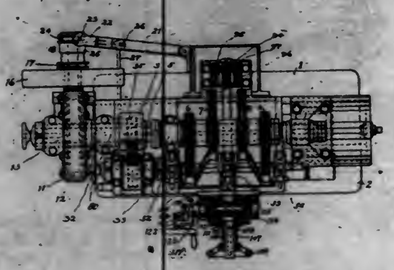
1,487,840. MACHINE FOR FORMING SEALED FOIL PACKAGES. EDWIN J. CONLEY, New York, and EDWARD J. WHALEN, Howard Beach, N. Y., assignors to The Conley Foil Company, New York, N. Y., a Corporation of New York. Filed Jan. 17, 1923. Serial No. 613,234. 50 Claims. (Cl. 93—3.)

1. In a machine for the purpose described, the combination of means for wrapping cigarettes and the like with a paper wrapper, and means for hermetically enclosing said wrapper with a sheet of foil without sealing said paper wrapper.



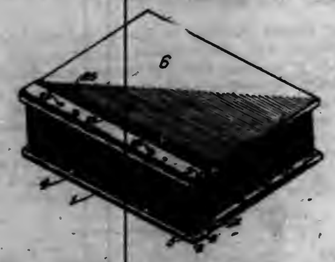
1,487,841. SCARFING MACHINE. JOHN S. DELANEY, Saugus, Mass. Filed Jan. 9, 1923. Serial No. 611,676. 12 Claims. (Cl. 69—16.)

1. In a machine of the character described, the combination of a rotatable cutter and a pivotally supported work rest made at one end with an arcuate cutting edge co-operating with said cutter, said work rest being movable on its pivotal support to carry the work toward and from the cutter.



12. In a machine of the character described, the combination of a rotatable and angularly adjustable cutter; a work rest movable toward and from said cutter, and means to provide for varying the angular position of the cutter relatively to the work rest according to the thickness of the stock being operated upon.

1,487,842. PROCESS OF MAKING LOW-ALCOHOLIC-CONTENT BEVERAGE. ANTON DOLENZ, San Francisco, Calif. Filed Aug. 30, 1919. Serial No. 320,900. 5 Claims. (Cl. 195—20.)

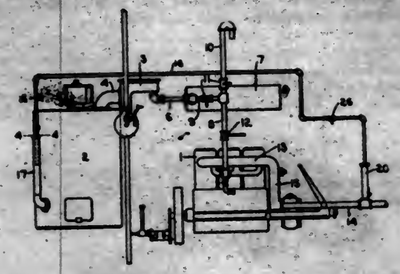


1. The process of manufacturing a malt beverage consisting in, fermenting a saccharified and hopped cereal infusion at a temperature which may be varied from 20 to 30° (C.); aerating and stirring the infusion until it shows a predetermined alcohol content; limiting the alcoholic content by separating a portion of the infusion; dealcoholizing the separated portion of the infusion and returning it to the remainder of the infusion.

1,487,843. MACHINE FOR MILLING CRANK ECCENTRIC SHAFTS AND THE LIKE. ALVIN B. HINIG, Cleveland, Ohio, assignor to The Motch & Merryweather Machinery Company, Cleveland, Ohio, a Corporation of Ohio. Filed Feb. 26, 1921. Serial No. 447,911. 8 Claims. (Cl. 90—20.)

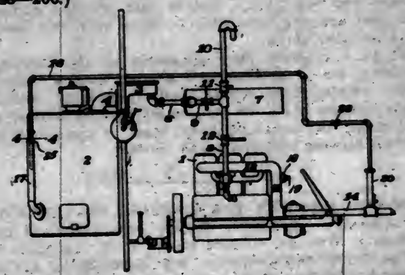
1. In an apparatus of the class described, the combination of a frame, a shaft extending longitudinally thereof, driving means for rotating said shaft, a milling cutter eccentrically mounted upon said shaft, an auxiliary frame pivoted to the front of said main frame, crank shaft holding elements mounted upon the upper edge of said auxiliary frame, driving means upon said auxiliary frame for engagement with said crank shaft, and feeding means whereby said auxiliary frame may be adjusted with respect to said main frame.

1,487,844. LOOSE-LEAF BINDER. CHARLES R. FARGO, Chicago, Ill., assignor to Wilson-Jones Loose Leaf Co., Chicago, Ill., a Corporation of Illinois. Filed May 15, 1918. Serial No. 234,611. 12 Claims. (Cl. 129—12.)



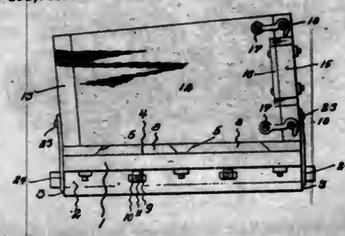
4. In a loose leaf binder the combination of a clamp member comprising a plate bent longitudinally to form an elongated hollow shell, a longitudinal hinge plate secured to the hollow shell and a binder cover hinged thereto.

8. In a loose leaf binder, the combination of an elongated clamp member having an outer face and an inner face, the latter adjoining the leaves of the binder, a binder cover, and a hinge including a part connected to the clamp member and a part connected to the binder cover, the axis of the hinge being located near the planes of the outer surfaces of the binder cover and clamp member whereby the cover can rotate through approximately 180° into contact with the outer face of the clamp member.



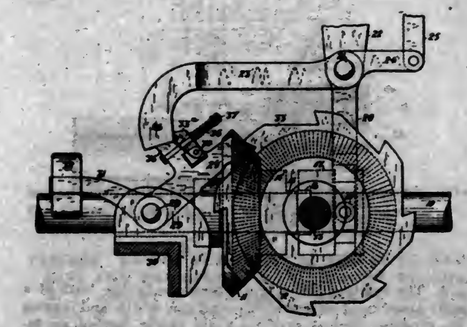
1,487,845. GAS-PRODUCER APPARATUS. ALBERT L. GALUSHA, Sharon, Mass. Filed July 15, 1918. Serial No. 244,898. 17 Claims. (Cl. 48—63.)

10. In an apparatus of the class described, the combination with a gas producer and an internal combustion engine, of means operating automatically to deliver to the gas producer a quantity of commingled air and steam



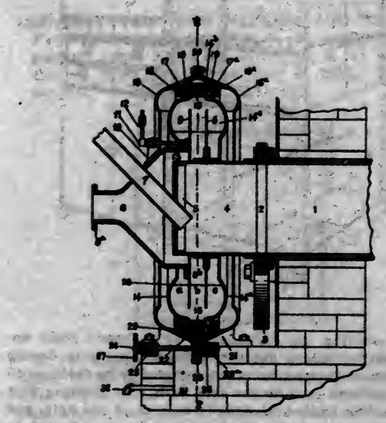
controlled in amount by the pressure of the exhaust of the engine and proportionate to the volume of gas consumed in the engine.

1,487,846. METHOD OF OPERATING GAS PRODUCERS. ALBERT L. GALUSHA, Sharon, Mass. Filed May 6, 1919. Serial No. 295,150. 4 Claims. (Cl. 48—206.)



3. The method of operating gas producers which consists in delivering gas from the producer to an internal combustion engine, admitting water to the exhaust pipe of the engine to generate steam, delivering air and trolled by the pressure of the exhaust, and permitting the excess of steam to escape through the exhaust pipe.

1,487,847. MOLD. WILLIAM GLATZ and CHARLES S. GLATZ, Manchester, Mich. Filed Sept. 6, 1921. Serial No. 498,783. 1 Claim. (Cl. 25—121.)



A mold comprising a base and a body removably secured on the base, said body having depending lugs received in sockets in the base, said base having longitudinal channels extending the entire length thereof and whose side walls are disposed at inward angles, wedge-shaped indicia bearing blocks designed to be received in the channels to contact the side walls thereof, wedge-shaped spacer blocks also received in the channels for spacing the first mentioned blocks, and longitudinally adjustable means passing through the under face of the base for contacting the spacer blocks for holding both the spacer and indicia bearing blocks in the channels.

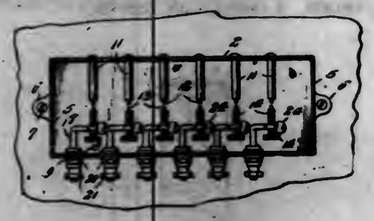
1,487,848. HOIST. WILLIAM A. GOLLNAST, Vallejo, Calif. Filed June 29, 1921. Serial No. 481,250. 15 Claims. (Cl. 192—12.)

1. In a device of the character described; a drive shaft; a freely rotating gear thereon; a driven shaft carrying a fixed gear in constant mesh with said rotating gear; clutch means on the driving shaft for optionally engaging the freely rotating gear with said shaft; lock means on the driven shaft for preventing countermotion of the driven shaft; and means for simultaneously controlling the clutch mechanism and the lock means whereby disengagement of the clutches will cause operation of the lock means.

1,487,849. SEALING MEANS. EDGAR GRAUBERT, Middlesex, N. J. Filed Jan. 24, 1922. Serial No. 531,503. 4 Claims. (Cl. 286—10.)

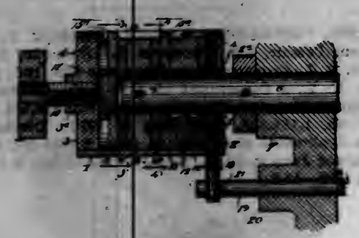
1. The combination of a stationary hood, a rotatable retort having one end extending into said hood, a rotatable vessel adapted to contain a liquid and rotatable about said one end of said retort, means for rotating said vessel to force said liquid outwardly therein under centrifugal force, and means carried by said hood and retort extending into said liquid whereby communication between the interior of said retort and the exterior of the hood is sealed.

1,487,850. FIRE-EXTINGUISHER HOLDER. JAMES A. MILLER and EDWARD P. GROSCLAUDE, Montreal, Quebec, Canada, assignors to Pyrene Manufacturing Company of Canada, Limited, Montreal, Quebec, Canada, a Corporation of Canada. Filed Mar. 1, 1922. Serial No. 540,295. 3 Claims. (Cl. 220—82.)



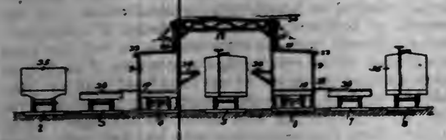
1. A fire extinguisher holder consisting of an oblong box with back, sides, bottom and top and an open front, the sides and top having inward flanges and the top flange being set rearwardly from the side flanges; a slide upon the top and presenting a flange overhanging the flange at the top; and means for locking the slide in place.

1,487,851. INFLATION DEVICE. WILLIAM P. HAMMOND, Passaic, and THEODORE A. HAMMOND, Rutherford, N. J., assignors to A. Schrader's Son, Inc., Brooklyn, N. Y., a Corporation of New York. Original application filed Apr. 29, 1910, Serial No. 558,418. Patent No. 1,181,188, dated May 2, 1916. Divided and this application filed Mar. 15, 1916, Serial No. 84,276. Renewed June 9, 1922. Serial No. 567,198. 8 Claims. (Cl. 152—11.5.)



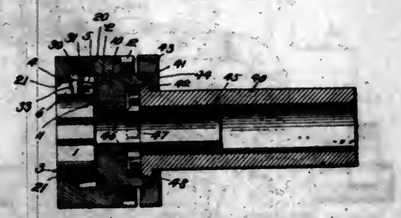
8. An inflating device for tires comprising means for connecting said device with the interior of a pneumatic tire, an inflation passage-way adapted to be connected with a pump or reservoir for conducting compressed air to the tire through said means of connection, a pressure gauge, adapted to be placed in communication with the interior of said tire through said means of connection, and a manually operable valve adapted to vent air from the interior of the tire through said means of connection when there is an excess of air introduced into the tire, whereby air may be vented through said device from the tire without removing said device or the hose leading to said pump from connection with the tire, said means of connection with the tire, comprising a deflater adapted to contact with the stem of a valve in an ordinary valve casing, and open it to allow the pressure within the tire to act upon said gauge and to flow through said manually operable valve when opened to vent air from the tire.

1,487,852. SPARK INDICATOR AND INTENSIFIER FOR GASOLINE ENGINES. HENRY HAWAUSE, Tolland, Mass. Filed Dec. 12, 1922. Serial No. 606,892. 1 Claim. (Cl. 174—17.)



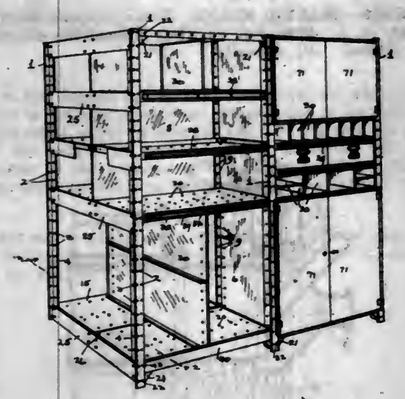
In a device of the class described, a casing, spaced stationary posts within the casing and supported within openings in the upper wall thereof, vertical posts supported within openings in the bottom wall of the casing and rearwardly of and substantially between the stationary posts, right angularly extending arms formed upon the upper ends of the posts and having split ends in alinement with the said stationary posts, screw threaded posts engaging through openings in the split ends of the arms and adapted for adjustment with respect to the said stationary posts and means for retaining said screw threaded posts in their adjusted position.

1,487,853. BRAKE MECHANISM. WILLIAM C. HAMBLEY, Mount Vernon, N. Y. Filed May 11, 1921. Serial No. 468,578. 7 Claims. (Cl. 188—83.)



1. A brake mechanism comprising a shaft, a shell rotative thereon, means to at will resist rotation of the shell, a disk secured upon the shaft, other disks upon the shaft within the shell, and means supported by the shell independent of the shaft to control the pressure of the disks against one another.

1,487,854. PORTABLE SHOP. JOHN M. HANSEN, Pittsburgh, Pa. Filed Mar. 30, 1923. Serial No. 628,931. 7 Claims. (Cl. 105—1.)

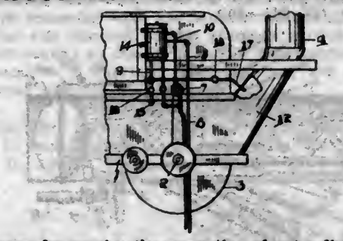


3. In a portable shop, the combination with parallel tracks, of cars on said tracks, framing extending above the tops of said cars, roof-trusses detachably secured to said framing bridging the space between said cars, and a temporary roof-support on said roof-trusses.

1,487,855. DIE AND DIE HOLDER. LOUIS B. HARBROUCK, Elmira, N. Y., assignor of one-half to Henry E. Van Ness, Elmira, N. Y. Filed Jan. 24, 1921. Serial No. 439,514. 12 Claims. (Cl. 10—117.)

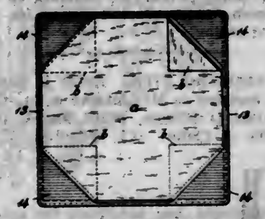
1. The combination of a one-piece die in the form of a split annulus of substantially uniform width and having an external conical surface, a die holder having an internal conical surface, and means for expanding the die so as to force its conical surface uniformly into contact with the conical surface of the die holder.

1,487,856. METALLIC BIN, SHELVING, AND THE LIKE. EARL F. HAUSERMAN, Cleveland Heights, LEROY D. MOWERY and ROBERT OSTERMAN, Cleveland, and EARL R. SMITH, Lakewood, Ohio, assignors to The E. F. Hauserman Company, Cleveland, Ohio, a Corporation of Ohio. Filed June 27, 1919. Serial No. 307,066. 9 Claims. (Cl. 211—27.)



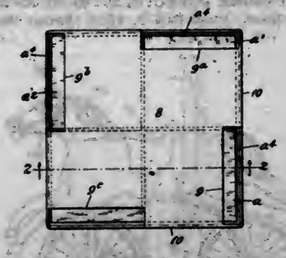
1. In shelving the combination of T-shaped front uprights having spaced apertures, flanged uprights having complementary spaced apertures adapted to be fastened to said T uprights to form the side walls of a shelving unit and providing angle uprights at the rear of the unit, and shelves having flanges with spaced apertures adapted to fit within said uprights, the apertures in said uprights and such shelf flanges being adapted to be aligned to receive retaining bolts.

1,487,857. THRASHING-MACHINE ATTACHMENT. GORDON HOLLINGER, St. Jacobs, Ontario, Canada. Filed July 28, 1922. Serial No. 578,267. 2 Claims. (Cl. 302—20.)



1. A thrashing machine provided with pneumatic straw stacking means including a fan, fan casing, air and straw

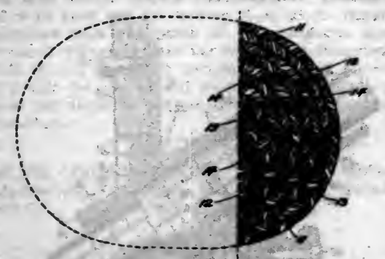
inlet and outlet passages in combination with a water supply pipe adapted to discharge into said passages, and



means for varying the proportion of water discharged into the respective passages.

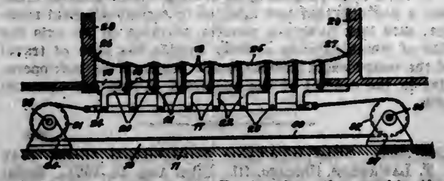
1,487,858. DEVICE FOR HOLDING STACKS OF NAPKINS AND THE LIKE. PAUL H. HOAWITT, Brooklyn, N. Y., assignor to Independent Paper Mills, Inc., New York, N. Y., a Corporation of New York. Filed July 6, 1923. Serial No. 649,892. 4 Claims. (Cl. 211—29.)

1. The combination of a holder, a stack of rectangular sheets combined therewith and having corners turned back to form flaps and means located adjacent to an end of said stack and arranged to permit the flap of a terminal sheet to project away therefrom whereby said flap may be grasped to remove said terminal sheet from said stack.



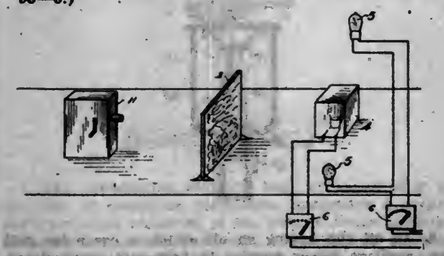
1,487,859. STAND FOR NAPKINS AND THE LIKE. PAUL H. HOAWITT, Brooklyn, N. Y., assignor to Independent Paper Mills, Inc., Brooklyn, N. Y., a Corporation of New York. Filed July 6, 1923. Serial No. 649,893. 3 Claims. (Cl. 211—29.)

1. The combination of a holder, a stack of sheets combined therewith, said sheets alternately extending at right angles to each other and having their contiguous ends overlapping and a member located at one end of said stack and having slots in registry with the free ends of the sheets of said stack through which a terminal sheet may be removed from said stack.



1,487,860. BRAID AND METHOD OF MAKING FLOOR COVERINGS THEREFROM. RAYMOND B. KALBACH, Philadelphia, Pa. Filed Jan. 12, 1923. Serial No. 612,194. 1 Claim. (Cl. 96—26.)

As an article of manufacture, an all wool two-core, flat braid comprising a plurality of strands of natural (undyed) yarn and strands of dyed yarn, of which some of the natural yarn serves as a core or stuffer and of which the remainder of the natural yarn and the dyed yarn serve as surface strands, all being braided together to



provide a background of natural yarn regardless of any exposure of the core or stuffer, the dyed surface strands showing at intervals upon said background.

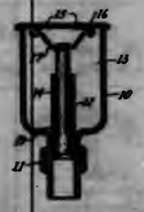
1,487,861. EMERGENCY TRAFFIC BARRIER. JOHN J. KEENAN, New York, N. Y. Filed Mar. 21, 1923. Serial No. 626,677. 5 Claims. (Cl. 20—6.)

1. In an emergency traffic barrier, the combination with a trough adapted to be arranged across a highway so that the walls thereof are below the surface of the highway, of spaced guard elements, each having a post with a substantially U-shaped flange on one of its lengthwise edges, said elements pivoted to the walls of the trough whereby the posts thereof are normally positioned lengthwise in the trough with the flanges being flush with the surface of the highway and so that the grooves of the flanges are in register, a flexible barrier line normally disposed in the grooves of the flanges of the posts when lowered in the trough and the line having its ends held above both of the end guard elements for being moved to and from a position on the upper ends of the posts, when raised and lowered above the highway, and electric means operative for operating the guard elements whereby the posts will be swung to and from spaced vertical positions above the highway.

1,487,862. PROCESS AND APPARATUS FOR THE PRODUCTION OF MOTION-PICTURE FILMS. ARCHIE LA FRANCHI, Seattle, Wash. Filed Apr. 27, 1922, Serial No. 557,016. Renewed Nov. 14, 1923. 3 Claims. (Cl. 95—5.)

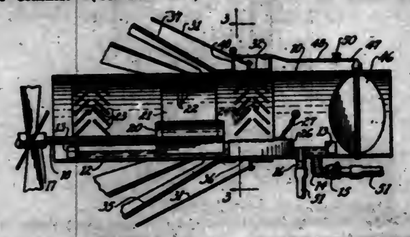
1. The herein described process, consisting in providing a relief plate, having a plastic material side, outlining inanimate objects in said material, lighting the plate from the material side, and photographing the plate from the plain side.

1,487,863. STEERING-GEAR LOCK. JOSEPH P. LAVIGNE, Detroit, Mich. Filed May 19, 1919. Serial No. 297,980. 14 Claims. (Cl. 70—30.)



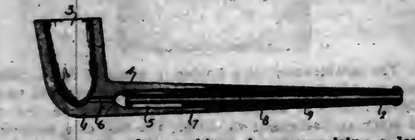
1. In a steering gear lock, a reciprocable locking member, a key operated lock adapted to reciprocate said member, said lock having a member movable on an axis the line of which extends entirely outside the path of travel of the reciprocable member, and a permutation lock operative in the control of the operation of said key operated lock.

1,487,864. SELF-HEATING SOLDERING IRON. JAY F. LAWRENCE, Chicago, Ill. Filed Aug. 13, 1921. Serial No. 491,905. 1 Claim. (Cl. 158—27.)



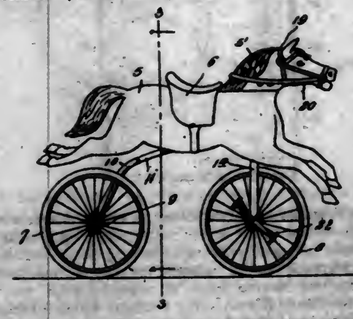
A self-heating soldering device, comprising a fire chamber, a fuel reservoir, a needle valve for feeding fuel to said fire chamber, a disk closing the lower end of said fuel reservoir, a cylindrical screen in said fuel reservoir spaced from the wall of the latter, a flanged cover for said screen, a screw extending centrally and longitudinally through said screen and connecting said cover with said disk, and a fuel supply pipe leading from the interior of said screen through said disk to said needle valve.

1,487,865. OIL CUP. CHARLES B. LINEBARGER, Chicago, Ill. Filed July 17, 1920. Serial No. 397,078. 7 Claims. (Cl. 184—45.)



5. An oil cup having an oil outlet, a cover for said cup, resilient means tending to hold said cover closed, a pin slidably positioned in said outlet, and means operatively connecting said pin with said cover whereby said pin will be withdrawn somewhat from said outlet when said cover is raised, said outlet being opened by the withdrawal of said pin.

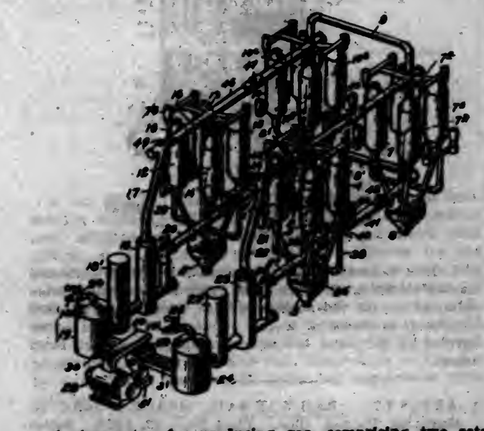
1,487,866. HUMIDIFIER. CHARLES B. LINEBARGER, Chicago, Ill. Filed Oct. 6, 1920. Serial No. 415,214. 6 Claims. (Cl. 261—30.)



1. A humidifier comprising a casing of curved cross-section and partly closed at both ends, means for forcing a gas through said casing, means for maintaining a supply of liquid within said casing, a stirrer rotatably mounted within said casing and normally partially immersed in said liquid, means for rotating said stirrer so that said liquid is driven up and around the inner wall of said casing, means for breaking up the current of liquid thereby produced, and means for heating the water in said casing.

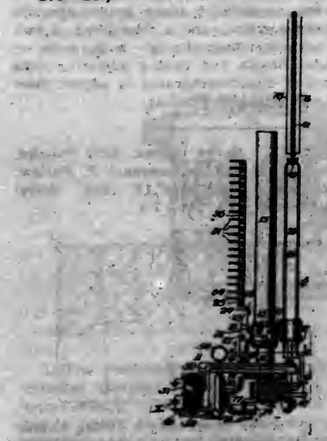
1,487,867. SMOKING PIPE. LOUIS B. LINKMAN, Chicago, Ill., assignor to M. Linkman & Co., Chicago, Ill., a Corporation of Illinois. Filed May 1, 1922. Serial No. 557,696. 1 Claim. (Cl. 131—12.)

A mouth piece for smoking pipes comprising a longitudinally bored stem having one end reduced to form a nipple, and a metallic tube secured in the bore of said nipple and an adjacent part of said stem for reinforcing said reduced end, said tube projecting beyond said nipple and having an annular cleaning flange at its end.



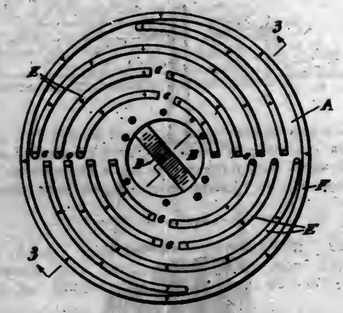
1,487,868. FIGURE POLYCYCLE. RAYMOND R. LORENZ, Palmyra, Nebr. Filed Feb. 3, 1923. Serial No. 616,644. 1 Claim. (Cl. 208—42.)

A toy comprising a body simulating that of a quadruped animal, a fork applied at one end to the intermediate portion of the trunk of the animal figure and disposed downwardly and rearwardly, a wheel journaled in said fork, a sleeve passing vertically and transversely through the forward portion of the body, a standard journaled in the sleeve and provided at its upper end with an angularly disposed extremity, a figure representing a head mounted upon said extremity and the upper end of the standard and disposed over the upper



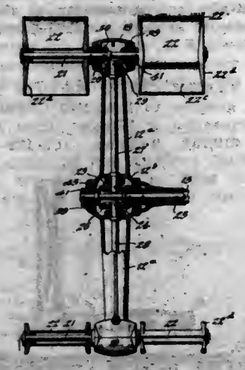
end of the sleeve, said extremity being disposed longitudinally with relation to the figure head, guiding members connected with the forward portion of the figure head and disposed around the rear portion thereof, a fork carried at the lower end of the standard, a wheel journaled in the last mentioned fork, and pedals connected with the last mentioned wheel.

1,487,869. APPARATUS FOR PRODUCING GAS. CARL LUNDIN, Pittsburgh, Pa. Filed Dec. 22, 1921. Serial No. 524,331. 7 Claims. (Cl. 48—85.)



1. Apparatus for producing gas, comprising two sets of coal retorts, means for charging and discharging said retorts without admitting air thereto, chambers for containing metallic oxid, means for charging and discharging said chambers without admitting air thereto, connections between said chambers and retorts communicating with a pump for circulating the gas in the apparatus, and means for retaining and for utilizing the heat of the material discharged from the oxid chambers for heating the coal for charging the retorts.

1,487,870. AUTOMATIC TELEPHONE EXCHANGE. FRANK A. LUNDQUIST, Chicago, Ill., assignor, by mesne assignments, to Henry S. Conrad, trustee. Filed Oct. 27, 1919. Serial No. 333,514. 32 Claims. (Cl. 179—18.)

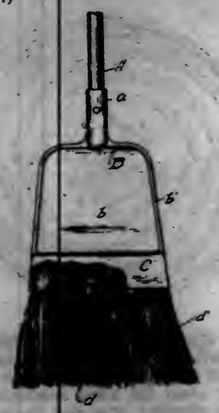


1. In a telephone exchange, a series of line switches, a movable element for each of said line switches, a series of bars each of which has projections in the path of each of said elements when said elements are moved from their normal positions, means for moving said elements from their normal positions, a pneumatic device associated with each bar for moving it so as to remove its projections from the paths of said elements, magnets associated with said bars for controlling the admission of air to said pneumatic devices, and means for closing the circuit for one of said magnets by contact between one of said elements and the bar with which said magnet is associated.

1,487,871. IRONING WHEEL. DANIEL F. McGOVERN, Montpelier, Vt. Filed Mar. 8, 1923. Serial No. 623,787. 1 Claim. (Cl. 51—209.)

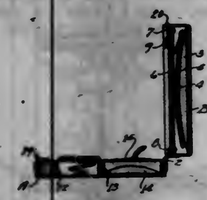
An ironing wheel of the class described comprising a cover plate having a central feeding aperture, a feed hopper disposed about said aperture, a continuous draft check disposed about the wheel substantially at its periphery and a plurality of curved flange segments disposed to feed inwardly of the wheel within said enclosing outer draft check, said wheel having radial openings in its flanging permissive of the outward centrifugation of the shot.

1,487,872. PROPELLING MECHANISM FOR AIR-SHIPS AND THE LIKE. CHARLES W. MANZEL, Buffalo, N. Y. Filed Sept. 8, 1919. Serial No. 321,008. 17 Claims. (Cl. 170—150.)



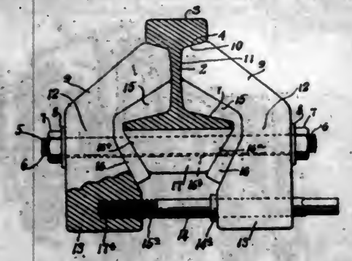
1. The combination with the body of an air ship or the like, of propelling mechanism comprising a rotary shaft arranged crosswise of the ship, a frame mounted on said shaft to turn therewith, a rotary shaft mounted on said frame parallel with said frame-shaft and carrying a propeller blade, a normally stationary controlling shaft extending lengthwise of said frame-shaft, a transmission shaft mounted radially on said frame, and gearing connecting said transmission shaft with said controlling and propeller shafts.

1,487,873. TRANSFER INK FOR PRODUCING INDELIBLE MARKINGS. TROWBRIDGE MARSTON, Morristown, N. J., and WINTHROP STANLEY LAWRENCE, Brooklyn, N. Y., assignors to Kaumagraph Co., New York, N. Y., a Corporation of New York. Filed Apr. 7, 1923. Serial No. 630,642. 7 Claims. (Cl. 134—32.)



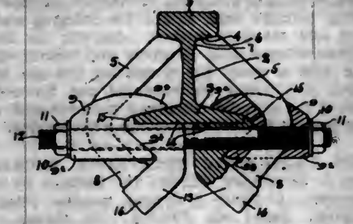
6. An indelible, non-smearing, fusible transfer ink consisting substantially of one part by weight of stearic acid having one and one half parts of induline base incorporated therein.

1,487,874. BROOM. JOHN F. MELTON, Chicago, Ill. Filed Oct. 7, 1921. Serial No. 506,078. 1 Claim. (Cl. 15—171.)



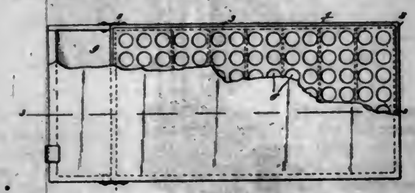
A new article of manufacture comprising in combination a broom holder formed of metal having a central web portion, a strengthening rib on the sides and top of said web, the upper part of said web portion terminating in a handle socket, the lower portion thereof having an elongated recessed portion extending across the bottom edge of the web portion, an inwardly extending rib near the edge of the recessed portion, fibers compressed within said rib and having the ends thereof extended into the upper part of said recess, said fibers being adhesively secured together at the upper ends thereof within the recessed portion, substantially as described.

1,487,875. VANITY CASE. MELVILLE MILLER, Pittsfield, Ill., assignor to Brun-Mill Company, Pittsfield, Ill., a Corporation of Illinois. Filed Jan. 15, 1923. Serial No. 612,753. 2 Claims. (Cl. 132—83.)



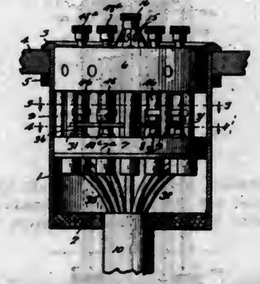
1. A vanity-case including a cup-shaped lid, a cup-shaped base oppositely disposed to the lid, the lid and base providing containing chambers for toilet articles, and means comprising a pintle for hingedly fastening the lid and base together for relative swinging movement, in combination with a combined partition and double mirror member of reduced size to fit within the lid, and means comprising a pintle-eye for hingedly fastening the mirror to said pintle for swinging movement relatively to the lid and base, the pintle-eye being laterally offset from the pintle for normally disposing the mirror-member within the confines of the lid and said partition and mirror-member providing a retaining wall for the toilet articles contained within the lid and also providing a reflecting medium at one or the other of its surfaces on the selected use of the articles contained within the lid or base.

1,487,876. RAILWAY BRACE. JOHN G. MUELLER, Dayton, Ohio. Filed Mar. 22, 1923. Serial No. 626,965. 3 Claims. (Cl. 238—53.)



3. In a railway brace, the combination with a tie rod having clamping nuts, an outer brace and an inner brace mounted on the rod at each side of the rail and adapted to clamp portions of a rail, and an adjustable screw carried by the outer braces and adapted to spread them apart.

1,487,877. RAILWAY-RAIL BRACE. JOHN G. MUELLER, Dayton, Ohio. Filed Mar. 22, 1923. Serial No. 626,967. 4 Claims. (Cl. 116—99.)

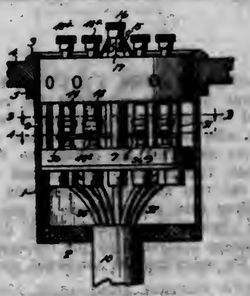


2. In a railway rail brace, the combination with a pair of outer braces, a pair of inner braces through which the outer braces extend, and a filler block in two parts, of a tie rod extending through both pairs of braces and the filler blocks and having adjusting nuts adapted to act against the inner braces to adjust them and the other braces, as also the blocks.

1,487,878. EGG CRATE. LAVAN OLIVER, East Vaughn, N. Mex., assignor of one-half to Lawrence F. Furlow, East Vaughn, N. Mex. Filed May 11, 1923. Serial No. 638,157. 4 Claims. (Cl. 217—7.)

1. An egg crate or carrier comprising a casing having within it a superposed series of egg containers of gradual increasing length from one end to the other and provided with perforations for supporting the eggs at end portions thereof out of contact with each other.

1,487,879. COMBINATION IGNITION LOCK. HENRY T. ORMONDE, Lakewood, Ohio, assignor of one-half to Orland F. Baughman and one-fourth to Julius Roemer, both of Lakewood, Ohio. Filed Jan. 11, 1922. Serial No. 528,509. 18 Claims. (Cl. 200—45.)



1. An ignition lock for a multi-cylinder internal combustion engine comprising a series of movable members each adapted by its movement to close a spark plug circuit, a plate having openings therethrough for the passage of said members and exceeding in number the number of said members, means including said plate for normally rendering said circuits ineffective, and additional means adjacent to certain openings only in said plate and engaging said plate for rendering said spark plug circuits ineffective and each adapted to be engaged by one of said members to break its engagement with said plate.

1,487,880. PROCESS FOR THE VULCANIZATION OF CAOUTCHOUC. STANLEY JOHN PEACHEY, Davenport, Stockport, England. Filed Feb. 4, 1919. Serial No. 275,012. 16 Claims. (Cl. 18—53.)

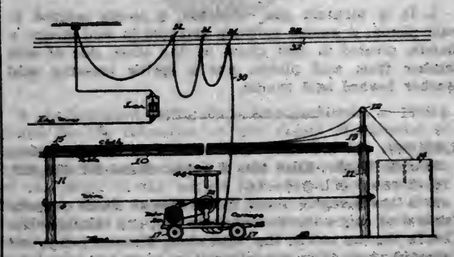
1. Vulcanizing rubber without the aid of heat by means of the interaction of sulphur dioxide and hydrogen sulphide in the mass, substantially as herein set forth.

12. A process for vulcanizing rubber, which comprises treating the rubber with H_2S and SO_2 in a liquid medium in the presence of moisture.

1,487,881. COMBINATION IGNITION LOCK. HENRY T. ORMONDE, Lakewood, Ohio, assignor of one-half to Orland F. Baughman and one-fourth to Julius Roemer, both of Lakewood, Ohio. Filed Mar. 30, 1922. Serial No. 548,006. 12 Claims. (Cl. 123—146.5.)

1. The combination, with the spark plugs of a multi-cylinder internal combustion engine, a source of electrical energy, a primary winding and a secondary winding, a circuit including the said source and the primary winding, and a circuit including the secondary winding and the spark plugs in succession, of a lock comprising a plurality of switch posts, a movable plate, switch plugs carried by said plate and movable toward and from said posts, said plugs and posts being in the first mentioned circuit, a second series of switch posts corresponding in number to the spark plugs, switch plugs movable toward and from said posts and each adapted to engage one of the first mentioned plugs thereby to move it into contact with its post, and a plurality of switch plugs resembling the second mentioned switch plugs and each adapted when moved to ground the primary circuit.

1,487,882. HARVESTER ATTACHMENT. DELBERT H. PARKER, Prescott, Wash. Filed July 20, 1920. Serial No. 397,639. 5 Claims. (Cl. 198—167.)



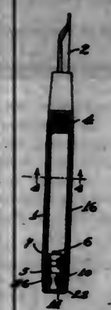
1. An attachment for a harvester comprising a draper, a series of beaters arranged above the draper, with the beaters overlapping so as to prevent mixed mass of grain and weeds from being carried around on the beaters.

1,487,883. COMESTIBLE CONTAINER. PAUL W. PETERSEN, Bay City, Mich. Filed Apr. 16, 1923. Serial No. 632,275. 15 Claims. (Cl. 62—170.)

12. The method of treating a container of fibrous material to be used for the storage of frozen comestibles which comprises first immersing the container in a bath of water for a sufficient period to saturate the fibre, second, subjecting the container to a freezing temperature, third, again immersing the container when empty in a bath of water, and then subjecting the container to a freezing temperature.

1,487,884. CARRIAGE FOR LAYING CLOTH. JOSEPH A. POIRIER, Woonsocket, R. I. Filed July 21, 1922. Serial No. 576,623. 6 Claims. (Cl. 104—235.)

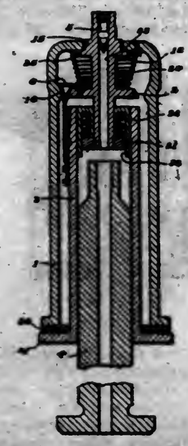
1. A device for laying cloth comprising a cloth table, a wheeled carriage, guide-ways therefor adjacent said table, a motor on said carriage effective to propel said carriage along said guide-ways, and foot operated con-



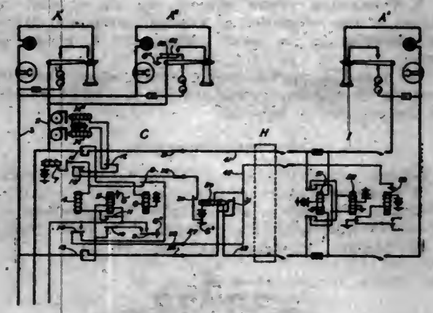
trolling devices for said motor, said devices comprising forward and reverse switches, means to close each switch and means to prevent simultaneous closing of both switches.

1,487,885. FASTENING DEVICE. SYLVESTER RAPHAEL, Brooklyn, N. Y. Filed Mar. 18, 1922. Serial No. 544,904. 2 Claims. (Cl. 220—55.)

1. In a fastening device for a receptacle having a closure provided with at least one opening, the combination of a support having an attaching member whereby the former may be secured to the receptacle and a resilient member extending therefrom, and having an opening therein in registry with the opening in the closure, the material adjacent said opening in said resilient member being slit away therefrom for a sufficient distance to provide yieldable engaging members, and a fastening member adapted to enter said openings in the closure and said resilient member and having means thereon for positively engaging with said engaging members.



1,487,886. FOUNTAIN PEN. RUDOLPH C. RETTIG, Chicago, Ill. Filed Apr. 17, 1922. Serial No. 553,561. 6 Claims. (Cl. 120—47.)



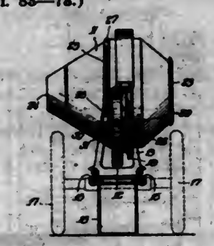
1. In a fountain pen, a piston, a sleeve secured to said piston, a washer movably mounted in said sleeve, a handle pivoted in said sleeve on the other side of said washer from said piston, and a spring pressing said washer toward said handle.

1,487,887. LOW-PRESSURE ALARM. JOHN M. RICH, Seattle, Wash. Filed May 2, 1923. Serial No. 636,152. 6 Claims. (Cl. 116—34.)

5. A low pressure alarm for tire valve stems comprising a dust cap, a stem within said cap, and slidable relative to the cap and to the valve stem, means for supporting said stem from the valve stem, a spring acting to move said stem in opposition to pressures within the valve stem, a releasable lock carried by said movable stem, a catch for normally holding said cap immobile relative to the valve stem, and engageable normally by said lock, said lock and stem being operable under the influence of said spring to release said catch upon decrease of pressure below a predetermined minimum, and resilient and yieldable means for loosely supporting the cap from the valve stem after release of said catch.

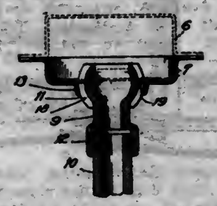
1,487,888. MEASURED-SERVICE TELEPHONE SYSTEM. RODNEY G. RICHARDSON, Chicago, Ill., assignor to Automatic Electric Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 15, 1919. Serial No. 338,878. 12 Claims. (Cl. 179—9.)

1. In a telephone system, a two party line, a meter at the exchange normally connected for registering calls from one of the stations on said line, a second meter for registering calls from the other station, a meter selecting relay for switching the connection from one meter to the other, full metallic and ground return circuits closed at the two stations, respectively, when calling, for controlling said relay, means at the corresponding station for opening the ground circuit during conversation, and means controlled by the response of the called subscriber for operating the connected meter.



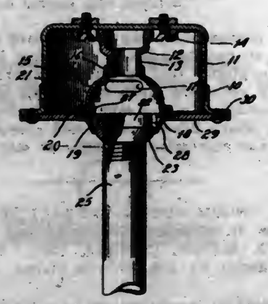
1,487,889. ADVERTISING DEVICE. GUSTAVE C. RICKARBY, Richmond Hill, N. Y. Filed Feb. 14, 1923. Serial No. 618,886. 3 Claims. (Cl. 40—130.)

1. An advertising device comprising a housing, translucent panels within the housing in spaced relation to the top, bottom and side walls, said walls and panels forming chambers, permanent plates partially overlying the front open sides of the chambers, a transparent door for closing the front of the housing, the door frame being so arranged as to co-operate with the permanent panels



in completely closing the chambers, illuminating means within said chambers and means in the rear wall of the housing for supporting advertising and news matter.

1,487,890. TILTING MECHANISM. ADOLPH W. RYBECK, Milwaukee, Wis., assignor to The T. L. Smith Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Apr. 16, 1923. Serial No. 632,800. 10 Claims. (Cl. 83—73.)



1. In combination with a tilting concrete mixer or the like, tilting mechanism comprising a lever and a link pivotally connected together, one of said members being pivotally connected to a fixed mixer support and the other being pivotally connected to a swinging portion of the mixer, and means limiting pivotal movement between the lever and link at a point in their movement beyond a dead center.

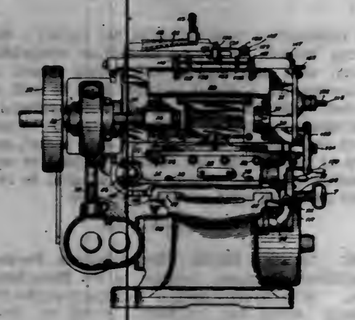
1,487,891. OUTLET BOX. AXEL RYDEN, Chicago, Ill., assignor to Appleton Electric Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 3, 1920. Serial No. 407,884. 2 Claims. (Cl. 240—85.)

1. The combination in an outlet box, of a cover plate having a portion stamped to provide a socket on the inside of said box, a sheet metal plate adapted to be fitted over said socket on the inner side of said cover plate, one of said plates being provided with tongues stamped therefrom and the other of said plates being slotted to receive said tongues, said tongues being adapted to be bent to detachably secure the plates together, said cover plate being provided with an opening in said socket to receive the stem of a lighting fixture having connection with said outlet box, said opening being larger than said stem to permit free universal movement of said stem therein, a spherically conformed head movably mounted in said socket adapted to be secured to said stem, said head being provided with a groove extending circumferentially in the periphery thereof in line with said stem, said sheet metal plate having a lug stamped therefrom to engage in said groove to prevent rotative movement of said head and stem relative to said socket but permitting universal swinging movement thereof.

1,487,892. OUTLET BOX. AXEL RYDEN, Chicago, Ill., assignor to Appleton Electric Company, Chicago, Ill., a Corporation of Illinois. Filed May 14, 1921. Serial No. 469,742. 7 Claims. (Cl. 240—85.)

1. In combination with an outlet box having a fixture supporting bracket, a fixture connection comprising a shell rigid with said support and having lateral openings therethrough, a socket member fixed to said shell, an annulus rigidly positioned in said shell having a plurality of notches formed on its inner periphery, an axially apertured ball element supported in said socket, and a plurality of lugs on the ball element adapted to engage said notches, said ball element being adapted to receive a tubular fixture in rigid relation therewith.

1,487,893. DRYING DRUM. GEORG SAUBER, Uerdingen-on-the-Rhine, Germany, assignor to the Firm Büttnerwerke, Aktiengesellschaft, Uerdingen-on-the-Rhine, Germany. Filed Aug. 24, 1921. Serial No. 494,858. 4 Claims. (Cl. 34—6.)

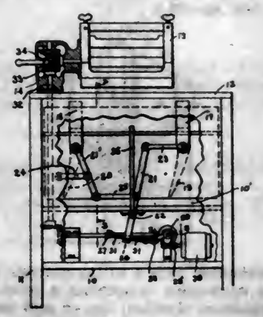


4. An improved drying drum with partitions or lifting blades for the formation of thin sheets of material to be dried, comprising, in combination with the rotatable drum, partitions arranged in the longitudinal direction of the drum having narrow transverse slots at short distances apart through which the drying material flows in thin sheets at right angles to the direction in which the heating gases flow through said drum, rings of sheet metal near the mantle of the drum standing transversely to said lifting blades and forming an obstacle to the heating gases near the mantle of the drum and forcing them to flow through the middle part and consequently through the sheets of material.

1,487,894. METHOD FOR MAKING PLASTER-BOARD LATH. JOHN SCHUMACHER, Los Angeles, Calif. Filed Aug. 6, 1923. Serial No. 656,011. 7 Claims. (Cl. 154—2.)

1. The process of making plaster board lath having a plurality of pockets adapted to receive intruding portions of a plaster coat in interlocking relation, which consists in advancing strips of covering sheets, slitting pocket openings in one of said sheets during its advance, supplying plastic filler between said sheets during their advance, and expressing said filler at said pocket openings.

1,487,895. WORM-WHEEL-GENERATING MACHINE. CHARLES H. SCHURR, Cleveland, Ohio, assignor to Hosea T. Bradner, Cleveland, Ohio. Filed July 3, 1919. Serial No. 308,623. 74 Claims. (Cl. 90—4.)

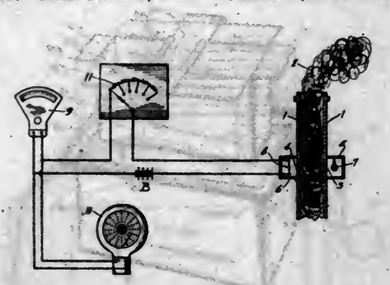


1. A worm gear wheel generating machine comprising a bed, a slide thereon, a blank carrier rotatably mounted upon said slide, another slide upon said bed, a hob rotatably mounted upon such second slide, a driving shaft, means connecting said shaft and hob for rotating the latter, means including indexing change gears for connecting said shaft and blank carrier to rotate the latter in predetermined harmony with the rotation of the hob, a feed driving member connected with said shaft, blank feed mechanism for actuating said blank carrying slide, hob feed mechanism, compensating mechanism adapted to connect said hob feed and blank rotation mechanisms, said compensating mechanism including a shaft having a projecting end and also including compensating change gears, a rotatable device adapted simultaneously to drive said hob feed and compensating mechanisms, said sleeve and device being connectable and dis-connectable with each other and with said blank and hob feed respectively.

25. A machine of the character described comprising a bed, a blank carrier rotatably mounted thereon, a hob rotatably mounted on said bed, means including indexing change gears and differential idlers for correlating the rotations of said blank carrier and hob, said differential mechanism including a rotatable housing supporting said idlers, a shaft, a driving sleeve splined to said shaft so as to be capable of rotating the same and sliding therealong, mechanism for feeding the hob along its own axis and adapted to be connected with said sleeve, compensating mechanism connecting said shaft and differential housing, and means for sliding said sleeve to break its connection with said feed mechanism.

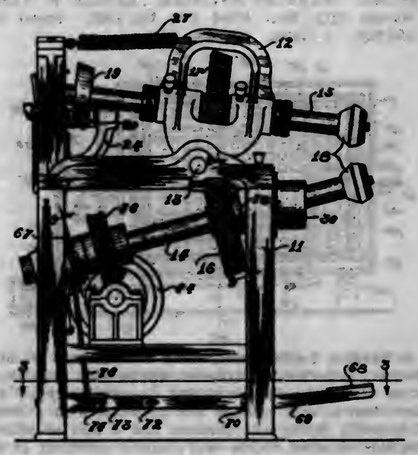
50. A worm gear wheel generating machine comprising a frame, a work carrier mounted for rotatable and reciprocable travel thereon, a tool spindle mounted for rotatable and axial travel upon said frame, means for rotating said work carrier and tool spindle, mechanisms for accomplishing the travel of said carrier and spindle, respectively, a driving member, a clutch adapted to connect either of said travel mechanisms with said driving member, a cone of gears rotatably connected with said driving member, a shaft parallel to the axis of said cone, a tumbler rotatably connected with said shaft, means including a lever supporting said tumbler gear and adapted to swing it about or move it along said shaft for connecting said tumbler gear with any of said cone of gears, and additional speed change gears for determining the rate of rotation of said shaft.

1,487,896. WASHING MACHINE. OTTO R. SCHWANTES, Clintonville, Wis. Filed Oct. 24, 1921. Serial No. 509,887. 8 Claims. (Cl. 68—19.)



1. A washing machine of the class described comprising a container having opposite alined longitudinally extending rods near their top edges to form guideways, a perforated member disposed in the container and connected with said rods, and means connected with said perforated member to reciprocate said perforated member within the container.

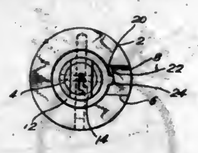
1,487,897. GARMENT-SECURING MEANS FOR BELT BUCKLES. JAMES W. SHARBUTT, Troy, Tex., assignor of one-half to C. A. Maedgen, Troy, Tex. Filed June 9, 1923. Serial No. 644,383. 1 Claim. (Cl. 24—73.)



A garment belt structure comprising a strap, a buckle frame applied to the strap and having a loop, there being slots provided at the upper and lower sides of the frame and located under the loop and disposed at acute angles to the inner surface of the loop, the frame being provided at its inner wall with an upstruck portion, the surface of which is approximately parallel with the side edges of the slots, a pin movably mounted in the slots and disposed transversely across said upstruck portion of the frame, and a female securing member applied to the outer surface of the angularly disposed wall of the upstruck portion of the frame and adapted to engage a securing device carried by the garment.

1,487,898. SMOKE INDICATING AND RECORDING DEVICE. ROY C. STOLP, Chicago, Ill. Filed June 13, 1921. Serial No. 477,262. 11 Claims. (Cl. 284—1.5.)

1. The combination with a smoke flue of a source of light, a receptacle opening into the flue and operatively associated with said source of light, a second receptacle opening into the flue in alignment with said first receptacle, and an element which exhibits under the action of light a remarkable variation in electric conductivity associated with said second receptacle.

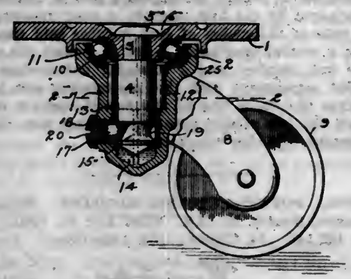


1,487,899. MACHINE FOR EMBOSSING ARTICLES. LEE STURGES, Elmhurst, and ALBERT J. BAYLES, Melrose Park, Ill., assignors to Solar-Sturges Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 9, 1923. Serial No. 630,234. 16 Claims. (Cl. 101—7.)

1. An embossing device for cans comprising a pair of shafts, an embossing roll on each shaft, and a circular support for the mouth of the can, the shaft carrying one of said rolls extending through said support.

1,487,900. PIN-TUMBLER LOCK. ERNEST L. TRICE, New Britain, Conn., assignor to The American Hardware Corporation, New Britain, Conn., a Corporation of Connecticut. Filed May 8, 1922. Serial No. 558,177. 5 Claims. (Cl. 70—46.)

1. A pin tumbler lock having, in combination, a pin tumbler lock case, means comprising a key operated plug adapted to be turned in opposite directions to a fixed angular position and permitting the removal of the key when the plug is in said position, and stopping devices comprising fixed stops on said pin tumbler lock case ar-



ranged exteriorly of and adjacent to the rear end of the lock case for preventing the plug from being turned in either direction beyond said position.

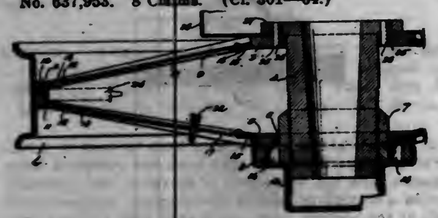
1,487,901. COMB. SAMUEL TRACHTENBERG, Cleveland, Ohio. Filed Sept. 28, 1923. Serial No. 665,381. 2 Claims. (Cl. 132—79.)

2. A comb having an extension upon its back in a longitudinal plane therewith, said comb and extension being stamped from the same sheet of material, said extension having a transverse opening therethrough, the peripheral wall of the opening being continuous, and a mirror frictionally held in the opening and removable through either end.

1,487,902. CASTER. FRANK C. TRIMBACH, Dayton, Ohio. Filed May 23, 1922. Serial No. 563,052. 14 Claims. (Cl. 16—20.)

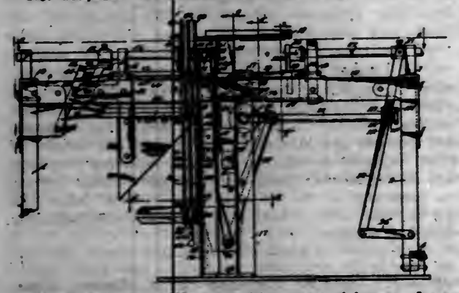
1. In a supporting caster, a dependent trunnion stud, means for attaching the stud to the supported structure, a thrust bearing below which the stud extends in pendant relation a socket member within which the trunnion stud projects and in spaced relation with the bottom of which the stud terminates, the stud receiving recess in said socket member being extended downwardly beyond the extremity of the trunnion stud to form below the end of the stud a lubricant reservoir and sediment collecting chamber.

1,487,903. CLAMP. CHARLES VITEK, Omaha, Nebr. Filed Oct. 15, 1923. Serial No. 668,550. 8 Claims. (Cl. 24—19.)



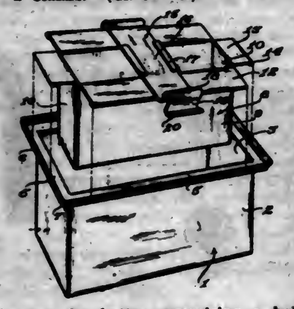
1. A clamp comprising a band of flexible material folded over itself and forming substantially a double circular band with an outer band portion and an inner band por-

tion, a part of the outer band portion adjacent the fold and the end of the outer band portion forming walls which are disposed at an angle to the circumference of



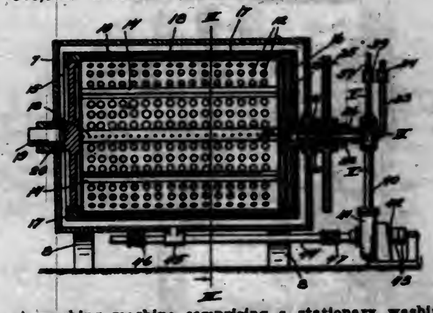
the intermediate part thereof, a tightening bolt extending between said walls, and a resilient member adapted for compression on tightening of said bolt.

1,487,904. WHEEL. HERBERT WALTERS and ROMAN A. HOLTZMAN, Detroit, Mich. Filed May 10, 1923. Serial No. 637,953. 8 Claims. (Cl. 301—64.)



1. A wheel comprising a rim having an annular rib upon its inner periphery, a hub member, a body member having radial spokes integrally formed therewith, said spokes being connected at their outer ends by a ring adapted to engage one side of the rib and the inner surface of the rim, a second body member having radial spokes, a ring connecting the outer ends of the spokes and adapted to engage the opposite side of the rib from that engaged by the first member, a ring connecting the inner ends of the spokes of each member said rings each having a central opening of a size to permit the passage of the hub member, and a clamping nut having screw-threaded engagement with the hub member and adapted to engage the inner ring of the second member whereby to draw the two spoked members together into clamping engagement with the rib upon the rim.

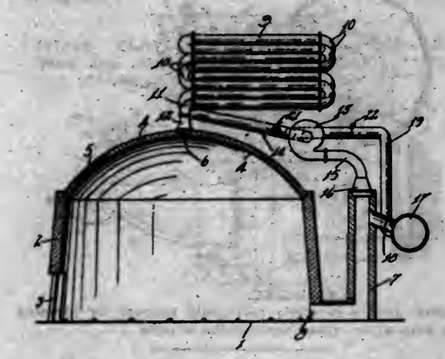
1,487,905. POTATO-CUTTING MACHINE. WILLIAM L. WALTON, Bantry, N. Dak. Filed Apr. 18, 1921. Serial No. 462,144. 44 Claims. (Cl. 146—78.)



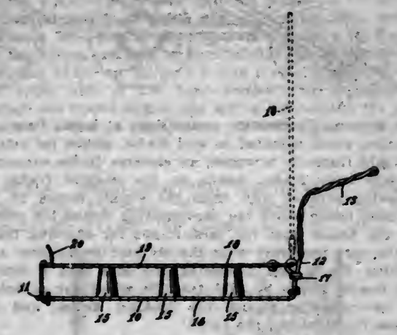
44. A potato cutting machine comprising a frame, means adapted to receive and to cut a potato of any size into equal parts and auxiliary knives automatically moved with respect to the potato for cutting each part into a plurality of equal parts.

1,487,906. BAKE PAN. JOHN R. WHITE and JAMES G. ELS, Dallas, Tex. Filed July 27, 1922. Serial No. 577,905. 2 Claims. (Cl. 53—6.)

1. A bake pan for batter comprising a hollow body open at its top and provided at said top with an outstanding flange and an upstanding ledge along said flange, a hollow core removably disposed within the body and provided at the upper portion of its walls with outstanding flanges adapted to fit closely within said ledge and rest upon said body flange whereby to suspend the core within the body and center the same with relation thereto in order to form a chamber for the batter between the body and the core, and a member extending across the top of said core and being secured to the flanges thereof and having projecting terminal portions providing locking tongues engageable with said body flange and thereby holding the core firmly down in said hollow body.



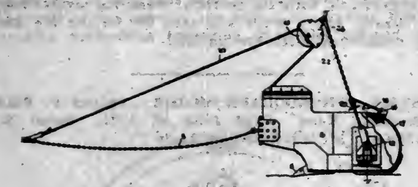
1,487,907. WASHING MACHINE. RICHARD W. YATES, Kansas City, Mo. Filed Oct. 10, 1921. Serial No. 506,802. 1 Claim. (Cl. 68—18.)



A washing machine comprising a stationary washing chamber, a perforated cylinder within said chamber, a series of hollow slats arranged longitudinally of the inner face of said cylinder and provided with a series of inwardly facing jet openings, and a pair of spiders rotatably mounted within said chamber exteriorly of the end walls of said cylinder and supporting the latter, one of said spiders being hollow and having an axial fluid inlet connection; said slats projecting beyond the end walls of said cylinder and having the passages therethrough inturned at one end for registering with the several arms of said hollow spider, and the end walls of said cylinder being formed with peripheral notches or recesses for accommodating the projecting ends of said slats.

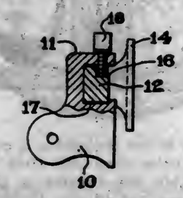
1,487,908. PROCESS AND MEANS OF COOLING KILNS. THOMAS CARLTON ALBIN, Manistique, Mich. Filed Feb. 15, 1923. Serial No. 619,226. 7 Claims. (Cl. 202—11.)

1. The herein described means for cooling a charcoal kiln having a scuttle hole and a chimney, which comprises a cooling pipe arranged to be connected at one end with the scuttle hole of the kiln, a suction fan having its intake port connected with the opposite end of said intake pipe, and its outlet port arranged to be connected with the chimney of said kiln.



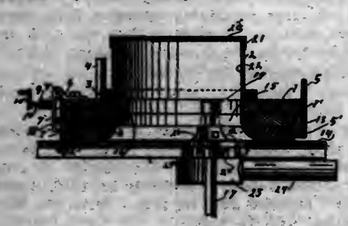
1,487,909. DOUGHNUT HOLDER. HARRY D. ANDREWS, Cheyenne, Wyo. Filed Apr. 15, 1922. Serial No. 552,940. 2 Claims. (Cl. 53—7.)

2. A device of the character described comprising a supporting member formed as a circular frame covered with wire screen and formed at one side with an upwardly extending U-shaped handle formed integral with the frame and having its terminal portions coiled thereabout, the base portion of the handle being formed with a loop, a plurality of upstanding cores of a post like nature arranged upon said support and adapted to have doughnuts disposed thereupon, a circular top member formed as a frame covered with wire screen adapted to lie upon the upper ends of said cores, links pivotally connecting said last named member with the handle, one of said links engaging within said loop and a catch for holding said last named member in position.



1,487,910. DRAG-LINE-BUCKET CLEANER. ERNEST LEE BARTMESS, Pekin, Ill. Filed May 16, 1923. Serial No. 639,432. 9 Claims. (Cl. 37—185.)

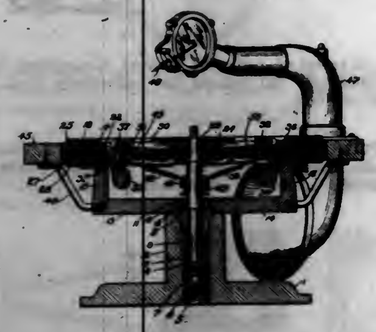
1. The combination of a drag line bucket having a curved rear end wall provided with slots, a cleaner bar in contact with the curved rear wall of the bucket and having arms extending through the slot, and a spreader member overhanging the bucket and arranged in the



path of travel of said arms whereby to positively move the arms and the cleaner bar rearwardly when the bucket is tilted.

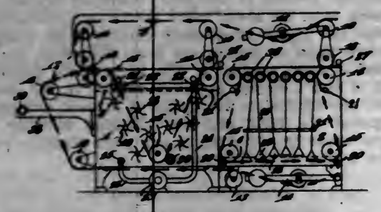
1,487,911. SHADE BRACKET. FRANCIS J. BAYOK, Perth Amboy, N. J. Filed May 22, 1922. Serial No. 562,788. 1 Claim. (Cl. 156—34.)

In combination, a window shade bracket of U-shaped formation in plan, and terminating to provide offset attaching flanges adapted to bear against the window casing, the intermediate portion of said bracket being reduced along its upper edge to provide a right angularly disposed shoulder on the inner side thereof, a shade roller bracket designed to provide an L-shaped extension rising from said bracket and slidably supported on the intermediate portion of the first mentioned bracket, a lug rising from the shade roller bracket and contacting the inner side of said intermediate portion of the window bracket to assist in holding the parts associated, and a threaded element carried by the horizontally disposed branch of said L-shaped extension formed on the shade bracket, and adapted to be positioned between and bearing against the right angularly disposed shoulder to hold the shade bracket fixed in any given position with relation to the window bracket.



1,487,912. SHAPER GUIDE. JOHN J. BEHM, Grand Haven, Mich. Filed Dec. 1, 1922. Serial No. 604,297. 2 Claims. (Cl. 144—145.)

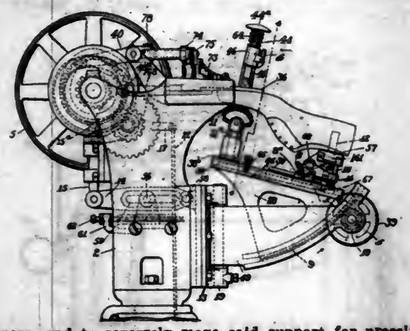
1. In combination with a guide for shaping the openings in toilet seats, a form body having stationary spurs at one end for engaging the edge of the material to be shaped, an adjustable spur pivotally mounted above the edge of the base at the other end and extending down-



wardly into position so the points may be made to penetrate the edge of the material to be shaped, and a spring chambered in the base in position to force the spur out of engagement with the material when its pivotal body is released, and a screw and rack for forcing the spur into engagement with the material.

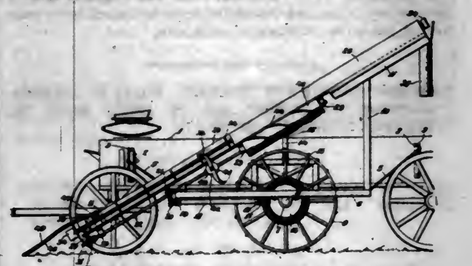
1,487,913. PHONOGRAPH MOTOR. PERLEY P. BELT, Fredonia, Kans. Filed June 10, 1921. Serial No. 476,476. 3 Claims. (Cl. 172—36.)

2. A phonograph motor comprising a rotatable disk, a channel shaped annulus suspended from the disk, magnetic material within the annulus, a circular magnet within the space confined by the annulus having pole pieces adjacent thereto and braking means carried by the turntable and movable into functional position in response to the speed thereof.



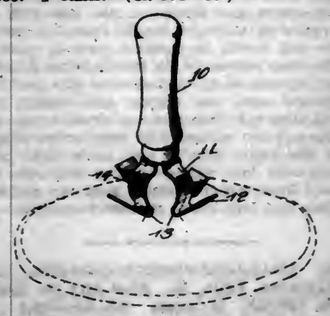
1,487,914. WASHING PROCESS AND MACHINE. JOSEPH LEIGH BOOTH, Virginia, Minn. Filed Mar. 12, 1923. Serial No. 624,577. 5 Claims. (Cl. 68—23.)

1. A process of cleaning fabrics which consists in passing the fabric over endless conveyors through a plurality of tanks containing cleansing fluid, removing the excess fluid in the passage from one tank to the next and subjecting the fabric to a current of air in its passage from one tank to the next.



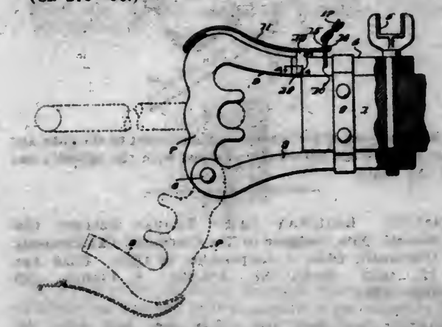
1,487,915. UPPER-SHAPING MACHINE. ELI BROTHERS, Lynn, Mass., assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed July 28, 1916, Serial No. 111,946. Renewed Feb. 16, 1922. Serial No. 537,121. 47 Claims. (Cl. 12—14.)

1. A machine of the class described having, in combination, a shoe support, shoe end-embracing wipers, upper clamping means, and power-operated mechanism for operating said clamping means to clamp an outspread portion of a shoe upper against the wipers, to move the shoe support for stretching the clamped upper, to advance the wipers over the shoe and pull a portion of the stock out from between the clamping means and



wipers, and to reversely move said support for pressing the over-wiped upper against the wipers.

1,487,916. CORN HARVESTER. MILLARD K. BROWN, Eagle Grove, Iowa. Filed July 19, 1921. Serial No. 485,932. 4 Claims. (Cl. 56—117.)



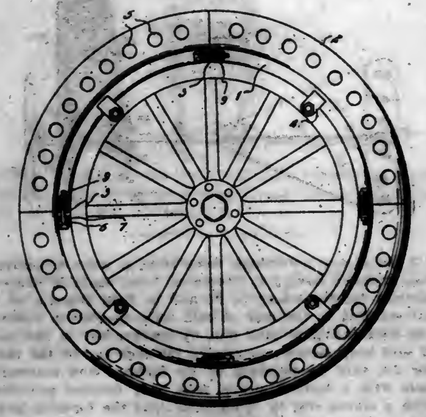
1. A corn harvester comprising a main frame, a traction wheel mounted in said frame, means for attaching said frame to a wagon, an elevator frame supported on said main frame, means on the elevator frame for removing ears of corn from the stalks, means on the elevator frame above the ear-removing means for removing the husks from the ears, means for effecting travel of the ears upwardly over the elevator frame past said husking means and delivering the ears into a wagon, and means driven by said traction wheel for actuating the ear-removing means, the husking means, and the means for elevating the corn.

1,487,917. KITCHEN UTENSIL. PERLEY W. CAMERON, West Haven, Conn. Filed Apr. 4, 1923. Serial No. 629,889. 1 Claim. (Cl. 294—33.)

A kitchen utensil, comprising a handle provided at one end with a plurality of longitudinally extending arcuately curved resilient fingers, the free ends of the fingers being spaced and provided with outwardly directed angular extensions disposed at an acute angle to the handle.

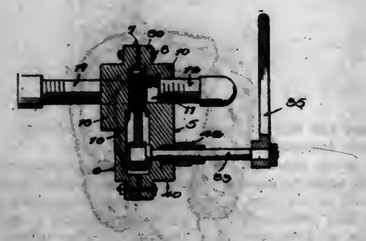
1,487,918. CLEVIS. ANDERSON CARTER, Stallo, Miss. Filed Jan. 26, 1923. Serial No. 615,175. 1 Claim. (Cl. 278—96.)

A clevis including a fixed section and a movable section which is hingedly secured to the fixed section, each of said sections having arms, the lower arm of the fixed section being of a greater length than the upper arm thereof, and the swinging section being hingedly secured to said lower arm, the swinging section having an arm directed toward the upper arm of the fixed section, said arm having a reduced end, the arm of the fixed section having a socket to receive said end thereof, a flat arched spring secured to the said arm of the swinging section having a hook portion terminating in a lip, a lip formed on the upper arm of the fixed section to be engaged by the hook of the spring, and a ring pivotally secured upon the upper arm of the fixed section and swingable to engage the lipped end of the spring for holding the hook portion thereof in engagement with the lip of said arm.



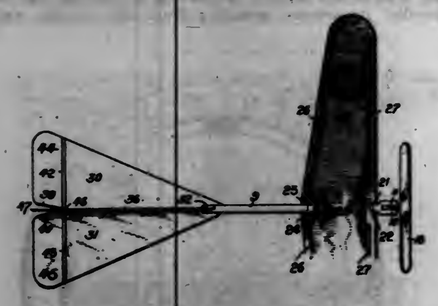
1,487,919. SEED-DROPPING MECHANISM. EUGENE M. COLE, Charlotte, N. C. Filed Sept. 20, 1920. Serial No. 411,420. 19 Claims. (Cl. 221—135.)

1. The combination with a hopper having a discharge outlet near its upper portion, of an inclined rotary device in said hopper having seed selecting means near its periphery for elevating seeds to the outlet, and a fixed guard disposed adjacent said device, but spaced radially inward from the seed selecting means, and adapted to restrain the upward movement of the bulk of unselected seeds.



1,487,920. EMERGENCY TIRE. LAWRENCE J. DAWSON, Kansas City, Mo. Filed Oct. 16, 1922. Serial No. 594,866. 1 Claim. (Cl. 301—39.)

An emergency tire of the character described comprising a segmental rim, channel shaped ears adapted to be arranged in pairs when the sections of said rims are associated and formed on each end of said section, angle bent walls formed on one edge of each ear and the wall of one ear of each pair being provided with a notch and the wall of the opposite ear having an opening therein, parallel projections extending from the notched wall



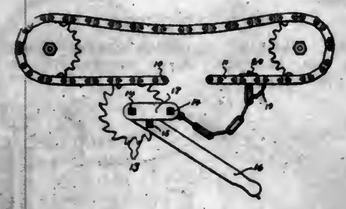
extending outwardly from the notched wall and a bolt arranged in each pair of ears and having its head end underlying the projections and its opposite end passing through the opening of the companion ear as and for the purpose specified.

1,487,921. VALVE. JACOB M. DRISCH, Nappanee, Ind. Filed Mar. 17, 1922. Serial No. 544,566. 1 Claim. (Cl. 251—18.)

A valve of the character specified comprising a pair of substantially triangular coacting plates having inwardly directed opposed shoulders of arcuate formation, one of the plates being provided with an inlet opening having its inner end flared and extended through the adjacent shoulder and being of arcuate formation, the other plate being provided with spaced outlet openings extending through one of the shoulders, a swinging arm mounted between said shoulders, disk-shaped heads arranged on opposite sides of said arm and having inwardly directed telescoping annuli slidably extending through the arm, a coiled spring confined between said disk-shaped heads and urging the same into engagement with said opposed shoulders, means whereby said arm may be operated, the outer edges of said coacting plates being provided with offset connecting flanges maintaining the shoulders in spaced relation to permit of the free swinging of said arm, one of the heads being flatly in contact with the adjacent shoulder and straddling the said arcuate opening.

1,487,922. TOY AEROPLANE. ALFRED DESPANG, Brooklyn, N. Y. Filed Sept. 23, 1921. Serial No. 502,803. 12 Claims. (Cl. 244—14.)

3. In a toy aero-plane comprising a unitary central body member having a bifurcated head, suitable shaped cavities for the wings to fit and be held therein, of a slit pointing to the rear of said body member to receive and hold the stabilizing fins, of another slit in the end of said body member to receive the rear end of the rudder fin, said fin provided at its forward and rearward ends with a locking means, said body member provided with a zigzag slot to receive and hold the forward locking means, of a tail skid located between said end and said locking means, of means for locking a chassis to the underside of said body member, of a propeller mounted on a shaft carried by a bracket and means stretched between the propeller shaft and the tail skid to cause the propeller to revolve.

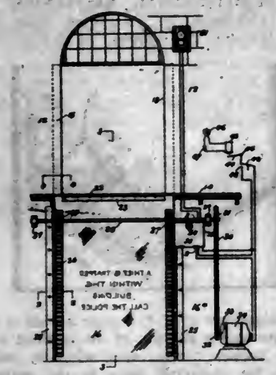


1,487,923. BUOYANT DEVICE FOR SWIMMERS. JOHN A. DE VILBISS, St. Louis, Mo., assignor to George Kapp, St. Louis, Mo. Filed July 7, 1923. Serial No. 649,980. 5 Claims. (Cl. 9—17.)

1. A buoyant device of the kind described, consisting of a shaped casing constructed of substantially yoke-shaped pieces of light-weight fabric, a straight elastic tube in said casing of less length than the linear length of the casing when deflated and adapted to be inflated so as to conform to the shape of the casing and hold same distended, means for connecting one end of the casing to one end of said tube which terminates inside of the casing, and means at the opposite end of said tube for enabling said tube to be inflated and deflated.

1,487,924. BELT PULLER. DANIEL DOYLE, Verona, Calif. Filed Sept. 12, 1921. Serial No. 500,144. 1 Claim. (Cl. 254—78.)

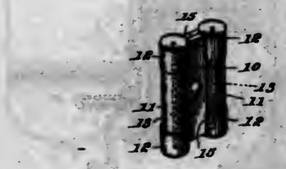
A tool of the class described comprising a circular head, an operating handle carried by the head, teeth extending radially therefrom for engagement with the links at one end of a chain, a yoke pivotally secured to the head and



a flexible element having one end connected to the yoke and the opposite end detachably engaged with the opposite end of the chain.

1,487,925. RAILWAY CAR. THOMAS ELLIOTT, Cincinnati, Ohio, assignor to The Cincinnati Car Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Apr. 17, 1922. Serial No. 553,653. 8 Claims. (Cl. 105—399.)

1. In a car, the combination with a belt rail and posts inward thereof, of a pier plate secured to the belt rail and having its side margins extended inward and secured to said posts.



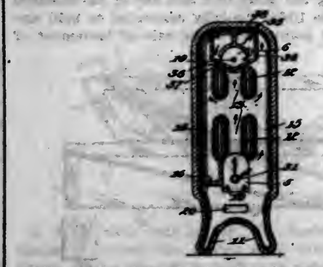
1,487,926. BURGLAR-TRAPPING APPARATUS. THOMAS D. EVANS, Phoenixville, Pa. Filed Jan. 26, 1922. Serial No. 531,835. 7 Claims. (Cl. 20—1.01.)

1. The combination with a building having a floor with an opening therein and a doorway above the opening, of a door movable upward through said opening, said door having resilient deflecting means thereon lying flat with said floor for closing said opening when the door is in lowered position; substantially as described.

3. The combination with a building having a floor with an opening therein and a doorway above the opening, of a door movable upward through said opening, means operative to raise said door, a switch controlling said means, an alarm sounding means, a switch controlling said sounding means, and means for locking the door in said raised position, said means operative when the door is in its lowered position to close said first switch and movable when the door is raised to permit opening of said first switch and effect closing of said second switch.

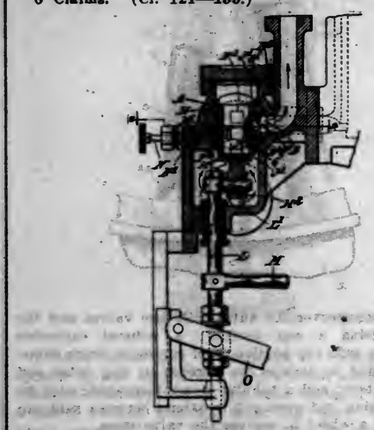
1,487,927. FUSE. HARRY E. EWING, Uniontown, Pa. Filed Mar. 5, 1923. Serial No. 622,981. 2 Claims. (Cl. 200—125.)

2. A fuse of the character described comprising a sheet of insulating material having opposite edges rolled to define bores, fuse wires within said bores, heat insulating fillings within the bores around the wires, and metal caps engaged exteriorly upon the rolled edges for closing the bores and for retaining said rolled edges in shape.



1,487,928. WINDOW FIXTURE. STENCEL FILIPEK, Westview, Ohio. Filed May 11, 1920. Serial No. 380,626. 1 Claim. (Cl. 156—24.)

A window fixture of the character described comprising an angle bracket including a horizontal part for supporting the bracket and having its upper and lower edges bent to form a channel, a vertical limb forming a continuation of a portion of the upper side edge and rising from one end of the horizontal part, a forward extension arranged at right angles from the upper end of the vertical limb and being provided with a curved extremity to receive a curtain pole, a reduced portion terminating from the curved extremity and being rounded upon itself, a latch pivotally carried by the reduced portion and having its free ends received in spaced openings formed in the forward extension, and an angle shaped shade roller holder adjustably secured in the channel of the horizontal part.



1,487,929. GAS RADIATOR. HERMAN J. FISHER and ARTHUR BETZ, Pasadena, Calif., assignors to Crown Gas Radiator Company, Pasadena, Calif., a Corporation of California. Filed Nov. 15, 1922. Serial No. 601,010. 13 Claims. (Cl. 126—91.)

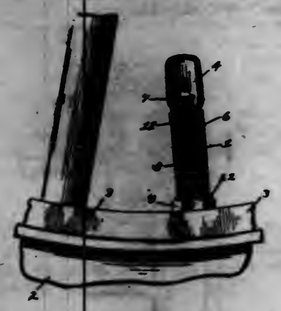
1. In a radiator of the character described, a vertical section having three circulating columns communicating with one another intermediate their ends, a burner in the lower part of the section, there being an air intake opening in the lower portion of said central column and an air vent opening in the upper portion of the same, a partition extending over said vent opening and cutting off direct communication of the front and rear columns therewith, and a U-shaped partition having its base arranged across the intermediate communicating portions of the three columns, the arms of said U-shaped partition ex-

tending upward in the front and rear columns to points opposite said partition arranged over the vent opening for the purpose specified.

1,487,930. DISTRIBUTING VALVE FOR STEAM ENGINES. ANDREW FORSTER, Cowes, Isle of Wight, England, assignor to J. Samuel White & Company Limited, East Cowes, Isle of Wight, England, a Company of Great Britain. Filed Oct. 11, 1921. Serial No. 507,090. 6 Claims. (Cl. 121—159.)

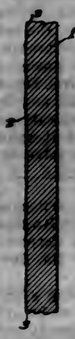
6. In a distributing valve for steam engines the combination of a steam chest having a cylindrical bore therein communicating with the main cylinder ports, a substantially hollow ported cylindrical steam-actuated piston valve adapted to reciprocate therein, said piston valve also having a ported transverse cylindrical bore formed in it, a hollow ported auxiliary valve mounted in said transverse bore and having openings through which steam is constantly admitted to the interior of said auxiliary valve, and means for reciprocating the auxiliary valve within its bore at right angles to the path of the piston valve so as to control the supply of steam to the interior of the piston valve and through the ports therein to the main cylinder ports, said means also permitting the auxiliary valve to oscillate about its own axis under the reciprocation of the main valve as set forth.

1,487,931. DAY BED. WILLIAM E. FRANK, St. Louis, Mo., assignor to Foster Brothers Manufacturing Company, St. Louis, Mo., a Corporation of Missouri. Filed Dec. 1, 1922. Serial No. 604,340. 5 Claims. (Cl. 5—22.)



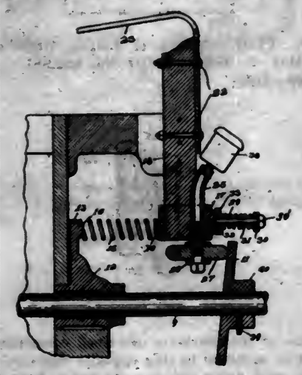
1. A day bed, comprising a stationary section, an extensible section adapted to be arranged in superimposed relation with said stationary section when the bed is closed and in an extended position in front of said stationary section when the bed is open, rock levers on said

stationary section pivotally connected to said extensible section for moving the same into and out of its extended position, and guide links pivotally connected to said stationary section at points below the axis of movement of



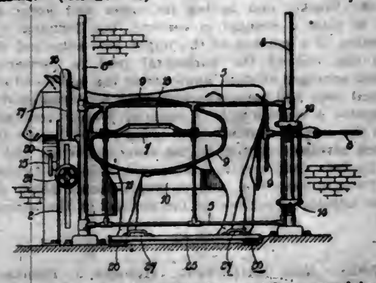
said rock levers and pivotally connected to said extensible section at points above the pivotal connections between said levers and extensible section.

1,487,932. VALVE-STEM COVER. OSCAR FRANK GUPPIN, San Francisco, Calif. Filed Sept. 21, 1922. Serial No. 589,677. 1 Claim. (Cl. 152—12.)



A valve stem cover for automobile tire valves and the like comprising a cap portion; a reduced extension formed upon said cap portion, said extension being internally threaded to engage the threads at the outer end of a valve stem; and a tubular member engaging said reduced extension and arranged to extend between said cap portion and a wheel to enclose the valve stem.

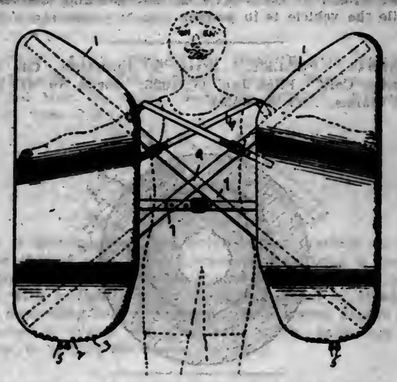
1,487,933. RAZOR STROP. CHARLES B. GOODWIN, Santa Ana, Calif., assignor to W. E. Ownby, Winthrop, Iowa. Filed Apr. 14, 1920. Serial No. 373,985. 2 Claims. (Cl. 51—200.)



1. A razor strop consisting of a leather strap having a polished condensed crinkled surface.

1,487,934. AGITATOR. AARON P. GOULD, Northwilkesboro, N. C., assignor to W. C. Meadows Mill Co., Northwilkesboro, N. C. Filed Aug. 27, 1920. Serial No. 406,378. 1 Claim. (Cl. 74—14.)

In a device of the character described, a support, a bearing forming a part of the support, said bearing having an upwardly extended arm formed with a boss, a power shaft extending through the bearing, a disk adjustably supported on the power shaft and having its side faces disposed at angles with respect to the power shaft, a pivoted arm supported by the support and having its lower end disposed adjacent to the disk, a collar on one end of the arm, and carrying a boss, a coiled spring positioned between the boss of the collar and the boss formed on the arm of the bearing, a wheel mounted at the lower end of the arm and adapted to engage the disk, to impart movement from the disk to the arm, an arm bearing against the collar, and a coiled spring for holding the last mentioned arm into engagement with the collar whereby reciprocating movement of the collar and arm supporting the collar will result in a relative movement of the last mentioned arm.

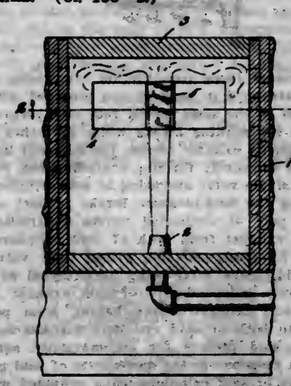


1,487,935. APPARATUS FOR SLAUGHTERING CATTLE. BERTRAM PARROTT GRAY, Sutton Coldfield, England. Filed Aug. 21, 1923. Serial No. 658,623. 13 Claims. (Cl. 17—1.)

1. Apparatus for slaughtering cattle comprising in combination a stall, means movable laterally against the side of the body of the animal; means movable against the rear of the body of the animal; and means for holding the head and neck of the animal stationary during slaughtering operation.

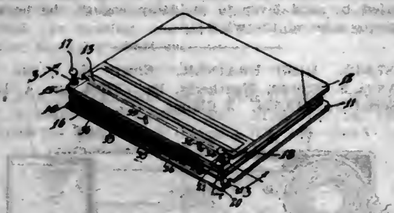
1,487,936. LIFE-SAVING DEVICE. CHARLES B. GRIMM, Chicago, Ill. Filed Mar. 12, 1923. Serial No. 624,666. 3 Claims. (Cl. 9—21.)

1. In a device of the character described, comprising a pair of wings, a pair of air chambers positioned in each of the wings, means for supporting the wings on the body of a swimmer, and means for holding the wings



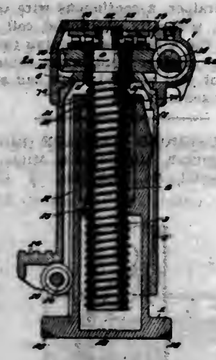
in an extended position on each side of the body of the wearer when using the device as a life saving means.

1,487,937. EXTENSION CORD. LOREN A. GRIFFIN, Evanston, Ill. Filed Dec. 10, 1921. Serial No. 521,424. 3 Claims. (Cl. 173—324.)



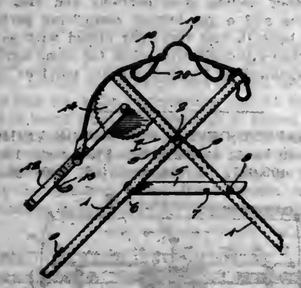
3. An extension cord comprising conductors insulated from each other and formed into a twisted pair, a contact block, socket contacts in said block, means joining the adjacent ends of said conductors to said contacts respectively, another contact block, plug contacts in said block, means joining the opposite ends of said conductors to said plug contacts respectively, flexible anchor members extending from each of said blocks parallel with the said conductors, and a covering of flexible waterproof material molded about and closely adhering to said conductors, blocks and anchor members to form an integral whole.

1,487,938. FIRE BOX. ANDREW J. HABERMACHER, Fort Worth, Tex. Filed Mar. 3, 1922. Serial No. 540,906. 2 Claims. (Cl. 158—1.)



1. In an oil burning furnace having a splash wall at one end, means spaced from the splash wall for directing a fire blast against the splash wall, and an air intake port in the bottom of the furnace, of a bridge extending over the port below the line of the fire blast.

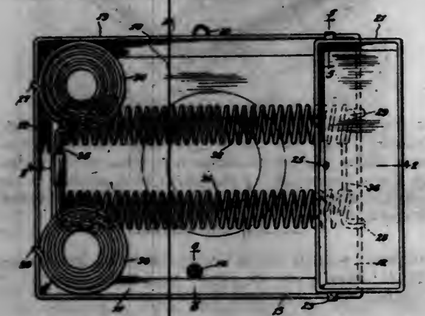
1,487,939. LOOSE-LEAF BINDER. CHARLES R. HADLEY, Los Angeles, Calif. Filed Dec. 14, 1922. Serial No. 606,828. 7 Claims. (Cl. 129—18.)



1. In a loose leaf binder, the combination of covers, means to clamp the covers upon loose leaves therebetween, means adapted to engage in notches in the leaves, and means operatable by movement of a portion of the clamping means to effect movement of the notch-engaging means.

1,487,940. SCREW JACK. WILLIAM S. HALSEY, Dover, N. J. Filed June 23, 1922. Serial No. 570,456. 7 Claims. (Cl. 254—103.)

1. In a screw jack, a standard, a vertical screw to operate in said standard, a head on said screw of greater diameter than said screw and constituting a journal and a sleeve around said standard, the upper end of said sleeve constituting a journal bearing for said journal.



1,487,941. OPERATING RACK. EDWIN DE YAUNY HAMMETT, Huntsville, Mo. Filed Apr. 9, 1923. Serial No. 630,939. 4 Claims. (Cl. 119—103.)

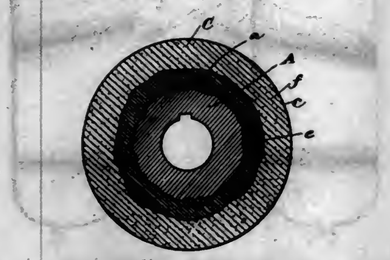
4. A device of the class described comprising a support on which an animal is held upon his back, a resilient metal strap connected at one end to said support and adapted to pass across the animal's neck, a lever ful-

crumed on said support and connected with the other end of said strap for drawing the latter tightly in place, means for holding said lever, and a pair of spaced springs carried by said lever to yieldably engage the neck at opposite sides of the wind-pipe.

1,487,942. DISH DRAINER. EDWIN G. HINES and ANNA S. STOVER, Weatherly, Pa. Filed Apr. 4, 1922. Serial No. 549,544. 3 Claims. (Cl. 141—11.)

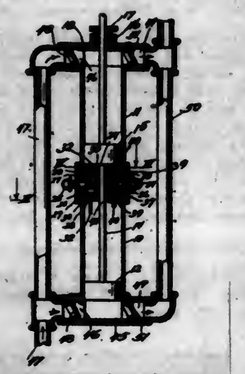
1. In a dish drainer, a continuous wire coiled to form horizontally and vertically positioned coil nests, hooks being formed on the wire for suspending the nests above the bottom of the drainer, said hooks being situated at the upper ends of said vertical nests and at the remote ends of said horizontal nests.

1,487,943. HOUSEHOLD GARBAGE BURNER. ALBERT C. HOLMQUIST, Minneapolis, Minn. Filed Apr. 23, 1923. Serial No. 633,826. 7 Claims. (Cl. 126—225.)



1. A household garbage burner having in combination, a suitable combustion chamber, a grate at the bottom of said chamber having open portions and also imperforate portions and a gas burner comprising perforated pipes spaced beneath and vertically alined with said imperforate portions and directly below the same having its gas outlets spanned by the imperforate portions of said grate.

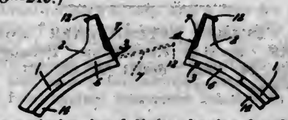
1,487,944. SAFETY DEVICE FOR MOTOR VEHICLES. GEORGE E. HOWELL, Sterling, Ill. Filed Sept. 10, 1921. Serial No. 499,627. 5 Claims. (Cl. 280—89.)



1. A safety device for motor vehicles including steering arms projecting at the front and rear of the front axle of the vehicle, and locking rods shiftable to engage said arms at opposite sides of the axle for locking the front wheels of the vehicle against swinging movement while the vehicle is in motion.

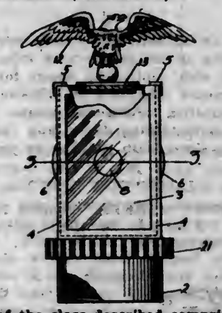
1,487,945. PULLEY. ISAAC N. JOHNSTON, Los Angeles, Calif. Filed Jan. 17, 1923. Serial No. 613,134. 2 Claims. (Cl. 64—45.)

1. A speed transmission pulley provided with end flanges and a surface and body material massed between the flanges and interlocked with the core and consisting of vulcanized rubber vulcanized harder adjacent the core than at its exterior portion.



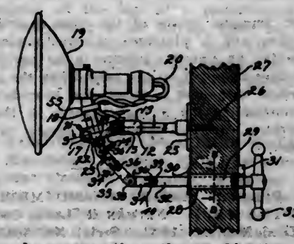
1,487,946. COMBINED FLUID-PRESSURE MOTOR AND PUMP. GEORGE W. JOHNSTON, St. Joseph, Mo. Filed Apr. 8, 1922. Serial No. 548,999. 1 Claim. (Cl. 103—52.)

A fluid pressure pump construction comprising a pair of cylinders arranged in tandem and provided with pistons connected to the same piston rod, each piston traveling through its working stroke while the other piston travels through its exhaust stroke, the adjacent heads of said cylinders conjointly forming a stuffing box for said piston rod, a single valve operating in said cylinder heads for controlling the fluid-pressure intake to both of said cylinders, a pair of connected valves controlling the fluid-pressure exhaust from both of said cylinders, said valves being all freely movable within their valve passages, and said intake valve being unconnected with and movable entirely independently of said exhaust valves, said intake and exhaust valves having stem portions projecting into both of said cylinders for alternate engagement by said pistons for automatically actuating said valves in response to the movements of said pistons, the outer ends of said cylinders being provided with inwardly opening check valves communicating with a common fluid intake connection and also with outwardly opening check valves communicating with a common discharge connection, whereby said cylinders are alternately filled with charges of fluid from said intake connection



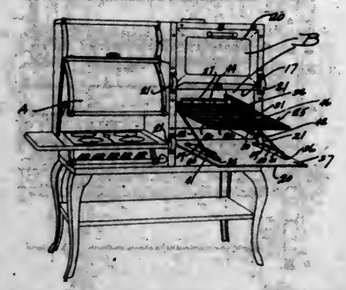
and said charges are alternately expelled from said cylinders into said common discharge connection in response to the movements of said pistons.

1,487,947. LINE-ATTACHING DEVICE FOR TRANSMISSION BANDS. JENKIN JONES, Newark, Ohio. Filed Mar. 28, 1923. Serial No. 628,308. 3 Claims. (Cl. 188—249.)



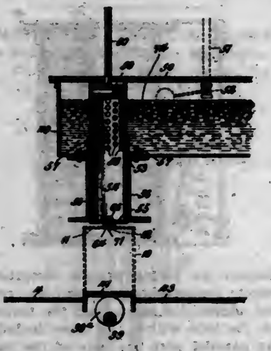
3. A transmission band lining having brackets at the ends thereof each of said brackets comprising a lining engaging plate having side flanges and provided at one end with a right angular member recessed to straddle the connecting bolt, and provided with lateral fingers positioned to engage the outer ends of the band lugs to assist in holding the device assembled.

1,487,948. RADIATOR-CAP LIGHT. ALFRED KANE, New York, N. Y. Filed May 25, 1923. Serial No. 641,436. 3 Claims. (Cl. 240—7.)



1. A device of the class described comprising a casing, an internally screw threaded extension formed on the lower end of said casing and adapted to co-act with the threaded portion of a filler spout on the radiator of an automobile, a transparent panel mounted in the front wall of said casing, a pair of colored lenses mounted in the side walls of said casing and arranged diametrically opposite each other, a lamp mounted in the rear wall of said casing, a transparent panel mounted in the top wall of said casing and an ornament mounted on the top wall and to the rear of said transparent panel, and extending over the same, whereby the light from said lamp will pass through said panel for illuminating said ornament.

1,487,949. LAMP MOUNTING. CHARLES F. L. KAUFMANN and WALLES L. KAUFMANN, Santa Ana, Calif. Filed Mar. 29, 1922. Serial No. 547,646. 3 Claims. (Cl. 240—61.)

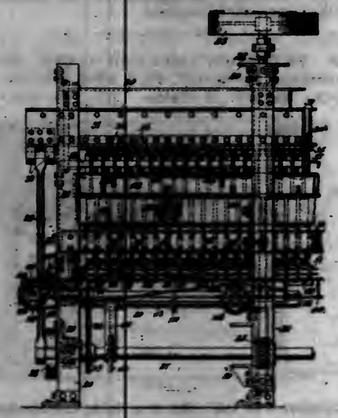


1. In a lamp mounting, the combination of a face plate, means to secure the face plate to the body of a vehicle, a bracket projecting from the face plate, a shaft section rotatably mounted on the bracket, a lamp carried by the shaft section, a bushing having a head at one end and screw-threaded at its other end, a hollow nut engaging the screw-threads, a shaft section extending through the bushing, and a flexible shaft section connecting the other shaft sections.

1,487,950. EXTENSION TRAY FOR OVENS. WILLIAM J. KIMMERLE, Pittsburgh, Pa. Filed Oct. 23, 1922. Serial No. 596,894. 5 Claims. (Cl. 126—340.)

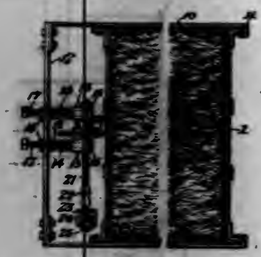
1. In a device of the class described, the combination of an oven including an opening, a door for said opening, a tray, and means adjustably connecting the tray and door to selectively permit various degrees of extension of the tray from said oven upon opening of the door.

1,487,951. CAN-FILLING MACHINE. JACQUES J. KIRKBY, Clymer, N. Y., assignor to Earl J. Bellinger, Sherman, N. Y. Filed Mar. 21, 1919. Serial No. 283,998. 19 Claims. (Cl. 226—94.)



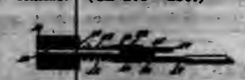
1. In a can filling machine, a reservoir for liquid, a plurality of cylinders within and extending below the reservoir, with a portion of each cylinder within the reservoir having its walls perforated and below the reservoir having its walls imperforate, and at the lower end having a valve discharge opening, a piston reciprocable in each cylinder, beams extending below and supporting the reservoir on opposite sides of those portions of the cylinders below the reservoir, and a top for the reservoir so that the cylinders are enclosed therein, said top having passages therethrough for the piston rods.

1,487,952. CAN-FILLING MACHINE. JACQUES J. KIRKBY, Clymer, N. Y., assignor to Earl J. Bellinger, Sherman, N. Y. Filed Oct. 14, 1920. Serial No. 416,921. 15 Claims. (Cl. 226—94.)



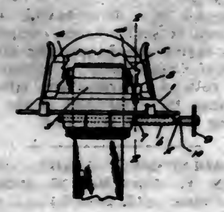
1. In a can filling machine, a plurality of cylinders, a piston reciprocable in each cylinder, a closure for the lower end of each cylinder, a nozzle mounted in each

closure, a can centering device mounted upon each closure, means to prevent each can centering device from dropping off the closure, each can centering device being so shaped as to cooperate with the devices on either side



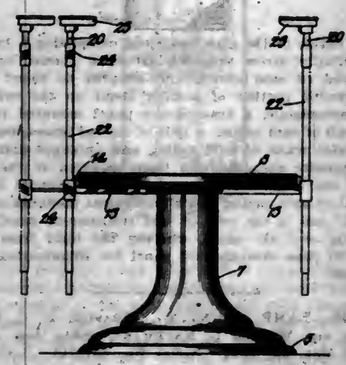
thereof to prevent turning of the same, each centering device having a plurality of prongs which are curved to engage the side walls of the cans and beveled to center the cans.

1,487,953. INDICATOR FOR BALING PRESSES. ELMER T. KISSINGER, Creston, Ohio. Filed Nov. 29, 1922, Serial No. 604,080. Renewed Sept. 12, 1923. 3 Claims. (Cl. 116—114.)



3. An indicator for baling presses comprising a dial, a tracer wheel, connections between the tracer wheel and dial, and means for supporting the tracer wheel in contact with the bale within the press including a yoke having a bar parallel with the side of the bale, parallel pairs of guide studs carried by said bar, bearing blocks for the tracer wheel shaft on said guide studs and movable toward and from the bale, and adjustable spring pressure means interposed between said bar and said bearing blocks.

1,487,954. BINDING POST. ARIE KLEINHESSELINK, Orange City, Iowa. Filed Mar. 13, 1923. Serial No. 624,703. 2 Claims. (Cl. 173—259.)

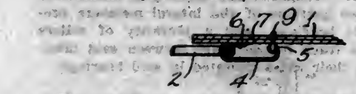


2. A device of the class described, the combination of a binding post stem having an opening extended through it near one end and having grooves on opposite sides of said opening extending longitudinally of the stem toward the end thereof, said stem also having a groove extending from said opening toward the opposite end of the binding post stem and terminating in a lateral extension, a sleeve slidably mounted upon the stem and being provided with a lug designed to enter said groove, and an extensible coil spring mounted upon the stem and designed to engage the said sleeve, substantially as and for the purposes stated.

1,487,955. FLAME EXTINGUISHER FOR LAMP BURNERS. STANLEY KRUSZYNSKI, Philadelphia, Pa. Filed Mar. 24, 1923. Serial No. 627,531. 2 Claims. (Cl. 67—80.)

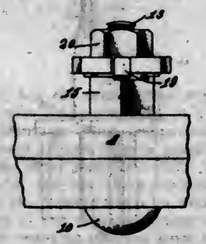
1. A flame extinguisher for a lamp burner comprising an extinguishing device on the wick tube, means associated with the wick controlling means for operating the device, such means consisting of a sleeve on the rod of the wick controlling device and means connecting the same to the extinguishing device and clutch means for connecting the sleeve with the disc on the rod.

1,487,956. SKIRT MARKER. JOSEPH LEIBOWITZ, New York, N. Y. Filed Feb. 21, 1922. Serial No. 538,202. 2 Claims. (Cl. 33—10.)



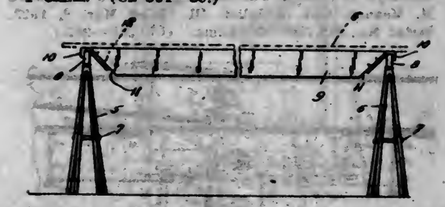
1. A skirt marking device of the class described comprising a base and a platform attached thereto, said platform having an annular groove in its periphery, an annular member mounted on the base below the platform, an arm formed with said member, and provided with a vertical extension having a lug operable in the groove of said platform, and an adjustable gauge carried by the said arm.

1,487,957. PLASTIC MATERIAL AND METHOD OF MAKING THE SAME. NATHAN B. LEVY, Cedarhurst, N. Y. Filed May 27, 1922. Serial No. 564,232. 10 Claims. (Cl. 106—36.)



1. A plastic material consisting of a fibrous substance, and an oxidized insoluble soap of a drying oil.

1,487,958. SHOE HOOK. AXEL EMANUEL LIND, Leadville, Colo. Filed May 14, 1923. Serial No. 638,984. 1 Claim. (Cl. 24—146.)

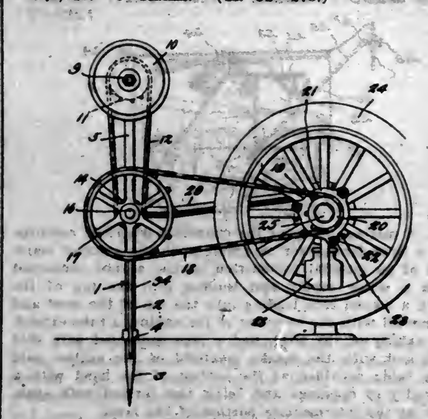


The combination with a shoe and a lace for said shoe, of a plurality of hooks, and means for hingedly mounting each of said hooks independently of the others upon said shoe with their work engaging portions adjacent to said shoe, said means for securing said hooks to said shoe being fixed against movement relative to the shoe.

1,487,959. COMBINATION BOLT AND NUT LOCK. JOHN P. LINDSAY, Randsburg, Calif. Filed Nov. 11, 1922. Serial No. 600,338. 1 Claim. (Cl. 151—18.)

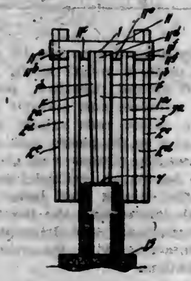
In combination, a bolt having one portion provided with a right hand thread and its remaining portion reduced and provided with a left hand thread, a nut threaded upon said right hand threaded portion and having its outer face formed with recesses, a washer engaged against the outer face of said nut and formed with projections fitting within said recesses, the outer periphery of said washer being formed with radially extending tongues, a nut engaged upon said left hand threaded portion and having a flange provided with notches, the tongues being adapted to be bent into said notches.

1,487,960. TOP SUPPORT FOR PAPER-HANGERS' PASTING TABLES. BERNARD E. MCLAUGHLIN, Detroit, Mich. Filed Aug. 24, 1923. Serial No. 659,124. 1 Claim. (Cl. 304—39.)



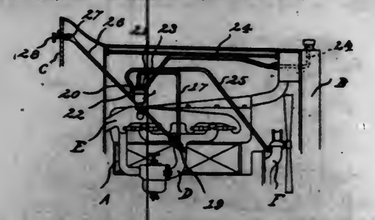
As a new article of manufacture, a support for preventing sagging of the top of a paperhanger's knock down table comprising a bar having table leg engaging hooks secured to the ends thereof, said bar having mitered ends, and said hooks being coextensive with the longer edge of the bar substantially as shown and described.

1,487,961. FORMULA FOR INSOLUBLE WALL TINTS. JOHN F. MAKOWSKI, Stockton, Calif., assignor to California Cedar Products Company, Stockton, Calif., a Corporation. Filed Dec. 23, 1922. Serial No. 608,596. 2 Claims. (Cl. 134—46.)



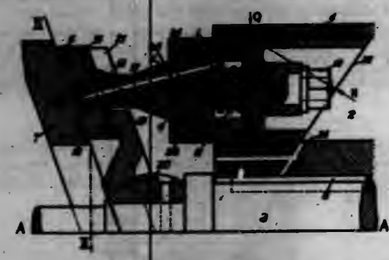
2. A composition for wall tints consisting of a body material, casein, and borax, in substantially the proportions of 10 pounds of said body material, 1 pound of casein, and ¼ pound of borax.

1,487,962. TOOL GRINDER. OSCAR R. MANVILLE, Breckenridge, Mo. Filed Mar. 6, 1922. Serial No. 541,412. 8 Claims. (Cl. 51—173.)



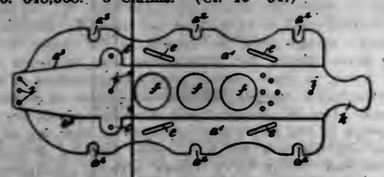
1. In a device of the class described, a standard comprising upper and lower parts; a connection uniting said parts; a brace projecting from the connection; a shaft journaled in the connection; a driven element on the upper part of the standard; means for connecting the driven element operatively with the shaft; means for connecting the brace with a vehicle frame; a sprocket wheel; means for connecting the sprocket wheel to a vehicle wheel; and a sprocket chain forming an operative connection between the said sprocket wheel and the shaft.

1,487,963. MEANS FOR CONCRETE CONSTRUCTION. JOHN V. MEARNS, Malvern, near Melbourne, Victoria, Australia. Filed Nov. 28, 1921. Serial No. 518,880. 4 Claims. (Cl. 25—131.)



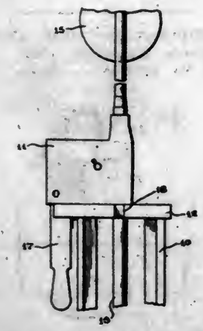
1. In concrete construction, coreboxes placed along foundations between inner and outer forms the faces of which are parallel to each other and the corebox which is distanced therefrom connecting the forms to the corebox and to each other by fastening devices extending through from the outside to the inside of the said parts, means for maintaining the coreboxes and wall forms in their correct position comprising a template having a mortise bevelled on one side to receive a squared piece of material and a wedge placed on the top edges of the forms and coreboxes so that one of the forms and its stud fits in a recess between shoulders, the corebox fitting in a recess between shoulders, a squared piece of material in the mortise and lying along the vertical face of the other form, and a wedge inserted in the remainder of the mortise.

1,487,964. VAPORIZING APPARATUS. EDWARD J. MEYER, Lakewood, N. J. Filed Oct. 6, 1922. Serial No. 592,905. 2 Claims. (Cl. 123—25.)



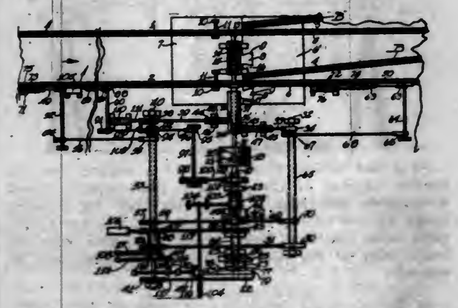
1. A mixing device of the character described comprising a bowl formed for mounting upon the exhaust manifold of an internal combustion engine, a tube connected with a water supply and leading into the top of the bowl, a second tube leading into the top of the bowl and connected with the breather of the engine, a tube extending axially of the bowl, and a pipe connected with said tube and with the intake manifold of the engine, said tube being provided at the bottom of the bowl with a plurality of openings and being also formed with openings at the intermediate portion of the bowl.

1,487,965. ROTARY RECIPROCATING ENGINE. ANTHONY G. M. MICHELL, Melbourne, Victoria, Australia. Filed Jan. 5, 1921. Serial No. 435,167. 9 Claims. (Cl. 121—62.)



3. In a rotary reciprocating engine, the combination of an oblique drive plate, a rotary shaft, a plurality of cylinders arranged around the shaft, pistons rotatable relatively to the cylinders and movable parallel to the axis of the shaft, piston rods axially movable in the pistons, slipper plates on the piston rods, forming sliding connections between the pistons and the oblique drive plate, each piston having an inclined inner driving end, the pressure of the driving fluid being constantly directed into a path intersecting the line of reaction between the slipper plate and said drive plate, at a point of the piston contacting with the cylinder under all conditions of operations.

1,487,966. ROLLER SKATE. WALTER MILLER-METCALF, New Brighton, England. Filed June 28, 1923. Serial No. 648,368. 3 Claims. (Cl. 46—51.)

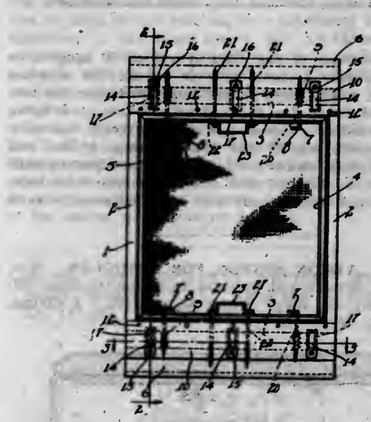


1. A roller skate, having a frame or body of inverted channel-section comprising a relatively-narrow, flat top plate, and lateral members of substantial height bent directly downward from said plate and forming continuations thereof, the bend lines of said members being parallel and straight throughout the major portion of their length; the lower portions of the lateral members providing roller-axle bearings; and a plurality of rollers located in single track in the space between said members and having their axles mounted in said bearings.

1,487,967. GRAVITY LOCK. JOSEPH B. MILTON, deceased, late of Enid, Okla., by Lucile V. Milton, administratrix, Enid, Okla. Filed May 23, 1923. Serial No. 641,021. 5 Claims. (Cl. 70—128.)

1. A switch lock comprising in combination with a pivotally mounted operating arm, a key operated pivotally mounted tumbler having one end normally disposed in the path of movement of said arm, a key operated pivotally mounted locking plate, interlocking means between the tumbler and plate to limit the range of movement of said tumbler, means whereby the plate may be independently moved to increase the range of movement and permit the tumbler to be moved out of the path of the operating arm and means engaged by the operating arm to hold the tumbler in an inactive position.

1,487,968. AUTOMATIC SWITCH-OPERATING DEVICE. WALTER M. MONROE, Joliet, Ill., assignor of one-third to Pius M. Fahrner and one-third to Edward M. Meaney, both of Joliet, Ill. Filed Mar. 8, 1923. Serial No. 623,736. 9 Claims. (Cl. 246—282.)

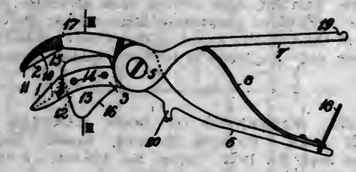


1. The combination with a railroad switch, of train actuated ramps for closing said switch before a train passes thereover, means operatively connecting said ramps to said switch, and an auxiliary train actuated ramp for keeping said switch open, manually controlled means for moving said first named ramps and said auxiliary ramp into operative position, and means for throwing said auxiliary ramp out of operative engagement with said manually controlled means.

1,487,969. MATCH BOX. LEWIS S. MOORE, Minneapolis, Minn. Filed Feb. 12, 1923. Serial No. 618,676. 8 Claims. (Cl. 206—21.)

1. In a match box the combination with a back plate having top and side capping flanges, of a box having an open back, a separable hinge supporting the box for swinging movement to and from a position in which it is closed by the back plate and held by the capping flanges, the top of the box being adapted to be sprung under the top of the capping flange to hold the box closed and the members of the separable hinge interlocked, and a feed blade for removing matches from the box.

1,487,970. SCREEN FRAME. FRANK MUSHALL, Chicago, Ill. Filed July 17, 1922. Serial No. 575,570. 2 Claims. (Cl. 156—14.)



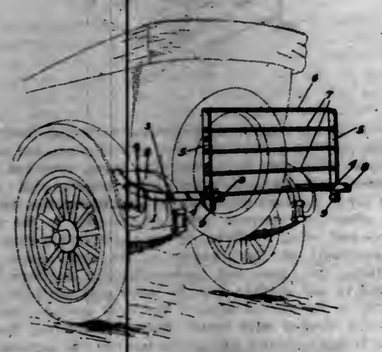
1. A screen comprising a frame, two oppositely disposed parallel sides movably carried by said frame, pins rigidly secured to said sides and being slidably mounted in said frame, springs for moving said sides away from said frame, said pins having heads thereon to determine the outward movement of said sides with respect to said frame, screws carried by said sides and being slidably disposed in said frame, handles secured to the inner ends of said screws and being adapted to move said sides inwardly against the tension of the springs, and metal plates covering the space between said frame and sides, said plates being bent at right angles at their ends to extend transversely across the top and bottom edges of said frame, said sides having grooves adapted to receive the guide strips of the window.

1,487,971. UNDERGARMENT OF THE BLOOMER TYPE. MARY D. NEILSON, Minneapolis, Minn. Filed July 15, 1922. Serial No. 575,332. 5 Claims. (Cl. 2—122.)

1. A bloomer garment comprising back and front portions, the back portion having a centrally-disposed curved bottom edge, the front portions being provided with symmetrically-disposed edges each formed with upper and lower portions extending in parallel relation but being offset by increased width of material in the lower parts and being connected by an edge portion extending substantially at right angles to the first named edge portions, the upper and connecting edge portions being united to one another, and the lower edge portions being united to the curved edge of the back portion, whereby legs are formed with crotch fullness extending directly back from the center line of the front of the garment.

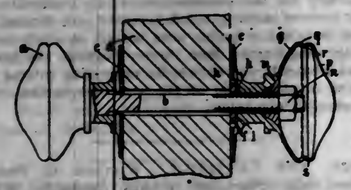
1,487,972. TOOL FOR EMASCULATING AND TAILING LAMBS. ROBERT E. PLUMMER, Jack River, Victoria, Australia. Filed Apr. 6, 1921. Serial No. 459,004. 6 Claims. (Cl. 128—306.)

1. A tool for the purposes set forth, consisting of a pair of crossed arms pivoted together and formed with opposed terminal gripping jaws dished on their interior sides, one arm having fixed thereto between the jaw and pivot an inwardly and outwardly projecting cutting blade extending longitudinally of the arm and having cutting edges on both extensions.



1,487,973. TOY CATAPULT. WILLIAM H. PRESTON, Denver, Colo. Filed July 3, 1923. Serial No. 649,332. 3 Claims. (Cl. 124—1.)

1. A device of the character described comprising a handle forming a hollow magazine, a cap on the lower end of the magazine and mounted to be turned thereon, a plurality of shot contained in the magazine, a pair of

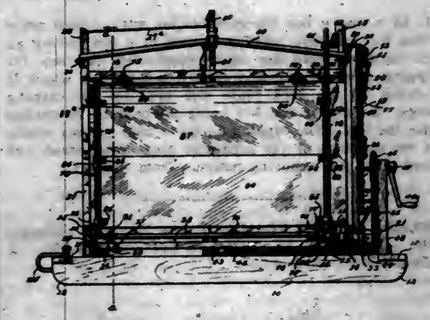


discs spaced apart and connected together to turn simultaneously, one of said discs being connected to the said cap whereby both of the discs will be turned when the cap is turned, each of the said discs being provided with openings, and a plate interposed between the said discs and provided with a single opening adapted to be aligned with two of the said openings in the said spaced discs when the said cap is turned to a predetermined position.

1,487,974. AUTOMOBILE TRUNK RACK. LEE B. PROUTY, Waterford, Calif. Filed Dec. 11, 1922. Serial No. 606,059. 2 Claims. (Cl. 224—29.)

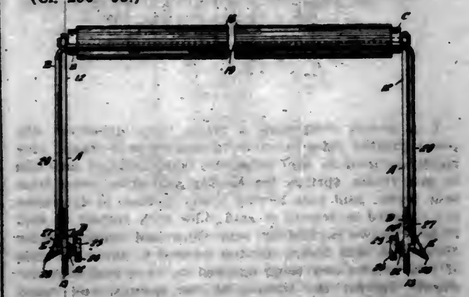
1. A folding rack comprising a pair of rigid supports, a rack structure pivotally mounted in the supports and extending therebetween, the outer ends of the supports having projections adapted to engage the under edges of the rack to the rear of the pivotal connection thereof when said rack is moved to lie in a horizontal position, and the adjacent ends of the rack structure having similar projections adapted to abut against the under edges of the supports ahead of the pivotal connection of the rack when the latter is moved to said horizontal position.

1,487,975. FASTENING OF DOOR HANDLES AND THE LIKE. CHARLES RIDDICK, Epsom, England. Filed Sept. 21, 1922. Serial No. 589,649. 3 Claims. (Cl. 292—348.)



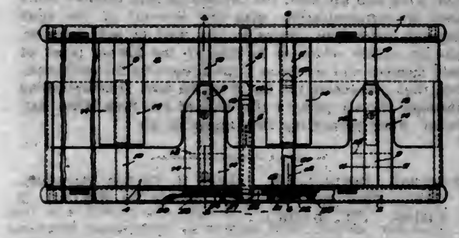
1. In a knob attachment, the combination of a screw-threaded spindle square at one end, an adjusting nut screwed thereon, a hollow two-part door handle comprising a hollow rear portion substantially of funnel shape and formed with a square aperture to fit the square end of said spindle and a front portion detachably secured to said rear portion, a washer on said spindle located within said door handle and shaped to fit within the funnel shaped portion thereof and to reinforce internally said rear portion and a securing nut screwed on said spindle within said door handle against said washer to maintain said rear portion of said door handle in contact with said adjusting nut.

1,487,976. SHOE HEEL. JOSEPH ROSSI and JOHN JACOBSZ, Youngstown, Ohio. Filed Apr. 2, 1923. Serial No. 629,250. 3 Claims. (Cl. 36—61.)



1. In a device of the class described, a recessed heel, a casing situated within said recess, a movable drum positioned within said casing, a plurality of inclined slots formed in the outer edges of said drum, a spike frame member actuated by said inclined grooves, substantially as described for the purpose set forth.

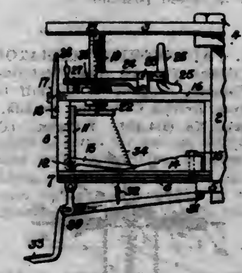
1,487,977. STANCHION AND OPERATING TABLE FOR ANIMALS. JOHN E. RYAN, Stuart, Iowa. Filed May 18, 1921. Serial No. 470,741. 12 Claims. (Cl. 119—103.)



1. In a device of the class described, a support, a frame rotatively mounted thereon, means for rotating said frame, a side plate pivotally mounted near the bottom of said frame, the free end of said side plate being curved inwardly, a second side plate pivotally mounted at the opposite side of said frame having its free end curved inwardly, means for independently adjusting said side plates to or from each other, and means for locking the curved edges of said side plates adjacent to each other.

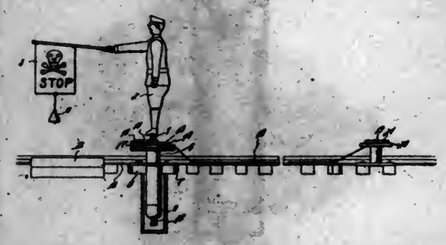
1,487,978. VISION SHIELD FOR VEHICLES. WILLIAM A. SCHAAR and CHARLES L. GEEDS, Chicago, Ill. Filed May 25, 1921. Serial No. 472,484. 4 Claims. (Cl. 296—95.)

1. In a vision shield adapted for use on the front of a superstructure, including upright side members, of an automobile or other vehicle, the combination with a pair of arms, each having between the ends thereof a clamping means adapted to rigidly secure the said arms to said side members; of movable side arms having lateral extensions slidably and pivotally mounted on said first named arms to swing in substantially vertical planes and move laterally relatively to said first named arms; an extensible shade attached to one end of said first named arms and at its opposite end to said pivotal arms; cooperable automatically operating means on said first named arms and the second named arms arranged to hold the latter in adjusted position with the shade extended; and manually operable means for moving said first named arms laterally relative to each other thereby rendering said first named means inoperative.



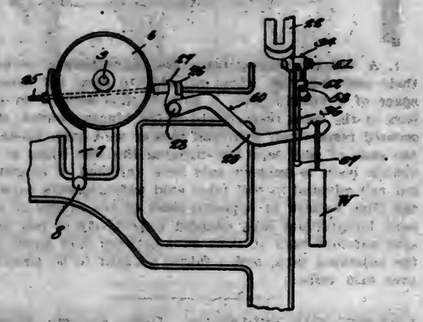
1,487,979. LOOSE-LEAF LEDGER. JOHN SCHADE, Holyoke, Mass., assignor to National Blank Book Company, Holyoke, Mass., a Voluntary Trust Association. Filed Apr. 23, 1921. Serial No. 463,954. 8 Claims. (Cl. 129—13.)

1. A ledger binder composed of two separable sections and resiliently extensible post members permanently carried by each of said sections for engagement within edge apertures in the loose sheets, and an extensible post comprising manually adjustable sections removably engageable with said binder sections and extending within perforations in said sheets to secure them as against removal.



5. In a loose leaf ledger, a pair of separable sections, and locking means therefor including a clutch having a slidable member, a spring for tensioning said member, and a slide having a thumb piece said slide being adapted to engage said member to move same against the action of the spring to unclutched position.

1,487,980. HEEL-BUILDING DEVICE. WILLIAM E. SMALL, Brooklyn, N. Y. Filed Feb. 1, 1921. Serial No. 441,538. 20 Claims. (Cl. 12—50.)



1. The method of building heels of separate lifts which comprise assembling said lifts one upon another, interlocking said lifts with a holder for preventing slipping of the lifts with respect to each other, applying pressure to the assembled mass, and unlocking said mass after pressure has been applied.

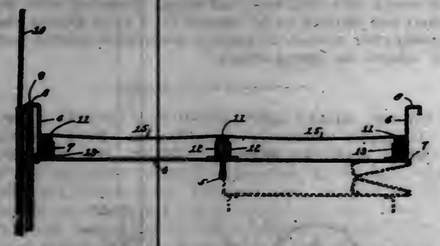
1,487,981. CROSSING SIGNAL. MELVIN H. SMITH, Pretty Prairie, Kans. Filed Nov. 3, 1923. Serial No. 672,580. 4 Claims. (Cl. 246—294.)

1. A device of the class described comprising a vertically arranged shaft, signal means carried thereby, spring means for holding the shaft in position with the signal in operative position, train operated means arranged a distance from the signal, a pawl for holding the shaft with the signal in inoperative position and the spring under tension, flexible means connecting the train operated means with said pawl and means connected with the shaft and adapted to be engaged by a train passing the crossing for moving the parts to inoperative position and to tension the spring means.

1,487,982. BRAKE MECHANISM FOR LOOMS. JAMES ALEXANDER SCARELLS, Gainesville, Ga. Filed Jan. 16, 1922. Serial No. 529,630. 1 Claim. (Cl. 188—83.)

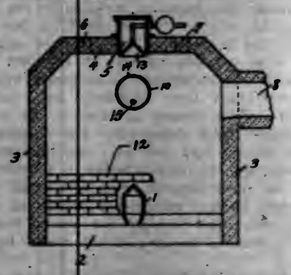
In a loom, a frame; a driving shaft journaled on the frame; a brake shoe mounted movably on the frame and controlling the rotation of the shaft; a first link connected with the brake shoe; a first lever engaged with the link; a second link slidable in the first lever and provided with a head adapted to cooperate with the first lever; a bell crank lever fulcrumed on a part of the frame; and a pivot element mounted in the second link, the bell crank lever comprising two fingers, between which the second link extends, the provision of two fingers permitting the pivot element to be riveted at both ends, and the pivot element being so riveted, thereby to hold the pivot element securely in place, one of the fingers being interposed between the second link and the frame, to prevent a wearing of the frame by the link.

1,487,983. PORTABLE ELECTRIC FLASH LAMP. JACOB STRAUSS, Arverne, N. Y. Filed Oct. 5, 1922. Serial No. 592,511. 5 Claims. (Cl. 240—8.5.)



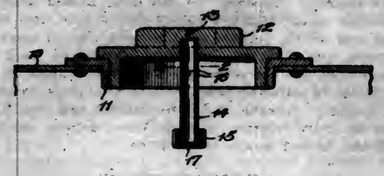
1. In a portable electric lamp, the combination of a casing comprising independent sections, a battery adapt-

ed to be shifted in one of the sections, a circuit closing plunger adapted to contact with the battery, flexible



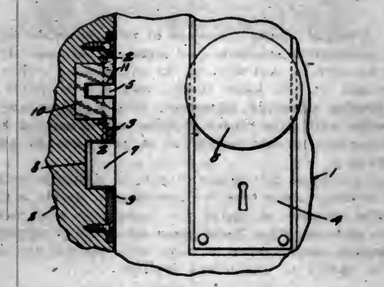
separating means between the battery and plunger, and means operable by the sections to close the circuit between the battery and plunger.

1,487,984. COLLAPSIBLE VEHICLE BED. CHARLES A. STRAIN, Los Angeles, Calif. Filed Aug. 7, 1922. Serial No. 580,054. 2 Claims. (Cl. 5—118.)



1. A bed comprising transverse bars hinged between their ends adapted when unfolded to span the interior space of a vehicle body, a pair of clips secured to said bars at the sides respectively of the hinges thereof, clips secured respectively near the ends of said bars, hooks on the ends of said bars for engaging the side edges of the vehicle body to support said bars unfolded, a longitudinal rail adapted to rest upon said unfolded bars between the clips secured at opposite sides of the hinges of said bars, longitudinal rails adapted respectively to rest upon said unfolded bars at their ends between said hooks and the adjoining clips, and a fabric adapted to be stretched over said rails.

1,487,985. GAS PRODUCER. DAVID SUDNTIC, Youngstown, Ohio. Filed Mar. 4, 1922. Serial No. 541,183. 1 Claim. (Cl. 48—86.)



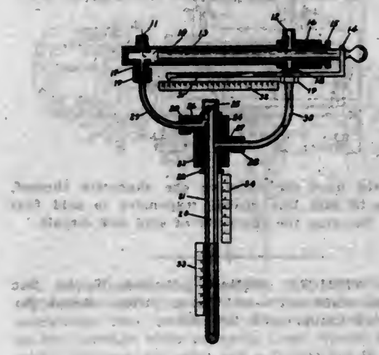
A gas producer of ordinary rectangular construction, a semi-arched top, a fuel hopper located in said top, a stationary circular fuel deflector positioned in a horizontal manner underneath said fuel hopper, means for cooling said fuel deflector, substantially as described for the purpose set forth.

1,487,986. TANK FOR TRACTORS, ETC. ERNEST E. SWEET, Detroit, Mich., assignor, by mesne assignments, to Harold H. Emmons, Detroit, Mich. Filed Apr. 23, 1920. Serial No. 376,050. 2 Claims. (Cl. 220—44.)

1. A liquid tank for vehicles having a filler cap with an air port in the top thereof which is unobstructed at all times and means to prevent the escape of liquid by splashing through said port, said means comprising a hollow member within the tank and secured to the wall of said filler cap and having its interior in communication with said air port, the interior of said member being also in communication with the interior of the tank through restricted orifices in the wall of said member, and an orifice which is located at the lowest point of said member and serves as a drain opening for said member, thus preventing the liquid in the tank from splashing through the air port in the wall of the tank when agitated, while permitting the ingress of air.

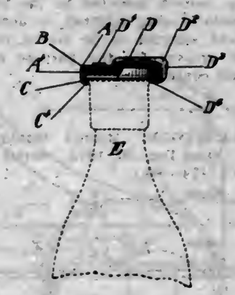
1,487,987. DOOR LOCK. JAMES H. TAYLOR, Pasadena, Calif. Filed June 27, 1923. Serial No. 648,061. 2 Claims. (Cl. 70—15.)

1. The combination of a keeper and a lock, one having a socket and the other a latch, said socket having a bore extending obliquely therefrom and opening thereinto, and a spring projected ball mounted in said bore and adapted to engage the latch when the door is closed to lock the latch in closed position.



1,487,988. AUTOMOBILE RADIATOR-FILLING BUCKET. HARRY TESCHE, New Westminster, British Columbia, Canada, assignor of one-half to Lena Colbek, Vancouver, British Columbia, Canada. Filed Dec. 1, 1922. Serial No. 604,401. 1 Claim. (Cl. 226—36.)

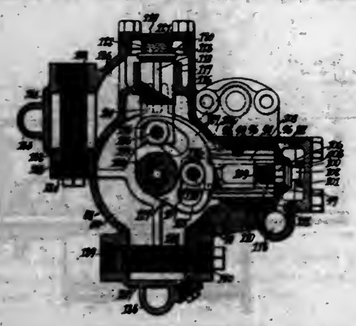
In a bucket, a tubular member projecting through the bottom thereof and provided at its lower end with diametrically opposed notches, a bar freely mounted in said notches and extending transversely of the bore of the



tubular member, a valve seated on the upper end of the said tubular member and normally closing said member and a tension spring between the valve and the bar serving to hold the valve closed and the bar in place in the notches.

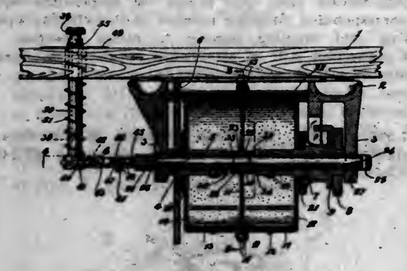
1,487,989. APPARATUS FOR MEASURING THE RATE OF FLOW OF GASES. LEONARD O. VOSS, Lincoln, Nebr. Filed Apr. 18, 1922. Serial No. 555,073. 4 Claims. (Cl. 73—167.)

1. A device for causing a drop and indicating in pressure in a flowing gas, said device being provided with an elongated passageway of reduced cross section, and manually operable means for varying the length of the reduced passageway.



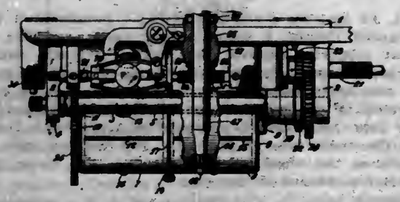
1,487,990. CAPSULE FOR USE WITH BOTTLES OR OTHER VESSELS, THE NECKS OF WHICH ARE FORMED TO RECEIVE CROWN CORKS OR SEALS. WILLIAM WATERS, Fitzroy, near Melbourne, and HENRY AUGUSTINE BRADY, Carlton, near Melbourne, Victoria, Australia. Filed Mar. 21, 1923. Serial No. 626,640. 6 Claims. (Cl. 215—64.)

1. An improved capsule, for use on containers formed to receive crown seals, comprising, a plane cap, a stationary depending, inturned lug formed on the edge of the cap, an arm eccentrically pivoted on the cap, and a depending, inturned lug formed on the free end of the arm.



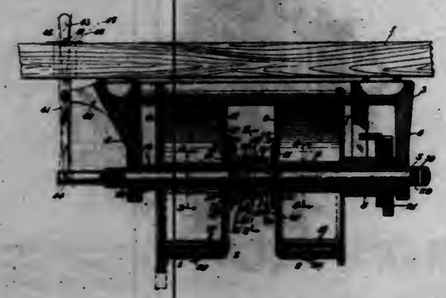
1,487,991. VALVE MECHANISM FOR TRAIN-STOPPING APPARATUS. JEAN FRANCIS WEBB, Jr., New York, N. Y., assignor to The International Signal Co., a Corporation of Arizona. Filed Dec. 30, 1922. Serial No. 609,865. 17 Claims. (Cl. 303—18.)

1. In a mechanism of the class described, a housing having two distinct valve chambers with valve openings, valves for controlling said openings, an oscillatable double slotted cam disk, said valves including stem-yokes



engaging said disk and having rollers mounted in the cam slots for operating said valves on alternate oscillations of said cam.

1,487,992. SPRING MOTOR AND ITS INSTALLATION IN PHONOGRAPHS. MAXIMILIAN WEIL, New York, N. Y. Filed July 14, 1920. Serial No. 396,211. 52 Claims. (Cl. 185—45.)



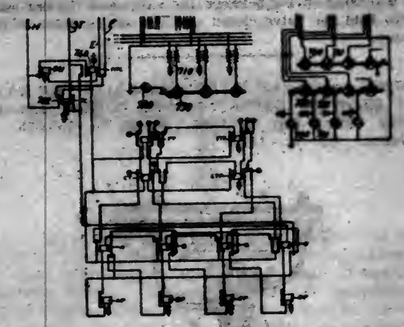
1. In apparatus of the character described, in combination, a driving spring mechanism, and means for substituting a substantially rigid connection for a section of said spring mechanism.

1,487,993. SPRING MOTOR AND ITS INSTALLATION IN PHONOGRAPHS. MAXIMILIAN WEIL, New York, N. Y. Filed Oct. 22, 1920. Serial No. 418,727. 27 Claims. (Cl. 185—40.)

1. A spring motor comprising in combination, a frame, a power plant mounted thereon comprising a plurality of driving springs, governor means for limiting the operation to a predetermined substantially uniform speed, and means for altering the mechanical transmitting connections in the completely assembled motor for operation at the said predetermined speed with less than all of said springs operatively connected.

1,487,994. SPRING MOTOR. MAXIMILIAN WEIL, New York, N. Y. Filed Apr. 4, 1921, Serial No. 458,345. Renewed Aug. 22, 1923. 18 Claims. (Cl. 185—45.)

10. In apparatus of the character described, in combination, a supporting shaft, a sleeve floating thereon, a coupling member surrounding said sleeve, slidable thereon but limited against rotation with respect thereto, a pair of drums extending over opposite ends of said sleeve and toward said coupling member, springs in said drums connecting the latter to said sleeve, said coupling member having teeth at its opposite ends and a conformation upon said drums for cooperation with the corresponding coupling member teeth, whereby upon shifting said coupling member in either direction, a rigid connection will be established between said sleeve and one of said drums.



1,487,995. CIGAR LIGHTER. GEORGE W. WILKINS, Trinidad, Colo. Filed Dec. 5, 1922. Serial No. 605,140. 2 Claims. (Cl. 67—711.)

1. An igniting device comprising a receptacle, a wick arranged therein, a spring-pressed spark producing element supported adjacent the wick, a rotatable element arranged above the spark-producing element, engaged by the latter and having a plurality of teeth, a cover pivoted to the receptacle and movable transversely of the upper end thereof, and a plurality of teeth formed on the under face of the cover and meshing with the teeth on the wheel whereby to rotate the latter upon pivotal movement of the cover.

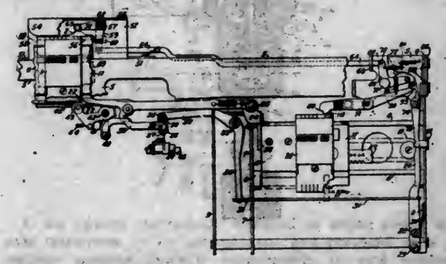
1,487,996. TELEPHONE-EXCHANGE SYSTEM. SAMUEL B. WILLIAMS, Jr., Brooklyn, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 28, 1920. Serial No. 433,905. 20 Claims. (Cl. 179—27.)

10. In a telephone system, lines of different character, a link circuit for interconnecting said lines, automatic switches for connecting said lines to said link and for connecting said link to said lines, means individual to

each of said lines for denoting the character thereof, and means in said link circuit responsive to said first means for changing the character of said link circuit.

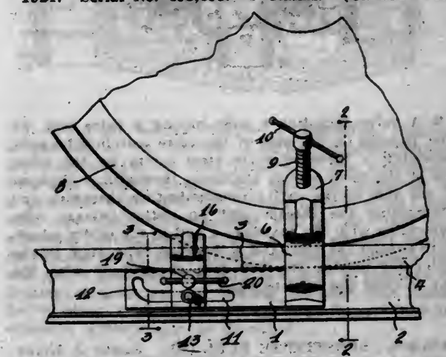
1,487,997. VEHICLE SIGNAL. MILTON WOOLF, San Francisco, Calif. Filed Dec. 4, 1920. Serial No. 428,296. 1 Claim. (Cl. 200—59.)

In an automobile signal, a steering post, a shell around said post, blocks secured to said post and said shell, said blocks overlying one another, concentric grooves formed in one of said blocks and extending substantially around the face of the block, one of said grooves being of shorter radius than the other of said grooves, a passage connecting said grooves, adjustable movable contacts mounted within said grooves, and a radially sliding contact mounted in the other of said blocks, said contact being adapted to normally lay in said passage and adapted to be moved into either of said concentric grooves for the purpose of contacting with one of said contacts.



1,487,998. ELECTRODE. MILTON WOOLF, San Francisco, Calif. Filed Dec. 26, 1922. Serial No. 609,077. 1 Claim. (Cl. 174—89.)

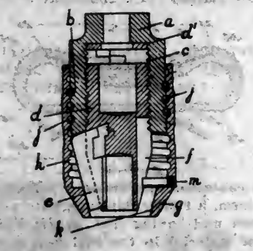
In a device of the character described, a head band adapted to encircle a portion of the head from side to side, a screw projecting through each of the opposite ends of said band, an inclined portion formed in each of



said screws, a disc slidably held on said screws, a rod passing through said discs in such a manner as to contact with the inclined portions of said screws, and nuts adapted to move said discs along said screws so as to cause said rod to contact with said inclined portion of said screws.

1,487,999. CALCULATING MACHINE. ROBERT G. C. BOA, Herkimer, N. Y., assignor to Remington Accounting Machine Corporation, New York, N. Y., a Corporation of New York. Filed Dec. 23, 1922. Serial No. 608,681. 16 Claims. (Cl. 235—59.)

1. In a calculating machine, the combination with register wheels arranged in a denominational series, mechanism that includes a stepping carriage and that as the carriage steps connects those wheels successively with a common actuator, and a feeler that is required to act on the wheels and that is normally held clear of them, of feeler actuating means including a device mounted on the carriage and a device mounted on the framework and held in the path of travel of the other device at and only at a place which the latter reaches in a stepping movement of the carriage after the common actuator has engaged the register wheels above the units wheel.

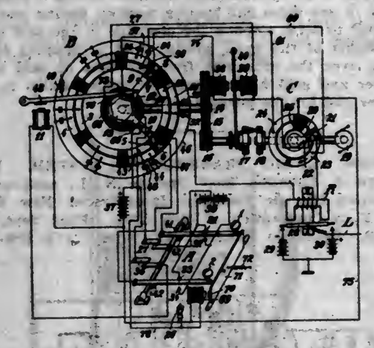


1,488,000. WHEEL CLAMP. WILLIAM D. WHITE and JAMES M. BROWN, Louisville, Miss. Filed Aug. 18, 1921. Serial No. 493,455. 5 Claims. (Cl. 188—45.)

1. A clamp of the character described, comprising a base plate, a wheel clamping member rigidly secured on said plate, and a rail clamping member longitudinally and vertically adjustable upon said plate.

1,488,001. CHUCK FOR HOLDING TOOLS AND BARS. CHARLES HENRY CLARK, Salford, England. Filed Nov. 14, 1922. Serial No. 600,826. 2 Claims. (Cl. 279—60.)

1. A rapidly operating chuck comprising a tubular shank or spindle, a sleeve or jaw holder having a helical engagement with the interior of the tubular shank, a nose or exterior sleeve having a helical engagement with the exterior of the tubular shank opposite in pitch from that of the sleeve or jaw holder, and means for causing



the jaw holder or sleeve and the exterior sleeve or nose to rotate together while permitting relative longitudinal movement of one with respect to the other.

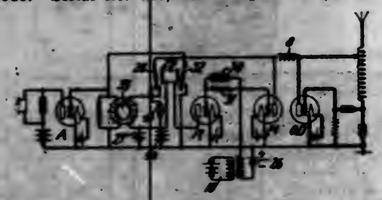
1,488,002. ALTERNATE PRECIPITATION OF SODIUM BICARBONATE AND AMMONIUM CHLORIDE. GEORGES CLAUDE, Paris, France, assignor to Societe l'Air Liquide Societe Anonyme pour l'Etude et l'Exploitation des Procedes Georges Claude, Paris, France. Filed Mar. 15, 1921. Serial No. 452,476. 8 Claims. (Cl. 23—22.)

1. A method of preparing sodium bicarbonate and ammonium chloride by precipitation from solution, which comprises executing the successive operations in presence of an excess of ammonium carbonate.

1,488,003. TELEGRAPHIC TRANSMITTER. ERWIN EBERHARDT, Hermsdorf, near Berlin, Germany, assignor to Siemens & Halske, Aktiengesellschaft, Siemensstadt, near Berlin, Germany, a German Corporation. Filed Nov. 23, 1920. Serial No. 426,081. 5 Claims. (Cl. 178—17.5.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

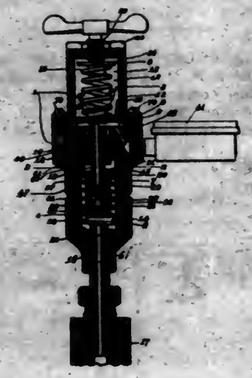
1. In a telegraphic transmitter, a line, means for supplying current for producing signals, a keyboard and a signal accumulating device, comprising a plurality of groups of condensers electrically associated with said keyboard according to the composition of the individual signals represented on the board, means for permitting the separate charging of said individual condenser groups successively at a non-uniform rate of speed depending on the operating speed of the keyboard, a sending device adapted to transmit signals to the line, said device operating at a uniform rate of speed, and means controlled by the sending device for successively discharging said condensers at a uniform rate of speed into said sending device, to cause the signal transmission to the line at a uniform speed rate.

1,488,004. AIR CONTAINER. ARTHUR GROVER FITZGERALD, Brookline, Mass., assignor to Ira J. Webster, Haverhill, Mass. Filed Apr. 11, 1921. Serial No. 460,170. 13 Claims. (Cl. 152—13.)



12. An air container comprising a rubber body of endless tubular form, a rubber flap integrally attached thereto at its center and having free, unattached, side edges, and inserts of material in the said flap having a higher wear resisting characteristic.

1,488,005. HAIR-CURLING DEVICE. MARY FREEMAN, New York, N. Y. Filed Apr. 23, 1923. Serial No. 633,995. 1 Claim. (Cl. 132—41.)



A metallic hair curling device for use in electric heating and curling apparatus of the character designated, comprising a one piece flat spool member formed at one extremity with a rectangular shoulder having a coupling socket, a one piece flat binding member having one end inturned to form a tenon for insertion in the said coupling socket of the spool member, and a clamping sleeve fitting over the otherwise free flat ends of said spool member and said binding member, substantially in the manner and for the purpose set forth.

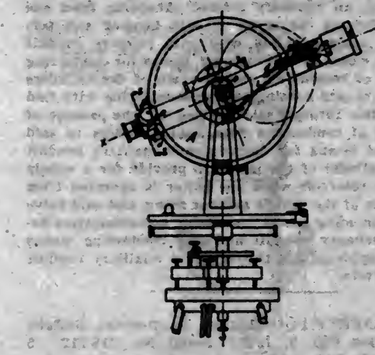
1,488,006. RADIO TRANSMISSION SYSTEM. RAYMOND A. HEISING, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 29, 1919. Serial No. 327,100. 11 Claims. (Cl. 250—6.)

1. In a high frequency transmission system, a high frequency conductor, means connected in energy transfer relation thereto adapted in common for generating high frequency oscillations for transmission and for detecting incoming high frequency oscillations, means for modifying the oscillations generated by said common means in accordance with signals, indicating means associated with said common means and sound control means whereby said system is alternately operative for transmitting signals and for receiving signals.

1,488,007. PRESSURE REGULATOR. ALEXANDER FREDERICK JENKINS, Baltimore, Md. Filed Apr. 9, 1920. Serial No. 372,408. 20 Claims. (Cl. 50—23.)

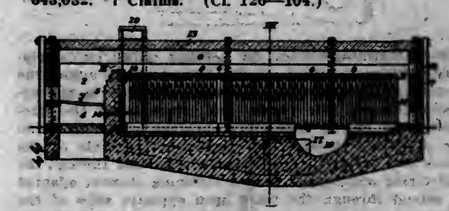
5. In a fluid pressure regulator, a regulating passage with a seat; a sealing member co-operating with said seat and opening against high pressure; and a telescopic moving carrier for said sealing member which member is within said carrier.

1,488,008. FAUCET VALVE. HENRY JONES, Wilmington, Del. Filed Dec. 22, 1921. Serial No. 524,107. 5 Claims. (Cl. 251—139.)



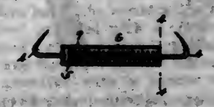
3. A valve including a body having a valve seat, an inlet passage on one side of the valve seat in alignment therewith, a threaded valve stem cavity on the other side of the valve seat in alignment therewith, a chamber at one side of the cavity communicating therewith and interrupting the threads and an outlet passage communicating with the chamber; a ball in the cavity adapted to engage the seat, and a threaded valve stem in the cavity for moving the ball into engagement with the seat to close the inlet passage.

1,488,009. SUBSTITUTE FUEL OIL. JAMES J. KIRBY, Newark, N. J., assignor, by mesne assignments, of one-half to General Oil Company of New Jersey, a Corporation of Delaware. Filed Mar. 30, 1921. Serial No. 457,019. 2 Claims. (Cl. 44—9.)



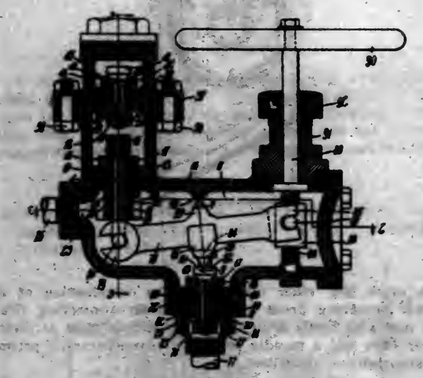
1. A fuel oil comprising a fractional mixture of 3 quarts of water, 2 ounces of glycerine, 2 ounces of soap, 3 pints of crude oil, 3 pints of gasoline, 2 quarts of kerosene, 1 pint of ammonia, 3 ounces of ether, 3 pints of naphtha, and 3 ounces of alum boiled to a viscous consistency to cause said gasoline, ammonia, naphtha, and ether to evaporate therefrom, to provide a two and three quarter gallon mixture, and diluted with one part of crude oil and two parts of gasoline to provide a twenty five gallon mixture.

1,488,010. SURVEYING TRANSIT. HAJO KOURKENS, Becon-les-Bruyeres, France, assignor to Edmund N. Peterson, Asnieres, France. Filed Apr. 8, 1922. Serial No. 550,870. 16 Claims. (Cl. 33—71.)



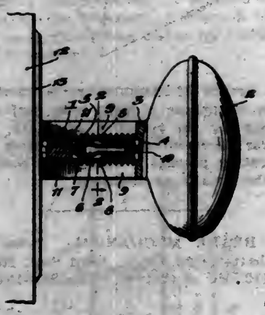
1. An optical instrument mounted to swing about an axis transverse to its optical axis, and provided with a reticule member movable transversely to said optical axis, a member rotatable independently of said instrument about the axis on which said instrument swings, co-operating index features located on said rotatable member and on said instrument, and an operative connection from said rotatable member to said movable reticule member to shift the latter as said rotatable member is turned about the axis on which the instrument swings.

1,488,011. AIR-HEATING FURNACE. LEIF LEE, Youngstown, Ohio. Filed June 2, 1923. Serial No. 643,032. 7 Claims. (Cl. 126—104.)



1. In an air heating furnace, a combustion chamber at one end of the furnace, a heating chamber extending longitudinally of said furnace, a flue coextensive with said heating chamber and separated therefrom by a partition wall, said flue communicating at one end with said combustion chamber and at its other end with said heating chamber, said heating chamber having its exhaust outlet adjacent the end thereof opposite the end which communicates with said flue, a plurality of heating elements in said heating chamber, and means for effecting a circulation of air through said heating elements, substantially as described.

1,488,012. CLIP FOR SHIRT COLLARS. JAMES SIMCOX LITTLE, Windsor, Melbourne, Victoria, Australia. Filed Apr. 17, 1922. Serial No. 553,803. 1 Claim. (Cl. 24—87.)

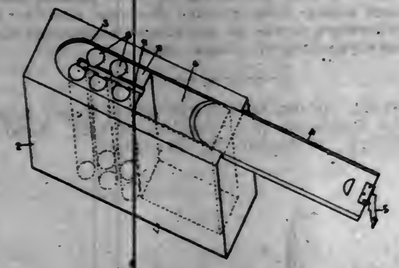


A clip of the kind indicated, comprising a barrel having a rectangular opening in one end, a hook fixed in the other end thereof, a spindle entering the barrel through and fitting in said opening, a hook on the outer end of the spindle and a compression spring about the spindle in the barrel.

1,488,013. HYDRAULIC VALVE. EMIL O. LUNDBLAD, Medford, Mass. Filed June 27, 1923. Serial No. 648,155. 23 Claims. (Cl. 138—16.)

1. A device of the character described comprising, in combination, a casing provided with a main pressure chamber and a plurality of aligning inlet passages, one of which communicates with said pressure chamber, said pressure chamber also having an outlet passage and an exhaust passage communicating therewith, valves for said inlet passages, a valve for said exhaust passage and means to open separately all of said valves.

1,488,014. DOORKNOB FASTENING. MARTIN MCDONALD, Washington, D. C. Filed Dec. 13, 1921. Serial No. 522,021. 10 Claims. (Cl. 292—353.)

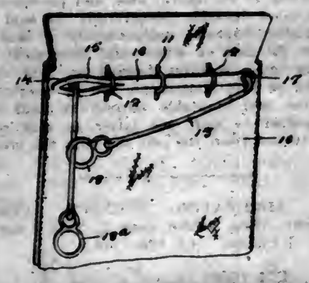


1. The combination of a spindle and a knob having a shank, the spindle being provided with a longitudinal slot, a double dog mounted in the slot with its extremities projecting at opposite sides of the spindle into engagement with opposite walls of the bore of the knob shank, the knob shank being provided with longitudinal bifurcations intersecting one another at substantially right angles, and the bore of the shank having ratchet teeth tapped therein and engaged by the free ends of the double dog.

1,488,015. GREEN-PEA VINER. WILLIAM MCDONALD, Green Bay, Wis., assignor to Chisholm-Scott Company, Columbus, Ohio, a Partnership. Filed Jan. 15, 1923, Serial No. 612,587. Renewed Nov. 24, 1923. 1 Claim. (Cl. 130—30.)

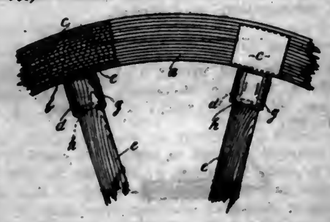
A green pea viner comprising the combination of a slowly revolving drum having inwardly projecting lifting ribs with beads secured to their lifting faces at their inner ends and a rapidly revolving beater-carrying prism substantially as described.

1,488,016. CARRIER FOR PERCUSSION CAPS. FRANK A. MCGAHEON, Crafton, Pa., assignor to James M. Selden, Pittsburgh, Pa. Filed Feb. 20, 1922. Serial No. 537,781. 3 Claims. (Cl. 206—3.)



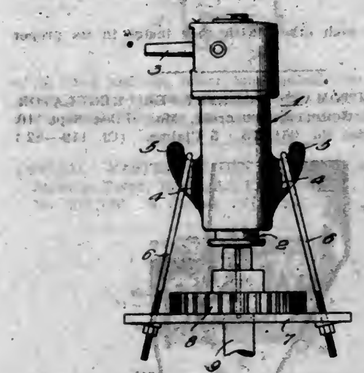
1. As an article of manufacture, a carrier for percussion caps comprising a main body portion having a pocket therein for the reception of a cap, and having a chamber for the reception of the cap wires, there being a communicating passage between the pocket and the chamber, substantially as described.

1,488,017. BRAKE MECHANISM. CLYDE JOHN MCNERNY, Chattanooga, Tenn. Filed Sept. 25, 1920. Serial No. 412,719. 5 Claims. (Cl. 188—154.)



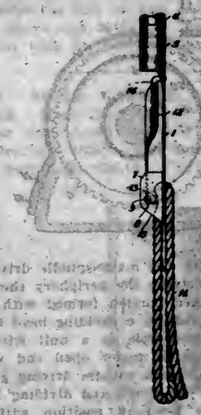
1. An apparatus for the purpose set forth comprising the combination with an internal combustion motor of a motor vehicle, of a fluid pressure operated brake mechanism, a fluid pressure reservoir, a control means for the supply of fluid pressure from said reservoir to said mechanism to operate the latter, a valve mechanism including a housing, a primary conduit leading from said housing to said reservoir and provided intermediate its ends with a check valve, an auxiliary conduit extending from one of the cylinders of the motor to said housing and permanently in communication with said primary conduit and normally closed to said cylinder, means for conducting the products of combustion from certain of the cylinders of said motor to said housing and communicating with said primary conduit through said housing for the passage of the products of combustion from said cylinders to said reservoir, and means for opening said auxiliary conduit to the said cylinder of the motor to provide for a supply of air to the reservoir when the motor is operated from the momentum of the vehicle and not firing, and said valve mechanism including means for closing communication between said primary conduit and said conducting means during the supply of air through said auxiliary conduit to said reservoir.

1,488,018. SAFETY POUCH. JOE MACHOWSKI, Buffalo, N. Y. Filed Feb. 9, 1923. Serial No. 618,112. 3 Claims. (Cl. 150—15.)



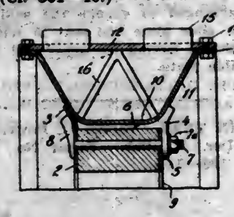
1. A fastening device for pouches embodying a plurality of rings adapted to extend transversely across the mouth of the pouch through slots provided in the opposite sides of said pouch, said pouch being also provided with spaced registering openings, a flexible member extending through the rings upon one side of the pouch and having its opposite ends extending through the registering openings, a slotted fastening element adapted to extend through the rings upon opposite sides of the pouch to prevent removal of the rings and hold the mouth of the pouch closed, means permanently connecting the ends of the flexible member and means whereby the flexible member may be detachably engaged through and disengaged from the slotted fastening element.

1,488,019. SPOKE SOCKET. EDWARD SINCLAIR BREMNER MACKENZIE-HUGHES, Dulwich, London, England. Filed July 5, 1921. Serial No. 482,585. 3 Claims. (Cl. 301—70.)



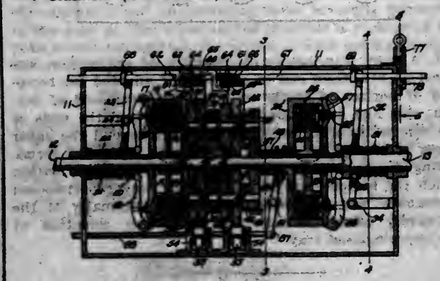
3. In a vehicle wheel a felloe, spokes, clips engaging said felloe and having inwardly extending longitudinally split sockets receiving the outer ends of said spokes and having inner edges, locking tubes surrounding said sockets and tightly wedged thereon and having inwardly facing edges, and strips formed on the inner edges of said sockets, bent over the inwardly facing edges of said locking tubes.

1,488,020. HYDRAULIC JACK. JOHN L. MALONE, Whistler, Ala. Filed Dec. 18, 1922. Serial No. 607,653. 1 Claim. (Cl. 29—86.)



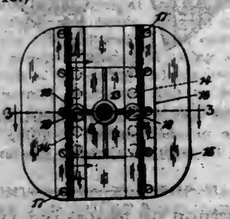
The combination with an elongated cylindrical body carrying a plunger at one end and means for forcing said plunger outwardly on the axial line of the body; of flat-sided uniformly shaped lugs integral with opposite sides of said body and extending from the latter on a diametrical line, said lugs having hook-shaped ends facing in the opposite direction from said plunger and being receivable in connecting devices for operatively connecting the body with any desired work.

1,488,021. MOP HEAD. MARIANO MARINO, Rochester, N. Y. Filed May 16, 1923. Serial No. 638,950. 3 Claims. (Cl. 15—150).



1. In a mop head, the combination with a body portion having a head provided with a transverse slot and with lateral ears, of a clamping jaw spanning the head adjacent to the slot and having a pivotal bearing in the ears, said jaw being provided with a handle whereby it may be swung into and out of clamping engagement with a mop passed through the slot, and means on the body portion for latching the handle against the latter to hold the jaw in clamping position.

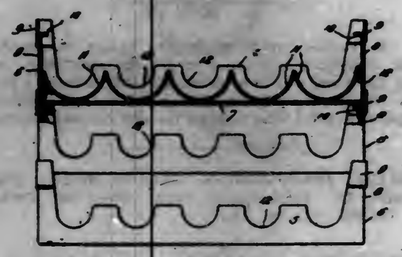
1,488,022. WHEEL. JESSE CANBY MORGAN, Portland, Oreg. Filed Aug. 29, 1921. Serial No. 496,218. 3 Claims. (Cl. 301—40.)



3. A traction tread for wheels having demountable rims, comprising a channel shaped rim adapted to seat upon the wheel and to be removably held thereon, a traction ring having traction lugs secured to the channel shaped rim, and braces between the said rim and the ring.

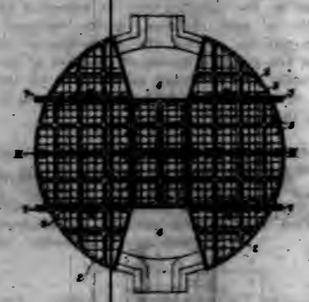
1,488,023. TRANSMISSION. JOHN G. MORTON, Champaign, Ill. Filed Jan. 5, 1923. Serial No. 610,832. 7 Claims. (Cl. 74—34.)

1. A transmission mechanism comprising in combination with a drive shaft and a driven shaft, a clutch mounted upon each shaft, spring actuated means for locking each of the clutches to its respective shaft, gears connecting the drive shaft and clutch, selective means whereby the clutches may be operated to release one or both of said clutches, means operated by the selective means to control the operation of the gears and control the relative speeds of rotation of the shafts, means whereby the direction of rotation of the driven shaft may be regulated and means for locking the selective means in position.



1,488,024. STOOL. STEPHEN NICHOLS, Denver, Colo. Filed Dec. 18, 1922. Serial No. 607,645. 1 Claim. (Cl. 155—115.)

A stool of the character described, comprising a seat, spaced parallel guide members secured to the under side of the seat and provided at their inner opposed edges with longitudinal guide grooves, a rectangular slide plate having its side edges fitted in the said grooves and provided between the guide members with a depending socket, said slide plate being provided in its lower face



adjacent each side edge with depressions arranged at intervals and housed within and protected by the grooves of the guide members, a set screw mounted in the guide members and arranged to engage the said depressions for securing the slide plate and seat in relative adjustment and a pedestal having its upper end fitted in the socket of the slide plate.

1,488,025. COIN TRAY. EMERY C. POYNTER, Mendon, Mo. Filed Dec. 6, 1923. Serial No. 679,398. 3 Claims. (Cl. 133—11.)

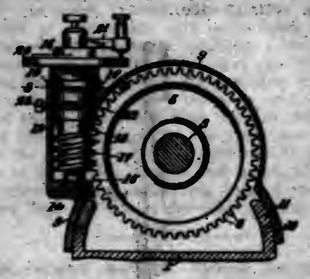
1. A coin tray having a plurality of transverse concaved pockets from end to end thereof adapted for reception of horizontal stacks of coins and composed of bottom, side and end walls, the end walls and the ends of the side walls being extended upwardly beyond the upper edges of the major portion of the side walls and terminating in outwardly offset upper end portions, within which the bottom portion of a similar tray superimposed thereabove may be nested, and ledges internally of the outwardly offset portions for supporting reception of the superimposed tray.

1,488,026. LADLE COVER. EDGAR J. REILLY, Youngstown, Ohio, assignor to The William B. Pollock Company, Youngstown, Ohio, a Corporation of Ohio. Filed Oct. 21, 1921. Serial No. 509,337. 15 Claims. (Cl. 22—83.)

1. A cover for open top ladles, comprising a cellular or grid-like frame or shell having a filling of refractory material held in position therein, substantially as described.

1,488,027. METHOD OF PRODUCING AND EXHIBITING PICTURES POSSESSING STEREOSCOPIC RELIEF AND PICTURES PRODUCED BY SUCH METHOD. WALTER OSBORNE RUNCIE, New York, N. Y. Filed May 24, 1919. Serial No. 236,423. 15 Claims. (Cl. 88—16.6.)

1. The method of producing pictures possessing stereoscopic relief, which consists in recording from the same angular viewpoint a plurality of related images of the subject in planes parallel with and substantially



spaced from each other, with each image in its proper focus.

1,488,028. AUTOMATIC POULTRY-FEED REGULATOR. GUSTAV F. SCHOLLE, Concordia, Mo. Filed Sept. 10, 1923. Serial No. 661,875. 5 Claims. (Cl. 119—52.)

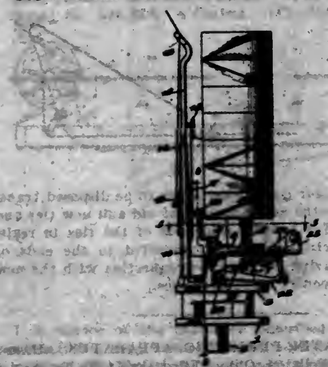
3. An automatic feed regulator for poultry feeders embodying an eccentrically-mounted valve and a member on which it is supported, the latter having means for its adjustable attachment, said valve being pivoted for reversal of position by the weight of the feed in the feeder.

1,488,029. LATHE ATTACHMENT. GEORGE N. BLANCHARD, Oakland, Calif. Filed Feb. 8, 1922. Serial No. 534,840. 3 Claims. (Cl. 90—57.)

1. In combination with the main spindle driving gear of a lathe, a guard overlying the periphery thereof and provided with an enlarged portion formed with a vertically disposed bearing opening, a dividing head including a shaft and a worm receivable as a unit within said bearing opening through its upper open end with the worm in mesh with said main spindle driving gear, and means engageable with the guard and dividing head for normally retaining the head in position within said opening.

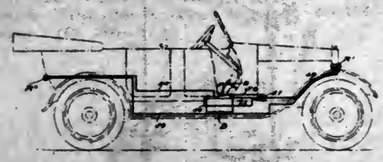
1,488,030. WINDOW FIXTURE. WILLIAM CLARK BLIVEN, Vincennes, Ind., assignor of one-half to Charles N. Johnson, Vincennes, Ind. Filed June 12, 1922. Serial No. 567,642. 2 Claims. (Cl. 156—23.)

2. A bracket for the purpose set forth comprising a metal stamping including a U-shaped clamp, the arms of which have openings at their free ends, and a relatively wide arm extending at right angles from one vertical edge of one of the clamping arms, said arm having an opening to accommodate one of the journals



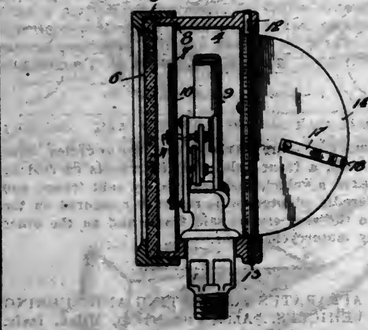
of a blind and the lower longitudinal end of the arm being rolled to simultaneously form a reinforcing bead and a tubular bearing for a curtain pole bracket.

1,488,031. FASTENING DEVICE. THOMAS BRIDGWOOD, Stoke-on-Trent, England. Filed July 24, 1922. Serial No. 577,166. 3 Claims. (Cl. 287—103.)



1. In a fastening device, a revoluble driving sleeve having two main longitudinal grooves in its outer side, said grooves each having two transverse grooves on one side, and one of each of the transverse grooves having an auxiliary longitudinal groove at its end arranged to one side of the main groove to which it pertains, a hub or boss slidable and revoluble on the said sleeve and provided with two dogs which are slidable in the said longitudinal main grooves and two of the transverse grooves, said hub or boss having also longitudinal grooves which register with the said longitudinal main grooves, a U-shaped key slidable in the longitudinal grooves of the said hub or boss and having projections at its end portions for engaging with the said main longitudinal grooves and in the other two transverse grooves and in the said auxiliary longitudinal grooves, and a spring which moves the hub or boss longitudinally away from the said sleeve and holds the projections of the key in engagement with the said auxiliary longitudinal grooves.

1,488,032. SPOOL CARRIER FOR BRAIDING MACHINES. JOHN EDDY CHACE, Adamsdale, Mass. Refiled for (abandoned) application Serial No. 432,018, filed Dec. 24, 1920. This application filed May 14, 1923. Serial No. 639,011. 14 Claims. (Cl. 96—15.)



13. In a bobbin carrier, a bobbin receiving spindle, a rotatable ratchet on the spindle, a pawl engageable with the ratchet, a standard, a slide on the standard, and spring pressed means to engage the slide to tension same downwardly and being normally spaced from the pawl and being movable to engage and thereby release same from the ratchet.

1,488,033. DIRECTION-SIGNALING APPARATUS FOR MOTOR VEHICLES. HARRY GILMORE CLIFTON, Jacksonville, Fla. Filed July 29, 1920. Serial No. 399,843. 11 Claims. (Cl. 200—39.)

1. A circuit controller comprising, a yoke mounted for swinging movement, an arm fixed to the yoke, a contact bar fixed to said arm, stationary contacts disposed in the path of movement of said contact bar, a spring for biasing the yoke to a position wherein said contact bar disengages the contacts, and an actuating lever pivotally connected to the yoke so that when moved laterally a rocking of the yoke is effected against the action of said spring to cause the contact bar to engage said contacts.

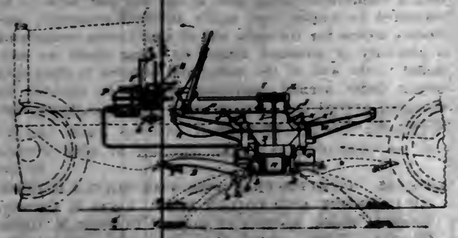
1,488,034. PRESSURE GAUGE. ERNEST B. CROCKER, Stratford, and OTTO W. HEISE, Bridgeport, Conn., assignors to Manning, Maxwell & Moore, Incorporated, New York, N. Y., a Corporation of New Jersey. Filed June 13, 1919. Serial No. 304,074. 7 Claims. (Cl. 73—109.)

1. In a device of the character described, in combination, a cylindrical casing open at one end and liable to be subjected to sudden and heavy internal pressures, and closure means for the open end of said casing comprising a plurality of members hinged to swing about an axis radial to the wall of the casing and adapted to close said casing under normal conditions and to be released by swinging toward one another about said axis under conditions of abnormal pressure.

1,488,035. COMPOSITION FOR THE MANUFACTURE OF LAUNDRY AND TOILET SOAP. LAURA E. CRUVER, Tacoma, Wash., assignor of one-half to Oscar M. Glass, Tacoma, Wash. Filed Oct. 24, 1921. Serial No. 509,975. 2 Claims. (Cl. 87—5.)

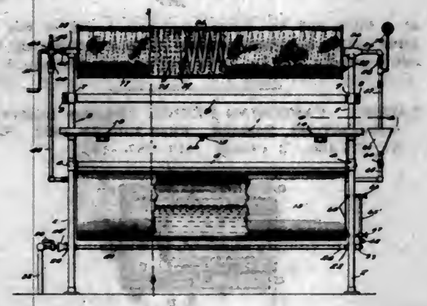
1. A laundry soap consisting of the following: 1 lb. white soap, 2 oz. coal oil, 2 oz. lemon juice, 2 oz. lettuce juice, 2 oz. cucumber juice, 1 tablespoon borax powder, 3 oz. paraffine, 10 drops oil of almond, 2 tablespoons of cocoanut oil, 1 oz. bluing.

1,488,036. CHIME MECHANISM. WALTER H. DURFEE, Providence, R. I. Filed Feb. 11, 1921. Serial No. 444,158. 7 Claims. (Cl. 84—106.)



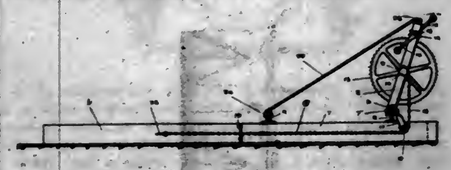
7. In a chiming mechanism, in combination, a hammer provided with an opening, an actuator for said hammer, a link chain having one end detachably secured to said actuator and its other end extended through the opening in said hammer and adjustably connected with the latter, and means for locking said chain in its adjusted position with relation to said hammer and against movement through said opening.

1,488,037. FORECARRIAGE FOR MOTOR CYCLES. CONRAD FEHR, Paris, France. Filed Mar. 23, 1922. Serial No. 546,134. 7 Claims. (Cl. 180—25.)



1. A removable fore-carriage for motor-cycles comprising a frame, a front axle, steering wheels carried by said front axle, a vehicle body carried by said frame, and a separate cradle adapted to be removably secured on the one hand to the rear end of said frame and on the other hand to the motorcycle frame.

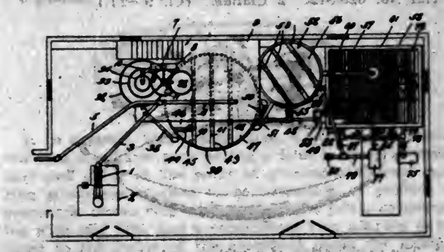
1,488,038. APPARATUS FOR LIFTING AND TURNING MOTOR VEHICLES. ALDO FIORENTINO, Milan, Italy. Filed Mar. 14, 1922. Serial No. 543,756. 6 Claims. (Cl. 254—87.)



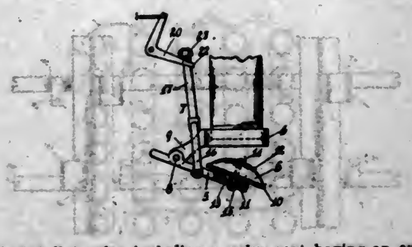
1. A lifting and turning apparatus for motor vehicles comprising in combination a support connected to the frame of the vehicle and including a rack with respect to which the support is turnable, legs pivoted to the rack, ground engaging feet slidably connected to the legs, means for lowering the legs, means for raising the rack to effect a raising of the connecting points of the legs and an inward sliding of the outer ends of the legs to consequently lift the vehicle and means on the vehicle frame and associated with the rack for effecting a turning of the vehicle when raised.

1,488,039. STEAM CLOTH SPONGING MACHINE. SAMUEL FISHER, Baltimore, Md. Filed Feb. 24, 1923. Serial No. 620,992. 3 Claims. (Cl. 26—7.)

1. In a cloth sponging apparatus, a table, a drop shelf for the top thereof and means for holding the shelf in alignment with the top, a tank removably supported on the table frame below the top thereof, means for admitting water into the tank, means for indicating the level of water in the tank, means for draining the tank, gas burners including spaced apertured tubes supported by the frame below the tank for heating the water therein to generate steam, a hollow drum supported by the table frame above the top thereof, said drum having series of peripheral apertures and a fabric facing arranged thereover, a roller journaled on the frame below the drum over which cloth supported on the table top is guided to arrange the same over the drum, means admitting steam generated in the tank into the drum, a filtering medium at the steam inlet in the drum, means regulating the pressure of steam in its passage to the drum, means in the drum receiving steam generated in the tank for drying the steam in its passage through the apertures of the drum, and means for revolving the drum.



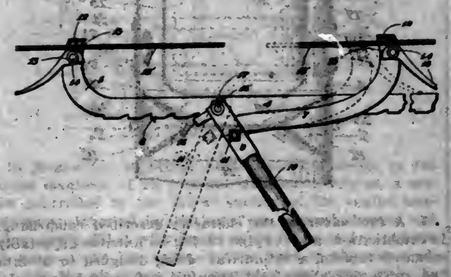
1,488,040. RAPID TIE CHANGER. BRITTEN GALLAND, Saltz, Iowa. Filed Apr. 30, 1923. Serial No. 635,799. 7 Claims. (Cl. 254—43.)



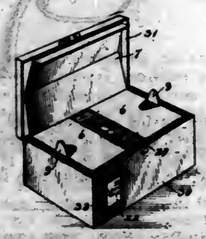
1. A tie changer comprising a bar to be disposed transversely between the adjacent ends of old and new ties and having means for holding said ends of the ties in registration, and actuating means connected to the ends of said bar and having portions for connection with the new tie to simultaneously move both ties.

1,488,041. WATER-PURIFYING APPARATUS. HARRY W. GIBSON, Wellston, Ohio. Filed Dec. 4, 1920. Serial No. 428,886. 5 Claims. (Cl. 210—16).

1. In a device of the class described, a filter; a conduit leading to the filter; a water motor interposed in the conduit; a chemical tank discharging into the conduit; an agitator in the chemical tank; means for driving the agitator from the motor; and means under the control of the agitator for governing the flow from the tank into the conduit.

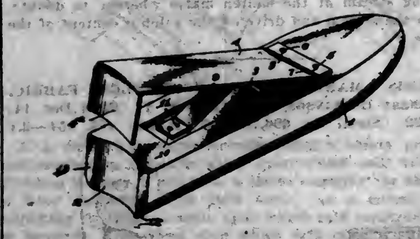


1,488,042. TOILET VALVE. HENRY P. GONSOULAND, Oakland, Calif. Filed Oct. 31, 1921. Serial No. 511,610. 7 Claims. (Cl. 251—2.)



2. A toilet valve including a valve seat having an outwardly extending arm and adapted to be secured on the lower outer end of the toilet waste pipe, a valve lever fulcrumed on said arm, a valve closure member secured to said lever for engaging said seat to close said pipe, a connector member consisting of a rod and a yoke adapted to straddle said arm and connected to said lever, a forked bell crank lever, the upper end of said rod extending through the forked end of said bell crank lever, a nut on the upper end of said rod for engaging the forked end of said bell crank lever and means for swinging said bell crank lever to open the valve.

1,488,043. WIRE-REPAIR TOOL. JOHN EINAR GOODMAN, Baldur, Manitoba, Canada. Filed Mar. 16, 1922. Serial No. 544,336. 4 Claims. (Cl. 254—81.)

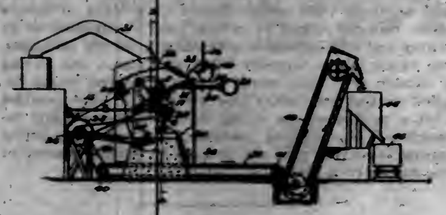


1. A device of the character described comprising in combination a body member having a serrated lower edge, a member slidable on the said body member, a lever to actuate said body member, the outer terminals of the said slidable and body members adapted for engagement with the terminals of wire members to be united, a dog rigid with the upper terminal of the said lever engageable with the said serrations to draw forward the said slidable member and an abutment configurated on the upper terminal of the said lever engageable with the said serrations to prevent retrogression of the said slidable member during actuation.

1,488,044. ART OF PACKING AND VENDING CIGARS. OTTO W. HARMS, Chicago, Ill., assignor to Ever Moist Cigar Box Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 5, 1924. Serial No. 690,714. 12 Claims. (Cl. 206—41.)

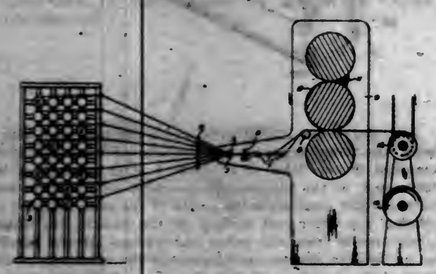
1. A mercantile package comprising an outer permanent rectangular container having a movable cover and a relatively small stamp inspection opening in one wall, and an inner refill carton formed of a blank of fibrous sheet material folded to carton form constructed to fit within and dimensioned to substantially fill the container, the carton being normally filled with cigars and having a liftable cover, the carton having a revenue stamp applied to seal the carton and arranged in such position that a portion of the stamp is visible through said inspection opening in the container, and accessible lifting means associated with the package to permit removal of the carton from the outer container.

1,488,045. PAN LIFTER. WALTER KARL HARRIS, Lockhart, Tex. Filed Nov. 28, 1923. Serial No. 676,528. 2 Claims. (Cl. 294—31.)



1. A device for lifting pans which are provided with a head, the device embodying a handle of heat-insulating material in the form of a block, a strip secured at its inner end to the handle and provided at its outer end with a finger disposed at an angle to the strip adapted to overlap the outer end surface of the handle, the finger being spaced from the outer end surface of the handle by a distance closely approximating the thickness of the wall of the pan to be lifted, thereby to hold the wall of the pan against the outer end surface of the handle and to hold the outer end of the handle beneath the head, and spring means interposed between the strip and the handle for moving the strip into such a position that the wall and the head of the pan may be located as aforesaid with respect to the handle.

1,488,046. TOY PISTOL. JOHN H. HARTMAN, Lancaster, Pa., assignor to John H. Hartman and Joseph T. Breneman, trading as The Hubley Manufacturing Co., Lancaster, Pa., a Copartnership. Filed Nov. 30, 1923. Serial No. 677,710. 8 Claims. (Cl. 42—54.)

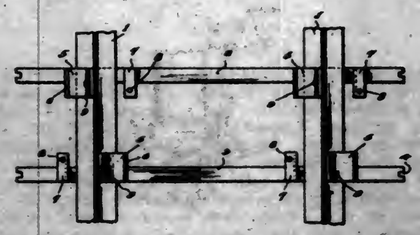


1. A toy pistol having a hollow body and a recess at the rear end thereof forming a cap-receiver, and an anvil arranged within said recess so as to provide air vents above and below the anvil opening into said hollow body.

1,488,047. PROCESS FOR THE TREATMENT OF MATTE FROM BLAST FURNACES. JOHN H. HICKEY, Gold Creek, Mont. Filed Oct. 1, 1918. Serial No. 256,461. 5 Claims. (Cl. 75—17.)

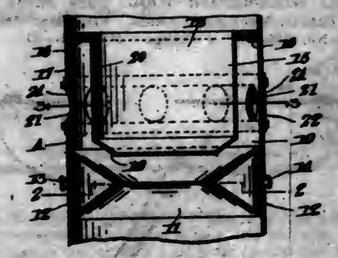
1. The step in a process for the treatment of matte to granulate and desulphurize the same, which consists in directing a blast of a fluid under pressure against a flowing stream of the molten matte whereby to disintegrate the stream and drive off the sulphur content of the matte.

1,488,048. MANUFACTURE OF WEFTLESS FABRIC. ERNEST HOPKINSON, New York, N. Y. Filed Dec. 14, 1922. Serial No. 606,768. 7 Claims. (Cl. 154—2.)



1. That method of manufacturing weftless fabric which consists in, treating with latex and drying a plurality of cords, assembling the cords in independent disconnected parallel relation, and finally joining the cords with vulcanizable rubber composition to form a sheet thereof.

1,488,049. WATER SLEEVE. WILLIAM T. LAWLESS, London, Ontario, Canada. Filed Mar. 17, 1923. Serial No. 625,812. 2 Claims. (Cl. 9—17.)

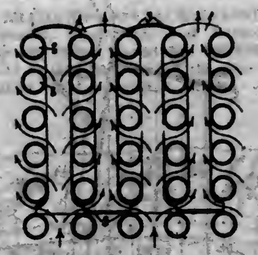


1. The combination of a rubber oval air container with cloth cover or container and a cloth sleeve in which is inserted a rubber band in a cloth encasement, the whole to be worn on the arms between the elbows and the shoulders.

1,488,050. RAILROAD TRACK. CHARLES LEAK, Centerville, Iowa. Filed Oct. 3, 1923. Serial No. 666,326. 3 Claims. (Cl. 238—38.)

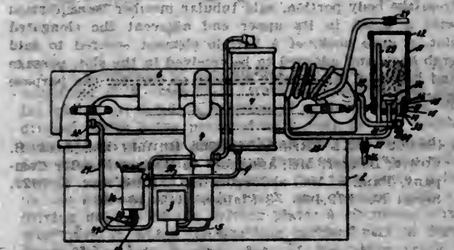
1. A railroad track comprising tie bars, fish plates carried by and projecting laterally from said tie bars, and keeper lugs also carried by the tie bars and projecting therefrom in the same direction as and in spaced relation to the fish plates, the said lugs and fish plates being arranged to inter-engage upon movement of two tie bars toward each other.

1,488,051. FUEL SAVER. JOSEPH MCDONOUGH and ALFRED WILKIN, Edmonton, Alberta, Canada. Filed Mar. 9, 1923. Serial No. 623,866. 3 Claims. (Cl. 110—58.)



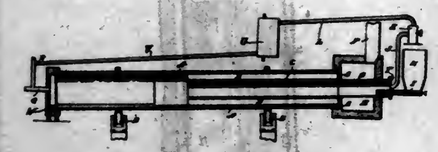
1. A fuel saver of the character described comprising, in combination, a stove-pipe having an annulus adjustably mounted therein, a cylindrical casing designed to fit into the stove-pipe above said annulus and spaced from the stove-pipe, flange means for suspending the casing in the stove-pipe, a sloping base for the casing in parallel alignment with the annulus, a plurality of spaced orifices around and in the stove-pipe opposite the casing, a sleeve designed to fit over said orifices and provided with openings designed to register with the stove-pipe openings.

1,488,052. PISTON RING. ALBERT C. MCFARLANE, Hayward, Calif. Filed Nov. 4, 1920. Serial No. 421,724. 5 Claims. (Cl. 74—109.)



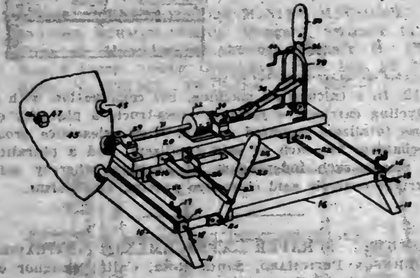
1. In a piston ring construction, a plurality of eccentric ring structures each having a joint in their thinnest part and a lug at the point of greatest thickness, said ring structures adapted to be assembled to produce a concentric piston ring with some of the joints co-operating with said lugs, and a compression ring adapted to be fitted to the inside of the assembled pieces for locking the same together.

1,488,053. BAFFLE FOR HEAT-EXCHANGE APPARATUS. ROBERT MCGREGOR, Ilford, England, assignor of one-third to Clayton and Shuttleworth Limited, Lincoln, England, and one-third to Philip Warwick Robson, Lincoln, England. Filed Mar. 14, 1922. Serial No. 543,752. 3 Claims. (Cl. 110—98.)



1. In a heat-exchange apparatus, tubes arranged in vertical rows with passages therebetween and deflectors situated in said passages, said deflectors being inclined to said tubes alternately in opposite directions.

1,488,054. FUEL VAPORIZER FOR INTERNAL-COMBUSTION ENGINES. CHESTER J. MUSSY, Baker, Oreg. Filed Mar. 29, 1921. Serial No. 456,619. 1 Claim. (Cl. 123—25.)

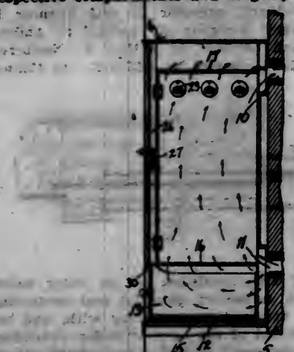


In means for supplying heated air and steam to the intake manifold of an internal combustion engine, a system controlled by the intake suction of the engine comprising an inverted jar having a cap secured thereon and being partly filled with water so as to leave an enclosed air space above the water, a tube fixed in the cap leading into the air space and connecting the same with the intake manifold, a second tube supported in the cap connecting the water with the first tube, a needle valve for controlling the port area of the second tube and a third tube supported in the cap adapted to supply heated air to the jar under the influence of the intake suction of the engine.

1,488,055. KILN FOR RECOVERY OF BY-PRODUCTS FROM FUEL. SPENCER B. NEWBERRY, Cleveland, Ohio; Andrew W. Newberry, executor of said Spencer B. Newberry, deceased, assignor of one-half to Andrew W. Newberry and one-half to Arthur C. Newberry. Filed Nov. 30, 1920. Serial No. 427,313. 10 Claims. (Cl. 222—7.)

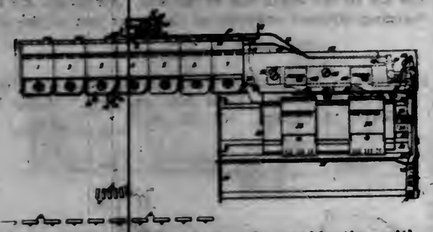
10. A revolving kiln consisting of an outer metal cylinder lined with refractory material and containing an inner cylinder attached to, revolving with, and extending beyond the end of the outer cylinder, extending through a part of the length of and concentrically placed in the outer cylinder, with space for passage of gases between the inner and outer cylinders and around the extension of the inner cylinder, means for introducing material containing carbonaceous fuel into the inner cylinder, means for drawing off volatilised products from the inner cylinder, and for drawing regulated amounts of products of combustion from the outer cylinder into the inner cylinder, and for conveying combustible gas generated in the inner cylinder to the lower end of the kiln, means for supplying supplementary fuel and air to the lower end of the kiln, and means for discharging calcined products at the lower end of the kiln.

1,488,056. CIRCULAR-SAW GRINDER. ELIJAH C. ORR, Deer Park, Wash. Filed July 18, 1921. Serial No. 485,418. 3 Claims. (Cl. 76—45.)



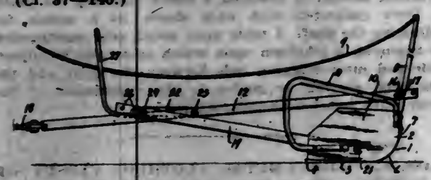
1. A circular saw grinder comprising a rotary grinding member, a rotatable shaft upon which said rotary grinding member is mounted, a sleeve engaging the shaft, a lever connected with such sleeve, as a means for adjusting the shaft, a table upon which said construction is mounted, a platform upon which said table is adjustable and inter-engaging rods between the table and the platform, serving as guides in the adjustment of the table with relation to the platform.

1,488,057. SHEET-METAL CLOTHING CLOSET OR LOCKER. MORRIS PILS, New York, N. Y. Filed Jan. 16, 1923. Serial No. 613,069. 1 Claim. (Cl. 45—37.)



A clothing closet comprising a top, bottom and side walls, a rear wall having extensions insertible through a building wall and constituting an inlet opening in the lower portion and an exit opening in the upper portion communicating with the interior of the closet, the major portion of said rear wall being spaced from the building wall a plurality of vertical partitions dividing the closet into separate compartments, outwardly swinging

doors for each compartment, a sliding drawer below the respective compartments and hingedly connected closures

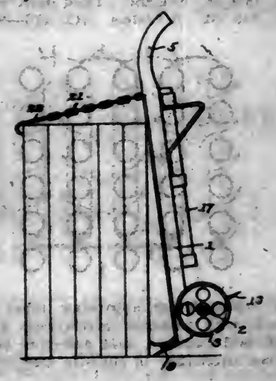


constituting the front wall of the closet and preventing the withdrawal of the drawer when the last mentioned closures are locked.

1,488,058. CALCULATING MACHINE. ARTHUR F. POOLE, Kenilworth, Ill., assignor to Remington Accounting Machine Corporation, New York, N. Y., a Corporation of New York. Filed Feb. 16, 1922. Serial No. 536,960. 12 Claims. (Cl. 235—59.)

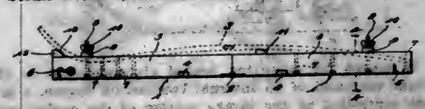
12. In a calculating machine, the combination with a traveling carriage, a jumping cross-truck, a plurality of cross totalizers mounted on said truck, clearance proof mechanism for each of said totalizers, and a plurality of means each independent of another, whereby said carriage controls said clearance proving mechanism.

1,488,059. SCRAPER ATTACHMENT. NATHANIEL JOHNSON PRITCHARD, Santa Rosa, Calif., assignor of one-fourth to Jacob Thomas Mallory and one-fourth to John Kiergan Mallory, both of Santa Rosa, Calif. Filed Jan. 18, 1923. Serial No. 613,461. 9 Claims. (Cl. 37—140.)



1. A scraper comprising a scoop bucket having a bottom member, an end member and two side members, a draw bar pivotally associated with the end member above the normal line of draft, a second bar engaging the side members, a pivoted hinge connecting the bars disposed to normally cause them to cooperate in pulling the load, and means allowing the position of the hinge to be changed whereby the whole load is transferred to the draw bar.

1,488,060. CORNER GUARD. JOHN PYNE, Harrisburg, Pa. Filed Mar. 17, 1922. Serial No. 544,608. 1 Claim. (Cl. 20—76.)

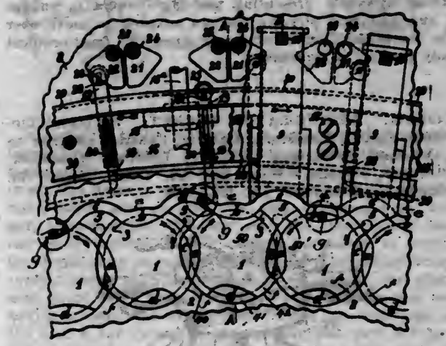


A guard comprising a triangular body portion, one corner of the body portion being curved inwardly and provided with a tapered extremity, one edge of the body portion being curved inwardly and upwardly and said tapered extremity adapted to pierce the article to which the device is secured.

1,488,061. TRUCK. FRANCIS HARRY QUINLAN, Barre, Vt. Filed May 5, 1922. Serial No. 558,600. 1 Claim. (Cl. 280—57.)

A wheeled truck of the character described comprising a tubular member longitudinally disposed intermediate the side members of said truck and being provided with an elongated slot having an angle passage arranged adjacent its inner terminal, said terminal being offset from the body portion, said tubular member being formed with a notch in its upper end adjacent the elongated slot, a grab hook, of a flexible element secured to said grab hook and adapted to be received in the slot, passage and notch of the tubular member as and for the purpose specified.

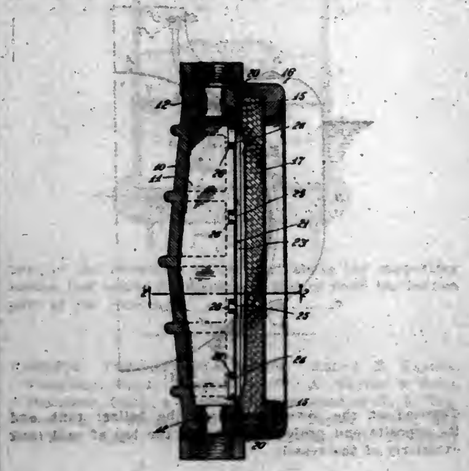
1,488,062. SKI PRESS. BIRGER RUHLIN and JACK B. COWIN, Bangor, Me., assignors to Bangor Novelty Company, Bangor, Me., a Corporation. Filed Aug. 3, 1922. Serial No. 579,460. 3 Claims. (Cl. 46—53.)



1. A ski-press comprising an elongated rectangular frame having an abutment secured to the upper side thereof at the forward end, a longitudinally adjustable clamping strip connected with the upper side of the frame adjacent said abutment for causing the ski to bear tightly against the latter, an adjustable clamping strip for cooperation with the opposite end of the ski, and a strip for placement between the ski and upper side of the frame for bowing the intermediate portion of the ski.

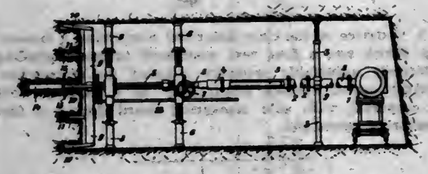
1,488,063. AGRICULTURAL IMPLEMENT. JOHN J. RUNCK, Republican City, Nebr. Filed Nov. 21, 1918. Serial No. 263,611. 1 Claim. (Cl. 97—155.)

A wheeled cultivator gang structure comprising a drag beam, a pair of gang arms pivotally connected with the beam, cross pieces on the beam for movably supporting the arms, a pulley having a vertical axis mounted on the beam, links connecting the pulley with the gang arms, spring means on said links for permitting yielding movement of the arms, an actuating cable passing around said pulley and in frictional engagement therewith.



1,488,064. BRAIDING AND LACE-MAKING MACHINE. CARL SANDWEG, Langerfeld, near Barmen, Germany. Filed July 27, 1920. Serial No. 399,436. 5 Claims. (Cl. 96—11.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. In a braiding or lace making machine, a main track consisting of a track-plate, track-plate points and driving plates arranged in recesses of said track-plate, said driving plates being provided with four driving notches each, means for rotating said driving plates and for arresting them at each quarter turn, passage ways transversely intersecting or crossing the track-plate points on one side of said main track and forming with the driving notches of the driving plates a circuitous auxiliary track in which the braiding carriers may be transferred from one driving plate of the main track to another without crossing braiding carriers located on the main track, said passage ways being openable and closable by slides controlled by the pattern gear.



1,488,065. WATER GAUGE. GEORGE H. SARGENT, Chicago, Ill. Filed June 15, 1922. Serial No. 568,506. 8 Claims. (Cl. 73—54.)

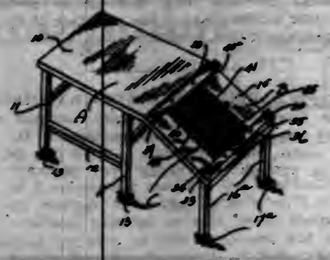
1. In a water gauge, a main body portion formed to provide a water chamber and having openings at opposite ends thereof, a cover member provided with a sight opening and adapted to be secured to the front side of the main body portion, a sight-glass disposed across said sight-opening in said cover member and held against the forward side of the body portion by said cover member, and a partition or shutter disposed adjacent to the rear face of the sight-glass with the marginal edges

thereof clamped intermediate of the sight-glass and forward side of the main body portion, said partition or shutter being provided with openings to permit the water to enter intermediate of the rear face of the sight-glass and said partition or shutter.

1,488,066. TUNNELING OR MINING MACHINE. ALEXANDER SCHMIDT, Dorog, Hungary, assignor to the Firm of Maschinenbau-Aktiengesellschaft H. Flottman & Comp., Herne, Germany. Filed Dec. 30, 1921. Serial No. 525,963. 10 Claims. (Cl. 262—7.)

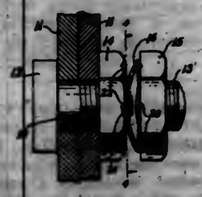
1. In a mining or tunneling machine the combination of a shaft for preliminary boring with two groups of cutting tools, one of which is cutting circular rings while the other is cutting vertically the rings thus produced.

1,488,067. APPARATUS FOR EMPTYING THE WATER-BALLAST TANKS OF SUBMARINES AND OTHER SUBMERSIBLE VESSELS. EUGÈNE SCHNEIDER, Paris, France, assignor to Schneider & Cie., Paris, France, a Limited Joint-Stock Company of France. Filed June 29, 1923. Serial No. 648,558. 4 Claims. (Cl. 114—16.)



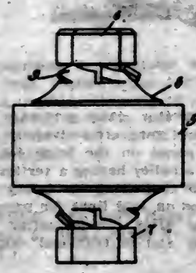
1. An apparatus for completely emptying the water-ballast tanks of submarines or other submersible vessels by means of compressed air or gas comprising a water filling and discharging valve at the lower part of the

ballast tank, an air discharging valve at the upper part of said tank, and a delivery pipe having one end



disposed at the lowest point of the ballast tank and its opposite end projecting through the top of said tank exteriorly of the vessel.

1,488,068. COMBINED FOOT REST AND MEASURE. SAM SCHWARTZ, Indianola, Miss. Filed Sept. 22, 1921. Serial No. 502,356. 3 Claims. (Cl. 33—3.)



1. A device of the class described comprising a measuring board, and a foot rest positioned thereon including relatively adjustable members adapted for engagement against opposite sides respectively of a person's foot to cooperate with said measuring board during a foot measuring operation.

1,488,069. NUT LOCK. GEORGE WASHINGTON SEAGO, Hemphill, Tex. Filed Jan. 15, 1923. Serial No. 612,715. 2 Claims. (Cl. 151—15.)
